One commenter stated that the National Safety Plan could be improved by implementing an employee safety reporting system that implements confidential close call reporting. This commenter also suggested that FTA include close call reporting in the list of SMS performance measures so that FTA could track and analyze close call events.

FTA's Response

General

FTA appreciates those comments in support of the National Safety Plan. Although transit is a relatively safe mode of travel, the statistical reality is that as transit ridership increases, data indicates that the total number of fatalities and serious accidents likely will also increase. FTA does not intend to adopt a prescriptive or burdensome approach to improving transit safety. Instead, FTA has adopted the principles and methods of Safety Management Systems (SMS) because SMS is both scalable and flexible and can accommodate the diversity of modes, expertise, and resources that exist within the transit industry.

SMS

For the last three decades the public transportation industry has implemented plans and programs based on the "system safety" principles outlined in the Military Standard 882 series (Standard Practice for System Safety, <http://www.system-safety.org/Documents/MIL-STD-882E.pdf> [external link]). This approach focuses on the application of engineering and management principles, criteria, and techniques to achieve an acceptable level of safety throughout all phases of a system lifecycle.

FTA has adopted SMS as the basis for the initiatives FTA will undertake to improve the safety of public transportation because it is both scalable and flexible. SMS is a collaborative approach that will help management and labor work together to build on the industry's existing safety foundation to better control risk, detect and correct

safety problems earlier, share and analyze safety data more effectively, and measure safety performance more accurately. SMS empowers transit operators to assess their own safety risks and prioritize the application of resources to those risks, which in turn supports a cost-effective allocation of resources.

The main difference between the system safety approach and SMS is that, because of its engineering roots, system safety focuses mostly on the safety implications of technical aspects and components of the system under consideration, somewhat at the expense of the human component. The SMS approach builds on the transit industry's experience with system safety by bringing management processes and organizational culture more squarely into the system safety engineering and hazard management framework. By tackling these "softer" management and human factors issues, SMS supplements system safety's more rigorous engineering processes.

FTA disagrees that the notion of benchmarking an individual agency's performance against the performance of another agency is inconsistent with SMS. The methods and principles of SMS do encourage agencies to improve their individual performance. However, effective implementation of SMS is dependent on the collection and analysis of available data, which can include data from other agencies. FTA has provided detailed responses to comments related to implementation of SMS at the transit agency level in the preamble to the final rule for Public Transportation Agency Safety Plans.

Workforce Development and Training

Although the National Safety Plan does not directly impose any workforce development burdens on recipients, FTA is continuing to develop training, guidance, and other resources to enhance the safety competencies of transit employees. For example, FTA may provide funding through its technical assistance program (49 U.S.C. 5314) to address public transportation workforce needs through research, outreach, training and the implementation of a frontline workforce grant program, and conduct training and educational programs in support of the public transportation industry. In addition, FTA is currently initiating a project to develop guidance that a transit agency could use to help it set up and operate an effective employee reporting system.

FTA will incorporate guidance, technical assistance, and other tools into the Plan as they become available. FTA

will also make resources available on the safety page of its Web site at <https://www.transit.dot.gov/regulations-and-guidance/safety/transit-safety-oversight-tso>. FTA encourages transit providers and sponsors to visit the page regularly to access the most up-to-date resources.

Figures and Tables

FTA has revised the tables used in today's final National Safety Plan for clarity.

Updates to the National Safety Plan

FTA intends for the National Safety Plan to serve as both the primary tool for FTA to communicate with the transit industry about its safety performance, and as a repository of guidance, best practices, technical assistance, tools and other information. FTA believes that a flexible and time sensitive approach to implementing updates to the National Safety Plan is the most effective way to disseminate information. Therefore, FTA plans to propose substantive updates to the National Safety Plan, such as new performance measures, through a public notice and comment process as needed, rather than by regulation. However, components of the Plan, such as the Safety Certification Training Program and standards, will be implemented through regulation.

Public Transportation Safety Certification Training Program

Although the Public Transportation Safety Certification Training Program is a statutory component of the National Safety Plan, FTA must establish the requirements of the Training Program through rulemaking. FTA anticipates publishing a final rule for the Safety Certification Training Program later this year. Until FTA publishes a final rule, State personnel who conduct safety audits and examinations of rail transit systems and for rail transit agency personnel who are directly responsible for safety must participate in the Interim Program. Bus operators may participate in the program on a voluntary basis. For more information on FTA's Training Program, please visit <https://safety.fta.dot.gov/login>.

Reporting Systems

FTA is currently conducting research on the design, demonstration, evaluation, and implementation of employee reporting systems at transit agencies. As a product of this research, FTA intends to issue guidance to the transit industry on how to set up and operate effective employee reporting systems.

In the future, FTA will consider adding close calls to the list of performance measures.

B. Definitions

Comments

General

One commenter noted that the National Safety Plan's performance measures do not match the National Transit Database (NTD) definitions and also stated that the term "system reliability" is not currently defined in the NTD glossary. This commenter also asserted that the definition of "passenger" in the National Safety Plan does not match the NTD.

Another commenter stated that the National Safety Plan needs clearer definitions so that consistent performance measures can be created across agencies.

FTA's Response

There likely will be instances where the definitions of terms in FTA's rules or the National Safety Plan may differ from the definitions of those terms in the NTD. Where necessary, FTA will update the NTD glossary to align with the safety rules and National Safety Plan. However, to the extent that a definition in a safety rule differs from a definition in the NTD glossary, the regulatory definition will apply to the particular statutory requirement under the Safety Program. FTA has made sure to align the definitions in this first final National Safety Plan with definitions in the final rules for safety and transit asset management. As the Safety Program matures, FTA will standardize other definitions to ensure consistent collection, analysis and reporting of safety information.

Fatalities

A few commenters noted that the definition of the term "fatalities" does not match the definition used in the NTD glossary.

FTA's Response

FTA did not include a definition of "fatality" in the proposed National Safety Plan. FTA did include a proposed performance measure for fatalities which was expressed as the total number of fatalities per unlinked passenger trips by mode. FTA's responses to comments on the fatality measure follow the summary of comments on the measure in Section C, below.

Injury and Serious Injury

A few commenters noted that the definition of "injuries" was included in

the National Safety Plan glossary, but the definition of "serious injury" is not.

FTA's Response

Neither the definition of "injury" nor "serious injury" was included in the proposed National Safety Plan glossary. However, FTA has moved the definition of "serious injury" from the footnote on page 41 of the proposed National Safety Plan to the glossary at Appendix A of the final Plan.

Safety Events

The proposed National Safety Plan defines safety events as "the collection of reported events that occur during the operation of public transportation and performance of regular supervisory maintenance activities." One commenter questioned whether the term "operation" refers to revenue service events only, or whether it also includes non-revenue service. The commenter stated that this difference could change current reporting thresholds. A few commenters stated that the definition of "safety events" does not match the definition in the NTD glossary.

FTA's Response

In the final National Safety Plan, FTA clarifies that the definition of "event" includes reported events that occur during both revenue and non-revenue operations. Contrary to comments received, the definition of "safety event" is not included in the NTD glossary. However, the proposed definition of "event" aligns with the definition of that term in the SSO final rule and the in the NTD safety and security reporting module. See Docket FTA-2014-0009 (January 2015).

Requests for New Definitions

A few commenters requested that FTA clarify the definitions of "transit provider." Other commenters requested that FTA define "unlinked passenger trips" and "fires."

FTA's Response

In response to comments, unlinked passenger trips are the number of passengers boarding the public transportation vehicles; passenger miles are the cumulative sum of the distances ridden by each passenger. However, FTA has removed this definition from the final National Safety Plan because it has revised the denominator for several performance measures, as discussed below.

FTA does not believe that it needs to define "transit provider" in the National Safety Plan. The Plan applies to recipients of chapter 53 funds that provide public transportation.

FTA does not agree that it should define the term “fires.” Terms such as “fires” that are not defined in the Plan or by statute or regulation will be interpreted in accordance with the definition set forth in dictionaries of common usage.

B. Chapter II—SMS Framework

Comment

SMS Components and Implementation Phases

Multiple commenters addressed the Safety Management Policy component of SMS. One commenter suggested that FTA’s Safety Management Policy lacked sufficient detail and encouraged FTA to establish minimum hazard criteria for all hazard management programs across all transit agencies to promote conformance. This commenter suggested that allowing each transit agency to establish its preferred method for hazard analysis will lead to varying methodologies, create confusion, and limit the available safety data for analyzing aggregate trends for the nation.

One commenter recommended that safety management policies promote open communication to all agency individuals, not just those identified as “relevant” to specific roles and responsibilities related to the SMS.

One commenter expressed concern about the “management of change” criteria in the National Safety Plan, recommending that FTA include additional guidance in the National Safety Plan concerning transit agency documentation of operation/infrastructure changes, the establishment of safety modification review bodies, the use of past performance when describing future criteria, the use of field monitoring to ensure the implementation, effectiveness, and enforcement of new mitigations, and the use of multi-tiered risk management processes. This commenter also requested expanded guidance for the “continuous improvement” section of the National Safety Plan, including exploration of the link between safety performance monitoring and continuous improvement.

One commenter applauded FTA for developing strong risk management policies, but recommended that FTA revisit and expand the hazard management program. This commenter stated that risk management must be done effectively, noting that there have been multiple instances over the past 11 years in which public transportation accidents have occurred that could have been prevented had the required Hazard

Management Plan and risk assessment been effective.

One commenter recommended that FTA include language in the National Safety Plan specifying that user documentation of a system’s operation, processes, policies, procedures, infrastructure, vehicles and training, as well as maintaining records of previous configurations, will assist in the process of continued system hazard identification. This commenter also suggested FTA add the term “safety risk” to the list of performance criterion in the SMS.

One commenter noted its appreciation for FTA’s recognition of the need for employee involvement in the promotion of system safety, but encouraged FTA to emphasize the importance of motivation, behavior, and attitude when promoting safety. The commenter stated that a poor safety culture in transportation industries can decrease program effectiveness, and that written SMS plans will realize positive outcomes only by engaging employees in a culture of safety.

Several commenters addressed the phased-in approach implementation policy of the SMS. One requested that FTA define and provide the relevant requirements and guidance materials for the list of tasks/expectations that a transportation agency “should have finished” at the completion of Phase 3 of SMS implementation. This commenter indicated that the National Safety Plan references requirements and guidance material that is not included in the National Safety Plan and requested the documentation prior to the National Safety Plan becoming effective.

Two commenters recommended that the National Safety Plan clarify that the phased-in approach is voluntary and that many of the subcomponents of the proposed SMS framework may already be included in current safety plans.

One commenter requested that FTA provide additional guidance on what type of changes require review and what type of oversight is needed during Phase 3. Two commenters stated that FTA should fully define and differentiate among the phrases “safety performance criteria,” “safety performance measures,” and “safety performance indicator” as the proposed National Safety Plan interchanges the terms.

One commenter indicated that Chapter 2 of the National Safety Plan is a verbatim copy of the FTA SMS Framework issued in August, 2015. This commenter recommended that FTA use the National Safety Plan as an opportunity to expand on the 2015

guidance to better help agencies develop SMS.

Fatigue Management

One commenter recommended that FTA include hour-of-service limitations or fitness-for-duty qualifications to the SMS and National Safety Plan to highlight the importance of fatigue management and ensure that it is adequately addressed in the National Safety Plan.

FTA’s Response

Readers should please be aware that the SMS Framework in the final National Safety Plan is not binding. The purpose of the SMS framework is to provide transit agencies with a brief overview of key SMS concepts, attributes of an effective SMS, FTA’s adopted SMS components and sub-components, and SMS development phases and sample tasks. FTA has refined its approach to the development of SMS guidance. FTA is currently working to develop more comprehensive, scalable SMS implementation guidance and will take comments received in to consideration during this process.

This summer, FTA initiated the SMS Implementation Pilot Program (SMS Pilot Program) so that FTA and participating transit agencies can work together to move SMS implementation forward. Through the SMS Pilot Program, FTA is partnering with transit agencies to assist them in transitioning to an SMS approach to managing safety. FTA provides technical assistance to transit agencies on developing and operating an SMS approach, while transit agencies provide opportunities for FTA to test the effectiveness of SMS tools in a diverse set of circumstances. The program is critical to helping FTA identify worthwhile and practical SMS implementation activities and to develop insights on how best to support the industry-wide transition to SMS.

Transit agencies not involved in the pilot program will benefit as well. FTA will apply lessons learned and best practices identified to develop guidance materials and technical assistance for the entire public transportation industry. Accordingly, in the final National Safety Plan, FTA has removed portions of the SMS Framework that provided guidance on implementation. FTA has retained portions of the SMS Framework that outline and describe the four pillars of SMS and revised some language to align with the requirements of the Public Transportation Agency Safety Plan final rule. As FTA refines its guidance materials it will take into consideration the issues and suggestions

raised by commenters on the SMS Framework.

Fatigue Management

In October 2014, FTA's Acting Administrator tasked the Transit Advisory Committee for Safety (TRACS) with developing recommendations for FTA on the elements that should comprise a SMS approach to a fatigue management program. On July, 30, 2015, TRACS issued a report—*Establishing a Fatigue Management Program for the Bus and Rail Transit Industry*—which recommend components of a successful fatigue management program, including hours of service (HOS), shift scheduling, fatigue prevention and awareness training, fitness-for-duty medical evaluations and screenings, work and vehicle environment design, safety culture, incident investigation, and data collection.² FTA is currently reviewing the TRACS recommendations. In the future, FTA may issue guidance or regulations on operator fitness for duty, which could address issues such as hours of service and fatigue management.

C. Chapter II—Performance Management

The reader should note that throughout the proposed National Safety Plan, and final National Safety Plan, FTA uses the term “performance measure” interchangeably with “performance criteria,” which it proposed to define as “categories of measures indicating the level of safe performance within a transit agency.” Although the language at 49 U.S.C. 5329(b) uses the term “performance criteria,” other parts of FTA's authorizing statute, such as the Transit Asset Management provisions of 49 U.S.C. 5326, use the term “performance measures.” FTA believes that Congress intended the terms “performance criteria” and “performance measures” to mean the same thing. To eliminate confusion over distinctions between these terms and to ensure consistency with the use of these terms throughout FTA's programs, FTA is defining “performance criteria” to mean “performance measures,” and it will use the term “performance measures” throughout this notice, the final National Safety Plan and associated rulemakings, accordingly.

Comment—Performance Measures Injuries and Fatalities

One commenter stated that an insufficient amount of fatality information is currently being collected nationally. The commenter suggested that as a result, there is not enough information to appropriately analyze the factors related to fatalities such that anyone would be able to develop actions to prevent incidences from occurring. Without appropriate data, the commenter suggested that FTA cannot conduct a true analysis of factors leading to fatalities.

Two commenters stated that the National Safety Plan indicates that the SSO final rule and all future safety rulemakings will define reportable accident/incidences in terms of injuries. However, they asserted that the SSO rulemaking never defined a reporting measure as proposed in the National Safety Plan and requested additional information on this topic.

One commenter recommended that the National Safety Plan use travel miles (‘train miles’ for the rail industry) instead of unlinked passenger trips for the purpose of standardizing the number of injuries and fatalities for the purpose of the performance measure.

Additional comments recommended that FTA express employee injury rates in terms of injuries per X employees or X hours of work.

FTA's Response

The proposed safety performance measures were derived from information that recipients already report to the NTD. Transit agencies already conduct their own investigations into the probable causes and contributing factors, as well as root cause analyses of organizational issues that influenced the causes or consequences of safety events. Each agency should use its own data to assess its performance.

FTA agrees that it is important to standardize the performance measures. Currently, through the NTD, FTA requires transit agencies to submit their total passenger trips, passenger miles, and vehicle revenue miles. FTA chose unlinked passenger trips as the denominator for the Fatalities and Injuries measures in the proposed National Safety Plan because we believed that it reflected better a passenger's exposure to risk. Based on the comments received, and after further consideration, FTA has changed the denominator for the performance measures from “unlinked passenger trips” to “vehicle revenue miles.” FTA believes that “vehicle revenue miles” is

more closely tied to risk as each additional vehicle mile of service increases risk of a collision with a pedestrian or third party vehicle.

In the first National Safety Plan, the Injury and Fatality measures apply only to passengers. FTA may establish measures for patrons, pedestrians, transit employees, occupants of other vehicles, or trespassers in future National Safety Plan iterations, after receiving input from the public.

Reliability

Multiple commenters questioned the appropriateness of using “reliability” as a performance measure of a SMS program. These commenters stated that performance measures should be limited to safety metrics. Other commenters questioned the redundancy of the term “reliability,” as “state of good repair” requirements should cover reliability issues and render this measure moot. Some commenters went on to request that FTA remove the measure from the performance list. An additional commenter stated that the definition of “reliability” is not defined in the NTD glossary.

Commenters generally supporting the use of reliability measures in the transportation industry commented that there are currently inconsistencies between system reliability standards in the National Safety Plan and the state of good repair measures that were proposed in the Transit Asset Management notice of proposed rulemaking (NPRM). The commenters recommended that system reliability should be more heavily linked with the Transit Asset Management rule rather than the National Safety Plan.

Several commenters provided support for the use of “reliability” as a performance measure but requested additional guidance and greater clarity on certain aspects of the measure. One commenter requested that FTA provide guidance as to what constitutes a reliability issue that requires reporting and recommended that non-safety mechanical failures not be included. Similarly, another commenter advised FTA to clarify the definition of “vehicle failure” to ensure that the term only refers to when a vehicle is unable to transport passengers.

FTA's Response

Through MAP-21, Congress recognized the critical relationship between safety and transit asset management. We note, in particular, the congressional requirement that the National Safety Plan include the definition for “state of good repair” as established in the rulemaking for transit

² The TRACS Report is available at [https://www.transit.dot.gov/sites/fta.dot.gov/files/docs/TRACS_Fatigue_Report_14-02_Final_\(2\).pdf](https://www.transit.dot.gov/sites/fta.dot.gov/files/docs/TRACS_Fatigue_Report_14-02_Final_(2).pdf).

asset management (49 U.S.C. 5329(b)(2)(B)) and the requirement at 49 U.S.C. 5329(d)(1)(C) that public transportation agency safety plans include state of good repair performance targets based on the performance measures established in the National Safety Plan.

The safety and performance of a public transportation system depend, in part, on the condition of its assets. A key challenge in connecting transit asset management to safety planning is that even when assets are not in a state of good repair, they can be operated safely, and, likewise, assets in a state of good repair can be operated unsafely. In the National Safety Plan, reliability is not a synonym for state of good repair. Rather, the proposed reliability measure is intended to serve as an expression of the relationship between safety and asset conditions, and therefore is neither duplicative nor inconsistent with the performance measure under the Transit Asset Management rule.

To clarify, at this time, the reliability measure applies only to revenue vehicles. The mean distance (miles) between failures is a standard industry metric. In the National Safety Plan FTA is not changing the way a "failure" is defined. Currently, FTA requires most Section 5307 recipients to report the following information: (1) Total number of failures (major failures and minor failures); and (2) total vehicle miles by mode. "Major failures" are failures caused by vehicle malfunctions or subpar vehicle condition which requires that it be pulled from service. "Minor failures" represent instances where a vehicle is pulled out of service for local policy reasons. For example, a transit agency may prohibit operation of a bus with inoperable air conditioning (AC) even though the bus could operate without AC.

FTA agrees with the comment suggesting that the reliability measure should only capture major mechanical failures since "minor failures" are linked to local policy. FTA has revised the measure in the final National Safety Plan to be "mean distance between *major mechanical* failures by mode." "Major mechanical failures" only encompass vehicles failures, and not the failure of infrastructure, equipment, etc.

Transit operators should combine this data to arrive at a number for mean distance between major mechanical failures by mode, and then set a target to improve performance for this measure. This may require agencies that currently are not required to report to the NTD, to begin collecting major mechanical failures and vehicle miles by mode. However, nothing in the Plan

changes reporting requirements or requires recipients to report any new information. Each agency will set targets based on the data it collects and FTA will not be collecting those targets.

Establishing Baselines

Several commenters provided commentary on the establishment of baselines for performance metrics. Two commenters questioned how FTA will gather sufficient and consistent data to establish baseline measurements. One commenter stated that FTA may struggle to gather consistent three-year data to be able to establish an initial time-weighted average for FTA's proposed safety criterion measures. Another commenter stated that baselines should not be established for all performance measures and that it is not appropriate for agencies to set baseline targets for fatalities and injuries, as anything above zero would be inappropriate.

An additional commenter recommended that FTA require transit agencies to establish baseline performance metrics for each different system (age, use, etc.) within the larger transportation system. This commenter asserted that large transit systems often have heterogeneous transportation infrastructure and it may not be appropriate or efficient to combine all systems under one set of metrics.

FTA's Response

FTA acknowledges that it may be difficult for agencies with immature safety risk management processes to establish baselines. However, FTA believes that establishing baseline targets is necessary for agencies to assess improvements in safety performance for future comparison. Although the baseline target for any safety performance measure should include at least three years of data to establish an initial time-weighted average (metric) for the measure, initial baseline targets may be based on the best available information to an agency.

The National Safety Plan does not prescribe a methodology for establishing baseline targets. FTA recognizes that each transit agency has its own operating policies that impact how performance is measured. However, FTA hopes that bringing greater attention to safety performance through the National Safety Plan will encourage more robust, consistent data collection, analysis and reporting in the future.

Other Comments on Safety Performance Measures

Multiple commenters recommended expanding the list of performance measures. One commenter requested

that FTA avoid duplicative requirements in performance measures. One commenter recommended that FTA expand the list of performance measures to include measures for job safety analysis, operational performance for employees, rule compliance, close calls and near misses, and hazard identification and mitigation. Two commenters requested that FTA add leading indicators to the list of measures to promote proactive aspects of the SMS.

Several commenters requested that FTA provide more information about the performance measures, including additional information about implementation and guidance concerning "local safety plans." One commenter asserted that the current performance measures are inappropriate.

One commenter stated that the current NTD has sufficient data to create performance targets at the national level, thereby developing consistent safety goals throughout the transit industry.

FTA's Response

The performance measures proposed in the National Safety Plan were designed to provide a strategic approach to improving safety performance in the day-to-day operations of public transportation. As the Safety Program matures, FTA will establish additional performance measures. Until such time, the final National Safety Plan maintains the proposed performance measures. In addition, at this time, FTA is not establishing national performance targets, but may do so in the future.

FTA disagrees that the proposed performance measures are inappropriate. The proposed safety performance measures were derived from information that recipients already report to the NTD. It is important to note that the performance measures established in the final National Safety Plan are the minimum measures that operators must set targets to under their public transportation agency safety plans. Until such time as FTA establishes additional measures based on leading indicators, FTA encourages transit agencies to add more proactive, leading measures into their own performance metrics.

MAP-21 created a performance-based and multimodal program to strengthen the U.S. transportation system. By focusing on national goals, increasing accountability, and improving transparency, these changes will improve decision-making through better informed planning and programming. The U.S. Department of Transportation

is implementing the new MAP-21 performance requirements through a number of rulemakings and Plans that establish performance measures and target setting requirements for recipients. FTA will issue guidance to assist the transit industry as it implements safety and transit asset management performance management. Upon issuance of the Agency Safety Plan rule FTA will provide specific guidance on implementing the requirements for public transportation agency safety plans.

Data Collection

One commenter requested clarification on how data gathered under an SMS program can be used to anticipate future risks if the exact causes of many accidents are often unknown. The commenter also questioned how FTA will gather at least three years of consistent data to establish averages for FTA's proposed safety performance measures, as indicated in the National Safety Plan.

Two commenters stated that data collection must be consistent across all FTA programs and clear reporting definitions must be crafted to ensure consistency. A couple of commenters requested additional clarification regarding how agencies should use the data they collect in conjuncture with data collected by other transit agencies. Those commenters asked whether or not transit agencies should compare safety data with other agencies when creating their own SMS plans. Some commenters expressed concern about the potential burdens of data collection if agencies are encouraged to collect and analyze safety data from other organizations to include in their safety plans.

One commenter recommended that FTA establish a strategic data management plan to aid in the standardization and analysis of safety data, suggesting that the NTD and SSO program should be used to analyze historical safety trends and establish minimum hazard criteria and targets. Another commenter indicated that it would be helpful if FTA establish a Web site where safety performance data analysis results could be shared and reviewed.

FTA's Response

Managing safety performance with current data and analysis is critical to the success of any effective SMS. SMS data collection efforts are more comprehensive than traditional methods. If transit agencies lack relevant information it may cause them to leave unaddressed critical gaps in safety. In SMS, agencies anticipate

future risk by measuring proactive mitigation efforts to determine the effectiveness of those efforts. These measures look at behaviors or performance linked to accident prevention or organizational actions taken before accidents occur, which lessen the likelihood the negative events will occur. Lagging measures are also necessary by revealing the frequency of missed targets and identifying where insufficiently mitigated risk needs to be addressed.

FTA recognizes the importance of data collection and analysis and setting goals based on this information. Accordingly, FTA has tasked TRACS to develop recommendations that help define the functional requirements of a comprehensive safety data and performance management approach that will inform FTA of the data required to implement an effective transit Safety Management System and how to collect and employ it to effectively improve safety performance. FTA is seeking specific recommendations on how it should standardize safety performance tools and capabilities, including safety performance monitoring; safety performance measurement, including standard definitions and baselines; hazard management and risk monitoring capabilities; and standard methods for data analysis and storage. FTA intends to utilize the TRACS recommendations in its development of enhanced internal data capabilities and guidance for the transit industry.

Comments: Relationship Between Safety Performance and Transit Asset Management

A couple of commenters stated that there are several inconsistencies between the National Safety Plan and FTA's Transit Asset Management rule, and that these inconsistencies should be eliminated. One commenter recommended that the Transit Asset Management rule serve as the standard across all Section 5329 rules.

FTA's Response

FTA disagrees that the proposed National Safety Plan was inconsistent with Transit Asset Management NPRM. FTA's approach to Transit Asset Management is consistent with SMS. A fundamental aspect of transit asset management is the monitoring of asset condition data as an indicator of system performance. Similarly, SMS is a formal data-driven approach to managing safety risk and assuring the effectiveness of safety risk mitigations. SMS does not require that a specific action be taken to address a specific safety risk. SMS merely provides an agency with the

information necessary to identify and understand safety risks, and subsequently make a determination about how to mitigate those risks.

C. Chapter III—Managing Risks and Assuring Safe Performance in Public Transportation

Comments: Safety Advisories

A few commenters provided comments concerning safety advisories. One commenter stated that safety advisories are beneficial, but they would be more valuable if they were issued with greater frequency and included analysis of the impact of previous safety advisories. Another commenter requested that FTA issue safety advisories for the bus industry along with the rail industry, while another agency requested more information related to how transit agencies should incorporate safety advisories into their safety plans.

FTA's Response

Due to the nature of an advisory, an operator need not "comply" with an advisory, but instead would decide whether or not to adopt the recommended actions. Each operator should determine whether or not the hazard or risk addressed in an advisory is relevant to its system and determine appropriate mitigations.

To date, FTA has only issued advisories related to hazards or risks that may impact rail transit operators. In the future FTA may issue advisories for other modes of transit.

Comments: Standards

Multiple commenters provided input on the voluntary nature of the National Safety Plan's safety standards. Several commenters, including multiple State DOTs and a Federal agency, expressed concern about the voluntary nature of the program. These commenters suggested that Congress intended for (and required) FTA to establish minimum mandatory criteria, not voluntary criteria, and that FTA should adjust the National Safety Plan accordingly by making the National Safety Plan a regulation instead of a guidance document. One commenter asserted that performance measures in operations should be based on robust rules-based compliance programs with an emphasis on mentoring and coaching.

Other commenters approved of the voluntary nature of the National Safety Plan's safety standards. One commenter praised the National Safety Plan for being prescriptively limited and voluntary, which would allow agencies

greater flexibility in implementing a safety program.

One commenter noted that voluntary standards for heavy and light rail are inadequate and are in need of revision. The commenter stated that heavy and light rail vehicles need additional crashworthiness, event recorder, safety appliance, fire, and camera safety standards.

Several commenters responded to a request from FTA to provide examples of voluntary safety standards that transit agencies have adopted.

A couple of commenters strongly encouraged FTA to strengthen vehicle safety performance standards by adding a fire safety component, noting that current fire safety provisions, particularly with regards to the interior of the vehicle, are insufficient. The commenters recommended that fire performance standards for vehicle seating be included in the National Safety Plan. Several commenters stated that FMVSS 302 is not adequate to ensure fire safety in public transit systems and is a standard that has been discredited by repeated scientific study. A number of commenters specifically singled out bus systems as a particularly inappropriate use of the FMVSS 302 standard, stating that FMVSS 302 is a bare minimum standard for cars that should not apply to buses because buses hold more people and have fewer potential exits.

Several commenters provided recommendations for standards that could replace FMVSS 302. Some commenters recommended FTA use the National Safety Council fire test, ASTM E2574, NFPA 130, or a heat release standard instead. These commenters recommended that fire standards should be requirements, not recommendations.

One commenter noted that it has adopted the Federal Motor Carrier Safety Administration (FMCSA) regulations as a baseline to follow for operations and maintenance safety and encouraged FTA to include these standards in the National Safety Plan. Another commenter indicated that it has adopted The American Society of Mechanical Engineers (ASME) safety standards for heavy rail vehicles, Institute of Electrical and Electronics Engineers (IEEE) standards for rail transit event recorders, and National Fire Protection Association (NFPA) standards for fixed guideway transit and passenger rail systems.

One commenter responded to FTA's request for comments on the costs of implementing voluntary safety standards, indicating that the cost of implementing voluntary safety standards was minimal. One commenter

responded to FTA's request for examples of additional standards adopted by transit agencies, stating that it has adopted the R179 Train Specification standards in addition to voluntary safety standards.

Some commenters suggested that FTA include hour-of-service and fitness for duty requirements, as well as standards for train specifications (R179). A transit agency and a professional association recommended that transit policing and customer expectation standards should be included in the National Safety Plan.

FTA's Response

For this first iteration of the National Safety Plan FTA believes that it is appropriate to include only voluntary standards. The FAST Act requires the Secretary of Transportation to conduct a review of public transportation safety standards and protocols to document existing standards and protocols that are currently used in transit and examine their efficacy. The content of the review must include minimum safety performance standards developed by the public transportation industry and safety performance standards, practices, or protocols in use by rail fixed guideway public transportation systems. The review also must include rail and bus safety standards, practices, or protocols in use by public transportation systems regarding rail and bus design and the workstation of rail and bus operators; scheduling fixed route rail and bus service with adequate time and access for operators to use restroom facilities; fatigue management; and crash avoidance and worthiness.

FTA has engaged in this review through the issuance of a **Federal Register** notice requesting public comment on its Compendium (inventory) of transit safety standards and protocols. See 81 FR 30605 (May 17, 2016). The Compendium includes an inventory of transit standards and protocols that FTA has identified, including standards or regulations promulgated by other Federal agencies and the standards and issue areas referenced in the comments.

Upon completion of the review and evaluation, FTA will issue a report presenting the findings of the review of standards; the outcome of the evaluation; a comprehensive set of recommendations to improve the safety of the public transportation industry, including recommendations for regulatory changes, if applicable; and actions taken to address the recommendations provided.

FTA will issue future mandatory standards through the notice and comment rulemaking process.

Carolyn Flowers,

Acting Administrator.

BILLING CODE P

DEPARTMENT OF TRANSPORTATION

Federal Transit Administration

[Docket Number: FTA-2016-0044]

Notice of Availability of Programmatic Assessment of Greenhouse Gas Emissions From Transit Projects

AGENCY: Federal Transit Administration (FTA), DOT.

ACTION: Notice of availability.

SUMMARY: The Federal Transit Administration (FTA) announces the availability of a final Programmatic Assessment of Greenhouse Gas Emissions from Transit Projects (Programmatic Assessment) and an accompanying Greenhouse Gas Emissions (GHG) Estimator Tool (Estimator Tool). On November 22, 2016, FTA announced in the **Federal Register** the availability of the draft Programmatic Assessment and Estimator Tool and requested public comment. FTA received five comment letters and presents its responses to those comments in this notice.

DATES: This final Programmatic Assessment and Estimator Tool are effective immediately.

ADDRESSES: The final Programmatic Assessment and Estimator Tool will be made available in the U.S. Government's electronic docket site at <http://www.regulations.gov> under docket number FTA-2016-0044 and on the FTA Web site at <http://www.fta.dot.gov>.

FOR FURTHER INFORMATION CONTACT: Maya Sarna, Office of Environmental Programs, (202) 366-5811, or Christopher Van Wyk, Office of Environmental Programs, (202) 366-1733; Helen Serassio, Office of Chief Counsel, (202) 366-1974. FTA is located at 1200 New Jersey Avenue SE., Washington, DC 20590. Office hours are from 9:00 a.m. to 5:00 p.m. ET, Monday through Friday, except Federal holidays.

SUPPLEMENTARY INFORMATION:

Background

In August 2016, the Council on Environmental Quality (CEQ) released its *Final Guidance for Federal Departments and Agencies on*

Consideration of Greenhouse Gas Emissions and the Effects of Climate Change in National Environmental Policy Act (NEPA) Reviews. The guidance provides a framework for agencies to consider the effects of a proposed action on climate change, as indicated by its estimated greenhouse gas (GHG) emissions. The CEQ guidance notes that an agency may decide, rather than analyze GHG emissions project-by-project, that it would be useful and efficient to provide an aggregate analysis of GHG emissions or climate change effects through programmatic analysis and then incorporate that analysis by reference into future NEPA reviews. FTA currently considers it practicable to assess the effects of GHG emissions and climate change for a variety of transit projects at a programmatic level.

The purpose of the *Programmatic Assessment of Greenhouse Gas Emissions from Transit Projects* is to: (1) Report on whether certain types of proposed transit projects merit detailed analysis of their GHG emissions at the project-level for purposes of NEPA; and (2) provide a source of data and analysis for FTA and its grantees to reference in future NEPA documents for projects where detailed, project-level GHG analysis would provide only limited information beyond what is collected and considered in the assessment. The Programmatic Assessment presents results from an analysis to estimate direct and indirect GHG emissions generated from the construction, operations, and maintenance phases of projects across select transit modes. The findings provide a reference for FTA and its grantees to use in future NEPA documents to describe the potential effects of proposed transit investments on partial lifecycle GHG emissions. This assessment's results can inform transit project sponsors who are considering the implications of GHG emissions of future transit investments or who might independently want to evaluate the GHG emissions benefits and cost of such investments. As part of the Programmatic Assessment, FTA developed the Estimator Tool. The Estimator Tool is a spreadsheet-based tool that allows users to calculate partial lifecycle GHG emissions estimates by transit mode for the construction, maintenance, and operations phases of transit project development, as well as an estimate of personal vehicle emissions displaced due to transit's "ridership effect."

Comments Received

On November 22, 2016, FTA announced in the **Federal Register** the availability of the draft Programmatic

Assessment and requested comment on it. As of the date of issuance of this notice of availability, FTA considered all comments received in the docket. FTA received comments from one trade association, three transit agencies, and one member of the public. FTA organized these comments by topic. This notice discusses the comments FTA received, provides FTA's responses to those comments, and identifies resulting changes FTA made to the final Programmatic Assessment and Estimator Tool.

One commenter requested clarification on three points: (1) Showing the calculation for deriving the GHG emissions value; (2) provide displaced auto vehicle miles traveled (VMT) data values, including fuel efficiencies and emissions factors used; and (3) discussion of displaced VMT in methodology, including whether annual displaced VMT for buses were included in the assessment.

FTA responds to the points as follows. First, the calculation for the GHG emissions output values are included in the Estimator Tool matrix (Excel spreadsheet that is an accompanying tool to the Programmatic Assessment). The calculation is: (construction sources * emission factor) + (maintenance sources * emission factor) – (displaced VMT sources * emission factor). Second, Table 2–3 includes values for gasoline-fueled sedans. It is the first entry in the sedan/ auto cell on Table 2–3, and is combined with Ethanol. The upstream emissions for gasoline-fueled sedans are 0.0001 MTCO₂eq per mile and the downstream emissions are 0.0003 MTCO₂eq per mile. This emission source was derived from the "Greenhouse Gases, Regulated Emissions, and Energy Use in Transportation Model" by Argonne National Laboratory (GREET), as described on page 12 of the final Programmatic Study. Third, annual displaced VMT for both bus and rail transit (the change in annual transit VMT between the build and the no-build scenario) are included in the calculation of the project's total annual GHG emissions. The calculation of a project's total annual displaced GHG emissions includes both personal vehicle-displaced VMT and annual transit-displaced VMT. The text of the final Programmatic Assessment will be updated to describe how annual displaced-transit VMT is included in the methodology and how it was used in the scenario testing, as noted by the commenter.

One trade association provided the following comments on the draft

Programmatic Assessment, with support mentioned by a number of transit agencies: (1) Materials for construction should not be included as part of the construction-related emissions factors; (2) litigation issues may arise due to data quality/limitations of construction-related emissions factors; (3) the impact of transit-oriented development and the land use effect in displacing GHG emissions was not included in the draft Programmatic Assessment; (4) incorporating and clarifying the methodology for calculating displaced VMT; (5) exemptions for light rail, streetcar, and BRT projects from completing GHG assessments should be provided.

On the first general point, the Council of Environmental Quality's guidance recommends that agencies quantify a proposed action's projected direct and indirect GHG emissions, taking into account available data and GHG quantification tools that are suitable for and commensurate with the proposed agency action. For the purpose of FTA's Programmatic Assessment, upstream emissions from the construction of public transportation facilities and infrastructure are considered indirect GHG emissions of a proposed project. The methodology used in the Programmatic Assessment is optional and may be edited to suit the requirements of a specific project, especially in scenarios where transit agencies are able to better quantify upstream emissions due to better available material sourcing procurement processes. The Federal Highway Administration's Infrastructure Carbon Estimator (ICE) provides readily available data to estimate the construction-related upstream emissions. The ICE tool provides estimates for the upstream emissions associated with constructing public transportation facilities, including the emissions associated with the extraction, transport, and production of the materials. Transit agencies are encouraged to consider opportunities within their procurement activities to mitigate a project's GHG emissions. As requested specifically by the commenter, FTA recognizes that emissions due to upstream materials acquisition activities are in fact the responsibility of the suppliers and manufacturers of these products. But as this commenter notes, there may be ways of procuring materials that can help to mitigate the GHG emissions associated with those materials, and FTA will consider ways of doing so, providing guidance as appropriate.

On the second general point, the programmatic assessment methodology

relies on the best available data and tools to estimate the GHG emissions associated with transit projects. Where available, the Programmatic Assessment uses conservative emission estimates for construction-related activities that involved direct and indirect emissions—electricity use and sources of construction materials. For example, the Estimator Tool's underground track construction emissions factor corresponding to ICE's most conservative emissions estimate. The emissions factors associated with in the Estimator Tool for electrically powered vehicles use the "U.S. Mix" region from the Environmental Protection Agency's (EPA's) eGRID2012, which represents an average value for the country. EPA's eGRID also provides GHG emission data at the sub-region level, which reflect more region-specific electricity generation. The Programmatic Assessment (Appendix B) and the associated Estimator Tool include the eGRID sub-region electricity emission factors, which reflect more region-specific electricity generation. While FTA understands the issue related to litigation due to data quality issues, the Programmatic Assessment is a capture in time of the best available data. FTA's Programmatic Assessment also establishes the methodology used to derive GHG emissions factors that may be replicated by transit agencies using locally available data sets in the Estimator Tool. Lastly, FTA would note that the GHG emissions provide a conservative understanding of transit's contribution to GHG emissions in order to provide disclosure for purposes of NEPA compliance. The use of the Programmatic Assessment is entirely optional, but FTA believes it would reduce litigation risk by taking a "hard look" at GHG emissions due to transit projects, even if that assessment is more conservative than actual emissions on certain projects.

On the third general point, the Programmatic Assessment acknowledges that, in addition to displacing automobile VMT, transit can help reduce congestion and spur more compact, transit-oriented development, thus reducing GHG emissions that may have otherwise occurred. The longer timeframe associated with realizing the GHG emission reduction benefits from denser development was not the primary reason why a land use component was not included in the methodology. A land use component was not included because the available tools (*i.e.*, the Land Use Benefit Calculator associated with TCRP Report 176) could not be applied at a

programmatic scale due to its location-specific nature. Transit agencies that wish to include the GHG emission benefits associated with the land use effect of transit may do so in NEPA documents. For example, agencies could use the results generated by the Land Use Benefit Calculator and add it to the results generated using the Estimator Tool. FTA notes that including a land use component, if possible for a national Programmatic Assessment, would in most cases reduce the predicted GHG emissions that can be attributed to transit projects.

On the fourth general point, FTA notes that the Programmatic Assessment does not specify the methodology that a transit agency should use to generate travel forecasts. The sample of transit projects analyzed in the Programmatic Assessment included 36 transit projects that applied for funding through the 49 U.S.C. 5309 Capital Investment Grants (CIG) Program. As part of the CIG program, each project developed and submitted travel forecast information, including displaced VMT, using one of the following approaches: Region-wide travel models; incremental data-driven methods; or FTA's Simplified Trips-on-Project Software (STOPS). FTA's Programmatic Assessment cannot include revised methodology incorporating the Land Use Benefit Calculator or STOPS because neither can be developed on a programmatic scale. Transit agencies that choose to calculate GHG emissions for a project can choose the method for calculating VMT.

On the fifth general point, FTA developed the Programmatic Assessment to provide transit agencies with a useful source of methodology, data, and analysis to reference in future environmental review documents to meet NEPA requirements. FTA recommends that NEPA reviews for individual BRT and streetcar projects incorporate this Programmatic Assessment by reference, with no additional need for project-specific analysis for purposes of NEPA. FTA also recommends that light rail projects with a high proportion of displaced VMT to annual transit VMT, regardless of length, alignment, and number of stations, incorporate this Programmatic Assessment by reference, with no additional need for project-specific analysis for purposes of NEPA. In cases where a light rail project is expected to have a lower ratio of displaced VMT to annual transit VMT, however, conducting a project-specific analysis using the Estimator Tool or another locally recommended approach is likely appropriate for purposes of NEPA

compliance. FTA will continue to evaluate the Programmatic Assessment and Estimator Tool to make improvements that will provide better estimates of GHG emissions for transit projects. FTA is making available the final Programmatic Assessment at this time, however, so that it is available for incorporation by reference in NEPA documents going forward while FTA continues to make improvements. FTA is also making available its Estimator Tool for transit agencies that wish to have a more tailored estimate of emissions or for which a project differs substantially from those used to create the Programmatic Assessment.

Authority: 42 U.S.C. 4321, *et seq.*; 40 CFR 1507.3; 49 CFR 1.81(a)(5).

Lucy Garliauskas,

Associate Administrator, Office of Planning and Environment, Federal Transit Administration.

BILLING CODE P

DEPARTMENT OF TRANSPORTATION

National Highway Traffic Safety Administration

[Docket No. NHTSA-2015-0075; Notice 2]

PACCAR, Inc., Grant of Petition for Decision of Inconsequential Noncompliance

AGENCY: National Highway Traffic Safety Administration (NHTSA), Department of Transportation (DOT).

ACTION: Grant of petition.

SUMMARY: PACCAR, Inc. (PACCAR), has determined that certain Peterbilt and Kenworth trucks do not fully comply with Federal Motor Vehicle Safety Standard (FMVSS) No. 108, *Lamps, Reflective devices, and Associated Equipment*. PACCAR filed a noncompliance report dated June 11, 2015, that was later revised on June 12, 2015. PACCAR also petitioned NHTSA on July 9, 2015, for a decision that the subject noncompliance is inconsequential as it relates to motor vehicle safety.

ADDRESSES: For further information on this decision contact Mike Cole, Office of Vehicle Safety Compliance, the National Highway Traffic Safety Administration (NHTSA), telephone (202) 366-2334, facsimile (202) 366-5930.

SUPPLEMENTARY INFORMATION:

I. Overview

PACCAR, Inc. (PACCAR), has determined that certain Peterbilt and

Kenworth trucks do not fully comply with paragraph S9.3.2 of Federal Motor Vehicle Safety Standard (FMVSS) No. 108, *Lamps, Reflective devices, and Associated Equipment*. PACCAR filed a noncompliance report dated June 11, 2015, that was later revised on June 12, 2015, pursuant to 49 CFR part 573, *Defect and Noncompliance Responsibility and Reports*. PACCAR also petitioned NHTSA on July 9, 2015, pursuant to 49 U.S.C. 30118(d) and 30120(h) (see implementing rule at 49 CFR part 556), for an exemption from the notification and remedy requirements of 49 U.S.C. Chapter 301 on the basis that this noncompliance is inconsequential to motor vehicle safety.

Notice of receipt of PACCAR's petition was published, with a 30-day public comment period, on September 25, 2015 in the **Federal Register** (80 FR 57911). One comment was received. To view the petition, comments and all supporting documents log onto the Federal Docket Management System (FDMS) Web site at: <http://www.regulations.gov/>. Then follow the online search instructions to locate docket number "NHTSA-2015-0075."

II. Trucks Involved

Affected are approximately 197 MY 2015–2016 Kenworth K270 and K370 manufactured between November 11, 2014 and March 18, 2015 and MY 2015–2016 Peterbilt 220 manufactured between November 10, 2014 and March 18, 2015.

III. Noncompliance

PACCAR explains that due to a programming error in the cab controller software in the subject trucks, the turn signal pilot indicator located on the instrument panel flashes twice as fast as the turn signals flash, and therefore does not meet the requirements of paragraph S9.3.2 of FMVSS No. 108.

IV. Rule Text

Paragraph S9.3.2 of FMVSS No. 108 requires in pertinent part

S9.3.2 The indicator must consist of one or more lights flashing at the same frequency as the turn signal lamps.

V. Summary of PACCAR's Position

PACCAR stated its belief that the subject noncompliance is inconsequential to motor vehicle safety. PACCAR states that the purpose of the turn signal pilot indicator is to assure that the vehicle operator can determine whether the turn signal system is activated. Thus, PACCAR believes that the pilot indicators in the subject trucks fully accomplishes that purpose; *i.e.*,

they flash when the turn signal is activated, and they cease flashing when the turn signal is deactivated (either manually or automatically).

PACCAR reviewed the agency's decisions on petitions for inconsequentiality in connection with various noncompliances with turn signal requirements. While PACCAR did not find any prior decisions that are similar to this noncompliance, PACCAR believes that NHTSA has granted previous petitions in connection with turn signal noncompliance that carried potentially greater safety risks.

PACCAR is not aware of any crashes or injuries associated with the noncompliance and it has not received any consumer complaints or warranty claims related to this issue.

PACCAR additionally informed NHTSA that after the noncompliance was discovered, all production of the noncompliant trucks in PACCAR's possession was put on hold until the software error could be corrected.

In summation, PACCAR believes that the described noncompliance of the subject trucks is inconsequential to motor vehicle safety, and that its petition, to exempt PACCAR from providing recall notification of noncompliance as required by 49 U.S.C. 30118 and remedying the recall noncompliance as required by 49 U.S.C. 30120 should be granted.

NHTSA's Decision

Comments Received: One comment was received from Mr. Bryan Branson who supported granting this petition. Mr. Branson explained that because the in-cab warning to the driver is there and working, this noncompliance causes no safety hazard to the motoring public. Mr. Branson also believed that a recall for this issue would be a costly and difficult burden to the truck owner if they had to take the unit out of service to repair this issue.

NHTSA's Analysis: As noted by PACCAR, the (exterior mounted) turn signal lamps on the affected vehicles comply with all requirements of FMVSS No. 108. As such, surrounding traffic and pedestrians would be unaffected by the noncompliance and would be notified of the driver's intention to make a turn when the affected vehicle's turn signals are activated. The person solely affected by the noncompliance would be the individual driver of the vehicle. When the turn signal lamps are activated, the driver will still be receiving the required notification that the vehicle's turn signals are flashing, albeit at twice the required rate. This could be seen as a minor annoyance to the driver; however, the agency does not

believe that this would distract the driver or cause the driver to refrain from using the turn signal lamps to indicate his intention to turn. Thus, the agency does not believe that this is a safety issue.

Further, PACCAR indicated that most of the trucks in this population are covered by another recall (15V-206) and the remedy for that recall will include a software reflash that will correct the turn signal indicator lamp flash rate at the same time. As such, we believe that truck owners will be afforded a correction for this issue at their truck's next service visit or when receiving the remedy to the aforementioned recall.

NHTSA's Decision: In consideration of the foregoing, NHTSA finds that PACCAR has met its burden of persuasion that the subject FMVSS No. 108 noncompliance is inconsequential to motor vehicle safety. Accordingly, PACCAR's petition is hereby granted and PACCAR is exempted from the obligation of providing notification of, and remedy for the subject noncompliance.

NHTSA notes that the statutory provisions (49 U.S.C. 30118(d) and 30120(h)) that permit manufacturers to file petitions for a determination of inconsequentiality allow NHTSA to exempt manufacturers only from the duties found in sections 30118 and 30120, respectively, to notify owners, purchasers, and dealers of a defect or noncompliance and to remedy the defect or noncompliance. Therefore, this decision only applies to the subject vehicles that PACCAR no longer controlled at the time it determined that the noncompliance existed. However, the granting of this petition does not relieve vehicle distributors and dealers of the prohibitions on the sale, offer for sale, or introduction or delivery for introduction into interstate commerce of the noncompliant vehicles under their control after PACCAR notified them that the subject noncompliance existed.

Authority: 49 U.S.C. 30118, 30120; delegations of authority at 49 CFR 1.95 and 501.8.

Jeffrey M. Giuseppe,
Director, Office of Vehicle Safety Compliance.
[FR Doc. 2017-01003 Filed 1-17-17; 8:45 am]

BILLING CODE 4910-59-P

DEPARTMENT OF TRANSPORTATION**National Highway Traffic Safety Administration****[Docket No. NHTSA–2016–0092; Notice 2]****Mercedes-Benz USA, LLC, Grant of Petition for Decision of Inconsequential Noncompliance****AGENCY:** National Highway Traffic Safety Administration (NHTSA), Department of Transportation (DOT).**ACTION:** Grant of petition.

SUMMARY: Mercedes-Benz USA, LLC (MBUSA), has determined that certain model year (MY) 2016 Mercedes GL-Class multipurpose passenger vehicles do not fully comply with Federal Motor Vehicle Safety Standard (FMVSS) No. 110, *Tire Selection and Rims and Motor Home/Recreation Vehicle Trailer Load Carrying Capacity Information for Motor Vehicles with a GVWR of 4,536 kilograms (10,000 pounds) or Less*. MBUSA filed a defect report dated August 12, 2016, and amended it on August 29, 2016. MBUSA then petitioned NHTSA on August 31, 2016, for a decision that the subject noncompliance is inconsequential as it relates to motor vehicle safety.

ADDRESSES: For further information on this decision contact Mr. Kerrin Bressant, Office of Vehicle Safety Compliance, the National Highway Traffic Safety Administration (NHTSA), telephone (202) 366–1110, facsimile (202) 366–5930.

SUPPLEMENTARY INFORMATION:**I. Overview**

Mercedes-Benz USA, LLC (MBUSA), has determined that certain model year (MY) 2016 Mercedes GL-Class multipurpose passenger vehicles do not fully comply with paragraph S4.3(d) of Federal Motor Vehicle Safety Standard (FMVSS) No. 110, *Tire Selection and Rims and Motor Home/Recreation Vehicle Trailer Load Carrying Capacity Information for Motor Vehicles with a GVWR of 4,536 kilograms (10,000 pounds) or Less*. MBUSA filed a report dated August 12, 2016, and amended it on August 29, 2016, pursuant to 49 CFR part 573, *Defect and Noncompliance Responsibility and Reports*. MBUSA then petitioned NHTSA on August 31, 2016, pursuant to 49 U.S.C. 30118(d) and 30120(h) and their implementing regulations at 49 CFR part 556, for an exemption from the notification and remedy requirements of 49 U.S.C. Chapter 301 on the basis that this noncompliance is inconsequential as it relates to motor vehicle safety.

Notice of receipt of the petition was published, with a 30-day public comment period, on November 14, 2016, in the **Federal Register** (81 FR 79558). No comments were received. To view the petition and all supporting documents log onto the Federal Docket Management System (FDMS) Web site at: <http://www.regulations.gov/>. Then follow the online search instructions to locate docket number “NHTSA–2016–0092.”

II. Vehicles Involved

Affected are 2,917 of the following MY 2016 Mercedes-Benz GL-Class multipurpose passenger vehicles manufactured between December 1, 2015, and February 5, 2016:

- GL 350 Bluetec 4Matic SUV (155 vehicles)
- GL 450 4Matic SUV (2,482 vehicles)
- GL 550 4Matic SUV (280 vehicles)

III. Noncompliance

MBUSA explains that the noncompliance is due to a labeling error. The subject vehicles are equipped with a spare tire, size T155/80 R19 114M; however, the tire information placard affixed to the vehicles' B-pillar incorrectly identifies the spare tire size as T165/90 R19 119M. The placard therefore does not comply with requirements specified in paragraph S4.3(d) of FMVSS No. 110.

IV. Rule Text

Paragraph S4.3 of FMVSS No. 110 states, in pertinent part:

S4.3 *Placard*. Each vehicle, except for a trailer or incomplete vehicle shall show the information specified in S4.3 (a) through (g), and may show, at the manufacturer's option, the information specified in S4.3 (h) through (i), on a placard permanently affixed to the driver's side B-pillar. In each vehicle without a driver's side B-pillar and two doors on the driver's side of the vehicle opening in the opposite directions, the placard shall be affixed on the forward edge of the rear side door . . .

(d) Tire size designation, indicated by the headings “size” or “original tire size” or “original size,” and “spare tire” or “spare,” for the tires installed at the time of the first purchase for purposes other than resale. For full size spare tires, the statement “see above” may, at the manufacturer's option replace the tire size designation. If no spare tire is provided, the word “none” must replace the tire size designation; . . .

V. Summary of MBUSA's Petition

MBUSA described the subject noncompliance and stated its belief that the noncompliance is inconsequential as it relates to motor vehicle safety.

In support of its petition, MBUSA stated the following:

(a) Both tire sizes can be used on the vehicle. The spare tire with the size of T165/90 R19 119M (the size stated on the B-pillar label) is equipped on older models produced before November 2015. The purpose of FMVSS No. 110 is to “prevent tire overloading,” see 40 CFR 571. S1, and no overloading will result from the incorrect label because either tire size (the one stated on the label or the one actually on the vehicle) can be used.

(b) The tire pressure is the same for both spare tire sizes. When checking the tire pressure for the spare tire, the customer will find the correct tire pressure values on the label. Again, no overloading will result from the incorrect label because the correct tire pressure values are provided.

(c) Information regarding the correct spare tire is available to the vehicle owner. The vehicles are equipped with an Operator's Manual which describes both spare tire sizes. Also, if a tire needs to be replaced on the spare wheel, the dealer Electronic Parts Catalogue (EPC) correctly specifies the proper tire part number. Additionally, further assistance regarding the correct spare tire can be provided by the customer assistance center.

(d) The presumption that the issue described above will have an inconsequential impact on safety is supported by field data: MBUSA is not aware of any customer complaints, accidents, or injuries alleged to have occurred as a result of this tire label discrepancy in the United States.

MBUSA concluded by expressing the belief that the subject noncompliance is inconsequential as it relates to motor vehicle safety, and that its petition to be exempted from providing notification of the noncompliance, as required by 49 U.S.C. 30118, and a remedy for the noncompliance, as required by 49 U.S.C. 30120, should be granted.

NHTSA's Decision

NHTSA's Analysis: The intent of FMVSS No. 110 is to ensure that vehicles are equipped with tires appropriate to handle maximum vehicle loads and prevent overloading. MBUSA explained that the tire placard on the affected GL-Class vehicles specifies a spare tire size (T165/90 R19 119M) that is different than the originally equipped spare tire size (T155/80R19 114M). MBUSA stated that no overloading will occur if either tire is used. The agency analyzed the load rating specifications of both spare tire sizes and confirmed that either tire could be used and are appropriate for the subject vehicle's maximum loaded weight conditions.

MBUSA explained that the recommended tire inflation pressure for the labeled spare tire listed on the FMVSS No. 110 tire placard is the same inflation pressure that MBUSA would recommend for the originally equipped spare tire. The agency verified that both spare tire sizes at the labeled recommended inflation pressure are appropriate for the maximum loaded weight of the subject vehicles. If a consumer inadvertently used the labeled inflation pressure to inflate the originally equipped spare tire, the tire load rating would be sufficient for the maximum loaded vehicle weight.

Furthermore, MBUSA explained that the subject vehicle's owner's manuals describe both spare tire sizes. The agency believes this additional information can be used by the consumer to ensure either size is appropriate for use.

NHTSA's Decision: In consideration of the foregoing, NHTSA finds that MBUSA has met its burden of persuasion that the subject FMVSS No. 110 noncompliance in the affected vehicles is inconsequential to motor vehicle safety. Accordingly, MBUSA's petition is hereby granted and MBUSA is consequently exempted from the obligation of providing notification of, and a free remedy for, the subject noncompliance under 49 U.S.C. 30118 and 30120.

NHTSA notes that the statutory provisions (49 U.S.C. 30118(d) and 30120(h)) that permit manufacturers to file petitions for a determination of inconsequentiality allow NHTSA to exempt manufacturers only from the duties found in sections 30118 and 30120, respectively, to notify owners, purchasers, and dealers of a defect or noncompliance and to remedy the defect or noncompliance. Therefore, this decision only applies to the subject vehicles that MBUSA no longer controlled at the time it determined that the noncompliance existed. However, the granting of this petition does not relieve vehicle distributors and dealers of the prohibitions on the sale, offer for sale, or introduction or delivery for introduction into interstate commerce of the noncompliant vehicles under their control after MBUSA notified them that the subject noncompliance existed.

Authority: 49 U.S.C. 30118, 30120; delegations of authority at 49 CFR 1.95 and 501.8.

Jeffrey M. Giuseppe,
Director, Office of Vehicle Safety Compliance.

BILLING CODE 4910-59-P

DEPARTMENT OF TRANSPORTATION

National Highway Traffic Safety Administration

[Docket No. NHTSA-2016-0115; Notice 1]

BMW Group of America, LLC, Incorporated, Receipt of Petition for Decision of Inconsequential Noncompliance

AGENCY: National Highway Traffic Safety Administration (NHTSA), Department of Transportation (DOT).

ACTION: Receipt of petition.

SUMMARY: BMW of North America, LLC (BMW), has determined that certain model year (MY) 2016–2017 BMW, Mini, and Rolls-Royce vehicles do not fully comply with Federal Motor Vehicle Safety Standard (FMVSS) No. 209, *Seat Belt Assemblies*. BMW filed a report dated October 13, 2016. BMW also petitioned NHTSA on November 4, 2016, for a decision that the subject noncompliance is inconsequential as it relates to motor vehicle safety.

DATES: The closing date for comments on the petition is February 17, 2017.

ADDRESSES: Interested persons are invited to submit written data, views, and arguments on this petition. Comments must refer to the docket and notice number cited in the title of this notice and submitted by any of the following methods:

- **Mail:** Send comments by mail addressed to U.S. Department of Transportation, Docket Operations, M-30, West Building Ground Floor, Room W12-140, 1200 New Jersey Avenue SE., Washington, DC 20590.

- **Hand Delivery:** Deliver comments by hand to U.S. Department of Transportation, Docket Operations, M-30, West Building Ground Floor, Room W12-140, 1200 New Jersey Avenue SE., Washington, DC 20590. The Docket Section is open on weekdays from 10 a.m. to 5 p.m. except Federal Holidays.

- **Electronically:** Submit comments electronically by logging onto the Federal Docket Management System (FDMS) Web site at <https://www.regulations.gov/>. Follow the online instructions for submitting comments.

- Comments may also be faxed to (202) 493-2251.

Comments must be written in the English language, and be no greater than 15 pages in length, although there is no limit to the length of necessary attachments to the comments. If comments are submitted in hard copy form, please ensure that two copies are provided. If you wish to receive confirmation that comments you have

submitted by mail were received, please enclose a stamped, self-addressed postcard with the comments. Note that all comments received will be posted without change to <https://www.regulations.gov>, including any personal information provided.

All comments and supporting materials received before the close of business on the closing date indicated above will be filed in the docket and will be considered. All comments and supporting materials received after the closing date will also be filed and will be considered to the fullest extent possible.

When the petition is granted or denied, notice of the decision will also be published in the **Federal Register** pursuant to the authority indicated at the end of this notice.

All comments, background documentation, and supporting materials submitted to the docket may be viewed by anyone at the address and times given above. The documents may also be viewed on the Internet at <https://www.regulations.gov> by following the online instructions for accessing the dockets. The docket ID number for this petition is shown in the heading of this notice.

DOT's complete Privacy Act Statement is available for review in a **Federal Register** notice published on April 11, 2000, (65 FR 19477-78).

SUPPLEMENTARY INFORMATION:

I. Overview

BMW of North America, LLC (BMW), has determined that certain model year (MY) 2016–2017 BMW, Mini, and Rolls-Royce vehicles do not fully comply with paragraph 4.3(j)(2)(ii) of Federal Motor Vehicle Safety Standard (FMVSS) No. 209, *Seat Belt Assemblies*. BMW filed a report dated October 13, 2016, pursuant to 49 CFR part 573, *Defect and Noncompliance Responsibility and Reports*. BMW also petitioned NHTSA on November 4, 2016, pursuant to 49 U.S.C. 30118(d) and 30120(h) and 49 CFR part 556, for an exemption from the notification and remedy requirements of 49 U.S.C. Chapter 301 on the basis that this noncompliance is inconsequential as it relates to motor vehicle safety.

This notice of receipt of BMW's petition is published under 49 U.S.C. 30118 and 30120 and does not represent any agency decision or other exercise of judgment concerning the merits of the petition.

II. Vehicles Involved

Approximately 15,630 of the following MY 2016–2017 BMW, Mini, and Rolls-Royce vehicles manufactured

between June 29, 2016 and October 10, 2016 are potentially involved:

- 2017 BMW X1 SAV (X1 sDrive28i, X1 xDrive28i)
- 2017 BMW 5 Series Gran Turismo (535i Gran Turismo, 535i xDrive Gran Turismo, 550i xDrive Gran Turismo)
- 2016 BMW 5 Series (528i, 528i xDrive, 535i, 535i xDrive, 550i, 550i xDrive, M5)
- 2016 BMW 5 Series (535d, 535d xDrive)
- 2016 Mini Cooper Clubman and Mini Cooper S Clubman
- Mini Hardtop 4-door Cooper and Mini Hardtop 4-door Cooper S
- 2017 Rolls-Royce Ghost

III. Noncompliance

BMW explains that the noncompliance involves the Emergency Locking Retractor (ELR) in the safety belt assembly of the vehicle's front left seat. These ELRs are equipped with a vehicle-sensitive locking mechanism and a webbing-sensitive locking mechanism. The noncompliance specifically involves the vehicle-sensitive locking mechanism, which does not lock as designed when subjected to the requirements of paragraph S4.3(j)(2)(ii) of FMVSS No. 209.

IV. Rule Text

Paragraph S4.3 of FMVSS No. 209 states in pertinent part:

S4.3 *Requirements for hardware . . .*

(j) *Emergency-locking retractor . . .*

(2) *For seat belt assemblies manufactured on or after February 22, 2007 and for manufacturers opting for early compliance.* An emergency-locking retractor of a Type 1 or Type 2 seat belt assembly, when tested in accordance with the procedures specified in paragraph S5.2(j)(2) . . .

(ii) Shall lock before the webbing payout exceeds the maximum limit of 25 mm when the retractor is subjected to an acceleration of 0.7 g under the applicable test conditions of S5.2(j)(2)(iii)(A) or (B). The retractor is determined to be locked when the webbing belt load tension is at least 35 N.

V. Summary of BMW's Petition

BMW described the subject noncompliance and stated its belief that the noncompliance is inconsequential as it relates to motor vehicle safety.

In support of its petition, BMW submitted the following reasoning:

(a) The vehicle-sensitive locking mechanism functions, but the noncompliance involves a slight exceedance of the FMVSS No. 209 Section S4.3(j)(2)(ii) requirement.

(b) The slight exceedance is such that, based upon testing of non-compliant units, the vehicle-sensitive locking mechanism locks at approximately 1.0g within 25mm, or at 0.7 g within 90mm.

(c) The tilt-lock function of the ELR is compliant, and locks at angles greater than 15-deg up to 41-deg when subjected to the FMVSS No. 209 Section S4.3(j)(2) rollover requirements.

(d) The ELR also contains a voluntary webbing-sensitive locking mechanism which provides crash and rollover restraint performance comparable to the performance provided by an FMVSS No. 209 compliant vehicle-sensitive locking mechanism.

(e) Crash test results comparing FMVSS No. 209 S4.3(j)(2)(ii) compliant ELRs and ELRs in which the vehicle-sensitive locking mechanism has been disabled (to demonstrate a "worst-case scenario", even though in affected vehicles the vehicle-sensitive mechanism remains functional) demonstrate comparable results according to FMVSS No. 208 assessments.

Test results indicate that any performance differences are with normal "data scatter" and are attributed to test tolerances.

(f) Affected safety belt assemblies comply with all other applicable provisions of FMVSS No. 209.

(g) NHTSA previously granted a petition from General Motors in which the ELR's vehicle-sensitive locking mechanism was completely non-functional, whereas the ELR's vehicle-sensitive locking mechanism in the affected BMW vehicles is functional, but may experience a slight exceedance of the FMVSS no. 209 S4.3(j)(2)(ii) requirement.

(h) BMW has not received any customer complaints related to this issue.

(i) BMW is not aware of any accidents or injuries related to this issue.

(j) Vehicle production has been corrected.

BMW concluded by expressing the belief that the subject noncompliance is inconsequential as it relates to motor vehicle safety, and that its petition to be exempted from providing notification of the noncompliance, as required by 49 U.S.C. 30118, and a remedy for the noncompliance, as required by 49 U.S.C. 30120, should be granted.

To view BMW's petition, test data and analyses in its entirety you can visit <https://www.regulations.gov> by following the online instructions for accessing the dockets and by using the docket ID number for this petition shown in the heading of this notice.

NHTSA notes that the statutory provisions (49 U.S.C. 30118(d) and 30120(h)) that permit manufacturers to file petitions for a determination of inconsequentiality allow NHTSA to exempt manufacturers only from the

duties found in sections 30118 and 30120, respectively, to notify owners, purchasers, and dealers of a defect or noncompliance and to remedy the defect or noncompliance. Therefore, any decision on this petition only applies to the subject vehicles that BMW no longer controlled at the time it determined that the noncompliance existed. However, any decision on this petition does not relieve vehicle distributors and dealers of the prohibitions on the sale, offer for sale, or introduction or delivery for introduction into interstate commerce of the noncompliant vehicles under their control after BMW notified them that the subject noncompliance existed.

Authority: 49 U.S.C. 30118, 30120; delegations of authority at 49 CFR 1.95 and 501.8.

Jeffrey M. Giuseppe,

Director, Office of Vehicle Safety Compliance.

BILLING CODE 4910-59-P

DEPARTMENT OF TRANSPORTATION

National Highway Traffic Safety Administration

Petition for Exemption From the Federal Motor Vehicle Theft Prevention Standard; General Motors LLC

AGENCY: National Highway Traffic Safety Administration, Department of Transportation (DOT).

ACTION: Grant of petition for exemption.

SUMMARY: This document grants in full the General Motors LLC's (GM) petition for an exemption of the Chevrolet Volt vehicle line in accordance with 49 CFR part 543, *Exemption from Vehicle Theft Prevention Standard*. This petition is granted because the agency has determined that the antitheft device to be placed on the line as standard equipment is likely to be as effective in reducing and deterring motor vehicle theft as compliance with the parts-marking requirements of 49 CFR part 541, *Federal Motor Vehicle Theft Prevention Standard* (Theft Prevention Standard).

DATES: The exemption granted by this notice is effective beginning with the 2018 model year (MY).

FOR FURTHER INFORMATION CONTACT: Ms. Deborah Mazyck, Office of International Policy, Fuel Economy and Consumer Programs, NHTSA, W43-443, 1200 New Jersey Avenue SE., Washington, DC 20590. Ms. Mazyck's phone number is (202) 366-4139. Her fax number is (202) 493-2990.

SUPPLEMENTARY INFORMATION: In a petition dated October 6, 2016, GM requested an exemption from the parts-marking requirements of the Theft Prevention Standard for the Chevrolet Volt vehicle line beginning with MY 2018. The petition requested an exemption from parts-marking pursuant to 49 CFR part 543, Exemption from Vehicle Theft Prevention Standard, based on the installation of an antitheft device as standard equipment for the entire vehicle line.

Under 49 CFR part 543.5(a), a manufacturer may petition NHTSA to grant an exemption for one vehicle line per model year. In its petition, GM provided a detailed description and diagram of the identity, design, and location of the components of the antitheft device for the MY 2018 Chevrolet Volt vehicle line. GM stated that its Chevrolet Volt vehicle line will be installed with the PASS-Key III+ antitheft device as standard equipment. The PASS-Key III+ is a passive, transponder based, electronic engine immobilizer antitheft device. GM stated that a keyless ignition system will be installed on its Chevrolet Volt vehicle line. Key components of its PASS-Key III+ system will include an electronically-coded ignition key, a body control module (BCM) with integrated PASS-Key III+ controller, engine control module (ECM), immobilizer exciter module, radio frequency (RF) receiver module, passive antenna module and low frequency antennas (LF). The electronic key is incorporated within a remote key fob. The key fob contains buttons to perform normal remote keyless door entry functions. GM stated that the device will provide protection against unauthorized use (*i.e.*, starting and engine fueling), but will not provide any visible or audible indication of unauthorized vehicle entry (*i.e.*, flashing lights or horn alarm).

GM's submission is considered a complete petition as required by 49 CFR 543.7, in that it meets the general requirements contained in § 543.5 and the specific content requirements of § 543.6.

In addressing the specific content requirements of 543.6, GM provided information on the reliability and durability of its proposed device. To ensure reliability and durability of the device, GM conducted tests based on its own specified standards. GM provided information on the specific tests it uses to validate the integrity, durability and reliability of the PASS-Key III+ device and believes that the device is reliable and durable since the components must operate as designed after each test. GM

also stated that the design and assembly processes of the PASS-Key III+ subsystem and components are validated for 10 years of vehicle life and 150,000 miles of performance. The PASS-Key III+ incorporates a higher level of electrical sophistication by utilizing an electronic key that is protected from electrical duplication.

GM stated that the PASS-Key III+ device is designed to be active at all times without direct intervention by the vehicle operator. No separate intentional action to turn on the security system is needed to achieve protection. Activation of the device occurs when the operator pushes the engine Start/Stop switch to the "OFF" position. Deactivation of the immobilizer device occurs when a valid key and matching immobilization code is verified, allowing the engine to start and continue normal operations. When the operator pushes the Engine Start/Stop switch to begin vehicle operation, the vehicle transmits randomly generated data and a vehicle identifier within the passenger compartment of the vehicle through three low-frequency antennas that is controlled by the passive antenna module. The electronic key receives the data and compares its vehicle identifier with the identifier previously assigned to the vehicle. If the vehicle identifier matches the identifier of the vehicle for which the key is programmed, the electronic key will transmit a response through the RF channel to a vehicle mounted receiver. The PASS-Key III+ control module receives the RF transmission and compares the received response with an internally calculated response. If the values match, the key is recognized as valid and a password is then transmitted through a serial data link to the ECM to enable fueling and vehicle starting. If an invalid key code is detected, the system will not transmit a password to the ECM to allow operation of the vehicle. Additionally, if an invalid electronic key code is received, the vehicle will not be allowed to transition from the "Off" mode to the "Accessory", "On", or "Start" mode positions inhibiting starting, ignition, and fuel flow of the vehicle.

GM further stated that the ignition key contains electronics which provides billions of possible electronic combinations. The electronics receive energy and data from the antenna module. Upon receipt of the data, and a vehicle indicator match, the electronic key will calculate a response to the data using an internal encryption algorithm and transmit the response back to the vehicle. The antenna module then translates the radio frequency signal received from the key into a digital

signal and passes the signal on to the controller module. The controller module then compares the received response to an internally calculated value. If the values match, the key is recognized as valid and a password is transmitted through a serial data link to the ECM to enable fueling and vehicle starting. GM also stated that a secondary data challenge and response process using another encryption algorithm must be validated by the engine controller to allow continued operation. If an invalid key code is received, the PASS-Key III+ controller module will send a "Disable Password" to the engine control module and starting, ignition, and fuel flow will be inhibited.

GM stated that the PASS-Key III+ device has been designed to enhance the functionality and theft protection provided by its first, second and third generation PASS-Key, PASS-Key II, and PASS-Key III devices. GM also referenced data provided by the American Automobile Manufacturers Association (AAMA) in support of the effectiveness of GM's PASS-Key devices in reducing and deterring motor vehicle theft found in the AAMA's comments referencing the agency's Preliminary Report on "Auto Theft and Recovery Effects of the Anti-Car Theft Act of 1992 and the Motor Vehicle Theft Law Enforcement Act of 1984", (Docket 97-042; Notice 1).

GM also noted that theft data have indicated a decline in theft rates for vehicle lines equipped with comparable devices that have received full exemptions from the parts-marking requirements. GM stated that the theft data, as provided by the Federal Bureau of Investigation's National Crime Information Center (NCIC) and compiled by the agency, show that theft rates are lower for exempted GM models equipped with the PASS-Key like systems than the theft rates for earlier models with similar appearance and construction that were parts-marked. Based on the performance of the PASS-Key, PASS-Key II, and PASS-Key III devices on other GM models, and the advanced technology utilized in PASS-Key III+, GM believes that the PASS-Key III+ device will be more effective in deterring theft than the parts-marking requirements of 49 CFR part 541.

GM stated that it believes that PASS-Key III+ devices will be at least as effective in deterring theft as the parts-marking requirements and that the agency should find that installation of the PASS-Key III+ device on the Chevrolet Volt vehicle line is sufficient to qualify it for full exemption from the parts-marking requirements.

Based on the evidence submitted by GM, the agency believes that the antitheft device for the Chevrolet Volt vehicle line is likely to be as effective in reducing and deterring motor vehicle theft as compliance with the parts-marking requirements of the Theft Prevention Standard (49 CFR 541).

GM's proposed device lacks an audible or visible alarm. Therefore, this device cannot perform one of the functions listed in 49 CFR part 543.6(a)(3), that is, to call attention to unauthorized attempts to enter or move the vehicle. The agency concludes that the device will provide the four of the five types of performance listed in § 543.6(a)(3): Promoting activation; preventing defeat or circumvention of the device by unauthorized persons; preventing operation of the vehicle by unauthorized entrants; and ensuring the reliability and durability of the device.

Pursuant to 49 U.S.C. 33106 and 49 CFR 543.7(b), the agency grants a petition for exemption from the parts-marking requirements of part 541 either in whole or in part, if it determines that, based upon substantial evidence, the standard equipment antitheft device is likely to be as effective in reducing and deterring motor vehicle theft as compliance with the parts-marking requirements of part 541. The agency finds that GM has provided adequate reasons for its belief that the antitheft device for the Chevrolet Volt vehicle line is likely to be as effective in reducing and deterring motor vehicle theft as compliance with the parts-marking requirements of the Theft Prevention Standard (49 CFR part 541). This conclusion is based on the information GM provided about its device.

For the foregoing reasons, the agency hereby grants in full GM's petition for exemption for the Chevrolet Volt vehicle line from the parts-marking requirements of 49 CFR part 541 beginning with the 2018 model year. The agency notes that 49 CFR part 541, Appendix A-1, identifies those lines that are exempted from the Theft Prevention Standard for a given model year. 49 CFR part 543.7(f) contains publication requirements incident to the disposition of all part 543 petitions. Advanced listing, including the release of future product nameplates, the beginning model year for which the petition is granted and a general description of the antitheft device is necessary in order to notify law enforcement agencies of new vehicle lines exempted from the parts-marking requirements of the Theft Prevention Standard.

If GM decides not to use the exemption for this line, it should formally notify the agency. If such a decision is made, the line must be fully marked according to the requirements under 49 CFR parts 541.5 and 541.6 (marking of major component parts and replacement parts).

NHTSA notes that if GM wishes in the future to modify the device on which this exemption is based, the company may have to submit a petition to modify the exemption. Part 543.7(d) states that a part 543 exemption applies only to vehicles that belong to a line exempted under this part and equipped with the antitheft device on which the line's exemption is based. Further, part 543.9(c)(2) provides for the submission of petitions "to modify an exemption to permit the use of an antitheft device similar to but differing from the one specified in that exemption."

The agency wishes to minimize the administrative burden that part 543.9(c)(2) could place on exempted vehicle manufacturers and itself. The agency did not intend in drafting part 543 to require the submission of a modification petition for every change to the components or design of an antitheft device. The significance of many such changes could be *de minimis*. Therefore, NHTSA suggests that if the manufacturer contemplates making any changes, the effects of which might be characterized as *de minimis*, it should consult the agency before preparing and submitting a petition to modify.

Issued in Washington, DC, under authority delegated in 49 CFR 1.95.

Raymond R. Posten,

Associate Administrator for Rulemaking.

BILLING CODE 4910-59-P

DEPARTMENT OF TRANSPORTATION

National Highway Traffic Safety Administration

[Docket No. NHTSA-2015-0035; Notice 2]

General Motors, LLC, Grant of Petition for Decision of Inconsequential Noncompliance

AGENCY: National Highway Traffic Safety Administration (NHTSA), Department of Transportation (DOT)

ACTION: Grant of petition

SUMMARY: General Motors, LLC, (GM) has determined that certain model year (MY) 2012–2015 Chevrolet Sonic passenger cars do not fully comply with Federal Motor Vehicle Safety Standard (FMVSS) No. 108, *Lamps, Reflective*

Devices and Associated Equipment. GM has filed a noncompliance report dated March 2, 2015. GM also petitioned NHTSA on March 24, 2015, for a decision that the subject noncompliance is inconsequential as it relates to motor vehicle safety.

ADDRESSES: For further information on the decision contact Mike Cole, Office of Vehicle Safety Compliance, the National Highway Traffic Safety Administration (NHTSA), telephone (202) 366-5319, facsimile (202) 366-3081.

SUPPLEMENTARY INFORMATION:

I. Overview

General Motors, LLC, (GM) has determined that certain model year (MY) 2012–2015 Chevrolet Sonic passenger cars do not fully comply with paragraph S6.5.3.4.1 of Federal Motor Vehicle Safety Standard (FMVSS) No. 108, *Lamps, Reflective Devices and Associated Equipment*. GM has filed a noncompliance report dated March 2, 2015, pursuant to 49 CFR part 573, *Defect and Noncompliance Responsibility and Reports*. GM also petitioned NHTSA on March 24, 2015, pursuant to 49 U.S.C. 30118(d) and 30120(h) (see implementing rule at 49 CFR part 556) for an exemption from the notification and remedy requirements of 49 U.S.C. Chapter 301 on the basis that this noncompliance is inconsequential to motor vehicle safety.

Notice of receipt of the GM petition was published, with a 30-day public comment period, on May 12, 2015, in the **Federal Register** (80 FR 27229). No comments were received. To view the petition and all supporting documents log onto the Federal Docket Management System (FDMS) Web site at: <http://www.regulations.gov/>. Then follow the online search instructions to locate docket number "NHTSA-2015-0035."

II. Vehicles Involved

Affected are approximately 310,243 MY 2012–2015 Chevrolet Sonic passenger cars manufactured between May 5, 2011 and February 4, 2015.

III. Noncompliance:

GM explains that the noncompliance is that the high-beam headlamp lenses on the subject vehicles are not marked with "HB3" (the HB bulb type) as required by paragraph S6.5.3.4.1 of FMVSS No. 108.

IV. Rule Text

Paragraph S6.5.3.4.1 of FMVSS No. 108 requires in pertinent part:

S6.5.3.4.1 The lens of each replaceable bulb headlamp must bear permanent marking

in front of each replaceable light source with which it is equipped that states either: The HB Type, if the light source conforms to S11 of this standard for filament light sources,

V. Summary of GM's Analyses

GM stated its belief that the subject noncompliance is inconsequential to motor vehicle safety for the following reasons:

(A) The high-beam headlamp lenses in question are clearly marked "9005" (the ANSI designation), which GM believes to be a well-known alternative designation recognized throughout the automotive industry and used by lighting manufacturers interchangeably with HB3, the lamp's HB type. GM also verified that the vehicle owner's manuals identify the high beam replacement bulb as 9005.

(B) That the mismarked high-beam headlamps are the correct headlamps for the subject vehicles and that they conform to all other requirements including photometric as required by FMVSS No. 108.

(C) The risk of customer confusion when selecting a correct replacement bulb is remote. Both the HB3 type and the 9005 ANSI designation are marked on the vehicles' headlamp bulb sockets, and packaging for replacement bulbs is commonly marked with both the HB type and the ANSI designation. GM searched a number of national automotive parts stores (Autozone, O'Reilly, Advanced Auto Parts, and Pep Boys), and found that all HB3 replacement bulbs in these stores were marked with the 9005 ANSI designation. Should a consumer attempt to install an incorrect bulb into the headlamp sockets, the bulb could not be successfully installed because of the unique nature of the socket hardware.

(D) GM also cited several previous petitions that NHTSA has granted dealing with noncompliances that GM believes are similar to the noncompliance that is the subject of its petition. Based on these decisions, GM believes that there is also precedent to support granting its petition.

GM is not aware of any VOQ or field data in which a consumer has complained of not being able to identify the proper replacement headlamp bulb for the affected vehicles, which GM believes to be evidence that this noncompliance is not impacting consumers.

GM has additionally informed NHTSA that it has corrected the noncompliance by adding the HB3 designation bulb type to the high-beam headlamp lens in all vehicles produced on or after February 21, 2015.

In summation, GM believes that the described noncompliance of the subject vehicles is inconsequential to motor vehicle safety, and that its petition, to exempt GM from providing recall notification of noncompliance as required by 49 U.S.C. 30118 and remedying the recall noncompliance as required by 49 U.S.C. 30120 should be granted.

NHTSA's Decision

NHTSA's Analysis: We agree with GM that the ANSI "9005" designation is a well-known alternative designation for the HB3 light source and that replacement light source packaging is commonly marked with both the HB type and ANSI designation. As such, we believe that consumers can properly identify and purchase the correct replacement upper beam light source for the affected vehicles. Further, the unique bulb holder design incorporated into the headlamps would prevent consumers from installing a light source other than an HB3/9005 so there would be no effect on headlamp performance.

NHTSA's Decision: In consideration of the foregoing, NHTSA finds that GM has met its burden of persuasion that the subject FMVSS No. 108 noncompliance is inconsequential to motor vehicle safety. Accordingly, GM's petition is hereby granted and GM is consequently exempted from the obligation of providing notification of, and a free remedy for, that noncompliance under 49 U.S.C. 30118 and 30120.

NHTSA notes that the statutory provisions (49 U.S.C. 30118(d) and 30120(h)) that permit manufacturers to file petitions for a determination of inconsequentiality allow NHTSA to exempt manufacturers only from the duties found in sections 30118 and 30120, respectively, to notify owners, purchasers, and dealers of a defect or noncompliance and to remedy the defect or noncompliance. Therefore, this decision only applies to the subject vehicles that GM no longer controlled at the time it determined that the noncompliance existed. However, the granting of this petition does not relieve vehicle distributors and dealers of the prohibitions on the sale, offer for sale, or introduction or delivery for introduction into interstate commerce of the noncompliant vehicles under their control after GM notified them that the subject noncompliance existed.

Authority: 49 U.S.C. 30118, 30120; delegations of authority at 49 CFR 1.95 and 501.8.

Jeffrey M. Giuseppe,

Director, Office of Vehicle Safety Compliance.

BILLING CODE 4910-59-P

DEPARTMENT OF TRANSPORTATION

Office of the Secretary

Contracting Initiative

AGENCY: Office of the Secretary (OST), Department of Transportation (DOT).

ACTION: Notice.

SUMMARY: The DOT is extending the contracting initiative pilot program for a period of 5 years.

DATES: This pilot program became effective on March 6, 2015.

FOR FURTHER INFORMATION CONTACT: For technical information: Mr. Michael Harkins, Deputy Assistant General Counsel for General Law, Office, U.S. Department of Transportation, 1200 New Jersey Avenue SE., Washington, DC 20590, 202-366-0590 (telephone), Michael.Harkins@dot.gov (email).

SUPPLEMENTARY INFORMATION:

Electronic Access

An electronic copy of this document may also be downloaded from the Office of the Federal Register's home page at http://www.archives.gov/federal_register and the Government Printing Office's Web page at <http://www.gpoaccess.gov>.

Background

On March 6, 2015, DOT published a notice in the **Federal Register** (80 FR 12257) establishing a contracting initiative pilot program under which, Federal Highway Administration (FHWA) and Federal Transit Administration (FTA) recipients and subrecipients could utilize various contracting requirements that generally have been disallowed due to concerns about adverse impacts on competition. The purpose of the pilot program is to determine whether the use of such requirements "unduly limit competition," as provided in an August 23, 2013, opinion from the Department of Justice's Office of Legal Counsel (OLC). DOT established the pilot program for a period of 1 year unless extended. On March 17, 2016, DOT extended this pilot program for a period of 1 additional year, until March 6, 2017 (81 FR14524). To date, DOT has received only limited data from the program. As a result, DOT has decided to extend the pilot program until March

6, 2022, so that it can gather additional data from more projects to better assess the effect of local hire preferences on competition. The extension of this pilot program will provide FHWA and FTA recipients and subrecipients flexibility to continue operating under the pilot program while DOT conducts its evaluation as well as provide DOT with additional projects to consider in evaluating the impacts on competition.

Please note that Section 415 of the Consolidated Appropriations Act, 2016, Public Law 114–113 (FY 2016 Appropriations Act), extended by Public Law 114–223 and Public Law 114–254, continues the restriction on the Federal Transit Administration (FTA) from using FY 2016 funds to implement, administer or enforce 49 CFR 18.36(c)(2) for construction hiring. Accordingly, FTA recipients and subrecipients do not need to submit applications for participation in the pilot program for contracts awarded or advertised on or before September 30, 2016.

Additionally, we note that Section 192 of the FY 2016 Appropriations Act (also extended by Public Law 114–223 and Public Law 114–254) expressly authorizes DOT assisted contracts under titles 49 and 23 of the United States Code utilizing geographic, economic, or other hiring preferences not otherwise authorized by law if the grant recipient certifies the following:

(1) That except with respect to apprentices or trainees, a pool of readily available but unemployed individuals possessing the knowledge, skill, and ability to perform the work that the contract requires resides in the jurisdiction;

(2) That the grant recipient will include appropriate provisions in its bid document ensuring that the contractor does not displace any of its existing employees in order to satisfy such hiring preference; and

(3) That any increase in the cost of labor, training, or delays resulting from the use of such hiring preference does not delay or displace any transportation project in the applicable Statewide Transportation Improvement Program or Transportation Improvement Program.

Accordingly, recipients and subrecipients should follow the application process described in the March 6, 2015, **Federal Register** notice (80 FR 12257), except that recipients and subrecipients must also include the required certifications from Section 192 of the FY 2016 Appropriations Act as discussed above.

Issued in Washington, DC, on December 28, 2016.

Anthony R. Foxx,

Secretary of Transportation.

[FR Doc. 2017–00984 Filed 1–17–17; 8:45 am]

BILLING CODE 4910–9X–P

DEPARTMENT OF THE TREASURY

Office of Foreign Assets Control

Sanctions Actions Pursuant to Executive Orders (E.O.s) 13722 and 13687.

AGENCY: Office of Foreign Assets Control, Treasury.

ACTION: Notice.

SUMMARY: The Treasury Department's Office of Foreign Assets Control (OFAC) is publishing the names of two entities identified as blocked pursuant to E.O. 13722, "Blocking Property of the Government of North Korea and the Workers' Party of Korea, and Prohibiting Certain Transactions With Respect to North Korea," and of seven individuals whose property and interests in property are blocked pursuant to E.O. 13687, "Imposing Additional Sanctions With Respect to North Korea."

DATES: OFAC's actions described in this notice were effective on January 11, 2017.

FOR FURTHER INFORMATION CONTACT: The Department of the Treasury's OFAC: Assistant Director for Licensing, tel.: 202–622–2480, Assistant Director for Regulatory Affairs, tel.: 202–622–4855, Assistant Director for Sanctions Compliance & Evaluation, tel.: 202–622–2490; or the Department of the Treasury's Office of the Chief Counsel (Foreign Assets Control), Office of the General Counsel, tel.: 202–622–2410.

SUPPLEMENTARY INFORMATION:

Electronic and Facsimile Availability

The Specially Designated Nationals and Blocked Persons List and additional information concerning OFAC sanctions programs are available on OFAC's Web site (www.treasury.gov/ofac).

Notice of OFAC Actions

On January 11, 2017, OFAC identified the following two entities as blocked pursuant to E.O. 13722, "Blocking Property of the Government of North Korea and the Workers' Party of Korea, and Prohibiting Certain Transactions With Respect to North Korea":

Entities

1. MINISTRY OF LABOR, Korea, North [DPRK3].

2. STATE PLANNING COMMISSION, Korea, North [DPRK3].

In addition, on January 11, 2017, OFAC blocked the property and interests in property of the following seven individuals pursuant to E.O. 13687, "Imposing Additional Sanctions With Respect to North Korea":

Individuals

1. KIM, Won Hong (a.k.a. KIM, Wo'n-hong), Korea, North; DOB 17 Jul 1945; Gender Male; Minister of State Security (individual) [DPRK2].

2. KIM, Yo Jong (a.k.a. KIM, Yo'-cho'ng), Korea, North; DOB 26 Sep 1989; Gender Female; Vice Director of the Workers' Party of Korea Propaganda and Agitation Department (individual) [DPRK2].

3. KIM, Il-Nam (a.k.a. KIM, Il Nam), Korea, North; DOB 09 Apr 1958; Gender Male; Chief, South Hamgyong Province, Ministry of State Security (individual) [DPRK2].

4. CHOE, Hwi, Korea, North; DOB 01 Jan 1954 to 31 Dec 1955; Gender Male; First Vice Director of the Workers' Party of Korea Propaganda and Agitation Department (individual) [DPRK2].

5. JO, Yong-Won (a.k.a. CHO, Yongwon), Korea, North; DOB 24 Oct 1957; Gender Male; Vice Director of the Organization and Guidance Department (individual) [DPRK2].

6. MIN, Byong Chol (a.k.a. MIN, Byong Chun; a.k.a. MIN, Byong-chol; a.k.a. MIN, Pyo'ng-ch'o'l), Korea, North; DOB 10 Aug 1948; Gender Male; Member of the Worker's Party of Korea's Organization and Guidance Department (individual) [DPRK2].

7. KANG, P'il-Hun (a.k.a. KANG, Phil Hun; a.k.a. KANG, Pil Hoon), Korea, North; DOB 11 Jun 1943; Gender Male; Director of the General Political Bureau of the Ministry of People's Security (individual) [DPRK2].

Dated: January 11, 2017.

John E. Smith,

Acting Director, Office of Foreign Assets Control.

BILLING CODE 4810–AL–P

DEPARTMENT OF THE TREASURY

Office of Foreign Assets Control

Unblocking of Specially Designated National and Blocked Person Pursuant to Executive Order 13469

AGENCY: Office of Foreign Assets Control, Treasury.

ACTION: Notice.

SUMMARY: The U.S. Department of the Treasury's Office of Foreign Assets

Control (OFAC) is publishing the name of one entity whose property and interests in property have been unblocked pursuant to Executive Order 13469 of July 25, 2008, "Blocking Property of Additional Persons Undermining Democratic Processes or Institutions in Zimbabwe."

DATES: OFAC's actions described in this notice are effective as of January 12, 2017.

FOR FURTHER INFORMATION CONTACT: Associate Director for Global Targeting, tel.: 202/622-2420, Assistant Director for Sanctions Compliance & Evaluation, tel.: 202/622-2490, Assistant Director for Licensing, tel.: 202/622-2480, Office of Foreign Assets Control, or Chief Counsel (Foreign Assets Control), tel.: 202/622-2410 (not toll free numbers).

SUPPLEMENTARY INFORMATION:

Electronic Availability

The SDN List and additional information concerning OFAC sanctions programs are available from OFAC's Web site (www.treasury.gov/ofac).

Notice of OFAC Actions

On January 12, 2017, OFAC, in consultation with the U.S. Department of State, removed from the SDN List the entity listed below, whose property and interests in property were blocked pursuant to Executive Order 13469 (E.O. 13469).

ZIMRE HOLDINGS LIMITED (a.k.a. WWW.ZHL.CO.ZW; a.k.a. ZIMRE), 9th Floor, Zimre Center, Cnr. Leopold Takawira/Kwame Nkrumah Avenue, P.O. Box 4839, Harare, Zimbabwe; Phone Number 263-4-772963; Fax Number 263-4-772972 [ZIMBABWE—E.O. 13469].

Dated: January 12, 2017.

John E. Smith,

Acting Director, Office of Foreign Assets Control.

BILLING CODE 4810-AL-P

U.S.-CHINA ECONOMIC AND SECURITY REVIEW COMMISSION

Notice of Open Public Hearing

AGENCY: U.S.-China Economic and Security Review Commission.

ACTION: Notice of open public hearing January 26, 2017—Washington, DC.

SUMMARY: Notice is hereby given of the following hearing of the U.S.-China Economic and Security Review Commission.

ADDRESSES: Room: Dirksen Senate Office Building, Room 419. Thursday, January 26, 2017, 9:00 a.m. to 3:05 p.m. A detailed agenda for the hearing will be posted to the Commission's Web site at www.uscc.gov. Also, please check our Web site for possible changes to the hearing schedule. *Reservations are not required to attend the hearing.*

FOR FURTHER INFORMATION CONTACT: Any member of the public seeking further information concerning the hearing should contact Leslie Tisdale, 444 North Capitol Street NW., Suite 602, Washington DC 20001; phone: 202-624-1496, or via email at LTisdale@uscc.gov. *Reservations are not required to attend the hearing.*

SUPPLEMENTARY INFORMATION:

Name: Carolyn Bartholomew, Chairman of the U.S.-China Economic and Security Review Commission. The Commission is mandated by Congress to investigate, assess, and report to Congress annually on "the national security implications of the economic relationship between the United States and the People's Republic of China."

Pursuant to this mandate, the Commission will hold a public hearing in Washington, DC On 1/26/2017 on "Chinese Investment in the United States: Impacts and Issues for Policymakers."

Background: This is the first public hearing the Commission will hold during its 2017 report cycle to collect input from academic, industry, and government experts on national security implications of the U.S. bilateral trade and economic relationship with China. This hearing will explore patterns of Chinese investment in the United States and implications for U.S. policymakers. Topics that will be examined include China's increasing investments in strategic sectors, Chinese state-owned companies claiming sovereign immunity in U.S. courts, and duress acquisitions of U.S. entities by Chinese firms. The hearing will also cover the activities of Chinese companies listed on U.S. stock exchanges, assessing implications for U.S. investors and the U.S. economy at large. The hearing will be co-chaired by Commissioners Robin Cleveland and Michael Wessel. Any interested party may file a written statement by January 26, 2017, by mailing to the contact below. A portion of each panel will include a question and answer period between the Commissioners and the witnesses.

Authority: Congress created the U.S.-China Economic and Security Review Commission in 2000 in the National Defense Authorization Act (Public Law 106-398), as amended by Division P of the Consolidated Appropriations Resolution, 2003 (Public Law 108-7), as amended by Public Law 109-108 (November 22, 2005), as amended by Public Law 113-291 (December 19, 2014).

Dated: January 11, 2017

Michael Danis,

Executive Director, U.S.-China Economic and Security Review Commission.

Department of Energy

10 CFR Part 431

Energy Conservation Program: Energy Conservation Standards for
Dedicated-Purpose Pool Pumps; Direct Final Rule

DEPARTMENT OF ENERGY

10 CFR Part 431

[Docket Number EERE-2015-BT-STD-0008]

RIN 1904-AD52

Energy Conservation Program: Energy Conservation Standards for Dedicated-Purpose Pool Pumps

AGENCY: Office of Energy Efficiency and Renewable Energy, Department of Energy.

ACTION: Direct final rule.

SUMMARY: The Energy Policy and Conservation Act of 1975 (EPCA), as amended, sets forth a variety of provisions designed to improve energy efficiency. Part C of Title III establishes the “Energy Conservation Program for Certain Industrial Equipment.” The covered equipment includes pumps. In this direct final rule, DOE is adopting new energy conservation standards for dedicated-purpose pool pumps. It has determined that the energy conservation standards for these products would result in significant conservation of energy, and are technologically feasible and economically justified.

DATES: The effective date of this rule is May 18, 2017 unless adverse comment is received by May 8, 2017. If adverse comments are received that DOE determines may provide a reasonable basis for withdrawal of the direct final rule, a timely withdrawal of this rule will be published in the **Federal Register**. If no such adverse comments are received, compliance with the standards established for dedicated-purpose pool pumps in this direct final rule is required on and after July 19, 2021.

ADDRESSES: The docket for this rulemaking, which includes **Federal Register** notices, public meeting attendee lists and transcripts, comments, and other supporting documents/materials, is available for review at www.regulations.gov. All documents in the docket are listed in the www.regulations.gov index. However, not all documents listed in the index may be publicly available, such as information that is exempt from public disclosure.

A link to the docket Web page can be found at <https://www.regulations.gov/docket?D=EERE-2015-BT-STD-0008>. The docket Web page contains simple instructions on how to access all documents, including public comments, in the docket.

I. Synopsis of the Direct Final Rule

Title III of the Energy Policy and Conservation Act of 1975 (42 U.S.C. 6291, *et seq*; EPCA), sets forth a variety of provisions designed to improve energy efficiency of appliances and commercial equipment. Part C of Title III, which for editorial reasons was redesignated as Part A–1 upon incorporation into the U.S. Code (42 U.S.C. 6311–6317), establishes the “Energy Conservation Program for Certain Industrial Equipment.” Covered industrial equipment includes pumps. (42 U.S.C. 6311(1)(H))¹ Pumps include dedicated-purpose pool pumps, the subject of this document.

The energy conservation standards for dedicated-purpose pool pumps (also referred to as “pool pumps”) established in this document reflect the consensus of a negotiation among interested parties with a broad cross-section of interests, including the manufacturers who produce the subject equipment, environmental and energy-efficiency advocacy organizations, and electric utility companies. A working group representing these parties was

established under the Appliance Standards and Rulemaking Federal Advisory Committee (ASRAC)² to discuss and, if possible, reach consensus on proposed standards for pool pump energy efficiency. On June 23, 2016, the dedicated-purpose pool pumps (DPPP) Working Group successfully reached consensus on recommended energy conservation standards for pool pumps. See section III.A for further discussion of the Working Group and its recommendations.

After carefully considering the recommendations submitted by the DPPP Working Group and adopted by ASRAC related to energy conservation standards for pool pumps, DOE has determined that these recommendations comprise a statement submitted by interested persons who represent relevant points of view on this matter, and which, if compliant with certain statutory requirements, could result in issuance of a direct final rule.

Pursuant to EPCA, any new or amended energy conservation standard must be designed to achieve the maximum improvement in energy efficiency that DOE determines is technologically feasible and economically justified. (42 U.S.C. 6295(o)(2)(A) and 6316(a)) Furthermore, the new or amended standard must result in significant conservation of energy. (42 U.S.C. 6295(o)(3)(B) and 6316(a)).

In accordance with these and other statutory provisions discussed in this document, DOE is adopting new energy conservation standards for certain dedicated-purpose pool pumps. The adopted standards are shown in Table I–1 and Table I–2. Standards for the equipment classes in Table I–1 are performance based, expressed in terms of weighted energy factor (WEF); standards in Table I–2 are prescriptive. These standards apply to all equipment listed in Table I–1 and Table I–2 and manufactured in or imported into the United States starting on July 19, 2021. DOE is not adopting standby or off-mode standards for this equipment.

TABLE I–1—PERFORMANCE-BASED ENERGY CONSERVATION STANDARDS FOR DEDICATED-PURPOSE POOL PUMPS

Equipment class				Minimum allowable WEF** score
Dedicated-purpose pool pump variety		Hydraulic horsepower applicability*	Motor phase	
Standard-Size Pumps.	Self-Priming Pool Filter	<2.5 hhp and ≥0.711 hhp	Single	WEF = –2.30 * ln (hhp) + 6.59.

¹ All references to EPCA in this document refer to the statute as amended through the Energy

Efficiency Improvement Act of 2015, Public Law 114–11 (Apr. 30, 2015).

² In accordance with the Federal Advisory Committee Act and the Negotiated Rulemaking Act (5 U.S.C. App.; 5 U.S.C. 561–570).

TABLE I-1—PERFORMANCE-BASED ENERGY CONSERVATION STANDARDS FOR DEDICATED-PURPOSE POOL PUMPS—Continued

Equipment class			Minimum allowable WEF** score
Dedicated-purpose pool pump variety	Hydraulic horsepower applicability*	Motor phase	
Small-Size Self-Priming Pool Filter Pumps ..	hhp <0.711 hp	Single	WEF = 5.55 for hhp ≤0.13 hp, – 1.30 * ln (hhp) + 2.90 for hhp >0.13 hp. WEF = 4.60 for hhp ≤0.13 hp, – 0.85 * ln (hhp) + 2.87 for hhp >0.13 hp. WEF = 0.42.
Non-Self-Priming Pool Filter Pumps	hhp <2.5 hp	Any	
Pressure Cleaner Booster Pumps	Any	Any	

* All instances of hhp refer to rated hydraulic horsepower determined in accordance with the DOE test procedure at 10 CFR 431.464 and applicable sampling plans.

** WEF is measured by kgal/kWh.

TABLE I-2—PRESCRIPTIVE ENERGY CONSERVATION STANDARDS FOR DEDICATED-PURPOSE POOL PUMPS

Equipment class			Prescriptive standard
Dedicated-purpose pool pump variety	Hydraulic horsepower applicability	Motor phase	
Integral Sand Filter Pool Pump	Any	Any	Must be distributed in commerce with a pool pump timer that is either integral to the pump or a separate component that is shipped with the pump.*
Integral Cartridge Filter Pool Pump	Any	Any	Must be distributed in commerce with a pool pump timer that is either integral to the pump or a separate component that is shipped with the pump.*
All Dedicated-Purpose Pool Pumps Distributed in Commerce with Freeze Protection Controls.	Any	Any	The pump must be shipped with freeze protection disabled or with the following default, user-adjustable settings: <ul style="list-style-type: none"> • The default dry-bulb air temperature setting is no greater than 40 °F; • The default run time setting shall be no greater than 1 hour (before the temperature is rechecked); and • The default motor speed shall not be more than ½ of the maximum available speed.

* Pool pump timer means a pool pump control that automatically turns off a dedicated-purpose pool pump after a run-time of no longer than 10 hours.

A. Benefits and Costs to Consumers³

Table I-3 presents DOE's evaluation of the economic impacts of the adopted standards on consumers of pool pumps,

as measured by the average life-cycle cost (LCC) savings and the simple payback period (PBP).⁴ The average LCC savings are positive for all equipment classes, and the PBP is much less than

the average lifetime of dedicated-purpose pool pumps, which is estimated to range from 4 to 7 years, depending on equipment class (see section IV.F.6).

TABLE I-3—IMPACTS OF ADOPTED ENERGY CONSERVATION STANDARDS ON END USERS OF DEDICATED-PURPOSE POOL PUMPS

Equipment class	Average LCC savings (2015\$)	Simple payback period (years)
Standard-Size Self-Priming Pool Filter Pump	2,140	0.7
Small-Size Self-Priming Pool Filter Pump	295	0.8
Standard-Size Non-Self-Priming Pool Filter Pump	191	0.2
Extra-Small Non-Self-Priming Pool Filter Pump	36	0.9
Pressure Cleaner Booster Pump	111	0.6
Integral Cartridge Filter Pool Pump	128	0.4
Integral Sand Filter Pool Pump	73	0.5

³ All monetary values in this document are expressed in 2015 dollars and, where appropriate, are discounted to 2016 unless explicitly stated otherwise.

⁴ The average LCC savings refer to consumers that are affected by a standard are measured relative to the efficiency distribution in the no-standards case, which depicts the market in the compliance year in

the absence of new or amended standards (see section IV.H.2). The simple PBP, which is designed to compare specific efficiency levels, is measured relative to the baseline model (see section IV.C.3).

DOE's analysis of the impacts of the adopted standards on consumers is described in section V.B.1 of this document.

B. Impact on Manufacturers

The industry net present value (INPV) is the sum of the discounted cash flows to the industry from the reference year through the end of the analysis period 2016–2050. Using a real discount rate of 11.8 percent, DOE estimates that the INPV for manufacturers of dedicated-purpose pool pumps in the case without standards is \$212.8 million in 2015\$. Under the new standards, DOE expects the change in INPV to range from –21.8 percent to 3.3 percent, which is approximately –\$46.3 million to \$7.0 million. In order to bring equipment into compliance with the new standards, DOE expects the industry to incur total conversion costs of \$35.6 million.

DOE's analysis of the impacts of the new standards on manufacturers is described in section IV.J and section V.B.2 of this document.

C. National Benefits and Costs

DOE's analyses indicate that the adopted energy conservation standards for dedicated-purpose pool pumps would save a significant amount of energy. Relative to the case without new standards, the lifetime energy savings for dedicated-purpose pool pumps purchased in the 30-year period that begins in the anticipated year of compliance with the standards (2021–2050), amount to 3.8 quadrillion British thermal units (Btu), or quads.⁵ This represents an estimated savings of 61 percent relative to the energy use of this equipment in the case without standards (referred to as the “no-standards case”).

The cumulative net present value (NPV) of total consumer benefits of the standards for dedicated-purpose pool pumps ranges from \$11 billion (at a 7-percent discount rate) to \$24 billion (at a 3-percent discount rate). This NPV

⁵ The quantity refers to full-fuel-cycle (FFC) energy savings. FFC energy savings includes the energy consumed in extracting, processing, and transporting primary fuels (*i.e.*, coal, natural gas, petroleum fuels), and, thus, presents a more complete picture of the impacts of energy efficiency standards. For more information on the FFC metric, see section IV.H.2.

expresses the estimated total value of future operating-cost savings minus the estimated increased equipment costs for dedicated-purpose pool pumps purchased in 2021–2050.

In addition, the standards for dedicated-purpose pool pumps are projected to yield significant environmental benefits. DOE estimates that the standards would result in cumulative greenhouse gas emission reductions (over the same period as for energy savings) of 202 million metric tons (Mt) of carbon dioxide (CO₂), 147 thousand tons of sulfur dioxide (SO₂), 257 thousand tons of nitrogen oxides (NO_x), 968 thousand tons of methane (CH₄), 3.0 thousand tons of nitrous oxide (N₂O), and 0.50 tons of mercury (Hg).⁷ The cumulative reduction in CO₂ emissions through 2030 amounts to 48 Mt, which is equivalent to the emissions resulting from the annual electricity use of 7.1 million homes.

The value of the CO₂ reduction is calculated using a range of values per metric ton (t) of CO₂ (otherwise known as the “Social Cost of Carbon Dioxide,” or SC-CO₂) developed by a Federal interagency working group.⁸ The derivation of the SC-CO₂ values is discussed in section IV.L. Using discount rates appropriate for each set of SC-CO₂ values, DOE estimates that the present value of the CO₂ emissions reduction is between \$1.5 billion and \$21 billion. Using the central SCC case represented by \$40.6/metric ton (t) in 2015 and a discount rate of 3-percent produces a value of \$6.8 billion.

DOE also calculated the value of the reduction in emissions of the non-CO₂ greenhouse gases, methane and nitrous oxide, using values for the social cost of

methane (SC-CH₄) and the social cost of nitrous oxide (SC-N₂O) recently developed by the interagency working group.⁹ See section IV.L.2 for description of the methodology and the values used for DOE's analysis. The estimated present value of the methane emissions reduction is between \$0.32 billion and \$2.6 billion, with a value of \$0.99 billion using the central SC-CH₄ case, and the estimated present value of the N₂O emissions reduction is between \$0.008 billion and \$0.09 billion, with a value of \$0.03 billion using the central SC-N₂O case.

DOE also estimates the present value of the NO_x emissions reduction to be \$0.21 billion using a 7-percent discount rate, and \$0.48 billion using a 3-percent discount rate.¹⁰ DOE is still investigating appropriate valuation of the reduction in other emissions, and therefore did not include any such values in the analysis of this direct final rule.

Table I–4 summarizes the economic benefits and costs expected to result from the adopted standards for dedicated-purpose pool pumps.

⁹ United States Government—Interagency Working Group on Social Cost of Greenhouse Gases. Addendum to Technical Support Document on Social Cost of Carbon for Regulatory Impact Analysis under Executive Order 12866: Application of the Methodology to Estimate the Social Cost of Methane and the Social Cost of Nitrous Oxide. August 2016. https://www.whitehouse.gov/sites/default/files/omb/inforeg/august_2016_sc_ch4_sc_n2o_addendum_final_8_26_16.pdf.

¹⁰ DOE estimated the monetized value of NO_x emissions reductions associated with electricity savings using benefit per ton estimates from the *Regulatory Impact Analysis for the Clean Power Plan Final Rule*, published in August 2015 by EPA's Office of Air Quality Planning and Standards. Available at www.epa.gov/cleanpowerplan/clean-power-plan-final-rule-regulatory-impact-analysis. See section IV.L for further discussion. The U.S. Supreme Court has stayed the rule implementing the Clean Power Plan until the current litigation against it concludes. *Chamber of Commerce, et al. v. EPA, et al.*, Order in Pending Case, 577 U.S. ____ (2016). However, the benefit-per-ton estimates established in the Regulatory Impact Analysis for the Clean Power Plan are based on scientific studies that remain valid irrespective of the legal status of the Clean Power Plan. DOE is primarily using a national benefit-per-ton estimate for NO_x emitted from the Electricity Generating Unit sector based on an estimate of premature mortality derived from the ACS study (Krewski *et al.* 2009). If the benefit-per-ton estimates were based on the Six Cities study (Lepule *et al.* 2011), the values would be nearly two-and-a-half times larger.

⁶ A metric ton is equivalent to 1.1 short tons. Results for emissions other than CO₂ are presented in short tons.

⁷ DOE calculated emissions reductions relative to the no-standards-case, which reflects key assumptions in the *Annual Energy Outlook 2016* (AEO2016). AEO2016 generally represents current legislation and environmental regulations for which implementing regulations were available as of the end of February 2016.

⁸ United States Government—Interagency Working Group on Social Cost of Carbon. *Technical Support Document: Technical Update of the Social Cost of Carbon for Regulatory Impact Analysis Under Executive Order 12866*. May 2013. Revised July 2015. Available at www.whitehouse.gov/sites/default/files/omb/inforeg/scc-std-final-july-2015.pdf.

TABLE I-4—SUMMARY OF ECONOMIC BENEFITS AND COSTS OF ADOPTED ENERGY CONSERVATION STANDARDS FOR DEDICATED-PURPOSE POOL PUMPS ***

Total Net Benefits		
Including GHG and NO _x Reduction Monetized Value	19	7
	32	3

*** This table presents the costs and benefits associated with pool pumps shipped in 2021–2050. These results include benefits to consumers which accrue after 2050 from the equipment purchased in 2021–2050. The incremental installed costs include incremental equipment cost as well as installation costs. The costs account for the incremental variable and fixed costs incurred by manufacturers due to the proposed standards, some of which may be incurred in preparation for the rule. The CO₂ reduction benefits are global benefits due to actions that occur domestically.

* The interagency group selected four sets of SC-CO₂, SC-CH₄, and SC-N₂O values for use in regulatory analyses. Three sets of values are based on the average social costs from the integrated assessment models, at discount rates of 5 percent, 3 percent, and 2.5 percent. The fourth set, which represents the 95th percentile of the social cost distributions calculated using a 3-percent discount rate, is included to represent higher-than-expected impacts from climate change further out in the tails of the social cost distributions. The social cost values are emission year specific. See section IV.L.1 for more details.

** DOE estimated the monetized value of NO_x emissions reductions associated with electricity savings using benefit per ton estimates from the *Regulatory Impact Analysis for the Clean Power Plan Final Rule*, published in August 2015 by EPA's Office of Air Quality Planning and Standards. (Available at www.epa.gov/cleanpowerplan/clean-power-plan-final-rule-regulatory-impact-analysis.) See section IV.L.3 for further discussion. DOE is primarily using a national benefit-per-ton estimate for NO_x emitted from the electricity generating unit sector based on an estimate of premature mortality derived from the ACS study (Krewski *et al.* 2009). If the benefit-per-ton estimates were based on the Six Cities study (Lepule *et al.* 2011), the values would be nearly two-and-a-half times larger.

† Total Benefits for both the 3-percent and 7-percent cases are presented using only the average social costs with 3-percent discount rate.

The benefits and costs of the adopted standards for dedicated-purpose pool pumps sold between 2021–2050 can also be expressed in terms of annualized values. The monetary values for the total annualized net benefits are (1) the reduced consumer operating costs, minus (2) the increases in equipment purchase prices and installation costs, plus (3) the value of the benefits of CO₂ and NO_x emission reductions, all annualized.¹¹

The national operating cost savings are domestic private U.S. consumer monetary savings that occur as a result of purchasing the covered equipment and are measured for the lifetime of dedicated-purpose pool pumps shipped in 2021–2050. The benefits associated with reduced CO₂ emissions achieved as a result of the adopted standards are

also calculated based on the lifetime of dedicated-purpose pool pumps shipped in 2021–2050. Because CO₂ emissions have a very long residence time in the atmosphere, the SC-CO₂ values for emissions in future years reflect CO₂-emissions impacts that continue through 2300. The CO₂ reduction is a benefit that accrues globally. DOE maintains that consideration of global benefits is appropriate because of the global nature of the climate change problem.

Estimates of annualized benefits and costs of the adopted standards are shown in Table I-5. The results under the primary estimate are as follows. Using a 7-percent discount rate for benefits and costs other than GHG reduction (for which DOE used average social costs with a 3-percent discount

rate),¹² the estimated cost of the standards in this rule is \$138 million per year in increased equipment costs, while the estimated annual benefits are \$1.3 billion in reduced equipment operating costs, \$449 million in GHG reductions, and \$22 million in reduced NO_x emissions. In this case, the net benefit amounts to \$1.7 billion per year. Using a 3-percent discount rate for all benefits and costs, the estimated cost of the standards is \$149 million per year in increased equipment costs, while the estimated annual benefits are \$1.5 billion in reduced operating costs, \$449 million in GHG reductions, and \$27 million in reduced NO_x emissions. In this case, the net benefit amounts to \$1.8 billion per year.

¹¹ To convert the time-series of costs and benefits into annualized values, DOE calculated a present value in 2016, the year used for discounting the NPV of total consumer costs and savings. For the benefits, DOE calculated a present value associated with each year's shipments in the year in which the shipments occur (e.g., 2020 or 2030), and then

discounted the present value from each year to 2016. The calculation uses discount rates of 3 and 7 percent for all costs and benefits except for the value of CO₂ reductions, for which DOE used case-specific discount rates, as shown in Table . Using the present value, DOE then calculated the fixed annual payment over a 30-year period, starting in

the compliance year, which yields the same present value.

¹² DOE used average social costs with a 3-percent discount rate because these values are considered as the "central" estimates by the interagency group.

TABLE I-5—ANNUALIZED BENEFITS AND COSTS OF ADOPTED STANDARDS FOR DEDICATED-PURPOSE POOL PUMPS *

	Discount rate (%)	Primary estimate	Low-net-benefits estimate	High-net-benefits estimate
Million 2015\$/year				
Benefits				
Consumer Operating Cost Savings	7	1,340	1,221	1,467.
	3	1,516	1,367	1,678.
GHG Reduction (using avg. social costs at 5% discount rate)**.	5	147	129	164.
GHG Reduction (using avg. social costs at 3% discount rate)**.	3	449	392	504.
GHG Reduction (using avg. social costs at 2.5% discount rate)**.	2.5	642	560	721.
GHG Reduction (using 95th percentile social costs at 3% discount rate)**.	3	1,346	1,175	1,510.

	3	2	2	2.
Net Benefits				
Total ‡	7% plus GHG range ..	1,371 to 2,570	1,245 to 2,292	1,535 to 2,881.
	7%	1,673	1,509	1,875.
	3 plus GHG range	1,542 to 2,741	1,387 to 2,433	1,748 to 3,094.
	3	1,844	1,651	2,088.

* This table presents the annualized costs and benefits associated with pool pumps shipped in 2021–2050. These results include benefits to consumers which accrue after 2050 from the pool pumps purchased from 2021–2050. The incremental equipment costs include incremental equipment cost as well as installation costs. The costs account for the incremental variable and fixed costs incurred by manufacturers due to the adopted standards, some of which may be incurred in preparation for the rule. The Primary, Low Net Benefits, and High Net Benefits Estimates utilize projections of energy prices and real GDP from the *AEIO2016* No-CPP case, a Low Economic Growth case, and a High Economic Growth case, respectively. In addition, incremental product costs reflect the default price trend in the Primary Estimate, a high price trend in the Low Benefits Estimate, and a low price trend in the High Benefits Estimate. The methods used to derive projected price trends are explained in section IV.F.1. The benefits and costs are based on equipment efficiency distributions as described in sections IV.F.8 and IV.H.1. Purchases of higher efficiency equipment are a result of many different factors unique to each consumer including past purchases, expected usage, and others. For each consumer, all other factors being the same, it would be anticipated that higher efficiency purchases in the no-new-standards case may correlate positively with higher energy prices. To the extent that this occurs, it would be expected to result in some lowering of the consumer operating cost savings from those calculated in this rule. Note that the Benefits and Costs may not sum to the Net Benefits due to rounding.

** The interagency group selected four sets of SC-CO₂, SC-CH₄, and SC-N₂O values for use in regulatory analyses. Three sets of values are based on the average social costs from the integrated assessment models, at discount rates of 5 percent, 3 percent, and 2.5 percent. The fourth set, which represents the 95th percentile of the social cost distributions calculated using a 3-percent discount rate, is included to represent higher-than-expected impacts from climate change further out in the tails of the social cost distributions. The social cost values are emission year specific. The GHG reduction benefits are global benefits due to actions that occur nationally. See section IV.L for more details.

† DOE estimated the monetized value of NO_x emissions reductions associated with electricity savings using benefit per ton estimates from the *Regulatory Impact Analysis for the Clean Power Plan Final Rule*, published in August 2015 by EPA's Office of Air Quality Planning and Standards. (Available at www.epa.gov/cleanpowerplan/clean-power-plan-final-rule-regulatory-impact-analysis.) See section IV.L.3 for further discussion. For the Primary Estimate and Low Net Benefits Estimate, DOE used national benefit-per-ton estimates for NO_x emitted from the Electric Generating Unit sector based on an estimate of premature mortality derived from the ACS study (Krewski *et al.* 2009). For the High Net Benefits Estimate, the benefit-per-ton estimates were based on the Six Cities study (Lepule *et al.* 2011); these are nearly two-and-a-half times larger than those from the ACS study.

‡ Total Benefits for both the 3-percent and 7-percent cases are presented using the average social costs with 3-percent discount rate. In the rows labeled “7% plus GHG range” and “3% plus GHG range,” the operating cost and NO_x benefits are calculated using the labeled discount rate, and those values are added to the full range of social cost values.

†† Manufacturers are estimated to incur \$35.6 million in conversion costs between 2017 and 2020.

DOE's analysis of the national impacts of the adopted standards is described in sections IV.H, IV.K, and IV.L of this document.

D. Conclusion

Based on the analyses in this direct final rule, DOE found the benefits to the

nation of the standards (energy savings, consumer LCC savings, positive NPV of consumer benefit, and emission reductions) outweigh the burdens (loss of INPV and LCC increases for some end users of this equipment). DOE has concluded that the standards in this direct final rule represent the maximum

improvement in energy efficiency that is technologically feasible and economically justified, and would result in significant conservation of energy.

II. Introduction

The following sections briefly discuss the statutory authority underlying this

direct final rule, as well as some of the relevant historical background related to the establishment of standards for dedicated-purpose pool pumps.

A. Authority

Title III, Part C¹³ of the Energy Policy and Conservation Act of 1975 (EPCA), (42 U.S.C. 6311–6317, as codified) established the Energy Conservation Program for Certain Industrial Equipment, a program covering certain industrial equipment.¹⁴ “Pumps” are listed as a type of covered industrial equipment. (42 U.S.C. 6311(1)(A))

While pumps are listed as a type of covered equipment, EPCA does not define the term “pump.” To address this, in January 2016, DOE published a test procedure final rule (January 2016 general pumps test procedure final rule) that established a definition for the term “pump.” 81 FR 4086, 4147 (January 25, 2016). In the December 2016 DPPP test procedure final rule (“test procedure final rule”),¹⁵ DOE noted the applicability of the definition of “pump” and associated terms to dedicated-purpose pool pumps.

Pursuant to EPCA, DOE’s energy conservation program for covered equipment consists essentially of four parts: (1) Testing, (2) labeling, (3) the establishment of Federal energy conservation standards, and (4) certification and enforcement procedures. Subject to certain criteria and conditions, DOE is required to develop test procedures to measure the energy efficiency, energy use, or estimated annual operating cost of covered equipment. (42 U.S.C. 6295(o)(3)(A) and 6316(a)) Manufacturers of covered equipment must use the prescribed DOE test procedure as the basis for certifying to DOE that their equipment complies with the applicable energy conservation standards adopted under EPCA, and when making representations to the public regarding their energy use or efficiency. (42 U.S.C. 6314(d)) Similarly, DOE must use these test procedures to determine whether the equipment complies with standards adopted pursuant to EPCA. *Id.* The DOE test procedures for dedicated-purpose pool pumps appear at title 10 of the Code of Federal Regulations (CFR) part 431, subpart Y, appendix B.

DOE must follow specific statutory criteria for prescribing new or amended standards for covered equipment, including dedicated-purpose pool pumps. Any new or amended standard for covered equipment must be designed to achieve the maximum improvement in energy efficiency that the Secretary of Energy determines is technologically feasible and economically justified. (42 U.S.C. 6313(a)(6)(C), 6295(o), and 6316(a)) Furthermore, DOE may not adopt any standard that would not result in the significant conservation of energy. (42 U.S.C. 6295(o)(3)) and 6316(a)) Moreover, DOE may not prescribe a standard (1) for certain equipment, including dedicated-purpose pool pumps, if no test procedure has been established for the product, or (2) if DOE determines by rule that the standard is not technologically feasible or economically justified. (42 U.S.C. 6295(o) and 6316(a)) In deciding whether a proposed standard is economically justified, DOE must determine whether the benefits of the standard exceed its burdens. DOE must make this determination after receiving comments on the proposed standard, and by considering, to the greatest extent practicable, the following seven statutory factors:

1. The economic impact of the standard on manufacturers and consumers of the equipment subject to the standard;
2. The savings in operating costs throughout the estimated average life of the covered equipment in the type (or class) compared to any increase in the price, initial charges, or maintenance expenses for the covered equipment that are likely to result from the standard;
3. The total projected amount of energy (or as applicable, water) savings likely to result directly from the standard;
4. Any lessening of the utility or the performance of the covered equipment likely to result from the standard;
5. The impact of any lessening of competition, as determined in writing by the Attorney General, that is likely to result from the standard;
6. The need for national energy and water conservation; and
7. Other factors the Secretary of Energy (Secretary) considers relevant. (42 U.S.C. 6295(o)(2)(B)(i)(I)–(VII)) and 6316(a))

Further, EPCA establishes a rebuttable presumption that a standard is economically justified if the Secretary finds that the additional cost to the consumer of purchasing a product complying with an energy conservation standard level will be less than three times the value of the energy savings

during the first year that the consumer will receive as a result of the standard, as calculated under the applicable test procedure. (42 U.S.C. 6295(o)(2)(B)(iii)) and 6316(a))

EPCA also contains what is known as an “anti-backsliding” provision, which prevents the Secretary from prescribing any amended standard that either increases the maximum allowable energy use or decreases the minimum required energy efficiency of a covered product. (42 U.S.C. 6295(o)(1)) and 6316(a)) Also, the Secretary may not prescribe an amended or new standard if interested persons have established by a preponderance of the evidence that the standard is likely to result in the unavailability in the United States in any covered product type (or class) of performance characteristics (including reliability), features, sizes, capacities, and volumes that are substantially the same as those generally available in the United States. (42 U.S.C. 6295(o)(4) and 6316(a))

Additionally, EPCA specifies requirements when promulgating an energy conservation standard for a covered product that has two or more subcategories. DOE must specify a different standard level for a type or class of products that has the same function or intended use if DOE determines that equipment within such group (a) consumes a different kind of energy from that consumed by other covered equipment within such type (or class); or (b) has a capacity or other performance-related feature that other equipment within such type (or class) do not have and such feature justifies a higher or lower standard. (42 U.S.C. 6295(q)(1) and 6316(a)) In determining whether a performance-related feature justifies a different standard for a group of equipment, DOE must consider such factors as the utility to the consumer of such a feature and other factors DOE deems appropriate. *Id.* Any rule prescribing such a standard must include an explanation of the basis on which such higher or lower level was established. (42 U.S.C. 6295(q)(2) and 6316(a))

Federal energy conservation requirements generally supersede State laws or regulations concerning energy conservation testing, labeling, and standards. (42 U.S.C. 6297(a)–(c) and 6316(a)) DOE may, however, grant waivers of Federal preemption for particular State laws or regulations, in accordance with the procedures and other provisions set forth under 42 U.S.C. 6297(d).

With particular regard to direct final rules, the Energy Independence and Security Act of 2007 (EISA 2007), Public

¹³ For editorial reasons, upon codification in the U.S. Code, part C was re-designated part A–1.

¹⁴ All references to EPCA refer to the statute as amended through the Energy Efficiency Improvement Act of 2015, Public Law 114–11 (April 30, 2015).

¹⁵ See https://www1.eere.energy.gov/buildings/appliance_standards/standards.aspx?productid=41.

Law 110–140 (December 19, 2007), amended EPCA, in relevant part, to grant DOE authority to issue a type of final rule (*i.e.*, a “direct final rule”) establishing an energy conservation standard for a product or equipment (including dedicated-purpose pool pumps) on receipt of a statement submitted jointly by interested persons that are fairly representative of relevant points of view (including representatives of manufacturers of covered equipment, States, and efficiency advocates), as determined by the Secretary. (42 U.S.C. 6295(p)(4)(A)) and 6316(a)) That statement must contain recommendations with respect to an energy or water conservation standard that are in accordance with the provisions of 42 U.S.C. 6295(o). (42 U.S.C. 6295(p)(4)(A)(i)) A notice of proposed rulemaking (NPR) that proposes an identical energy efficiency standard must be published simultaneously with the direct final rule and a public comment period of at least 110 days provided. (42 U.S.C. 6295(p)(4)(A)–(B)) Not later than 120 days after issuance of the direct final rule, if DOE receives one or more adverse comments or an alternative joint recommendation relating to the direct final rule, the Secretary must determine whether the comments or alternative joint recommendation may provide a reasonable basis for withdrawal under 42 U.S.C. 6295(o) or other applicable law. (42 U.S.C. 6295(p)(4)(C)(i)) If the Secretary makes such a determination, DOE must withdraw the direct final rule and proceed with the simultaneously published NPR, and publish in the **Federal Register** the reason why the direct final rule was withdrawn. (42 U.S.C. 6295(p)(4)(C)(ii))

B. Background

Currently, no Federal energy conservation standards exist for

dedicated-purpose pool pumps. DOE excluded this category of pumps from its recent consensus-based energy conservation standard final rule for general pumps. 81 FR 4368 (January 26, 2016). The general pumps final rule, which was also the product of a pumps working group that had been created through the ASRAC, examined a variety of pump categories. While dedicated-purpose pool pumps were one of the pump categories that were considered during the working group’s discussions, the working group ultimately recommended that DOE initiate a separate rulemaking for dedicated-purpose pool pumps. (Docket No. EERE–2013–BT–NOC–0039, No. 0092 at p. 2)

DOE began the separate rulemaking for dedicated-purpose pool pumps on May 8, 2015, when it issued a Request for Information (RFI) (May 2015 DPPP RFI). 80 FR 26475. The May 2015 DPPP RFI presented information and requested public comment about definitions, metrics, test procedures, equipment characteristics, and typical applications relevant to DPPP equipment. DOE received six written comments in response to the May 2015 DPPP RFI. The commenters included the Association of Pool and Spa Professionals (APSP); Pacific Gas and Electric Company (PG&E), Southern California Gas Company (SCG), Southern California Edison (SCE), and San Diego Gas and Electric Company (SDG&E), collectively referred to herein as the California Investor-Owned Utilities (CA IOUs); the Hydraulic Institute (HI); Ms. Tamara Newman; the National Electrical Manufacturers Association (NEMA); and River City Pool and Spa (River City).

In response to the May 2015 DPPP RFI, APSP, HI, and CA IOUs encouraged DOE to pursue a negotiated rulemaking for dedicated-purpose pool pumps.

(Docket. No. EERE–2015–BT–STD–0008, APSP, No. 10 at p. 2; HI, No. 8 at p. 2; CA IOUs, No. 11 at p. 2) Consistent with feedback from these interested parties, DOE began a process through the ASRAC to charter a working group to recommend energy conservation standards and a test procedure for dedicated-purpose pool pumps rather than continuing down the traditional notice and comment route that DOE had already begun. (Docket No. EERE–2015–BT–STD–0008) On August 25, 2015, DOE published a notice of intent to establish a working group for dedicated-purpose pool pumps (the DPPP Working Group) 80 FR 51483. The initial DPPP Working Group charter allowed for 3 months of DPPP Working Group meetings to establish the scope, metric, definitions, and test procedure for dedicated-purpose pool pumps. The charter reserved the discussion of standards for a later set of meetings, after the working group produced a term sheet recommending a scope, metric, definitions, and test procedure for DPPPs. (Docket No. EERE–2013–BT–NOC–0005, No. 56 at p. 27) On October 15, 2015, DOE published a notice of public open meetings of the DPPP Working Group to establish three additional meetings under the initial charter. 80 FR 61996. DOE selected the members of the DPPP Working Group to ensure a broad and balanced array of interested parties and expertise, including representatives from efficiency advocacy organizations and manufacturers, as well as one representative from a state government organization. Additionally, one member from ASRAC and one DOE representative were part of the group. Table II–1 lists the 13 members of the DPPP Working Group and their affiliations.

TABLE II–1—DPPP WORKING GROUP MEMBERS AND AFFILIATIONS

Member	Affiliation	Abbreviation
John Caskey	National Electrical Manufacturers Association (and ASRAC representative)	NEMA.
John Cymbalsky	U.S. Department of Energy	DOE.
Kristin Driskell	California Energy Commission	CEC.
Scott Durfee	Nidec Motor Corporation	Nidec.
Jeff Farlow	Pentair Aquatic Systems	Pentair.
Gary Fernstrom	California Investor-Owned Utilities (PG&E, SDG&E, SCG, and SCE)	CA IOUs.
Patrizio Fumagalli	Bestway USA, Inc	Bestway.
Paul Lin	Regal Beloit Corporation	Regal.
Joanna Mauer	Appliance Standards Awareness Project	ASAP.
Ray Mirzaei	Waterway Plastics	Waterway.
Doug Philhower	Hayward Industries, Inc	Hayward.
Shajee Siddiqui	Zodiac Pool Systems, Inc	Zodiac.
Meg Waltner	Natural Resources Defense Council	NRDC.

The DPPP Working Group commenced negotiations at an open meeting between September 30 and October 1, 2015, and then held three additional meetings to discuss scope, metrics, and the test procedure.¹⁶ The DPPP Working Group completed its initial charter on December 8, 2015, with a consensus vote to approve a term sheet containing recommendations to DOE on scope, metric, and the basis of test procedure (“December 2015 DPPP Working Group recommendations”).¹⁷ The term sheet containing these recommendations is available in the DPPP Working Group docket. (Docket No. EERE–2015–BT–STD–0008, No. 51) ASRAC subsequently voted unanimously to approve the December 2015 DPPP Working Group recommendations during its January 20, 2016 meeting. (Docket No. EERE–2015–BT–STD–0008, No. 0052) The December 2015 DPPP Working Group recommendations pertinent to the test procedure and metric are discussed in section III.C of this document and reflected in DOE’s DPPP test procedure final rule, issued in December 2016.¹⁸ DOE’s test procedure for dedicated-purpose pool pumps appears at title 10 of the Code of Federal Regulations (CFR) part 431, subpart Y, appendix B.

At the January 20, 2016, ASRAC meeting, the DPPP Working Group also requested more time to discuss potential energy conservation standards for dedicated-purpose pool pumps. In response, ASRAC recommended that the DPPP Working Group continue its work in a second phase of negotiations to recommend potential energy conservation standards for dedicated-purpose pool pumps. (Docket No. EERE–2013–BT–NOC–0005, No. 71 at pp. 20–52) The second phase of meetings commenced on March 21, 2016 (81 FR 10152, 10153) and

concluded on June 23, 2016, with approval of a second term sheet (June 2016 DPPP Working Group recommendations). This term sheet contained DPPP Working Group recommendations on performance-based energy conservation standard levels, scope of such standards, certain prescriptive requirements, certain labeling requirements, certain definitions, and certain amendments to its previous test procedure recommendations. (Docket No. EERE–2015–BT–STD–0008, No. 82) ASRAC subsequently voted unanimously to approve the June 2016 DPPP Working Group recommendations during a July 29, 2016 meeting. (Docket No. EERE–2013–BT–NOC–0005, No. 87) The energy conservation standards, definitions, and prescriptive requirements established in this direct final rule directly reflect the June 2016 DPPP Working Group recommendations.

In this direct final rule, DOE refers to both formal recommendations of the DPPP Working Group, as well as informal discussion and suggestions that were not formally recommended. All references to approved recommendations are specified with a citation to the June 2016 DPPP Working Group term sheet and noted with the recommendation number (e.g., Docket No. EERE–2015–BT–STD–0008, No. #82 Recommendation #X at p. Y); all references to discussions or suggestions of the DPPP Working Group not found in the June 2016 DPPP Working Group recommendations will have a citation to meeting transcripts and the commenter, if applicable (e.g., Docket No. EERE–2015–BT–STD–0008, [Organization], No. X at p. Y).

In this direct final rule, DOE also refers to certain submitted comments pertaining to the 2015 RFI that have to do with energy conservation standards (e.g., Docket No. EERE–2015–BT–STD–0008, No. X at p. Y). Any RFI comments related to the test procedure or informational in nature are not included here. DOE notes that many of the interested parties that submitted comments pertaining to the 2015 RFI later became members of the DPPP Working Group, or in the case of APSP, several of their members became

members of the Working Group. As such, the concerns of these commenters were fully discussed as part of the group’s meetings, and their positions may have changed as a result of the compromises inherent in a negotiation. Table II–2 lists the RFI commenters, as well as whether they participated in the DPPP Working Group.

TABLE II–2—LIST OF RFI COMMENTERS

Commenter	DPPP working group member
APSP	No.
CA IOU	Yes.

III. General Discussion

A. Consensus Agreement

As discussed in section II.B, DOE established a working group to negotiate a test procedure and energy conservation standards for dedicated-purpose pool pumps. On June 23, 2016, the Working Group reached unanimous consensus on a term sheet related to performance-based energy conservation standards, scope of such standards, certain definitions, certain prescriptive requirements, certain labeling requirements, and certain test procedure aspects for dedicated-purpose pool pumps. This term sheet included the following recommendations related to energy conservation standards:¹⁹

Recommendation #1. Each dedicated-purpose pool pump shall be required to meet the applicable minimum energy efficiency standards (WEF) set forth in the following table on and after July 19, 2021:

¹⁹ Note that the recommendations appear as-written in the June 2016, Working Group recommendation (<https://www.regulations.gov/document?D=EERE-2015-BT-STD-0008-0082>); i.e., all text and tables are verbatim.

¹⁶ Details of the negotiations sessions can be found in the public meeting transcripts that are posted to the docket for the Working Group (www.regulations.gov/#!docketDetail;D=EERE-2015-BT-STD-0008).

¹⁷ The ground rules of the DPPP Working Group define consensus as no more than three negative votes. (Docket No. EERE–2015–BT–0008–0016 at p. 3) Abstention was not construed as a negative vote.

¹⁸ See https://www1.eere.energy.gov/buildings/appliance_standards/standards.aspx?productid=41.

Equipment Class	Eff. Level	WEF Equation
Self-priming pool filter pumps <2.5 HHP and ≥0.711 HHP	6 (uncorrected)	$WEF = -2.30 * \ln(HHP) + 6.59$
Self-priming pool filter pumps <0.711 HHP	2	$WEF = \begin{cases} 5.55, & HHP \leq 0.13 \\ -1.30 * \ln(HHP) + 2.90, & HHP > 0.13 \end{cases}$
Non-self-priming pool filter pumps <2.5 HHP	1	$WEF = \begin{cases} 4.60, & HHP \leq 0.13 \\ -0.85 * \ln(HHP) + 2.87, & HHP > 0.13 \end{cases}$
Pressure cleaner booster pumps	1	DOE will recalculate WEF based on the updated test procedure in Recommendation #8 to be equivalent to EL1 (where the EL1 WEF with the previous test procedure was 0.73).

The working group does not recommend standards for: (1) Waterfall pumps of any size or (2) self-priming and non-self-priming pool filter pumps greater than or equal to 2.5 HHP.

All instances of HHP refer to hydraulic horsepower on Curve C at Max Speed.²⁰

Recommendation #2. On and after July 19, 2021, integral cartridge-filter pool pumps and integral sand-filter pool pumps must be distributed in commerce with a timer. Timer may be integral to the pump or a separate component that is shipped with the pump.

Recommendation #3. The scope of the recommended standards for self-priming pool filter pumps are only applicable to self-priming pool filter pumps served by single-phase power.

The recommended test procedure and reporting requirements would be applicable to all self-priming pool filter pumps (served by single- and three-phase power).

The recommended hydraulic horsepower limitation (<2.5 hydraulic hp) still applies.

Recommendation #4. For the purposes of establishing compliance with the standards for integral cartridge-filter and integral sand-filter pool pumps discussed in Recommendation #2, pool pump timer is defined as follows:

Pool pump timer means a pool pump control that automatically turns off a dedicated-purpose pool pump after a run-time of no longer than 10 hours.

The recommended definition captures the intent of the working group and should be adopted as-written or as modified in a manner that captures the same intent.

Recommendation #6A. All dedicated-purpose pool pumps with freeze protection controls distributed in commerce with the pump shall be

shipped with freeze protection disabled or with the following default, user-adjustable settings:

1. The default dry-bulb air temperature setting is no greater than 40 °F

2. The default run time setting shall be no greater than 1 hour (before the temperature is rechecked); and

3. The default motor speed shall not be more than ½ of the maximum available speed

As part of certification reporting, manufacturers must include the default dry-bulb air temperature setting (in °F), default run time setting (in minutes), and default motor speed (in rpm).

(Docket No. EERE-2015-BT-STD-0008, No. 82) This term sheet was ultimately submitted to, and accepted by the ASRAC, on July 29, 2016 (Docket No. EERE-2013-BT-NOC-0005, No. 87). All recommendations not shown here are related to test procedure or certification and were addressed in the recently issued test procedure final rule.

After carefully considering the consensus recommendations submitted by the DPPP Working Group and adopted by ASRAC related to energy conservation standards for dedicated-purpose pool pumps, DOE has determined that these recommendations, submitted in the previously discussed term sheet, comprise a statement submitted by interested persons who are fairly representative of relevant points of view on this matter. If compliant with certain statutory requirements, the recommendations could result in issuance of a direct final rule. In reaching this determination, DOE considered that the DPPP Working Group, in conjunction with ASRAC members who approved the recommendations, consisted of representatives of manufacturers of the covered equipment at issue, States, and efficiency advocates—all of which are groups specifically identified by Congress as relevant parties to any consensus recommendation. (42 U.S.C. 6295(p)(4)(A) and 6316(a)) As discussed

above, the term sheet was signed and submitted by a broad cross-section of interests, including the manufacturers who produce the subject equipment, environmental and energy-efficiency advocacy organizations, electric utility companies, and a member representing a State.²¹ In addition, the ASRAC Committee approving the DPPP Working Group's recommendations included at least two members representing States, one representing the National Association of State Energy Officials (NASEO) and one representing the State of California.²² By explicit language of the statute, the Secretary has the discretion to determine when a joint recommendation for an energy or water conservation standard has met the requirement for representativeness (*i.e.*, "as determined by the Secretary"). (42 U.S.C. 6295(p) (For today's direct final rule, DOE has determined that the DPPP working group represents all relevant points of view of interested parties.

Pursuant to 42 U.S.C. 6295(p)(4), the Secretary must also determine whether a jointly submitted recommendation for an energy or water conservation standard satisfies 42 U.S.C. 6295(o) or 42 U.S.C. 6313(a)(6)(B), as applicable. In making this determination, DOE has conducted an analysis to evaluate whether the potential energy conservation standards under consideration would meet these requirements. This evaluation is the same comprehensive approach that DOE typically conducts whenever it considers potential energy conservation standards for a given type of product or equipment. DOE applies the same principles to any consensus recommendations it may receive to satisfy its statutory obligation to ensure that any energy conservation standard it adopts achieves the maximum improvement in energy efficiency that is technologically feasible and economically justified and will result in

²⁰ The test procedure final rule contains a detailed discussion of the system curves used in pump testing, and section IV.A.1.c of this document describes how system curve C defines the relationship between the power, head, and flow of a pump.

²¹ This individual was Kristen Driskell (CEC).

²² These individuals were Deborah E. Miller (NASEO) and David Hungerford (CEC).

significant conservation of energy. Upon review, the Secretary determined that the term sheet submitted in the dedicated-purpose pool pump rulemaking comports with the standard-setting criteria set forth under 42 U.S.C. 6295(o). Accordingly, the consensus-recommended efficiency levels were included as Trial Standard Level (TSL) 3 for dedicated-purpose pool pumps in this rule (see section V.A for descriptions of all of the considered TSLs). Details regarding how the consensus-recommended TSL complies with the standard-setting criteria are discussed and demonstrated in the relevant sections throughout this document.

In sum, as the relevant criteria under 42 U.S.C. 6295(p)(4) have been satisfied, and the Secretary has determined that it is appropriate to adopt the consensus-recommended energy conservation standards for dedicated-purpose pool pumps through this direct final rule.

As required by the same statutory provision, DOE also is simultaneously publishing a notice of proposed rulemaking (NPR) proposing that the identical standard levels contained in this direct final rule be adopted. Consistent with the statute, DOE is providing a 110-day public comment period on the direct final rule. While DOE typically provides a comment period of 60 days on proposed standards, DOE is providing a 110-day comment period for this NPR, which is the same length as the comment period for the direct final rule. Based on the comments received during this period, the direct final rule will either become effective or DOE will withdraw it if one or more adverse comments is received and if DOE determines that those comments, when viewed in light of the rulemaking record related to the direct final rule, provide a reasonable basis for withdrawal of the direct final rule and for DOE to continue this rulemaking under the NPR. Receipt of an alternative joint recommendation may also trigger a DOE withdrawal of the direct final rule in the same manner. 42 U.S.C. 6295(p)(4)(C). Typical of other rulemakings, it is the substance, rather than the quantity, of comments that will ultimately determine whether a direct final rule will be withdrawn. To this end, the substance of any adverse comment(s) received will be weighed against the anticipated benefits of the jointly submitted recommendations and the likelihood that further consideration of the comment(s) would change the results of the rulemaking. To the extent an adverse issue had been previously raised and addressed in the rulemaking proceeding, such a submission will not

typically provide a basis for withdrawal of a direct final rule. Under the statute, withdrawal would occur by the 120th day after the direct final rule's publication.

B. Compliance Date

EPCA does not prescribe a lead time for pumps, or the number of years between the date of publication of a final standards rule and the date on which manufacturers must comply with the new standard. The DPPP Working Group recommended that the standards for dedicated-purpose pool pumps be applicable 54 months following publication of the direct final rule in the **Federal Register**. (EERE-2015-BT-STD-0008, No. 51, Recommendations #1 and #2 at pp. 1–2) DOE has adopted this date for this direct final rule.

C. Test Procedure

This section discusses DOE's requirements with respect to test procedures as well as summarizes the test procedure for dedicated-purpose pool pumps adopted by DOE.

EPCA sets forth generally applicable criteria and procedures for DOE's adoption and amendment of test procedures. (42 U.S.C. 6314) Manufacturers of covered equipment must use these test procedures to certify to DOE that their equipment complies with energy conservation standards and to quantify the efficiency of their equipment. As noted, in December 2016, DOE issued the DPPP test procedure final rule to establish test procedures for dedicated-purpose pool pumps.²³ The test procedure for dedicated-purpose pool pumps will appear at title 10 of the CFR part 431, subpart Y, appendix B.

DOE notes that 10 CFR part 430, subpart C, Appendix A established procedures, interpretations, and policies to guide DOE in the consideration and promulgation of new or revised appliance efficiency standards under EPCA. (See section 1.) These procedures are a general guide to the steps DOE typically follows in promulgating energy conservation standards. The guidance recognizes that DOE can and will, on occasion, deviate from the typical process. (See 10 CFR part 430, subpart C, appendix A, section 14(a)) In this particular instance, DOE deviated from its typical process by conducting a negotiated rulemaking process, per the request of multiple key stakeholders and as chartered by ASRAC. The DPPP Working Group initially met four times and successfully reached consensus on

the recommended test procedure and metric for different varieties of dedicated-purpose pool pumps. Following ASRAC approval, the DPPP Working Group commenced a second phase of meetings, resulting in consensus on the recommended energy conservation standards as well as certain additional test procedure recommendations. These recommendations are contained in the December 2015 and June 2016 DPPP Working Group term sheets, which ASRAC adopted. (Docket No. EERE-2015-BT-STD-0008, No. 51 and 82, respectively)

As discussed in section III.A, the June 2016 term sheet meets the criteria of a consensus recommendation, and DOE has determined that these recommendations are in accordance with the statutory requirements of 42 U.S.C. 6295(p)(4) (and 6316(a)) for the issuance of a direct final rule. DOE ultimately adopted the test procedure provisions and recommended standard levels that the DPPP Working Group included in the term sheets, which illustrates that DOE's deviations from the typical rulemaking process in this instance did not adversely impact the manufacturers' ability to understand and provide input to DOE's rulemaking process. The process that DOE used, in this case, was a more collaborative negotiated rulemaking effort resulting in an agreement on recommended standard levels, which DOE is fully implementing in this direct final rule.

Consistent with the recommendations of the DPPP Working Group, in September 2016 DOE published a test procedure notice of proposed rulemaking proposing (September 2016 DPPP TP NPR) to propose new definitions, a new test procedure, new sampling and rating requirements, and new enforcement provisions for dedicated-purpose pool pumps. DOE held a public meeting on September 26, 2016, to discuss and request public comment on the September 2016 DPPP test procedure NPR. Subsequently, DOE published a test procedure final rule reflecting relevant recommendations of the DPPP Working Group, as well as input from interested parties received in response to the September 2016 DPPP test procedure NPR. (Docket No. EERE-2016-BT-TP-0002)

In the test procedure final rule, DOE prescribed a test procedure for measuring the WEF for certain varieties of dedicated-purpose pool pumps. Specifically, the adopted test procedure applies only to self-priming and non-

²³ See https://www1.eere.energy.gov/buildings/appliance_standards/standards.aspx?productid=41.

self-priming pool filter pumps,²⁴ waterfall pumps, and pressure cleaner booster pumps. The test procedure does not apply to integral cartridge filter pool pumps, integral sand filter pool pumps, storable electric spa pumps, or rigid electric spa pumps.

For those applicable varieties of dedicated-purpose pool pumps, DOE prescribed methods to measure and calculate WEF, which is determined as a weighted average of water flow rate over the input power to the dedicated-purpose pool pump at different load

points, depending on the variety of dedicated-purpose pool pump and the number of operating speeds with which it is distributed in commerce. The equation for WEF is shown in Equation 1:

$$\text{WEF} = \frac{\sum_{i=1}^n \left(w_i \times \frac{Q_i}{1000} \times 60 \right)}{\sum_{i=1}^n \left(w_i \times \frac{P_i}{1000} \right)}$$

Equation 1

Where:

WEF = weighted energy factor in kgal/kWh;

w_i = weighting factor at each load point i ;

Q_i = flow at each load point i in gal/min;

P_i = input power to the motor (or controls, if present) at each load point i in W;

i = load point(s), defined uniquely for each DPPP variety; and

n = number of load point(s), defined uniquely for each speed configuration.

DOE prescribed unique load points for the different varieties and speed

configurations of dedicated-purpose pool pumps, as recommended by the DPPP Working Group. The load points (i) and weights (w_i) used in determining WEF for each pump variety are presented in Table III–1.

²⁴ DOE's DPPP test procedure applies to certain varieties of dedicated-purpose pool pumps that are

served by both single-phase and three-phase power, whereas this direct final rule only establishes

energy conservation standards for self-priming pool filter pumps served by single-phase power.

Table III-1 Load Points and Weights for Each DPPP Variety and Speed Configuration

DPPP Varieties	Speed Type	Test Points					Weight w_i
		# of Points n	Load Point i	Flow Rate Q	Head H	Speed n	
Self-Priming Pool Filter Pumps And Non-Self-Priming Pool Filter Pumps (with hydraulic hp ≤ 2.5 hp)	Single*	1	High	$Q_{high}(gpm) = Q_{max_speed@C} =$ flow at maximum speed on curve C	$H = 0.0082 \times Q_{high}^2$	Max speed	1.0
	Two-Speed	2	Low	$Q_{low}(gpm) =$ Flow rate associated with specified head and speed that is not below: <ul style="list-style-type: none"> 31.1 gpm if pump hydraulic hp at max speed on curve C is >0.75 or 24.7 gpm if pump hydraulic hp at max speed on curve C is ≤ 0.75 (a pump may vary speed to achieve this load point)	$H \geq 0.0082 \times Q_{low}^2$	Lowest speed capable of meeting the specified flow and head values, if any	0.8
			High	$Q_{high}(gpm) = Q_{max_speed@C} =$ flow at max speed on curve C	$H = 0.0082 \times Q_{high}^2$	Max speed	0.2
	Multi- and Variable-Speed	2	Low	$Q_{low}(gpm)$ <ul style="list-style-type: none"> If pump hydraulic hp at max speed on curve C is >0.75, then $Q_{low} \geq 31.1$ gpm If pump hydraulic hp at max speed on curve C is ≤ 0.75, then $Q_{low} \geq 24.7$ gpm (a pump may vary speed to achieve this load point)	$H = 0.0082 \times Q_{low}^2$	Lowest speed capable of meeting the specified flow and head values	0.8
			High	$Q_{high}(gpm) \geq 0.8 \times Q_{max_speed@C} \geq$ 80% of flow at maximum speed on curve C (a pump may vary speed to achieve this load point)	$H = 0.0082 \times Q_{high}^2$	Lowest speed capable of meeting the specified flow and head values	0.2
	Waterfall Pumps	1	High	Flow corresponding to specified head (on max speed pump curve)	17.0 ft	Max speed	1.0
DPPP	Speed	Test Points					Weight
Pressure Cleaner Booster Pumps	All	1	High	10.0 gpm (a pump may vary speed to achieve this load point)	≥ 60.0 ft	Lowest speed capable of meeting the specified flow and head values, if any	1.0

The test procedure final rule also contains methods to determine the self-

priming capability of pool filter pumps to effectively differentiate self-priming

and non-self-priming pool filter pumps, and the rated hydraulic horsepower,

both of which are necessary to determine the applicable energy conservation standard for certain varieties of dedicated-purpose pool pumps.

D. Scope

In the test procedure final rule, DOE adopted the following definition for dedicated-purpose pool pumps, consistent with that recommended by the DPPP Working Group (EERE-2015-BT-STD-0008, No. 51 Recommendation #4 at p. 3):

“Dedicated-purpose pool pump” means a self-priming pool filter pump, a non-self-priming pool filter pump, a waterfall pump, a pressure cleaner booster pump, an integral sand filter pool pump, an integral cartridge filter pool pump, a storable electric spa pump, or a rigid electric spa pump.

The test procedure final rule also specifically defines several varieties of dedicated-purpose pool pumps, some of which are included in the scope of energy conservation standards. The following sections describe the scope for the adopted performance-based and prescriptive energy conservation standards, respectively, for dedicated-purpose pool pumps.

1. Performance-Based Energy Conservation Standards

The DPPP Working Group recommended energy conservation standards for a subset of dedicated-purpose pool pumps to which the test procedure applies. Specifically, while the test procedure applies to self-priming pool filter pumps, non-self-priming pool filter pumps, pressure cleaner booster pumps, and waterfall

pumps, the DPPP Working Group recommended energy conservation standards only for the first three categories, excepting waterfall pumps due to limited economic benefits. (EERE-2015-BT-STD-0008, No. 82 Recommendation #2 at pp. 1–2). DOE agrees with the reasoning of the DPPP Working Group and is establishing energy conservation standards in this direct final rule only for those pump varieties recommended by the DPPP Working Group. Further detail on the economic benefits and burdens for all dedicated-purpose pool pump varieties analyzed, including waterfall pumps, can be found in section V.B. The scope of the performance-based energy conservation standards established in this document is summarized in Table III–2.

TABLE III–2 SCOPE OF PERFORMANCE-BASED STANDARDS FOR DEDICATED-PURPOSE POOL PUMPS

Pump variety	Hydraulic horsepower range	Power that pump is served by
Self-priming pool filter pump	All pumps less than 2.5 hhp	Single Phase.
Non-self-priming pool filter pumps	All pumps less than 2.5 hhp	No Restriction.
Pressure cleaner booster pumps	No Restriction	No Restriction.

DOE notes that in response to the May 2015 DPPP RFI, HI suggested that “auxiliary pool pumps [now referred to as pressure cleaner booster pumps] below 1 hp should be excluded because it will be difficult to adequately differentiate them from other CIP ESCC pumps below 1 hp. Including auxiliary pool pumps below 1 hp could potentially extend the scope of the CIP rulemaking outside the ASRAC working group negotiation. [sic]” (Docket. No. EERE-2015-BT-STD-0008, HI, No. 8 at p. 3) DOE acknowledges the concerns raised by HI, and clarifies that in test procedure rulemaking, DOE proposed, received comment on, and ultimately established, a definition for pressure cleaner booster pumps that effectively differentiated these pumps from end suction close-coupled pumps less than 1 horsepower. Specifically, pressure cleaner booster pump was defined to mean an end suction, dry rotor pump designed and marketed for pressure-side pool cleaner applications, and which may be UL listed under ANSI/UL 1081–2014, “Standard for Swimming Pool Pumps, Filters, and Chlorinators.” Because DOE was able to, in the test procedure final rule, develop a definition to adequately differentiate pressure cleaner booster pumps from other end suction close-coupled pump, DOE will not exclude pressure cleaner

booster pumps from energy conservation standards, as recommended by HI.

As shown in Table III–2, the DPPP Working Group recommended a scope of standards that restricts self-priming and non-self-priming pool filter pumps to those with a hydraulic output power less than 2.5 horsepower (Docket No. EERE-2015-BT-STD-0008, No. 82, Recommendation #1 at p. 1). DOE notes that the DPPP Working Group first discussed a cutoff point of 2.5 hydraulic horsepower in the March 21, 2016 DPPP Working Group meeting. Initially, the DPPP Working Group members were confused about whether the discussion of pump capacity was using terms of hydraulic horsepower, nameplate horsepower, or shaft horsepower. DOE clarified that capacity discussions are in terms of hydraulic horsepower. (Docket No. EERE-2015-BT-STD-0008, No. 94 at p. 38–42) In a subsequent April 19 Working Group meeting, DOE again clarified that the scope metric is in terms of hydraulic horsepower. (Docket No. EERE-2015-BT-STD-0008, No. 79 at p. 34–39)

Ultimately, the DPPP Working Group recommendation for horsepower limitations is consistent with the scope of self-priming and non-self-priming pool filter pumps established in the test procedure final rule. The DPPP Working

Group recommended this restriction based on the combination of three key reasons: (1) Low shipments volume, (2) low potential for energy savings (due to the prevalence of motors already regulated by DOE), and (3) lack of performance data. (Docket No. EERE-2015-BT-STD-0008, No. 79 at p. 36–47) DOE agrees with the reasoning of the DPPP Working Group and is adopting this scope restriction in this direct final rule.

DOE notes that prior to the formation of the DPPP Working Group, APSP responded to the May 2015 DPPP RFI and recommended that DOE define scope using total horsepower, noting that it was also open to discussing and developing alternative or additional methods in which we can rate covered pump systems by total input power draw. (Docket. No. EERE-2015-BT-STD-0008, APSP, No. 10 at p. 5) APSP provided no further rationale for their option. APSP’s recommendation conflicts with the use of hydraulic horsepower recommended by the DPPP Working Group and discussed in the previous paragraphs. DOE notes that five members of APSP (Waterway Plastics, Hayward Industries, Inc., Zodiac Pool Systems, Inc., Pentair Aquatic Systems, and Bestway USA, Inc.) participated in the DPPP Working Group and unanimously supported the

term sheet recommendations enumerated in the previous paragraphs. (EERE-2015-BT-STD-0008, No. 51) Further, DOE notes that a representative of APSP was present at the final DPPP Working Group meeting, and offered no public comment in opposition to the term sheet adopted by the DPPP Working Group. (Docket No. EERE-2015-BT-STD-0008, June 23 DPPP Working Group Meeting, No. 92, at p. 3) For these reasons, DOE believes that the interests of APSP were sufficiently satisfied by the recommendations unanimously agreed upon by the DPPP Working Group. Also as shown in Table III-2, the DPPP Working Group recommended that the scope of the recommended standards for self-priming pool filter pumps only be applicable to self-priming pool filter pumps served by single-phase power. The DPPP Working Group clarified that the recommended test procedure and reporting requirements would still be applicable to all self-priming pool filter pumps—both those served by single-phase power and those served by three-phase power. (Docket No. EERE-2015-BT-STD-0008, No. 82

Recommendations #3 at p. 2) Regardless of whether the pump is supplied by single- or three-phase power, the recommended hydraulic horsepower limitation of 2.5 rated hydraulic horsepower would still apply to such self-priming pool filter pumps.

The DPPP Working Group recommended this restriction based on low shipments volume and low potential for energy savings (due to the prevalence of motors already regulated by DOE) (Docket No. EERE-2015-BT-STD-0008, No. 91 at p. 171). DOE agrees with the reasoning of the DPPP Working Group and is adopting this scope restriction in this direct final rule.

Finally, consistent with the test procedure scope, standards do not apply to submersible pumps. In the test procedure final rule, DOE defined a submersible pump as a pump that is designed to be operated with the motor and bare pump fully submerged in the pumped liquid. As discussed in the test procedure final rule, DOE determined that some end suction submersible pond pumps may meet the definition of self-priming or non-self-priming pool filter pump, but were not reviewed by the DPPP Working Group and were not intended by the DPPP Working Group to be in the scope of this rulemaking. In order to exclude these pumps from this regulation, DOE excluded submersible pumps from the scope of the test procedure final rule, and is in turn excluding them from the scope of this direct final rule.

2. Prescriptive Energy Conservation Standards

Consistent with the DPPP Working Group recommendations, DOE is setting prescriptive energy conservation standards for integral cartridge filter pool pumps and integral sand filter pool pumps. This equipment is specifically defined in the test procedure final rule.

DOE notes that before the formation of the DPPP Working Group, APSP responded to the May 2015 DPPP RFI and generally recommended that DOE pursue a performance-based metric versus a prescriptive regulation. (Docket. No. EERE-2015-BT-STD-0008, APSP, No. 10 at p. 11) APSP provided no further rationale for their option. APSP's recommendation conflicts with the mix of performance-based and prescriptive standards recommended by the DPPP Working Group and enumerated in section III.A. DOE notes that five members of APSP (Waterway Plastics, Hayward Industries, Inc., Zodiac Pool Systems, Inc., Pentair Aquatic Systems, and Bestway USA, Inc.) participated in the DPPP Working Group and unanimously supported the term sheet recommendations enumerated in section III.A. (EERE-2015-BT-STD-0008, No. 51) Further, DOE notes that a representative of APSP was present at the final DPPP Working Group meeting, and offered no public comment in opposition to the term sheet adopted by the DPPP Working Group. (Docket No. EERE-2015-BT-STD-0008, June 23 DPPP Working Group Meeting, No. 92, at p. 3) For these reasons, DOE believes that the interests of APSP were sufficiently satisfied by the recommendations unanimously agreed upon by the DPPP Working Group.

3. Dedicated-Purpose Pool Pump Motor

In response to the May 2015 DPPP RFI, NEMA recommended that DOE consider proposing a replacement motor standard for pool pumps, as has been done in the California Title 20 Appliance Efficiency Program. NEMA asserted that the replacement pool filter pump motor subject is one that requires nationwide uniformity of compliance and enforcement through specific language regarding replacement motors within the pool filter pump system. (Docket. No. EERE-2015-BT-STD-0008, NEMA, No. 9 at p. 2) DOE acknowledges that replacement dedicated-purpose pool pump motors may have an impact on national energy consumption. However, establishing energy conservation standards or prescriptive requirements for dedicated-purpose pool pump motors is outside of the scope of authority of this

rulemaking, as replacement motors do not meet the definition of “dedicated-purpose pool pump” or “pump,” as defined in part 431 of title 10 of the Code of Federal Regulations. For this reason, in this direct final rule, DOE will not establish energy conservation standards for replacement dedicated-purpose pool pump motors.

However, DOE notes that in the test procedure final rule, DOE established an *optional* test procedure for rating replacement dedicated-purpose pool pump motors. DOE believes that this optional test procedure will aid the industry in moving towards uniformity in the rating and labeling of replacement dedicated-purpose pool pump motors.

E. Technological Feasibility

1. General

In each energy conservation standards rulemaking, DOE conducts a screening analysis based on information gathered on all current technology options and prototype designs that could improve the efficiency of the products or equipment that are the subject of the rulemaking. As the first step in such an analysis, DOE develops a list of technology options for consideration in consultation with manufacturers, industry experts, and other interested parties. DOE then determines which of those means for improving efficiency are technologically feasible. DOE considers technologies incorporated in commercially available products or in working prototypes to be technologically feasible. 10 CFR part 430, subpart C, appendix A, section 4(a)(4)(i).

After DOE has determined that particular technology options are technologically feasible, it further evaluates each technology option in light of the following additional screening criteria: (1) Practicability to manufacture, install, and service; (2) adverse impacts on product utility or availability; and (3) adverse impacts on health or safety. 10 CFR part 430, subpart C, appendix A, section 4(a)(4)(ii)–(iv) Additionally, it is DOE policy not to include in its analysis any proprietary technology that is a unique pathway to achieving a certain efficiency level. Section IV.B of this notice discusses the results of the screening analysis for dedicated-purpose pool pumps, particularly the designs DOE considered, those it screened out, and those that are the basis for the standards considered in this rulemaking. For further details on the screening analysis for this rulemaking, see chapter 4 of the direct

final rule technical support document (TSD).

2. Maximum Technologically Feasible Levels

When DOE proposes to adopt or amend a standard for a type or class of covered equipment, it must determine the maximum improvement in energy efficiency or maximum reduction in energy use that is technologically feasible for such product. (42 U.S.C. 6295(p)(1)) and 6316(a)) Accordingly, in the engineering analysis, DOE determined the maximum technologically feasible (max-tech) improvements in energy efficiency for dedicated-purpose pool pumps based on the most efficient equipment available on the market for certain equipment classes, and theoretical maximum attainable efficiency for others. The max-tech levels that DOE determined for this rulemaking are described in section IV.C.4 of this direct final rule and in chapter 5 of the direct final rule TSD.

F. Energy Savings

1. Determination of Savings

For each trial standard level (TSL), DOE projected energy savings from application of the TSL to pool pumps purchased in the 30-year period that begins in the year of compliance with any new standards (2021–2050).²⁵ The savings are measured over the entire lifetime of equipment purchased in the 30-year analysis period. DOE quantified the energy savings attributable to each TSL as the difference in energy consumption between each standards case and the no-standards case. The no-standards case represents a projection of energy consumption that reflects how the market for equipment would likely evolve in the absence of energy conservation standards.

DOE used its national impact analysis (NIA) spreadsheet model to estimate national energy savings (NES) from potential standards for pool pumps. The NIA spreadsheet model (described in section IV.H of this document) calculates energy savings in terms of site energy, which is the energy directly consumed by equipment at the locations where they are used. For electricity, DOE reports national energy savings in terms of primary energy savings, which is the savings in the energy that is used to generate and transmit the site electricity. DOE also calculates NES in terms of full-fuel-cycle (FFC) energy savings. The FFC metric includes the

energy consumed in extracting, processing, and transporting primary fuels (*i.e.*, coal, natural gas, petroleum fuels), and thus presents a more complete picture of the impacts of energy conservation standards.²⁶ DOE's approach is based on the calculation of an FFC multiplier for each of the energy types used by covered products or equipment. For more information on FFC energy savings, see section IV.H.2 of this direct final rule.

G. Economic Justification

1. Specific Criteria

As noted, EPCA provides seven factors to be evaluated in determining whether a potential energy conservation standard is economically justified. (42 U.S.C. 6295(o)(2)(B)(i)(I)(VII) and 6316(a)) The following sections discuss how DOE has addressed each of those seven factors in this rulemaking.

a. Economic Impact on Manufacturers and Consumers

In determining the impacts of a potential amended standard on manufacturers, DOE conducts a manufacturer impact analysis (MIA), as discussed in section IV.J. DOE first uses an annual cash-flow approach to determine the quantitative impacts. This step includes both a short-term assessment—based on the cost and capital requirements during the period between when a regulation is issued and when entities must comply with the regulation—and a long-term assessment over a 30-year period. The industry-wide impacts analyzed include (1) INPV, which values the industry on the basis of expected future cash flows; (2) cash flows by year; (3) changes in revenue and income; and (4) other measures of impact, as appropriate. Second, DOE analyzes and reports the impacts on different types of manufacturers, including impacts on small manufacturers. Third, DOE considers the impact of standards on domestic manufacturer employment and manufacturing capacity, as well as the potential for standards to result in plant closures and loss of capital investment. Finally, DOE takes into account cumulative impacts of various DOE regulations and other regulatory requirements on manufacturers.

For individual consumers, measures of economic impact include the changes in LCC and PBP associated with new or amended standards. These measures are discussed further in the following

section. For consumers in the aggregate, DOE also calculates the national net present value of the economic impacts applicable to a particular rulemaking. DOE also evaluates the LCC impacts of potential standards on identifiable subgroups of consumers that may be affected disproportionately by a national standard.

b. Savings in Operating Costs Compared to Increase in Price (LCC and PBP)

EPCA requires DOE to consider the savings in operating costs throughout the estimated average life of the covered product in the type (or class) compared to any increase in the price of, or in the initial charges for, or maintenance expenses of, the covered product that are likely to result from a standard. (42 U.S.C. 6295(o)(2)(B)(i)(II) and 6316(a)) DOE conducts this comparison in its LCC and PBP analyses.

The LCC is the sum of the purchase price of equipment (including its installation) and the operating cost (including energy, maintenance, and repair expenditures) discounted over the lifetime of the equipment. The LCC analysis requires a variety of inputs, such as equipment prices, equipment energy consumption, energy prices, maintenance and repair costs, equipment lifetime, and discount rates appropriate for consumers. To account for uncertainty and variability in specific inputs, such as equipment lifetime and discount rate, DOE uses a distribution of values, with probabilities attached to each value.

The PBP is the estimated amount of time (in years) it takes consumers to recover the increased purchase cost (including installation) of more efficient equipment through lower operating costs. DOE calculates the PBP by dividing the change in purchase cost due to a more-stringent standard by the change in annual operating cost for the year in which compliance is required with standards.

For its LCC and PBP analyses, DOE assumes that consumers will purchase the covered equipment in the first year of compliance with new standards. The LCC savings for the considered efficiency levels are calculated relative to the case that reflects projected market trends in the absence of new or amended standards. DOE's LCC and PBP analyses are discussed in further detail in section IV.F.

c. Energy Savings

Although significant conservation of energy is a separate statutory requirement for adopting an energy conservation standard, EPCA requires DOE, in determining the economic

²⁵ DOE also presents a sensitivity analysis that considers impacts for equipment shipped in a 9-year period.

²⁶ The FFC metric is discussed in DOE's statement of policy and notice of policy amendment. 76 FR 51282 (August 18, 2011), as amended at 77 FR 49701 (August 17, 2012).

justification of a standard, to consider the total projected energy savings that are expected to result directly from the standard. (42 U.S.C. 6295(o)(2)(B)(i)(III) and 6316(a)) As discussed in section IV.H, DOE uses the NIA spreadsheet model to project national energy savings.

d. Lessening of Utility or Performance of Equipment

In establishing equipment classes, and in evaluating design options and the impact of potential standard levels, DOE evaluates potential standards that would not lessen the utility or performance of the considered equipment. (42 U.S.C. 6295(o)(2)(B)(i)(IV) and 6316(a)) DOE reviewed performance data and characteristics for dedicated-purpose pool pump models that are currently available on the market, including models that meet the standards adopted in this final rule and models that do not meet the standards adopted in this final rule. For these models, DOE examined characteristics such as the capacity, controls, and physical size of the pumps. DOE was unable to identify any DPPP features or associated end-user utility that would become unavailable following the adoption of the standards in this final rule. Consequently, DOE concludes that the standards adopted in this direct final rule would not reduce the utility or performance of the equipment subject to this rulemaking. DOE's assessment of available technology options (*see* section IV.A.6) discusses, in detail, the features and technologies associated with the select standard level.

e. Impact of Any Lessening of Competition

EPCA directs DOE to consider the impact of any lessening of competition, as determined in writing by the Attorney General, which is likely to result from a standard. (42 U.S.C. 6295(o)(2)(B)(i)(V) and 6316(a)) It also directs the Attorney General to determine the impact, if any, of any lessening of competition likely to result from a standard and to transmit such determination to the Secretary within 60 days of the publication of a proposed rule, together with an analysis of the nature and extent of the impact. (42 U.S.C. 6295(o)(2)(B)(ii) and 6316(a)) DOE will transmit a copy of this direct final rule to the Attorney General with a request that the Department of Justice (DOJ) provide its determination on this issue. DOE will consider DOJ's comments on the rule in determining whether to proceed with the direct final rule. DOE will also publish and respond

to the DOJ's comments in the **Federal Register** in a separate notice.

f. Need for National Energy Conservation

DOE also considers the need for national energy and water conservation in determining whether a new or amended standard is economically justified. (42 U.S.C. 6295(o)(2)(B)(i)(VI) and 6316(a)) The energy savings from the adopted standards are likely to provide improvements to the security and reliability of the nation's energy system. Reductions in the demand for electricity also may result in reduced costs for maintaining the reliability of the Nation's electricity system. DOE conducts a utility impact analysis to estimate how standards may affect the nation's needed power generation capacity, as discussed in section IV.M.

DOE maintains that environmental and public health benefits associated with the more efficient use of energy are important to take into account when considering the need for national energy conservation. The adopted standards are likely to result in environmental benefits in the form of reduced emissions of air pollutants and greenhouse gases (GHGs) associated with energy production and use. DOE conducts an emissions analysis to estimate how potential standards may affect these emissions, as discussed in section IV.K; the estimated emissions impacts are reported in section V.B.6 of this document. DOE also estimates the economic value of emissions reductions resulting from the considered TSLs, as discussed in section IV.L.

g. Other Factors

In determining whether an energy conservation standard is economically justified, DOE may consider any other factors that the Secretary deems to be relevant. (42 U.S.C. 6295(o)(2)(B)(i)(VII) and 6316(a)) To the extent DOE identifies any relevant information regarding economic justification that does not fit into the other categories described above, DOE could consider such information under "other factors."

2. Significance of Savings

To adopt standards for a covered product or equipment, DOE must determine that such action would result in significant energy savings. (42 U.S.C. 6295(o)(3)(B) and 6316(a)) Although EPCA does not define the term "significant," in *Natural Resources Defense Council v. Herrington*, the U.S. Court of Appeals for the District of Columbia indicated that Congress intended "significant" energy savings in the context of EPCA to be savings that

are not "genuinely trivial." 768 F.2d 1355, 1373 (D.C. Cir. 1985). The energy savings for all the TSLs considered in this rulemaking, including the adopted standards, are not trivial, and, therefore, DOE considers them "significant" within the meaning of section 325 of EPCA.

3. Rebuttable Presumption

EPCA creates a rebuttable presumption that an energy conservation standard is economically justified if the additional cost to the consumer of a product that meets the standard is less than three times the value of the first year's energy savings resulting from the standard, as calculated under the applicable DOE test procedure. (42 U.S.C. 6295(o)(2)(B)(iii)) DOE's LCC and PBP analyses generate values used to calculate the effect potential amended energy conservation standards would have on the payback period for consumers. These analyses include, but are not limited to, the 3-year payback period contemplated under the rebuttable-presumption test. In addition, DOE routinely conducts an economic analysis that considers the full range of impacts to consumers, manufacturers, the Nation, and the environment, as required under EPCA. (42 U.S.C. 6295(o)(2)(B)(i)) The results of this analysis serve as the basis for DOE's evaluation of the economic justification for a potential standard level (thereby supporting or rebutting the results of any preliminary determination of economic justification). The rebuttable presumption payback results are discussed in section V.B.1.cof this direct final rule.

IV. Methodology and Discussion of Related Comments

This section addresses the rulemaking analyses DOE performed for this direct final rule. Separate subsections address each component of DOE's analyses.

DOE used several analytical tools to estimate the impact of the standards considered in this document. The first tool is a spreadsheet that calculates the LCC savings and PBP of potential amended or new energy conservation standards. The national impacts analysis uses a second spreadsheet set that provides shipments forecasts and calculates national energy savings and net present value of total consumer costs and savings expected to result from potential energy conservation standards. DOE uses the third spreadsheet tool, the Government Regulatory Impact Model (GRIM), to assess manufacturer impacts of potential standards. These three spreadsheet tools

are available on the DOE Web site for this rulemaking: https://www1.eere.energy.gov/buildings/appliance_standards/standards.aspx?productid=67.

Additionally, DOE used output from the Energy Information Administration (EIA)'s *Annual Energy Outlook 2016* (AEO2016), a widely known energy forecast for the United States, for the emissions and utility impact analyses.

A. Market and Technology Assessment

DOE develops information in the market and technology assessment that provides an overall picture of the market for dedicated-purpose pool pumps, including purpose of the equipment, industry structure, manufacturers, market characteristics, and technologies used in the equipment. This activity includes both quantitative and qualitative assessments, based primarily on publicly available information (e.g., manufacturer specification sheets and industry publications) and data submitted by manufacturers, trade associations, and other stakeholders. The market and technology assessment for this rulemaking addresses: (1) Equipment classes, (2) manufacturers and industry structure, (3) existing efficiency programs, (4) shipments information, (5) market and industry trends, and (6) technologies or design options that could improve the energy efficiency of dedicated-purpose pool pumps. The key findings of DOE's market assessment are summarized below. See chapter 3 of the direct final rule TSD for further discussion of the market and technology assessment.

1. Equipment Classes and Distinguishing Features

When evaluating and establishing energy conservation standards, DOE divides covered equipment into equipment classes by the type of energy used, by capacity, or by other performance-related features that justify differing standards. In making a determination whether a performance-related feature justifies a different standard, DOE must consider such factors as the utility of the feature to the consumer and other factors DOE determines are appropriate. (42 U.S.C. 6295(q) and 6316(a))

In the test procedure final rule, DOE defined different varieties of DPPP equipment. A pool filter pump is an end suction pump that either: (1) Includes an integrated basket strainer, or (2) does not include an integrated basket strainer, but requires a basket strainer for operation, as stated in manufacturer literature provided with the pump; and

may be distributed in commerce connected to, or packaged with, a sand filter, removable cartridge filter, or other filtration accessory, as long as the bare pump and filtration accessory are connected with consumer-removable connections that allow the pump to be plumbed to bypass the filtration accessory for testing.

A self-priming pool filter pump is a pool filter pump that is certified under NSF/ANSI 50–2015 to be self-priming or is capable of re-priming to a vertical lift of at least 5 feet with a true priming time less than or equal to 10 minutes, when tested in accordance with NSF/ANSI 50–2015, "Equipment for Swimming Pools, Spas, Hot Tubs and Other Recreational Water Facilities."

A non-self-priming pool filter pump is a pool filter pump that is not certified under NSF/ANSI 50–2015 to be self-priming and is not capable of re-priming to a vertical lift of at least 5 feet with a true priming time less than or equal to 10 minutes, when tested in accordance with NSF/ANSI 50–2015.

A pressure cleaner booster pump is an end suction, dry rotor pump designed and marketed for pressure-side pool cleaner applications, and which may be UL listed under ANSI/UL 1081–2014, "Standard for Swimming Pool Pumps, Filters, and Chlorinators."

A waterfall pump is a pool filter pump with maximum head less than or equal to 30 feet, and a maximum speed less than or equal to 1,800 rpm.

An integral cartridge filter pool pump is a pump that requires a removable cartridge filter, installed on the suction side of the pump, for operation; and the pump cannot be plumbed to bypass the cartridge filter for testing.

An integral sand filter pool pump is a pump distributed in commerce with a sand filter that cannot be bypassed for testing.

The DPPP varieties defined above serve as the basis for the DPPP equipment classes established in this direct final rule. Further, the class of self-priming pool filter pumps is being subdivided into two classes based on pump capacity. In this direct final rule, DOE is establishing DPPP equipment classes based on the following performance-related features:

- Strainer or filtration accessory
- self-priming ability
- pump capacity (flow, head, and horsepower)
- rotational speed

Stakeholder comments regarding equipment classes, the specific separation of equipment classes based on the listed factors, and the final list of proposed equipment classes are

discussed further in sections IV.A.1.a through IV.A.1.d.

a. Strainer or Filtration Accessory

Dedicated-purpose pool pumps employ several different varieties of strainer and filtration accessories, each providing a different utility to the end user. As defined in the test procedure final rule, a pool filter pump either includes a basket strainer or requires a basket strainer for operation. A basket strainer is a specific component that the test procedure final rule defines as "a perforated or otherwise porous receptacle that prevents solid debris from entering a pump, when mounted within a housing on the suction side of a pump. The basket strainer receptacle is capable of passing spherical solids of 1 mm in diameter, and can be removed by hand or with simple tools. Simple tools include but are not limited to a screwdriver, pliers, and an open-ended wrench." The basket strainer provides a direct utility to the pool filter pump end user, as it protects the pump from debris that would otherwise enter the impeller and cause damage to the pump. However, this utility comes at the cost of pump efficiency. The basket strainer has head-loss associated with it, which means a measurable amount of hydraulic power is lost as water traverses the basket strainer and the basket strainer housing. Ultimately, this reduces efficiency for pumps that include or require a basket strainer, compared to those that do not. Based on this relationship between end-user utility and achievable efficiency, DOE concludes that the presence of or requirement for a basket strainer is an appropriate feature to differentiate and establish pool filter pump equipment classes (including standard-size and small-size self-priming pool filter pumps, non-self-priming pool filter pumps, and waterfall pumps).

Typically, if a pool utilizes a pool filter pump, the filtration of particulates less than 1mm in diameter takes place in a separate filtration device, which is either installed separately from the pump, or is attached to the pump and may be removed using simple tools. Alternatively, integral cartridge filter and integral sand filter pump varieties include a filtration accessory, designed to remove particulates less than 1mm in diameter, which is integrally and permanently mounted to the pump. These integral filter pump varieties are typically distributed in commerce with a storable pool (e.g., inflatable or collapsible pools) or as a replacement pump for such a pool. These storable pools are intended for temporary or seasonal use, and their application and

usage profile are unique from other dedicated-purpose pool pump varieties. The end user is required to assemble the pump and pool at the beginning of the season and disassemble the pump and pool for storage at the end of the season. Combining the pump and filtration equipment into one integral piece of equipment enables the user to assemble, disassemble, and store the equipment more easily than if the pump and filter were separate components. Thus, the integral nature of the filtration accessory provides utility to the end user.

Similar to the basket strainer, the integral filtration accessory has head-loss associated with it, which means a measurable amount of hydraulic power is lost as water traverses the integral filtration accessory. However, due to the finer filtering capability of the integral filtration accessory (designed to remove particulates less than 1 mm in diameter), the integral filtration accessory will experience a larger head-loss than a comparably sized strainer basket. Ultimately, this translates to a reduced efficiency for integral cartridge filter and integral sand filter pool pumps, as compared to similarly sized pool filter pumps and other pumps not requiring a basket strainer. Based on this relationship between end-user utility and achievable efficiency, DOE concludes that the presence of an integral filtration accessory is an appropriate feature to differentiate and establish integral pump equipment classes (including integral cartridge filter and integral sand filter pumps).

The two specific varieties of integral filter pumps (integral cartridge and integral sand) offer different utility to end users. Sand filter pumps typically weigh more (when filled with sand media), but require less ongoing intervention and attention by the end user than cartridge filters. However, integral sand filter pool pumps typically have a greater head-loss across the filtration accessory than integral cartridge filter pool pumps. Ultimately, this translates to a reduced efficiency for

integral sand filter pumps, compared to integral cartridge filter pumps. Based on this relationship between end-user utility and achievable efficiency, DOE concludes that the variety of integral filtration accessory (sand filter versus cartridge filter) is an appropriate feature to differentiate integral pumps into two equipment classes, integral cartridge and integral sand filter pumps.

b. Self-Priming Ability

All pool filter pumps on the market are either self-priming or non-self-priming. The test procedure final rule defines a self-priming pool filter pump as, “a pool filter pump that is certified under NSF/ANSI 50–2015 to be self-priming or is capable of re-priming to a vertical lift of at least 5 feet with a true priming time less than or equal to 10 minutes, when tested in accordance with NSF/ANSI 50–2015.” Self-priming pumps are able to lift liquid that originates below the centerline of the pump inlet and, after initial manual priming, are able to subsequently re-prime without the use of external vacuum sources, manual filling, or a foot valve. In contrast, non-self-priming pumps must be re-primed in order to operate after an idle period. This re-priming may be achieved by manually filling the pump with water, or re-priming may be induced by placing the pump at a lower vertical height than the surface of the water it will pump. The self-priming capability of a pool filter pump affects typical applications for which the pump is appropriate, and thus the utility to the end user. For example, typical inground pool constructions consist of a pump at ground level (above the water level), and main and skimmer drains below the water level. In this configuration, when the pump is cycled off (which will typically happen during the day), prime is lost. A self-priming pump provides the end user with the ability to restart the pump (typically using a timer) without any need for manual intervention. Alternatively, a non-self-

priming pump would require the end user to manually refill the pump casing (re-prime) the pump, each time the end user wanted to restart the pump.

To achieve self-priming capability, self-priming pumps are constructed in a different manner than non-self-priming pumps. Specifically, self-priming pool filter pumps typically incorporate diffusers and reservoirs that work together to remove air from the suction side of the pump and regain the prime after an idle period. Prime is achieved by recirculating water that is trapped in the reservoir. The water in the pump mixes with air entering the pump from the suction line, and that mixture is discharged back into the reservoir, where air is released out of the pump discharge. Once all of the air is removed from the suction line, the pump is primed. However, once the self-priming pump is primed and running, the diffuser and reservoir configuration, by design, results in significant water recirculation within the bare pump, compared to a non-self-priming pump, where there is less internal recirculation. Internal water recirculation means that a portion of the hydraulic output of the pump is recirculated back to the reservoir of the pump, and is not immediately discharged out of the pump; as such, recirculation reduces the efficiency of the pump. Based on this relationship between end-user utility and achievable efficiency, DOE concludes that self-priming capability is an appropriate feature to differentiate equipment classes (self-priming versus non-self-priming pool filter pumps).²⁷

c. Pump Capacity (Flow, Head, and Power)

The capacity of a dedicated-purpose pool pump can be expressed using measurements of head, flow, and hydraulic power. These three parameters define the useful output to the end user and are interrelated and bound by the Equation 2:

$$P_{hydro} = \frac{Q * H}{3956}$$

Equation 2

Where:

P_{hydro} = hydraulic power (hp)
 Q = volumetric flow (gpm), and

H = total dynamic head (feet of water)

²⁷ More information on the construction and capabilities of self-priming and non-self-priming pumps is available at Hayward Industries' Web

page of frequently asked questions. In particular, the descriptions of inground and aboveground pump operations discuss priming. These

The requirements of a pool (or any water system), can be expressed in terms of a system curve. When a pump is tested on a system curve (such as descriptions are available at: <https://www.hayward-pool.com/shop/en/pools/faqs#q188>, and at <https://www.hayward-pool.com/shop/en/pools/faqs#q192>.

curve C),²⁸ any one of these three measurements can be used to calculate the other two measurements. Equation 3

and Equation 4 illustrate this relationship.

$$H_{CurveC} = 0.0082 * Q_{CurveC}^2$$

Equation 3

Where:

Q_{CurveC} = volumetric flow on system curve C (gpm) and

H_{CurveC} = head on system curve C (feet of water)

$$P_{hydro,CurveC} = \frac{0.0082 * Q_{CurveC}^3}{3956}$$

Equation 4

Where:

$P_{hydro,CurveC}$ = hydraulic power on system curve C (hp)

In this direct final rule, in agreement with DPPP Working Group recommendations, DOE is subdividing self-priming pool filter pumps into two equipment classes based on capacity, or more specifically, hydraulic horsepower at maximum speed on curve C (which is also referred to as rated hydraulic horsepower in test procedure final rule).

During meetings, some DPPP Working Group members commented that small pool filter pumps are inherently more efficient than large pool filter pumps, and the group considered introducing a breakpoint to divide the self-priming pool filter pump variety into two equipment classes based on capacity. (Docket No. EERE-2015-BT-STD-0008-0101, May 19 DPPP Working Group Meeting, at pp. 78–87) Initially, several DPPP Working Group members proposed to set this breakpoint at a level such that pumps rated above 0.75 thp would fall in a larger equipment class. (Docket No. EERE-2015-BT-STD-0008-0091, June 22 DPPP Working Group Meeting, at pp. 44–50) DPPP manufacturers commented that pumps rated below 1.0 thp make up a small portion of total pool filter pump shipments, and manufacturers proposed a higher breakpoint for the equipment classes, at a hydraulic horsepower corresponding to 1.25 thp. (Docket No. EERE-2015-BT-STD-0008-0091, June 22 DPPP Working Group Meeting, at pp. 54) To aid discussion, DPPP manufacturers provided pool filter pump shipment data to DOE's contractor and DOE presented

aggregated shipment data to the DPPP Working Group. The aggregated shipment data showed that approximately 10 percent of pool filter pump shipments are rated below 1.0 thp and approximately 5 percent of pool filter pump shipments are rated below 0.75 thp. (Docket No. EERE-2015-BT-STD-0008-0092, June 23 DPPP Working Group Meeting, at pp. 233–239) Based on these shipment data, the DPPP Working Group agreed on a recommendation to set the breakpoint between small-size and standard-size self-priming pool filter pumps at 0.711 hhp, so that most of the currently available pool filter pumps rated at 1.0 thp and below would fall below the 0.711-hhp breakpoint. (Docket No. EERE-2015-BT-STD-0008-0092, June 23 DPPP Working Group Meeting, at pp. 276–277; No. 82 Recommendation #1 at p. 1) Equation 4 dictates that 0.711 hhp corresponds to a flow rate of 70 gpm on curve C.

As discussed earlier in this subsection, pump capacity may also be considered in terms of pump head (or total dynamic pressure). In this direct final rule, DOE is distinguishing waterfall pump equipment from other pool filter pump varieties using head limitations. Specifically, as discussed by the DPPP Working Group, pumps used in waterfall applications do not need to produce high heads because waterfall pumps are typically not connected to pool circulation plumbing or to ancillary pool components like heaters and chlorinators (Docket No. EERE-2015-BT-STD-0008-0056, December 7 DPPP Working Group Meeting, at p. 237). Therefore, the DPPP Working

Group recommended distinguishing the waterfall pump equipment class by establishing a maximum pump head of 30 feet (inclusive) for the waterfall pump equipment class. (Docket No. EERE-2015-BT-STD-0008, No. 51 Recommendation #4 at p. 3)

Finally, in this direct final rule, DOE is distinguishing pressure cleaner booster pumps from other pumps based on their unique flow and head output. DPPP Working Group members asked whether pressure cleaner booster pumps would be covered by the energy conservation standard for general pumps. DOE clarified that the pressure cleaner booster pumps would not be covered by the general pumps standard since the general pumps standard has a lower bound of 25 gpm at the pump's best efficiency point, and the best efficiency point of pressure cleaner booster pumps is typically less than 25 gpm. (Docket No. EERE-2015-BT-STD-0008-0058, October 19 Working Group Meeting, at pp. 76–81) As discussed by the DPPP Working Group, pressure cleaner booster pumps must provide a high amount of head at a low flow rate to propel pressure-side pool cleaners along the bottom of the pool and to remove debris as the cleaner moves. Specifically, pressure-side pool cleaners (and associated piping and hoses) require a pump that provides at least 60 feet of head at approximately 10 gpm of flow; noting that the actual head requirements vary with each specific system, but will not typically be lower than 60 feet of head. (Docket No. EERE-2015-BT-STD-0008, March 22 Working Group Meeting, at pp. 207–210) Figure IV.1 illustrates the performance of four

²⁸ The test procedure final rule contains a detailed discussion of the system curves used in pump testing.

pressure cleaner booster pump models from the three largest manufacturers (representing the majority of the

pressure cleaner booster pump market) and highlights the range of head and

flow rates for which these pumps are currently designed.

Figure IV.1 Head-Flow Chart for Four Pressure Cleaner Booster Pumps, Highlighting Design Range

Although the pumps in Figure IV.1 all provide between 100 and 127 feet of head at 10 gpm, the DPPP Working Group concluded that certain systems require less head (down to 60 feet of head). DPPP Working Group members expressed a desire that the test procedure allow better ratings for variable-speed pressure cleaner pumps that are able to reduce speed and energy consumption to avoid supplying (and wasting) excess pressure beyond what is required to drive the cleaner. (Docket No. EERE-2015-BT-STD-0008-0101, May 19 Working Group Meeting, at pp. 49) The DPPP Working Group recommended that, for the test procedure, pressure cleaner booster pumps be evaluated at the lowest speed that can achieve 60 feet of head at a flow rate of 10 gpm. (Docket No. EERE-2015-

BT-STD-0008, No. 82 Recommendation #8 at pp. 4) Consequently, DOE has concluded that the aforementioned capacity range provides a specific utility to the consumer, or end user, and is therefore appropriate to use as the basis for distinguishing pressure cleaner booster pumps from other pump equipment classes.

d. Rotational Speed

For dedicated-purpose pool pumps, DOE has determined that rotational speed is not a sufficient differentiator to establish an equipment class without adding specific utility. However, the DPPP Working Group recommended DOE define waterfall pumps as “a pool filter pump with maximum head less than or equal to 30 feet, and a maximum speed less than or equal to 1,800 rpm”

and establish an equipment class for this variety of pool filter pump (Docket No. EERE-2015-BT-STD-0008, No. 44, Recommendation #4 at p. 3). Waterfall pumps are used in applications with low head and high flow requirements; *i.e.*, applications that require “flat” head versus flow performance curves. This is because waterfall pumps are not typically plumbed through a filter or other auxiliary equipment, and thus do not have a large amount of head to overcome.

Pumps running at 1,800 rpm typically exhibit the fairly flat head versus flow operating curve that is usually required by waterfall applications. Figure IV.2 illustrates this property in contrast to the steeper head-versus-flow curves that are typical for self-priming pool filter pumps.

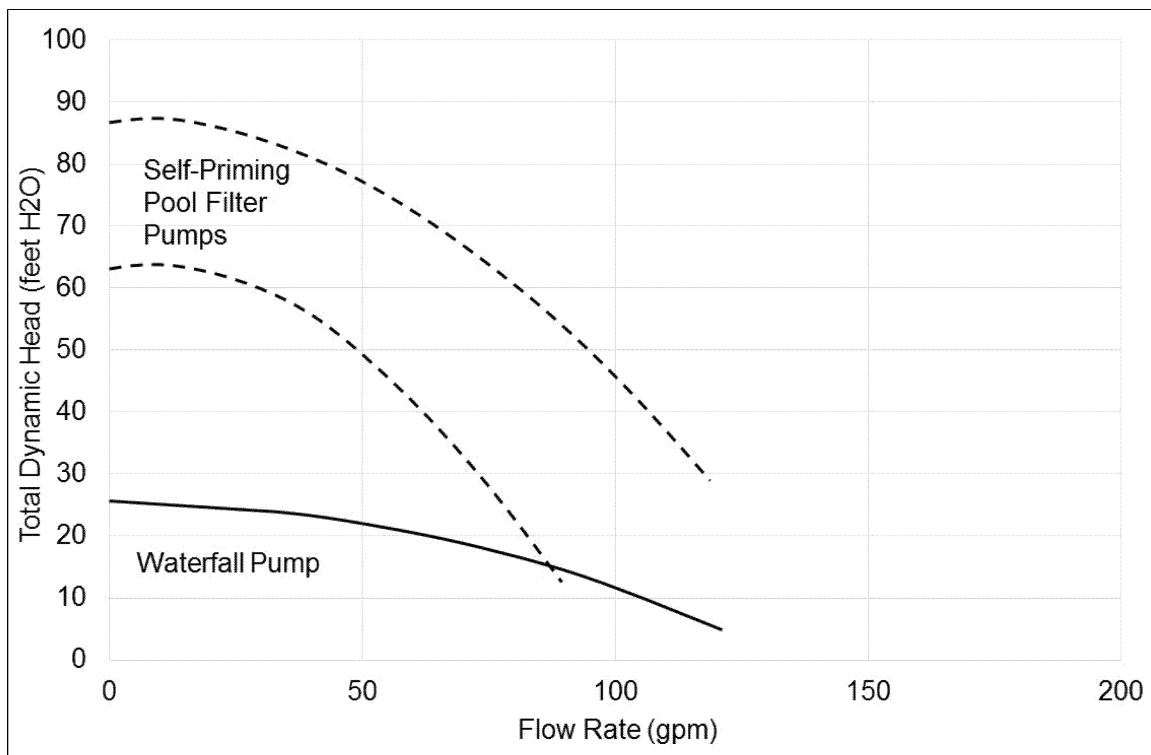

Figure IV.2 Head-Flow Curves of a Waterfall Pump and Self-Priming Pool Filter Pumps

Due to the inherent curve shape of 1,800 rpm pumps, this rotational speed limitation in conjunction with the 30-foot head limitation serves to establish

a capacity differentiation. The limitations recommended by the DPPP Working Group effectively categorize a set of pumps with similar performance

curves (heads, flows, and hydraulic horsepower) into one equipment class—waterfall pumps. Figure IV.3 illustrates this phenomenon.

Figure IV.3 Head-Flow Curves of Multiple Waterfall Pumps and Self-Priming Pool Filter Pumps

e. End User Safety

Pressure cleaner booster pumps share many similar design features with end suction close-coupled pumps. However, dedicated-purpose pool pumps (including pressure cleaner booster pumps) must specifically consider the safety of the pool operator (typically a homeowner or renter) in their design (e.g., reduced electrocution or injury risk). To do so, the dedicated-purpose pool pump industry relies on the safety requirements established in the voluntary standard ANSI/UL 1081–

2014, “Standard for Swimming Pool Pumps, Filters, and Chlorinators.”²⁹ Based on DPPP Working Group discussion, DOE concludes that most pool filter pumps and all pressure cleaner booster pumps comply with and are currently listed to ANSI/UL 1081–2014. Conversely, general purpose end suction close-coupled pumps are typically installed in commercial and industrial applications and do not need to account for the same specific safety concerns. Differences in safety consideration result in differences in design choices that ultimately affect the

performance of the pump. Consequently, DOE concludes that safety considerations are appropriate features to differentiate pressure cleaner booster pumps from end suction close-coupled pumps.

f. List of Proposed Equipment Classes

Based on the performance-related features and distinguishing characteristics described from section IV.A.1.a to section IV.A.1.d, DOE is establishing the following equipment classes, listed in Table IV–1 and Table IV–2:

TABLE IV–1—DOE EQUIPMENT CLASSES FOR POOL FILTER PUMPS

Strainer or filtration accessory	Priming capability	Pump capacity		Rotational speed	Equipment class designation
		Pump power	Pump head		
Basket strainer	Self-priming	<2.5 hhp, >0.711 hhp.	n/s *	n/s *	Self-priming pool filter pump, standard-size.
		≤0.711 hhp	n/s *	n/s *	Self-priming pool filter pump, small-size.
	Non-self-priming ...	<2.5 hhp	n/s *	n/s *	Non-self-priming pool filter pump.**
		n/s *	≤30 ft.	≤1800 rpm	Waterfall pump.

* n/s indicates not specified.

** DOE analyzed non-self-priming pool filter pumps as two equipment classes: Extra-small (less than 0.13 hhp) and standard-size (less than 2.5 hhp and greater than 0.13 hhp). These two equipment classes were ultimately merged into one after DOE selected the same efficiency level for both extra-small and standard-size non-self-priming pool filter pumps.

²⁹ ANSI/UL 1081–2014 is available for purchase at http://ulstandards.ul.com/standard/?id=1081_6.

TABLE IV-2—DOE EQUIPMENT CLASSES FOR OTHER DEDICATED-PURPOSE POOL PUMPS

Distinguishing feature(s)	Equipment class designation
Integrated cartridge filter	Integral cartridge filter pool pump.
Integrated sand filter	Integral sand filter pool pump.
• Capacity (designed and marketed for pressure-side pool cleaner applications)	Pressure cleaner booster pump.
• End User Safety (UL listed under ANSI/UL 1081–2014)	

2. Manufacturers and Industry Structure

Manufacturers of dedicated-purpose pool pumps can be categorized into two distinct segments: (1) Those that primarily offer pool filter pumps greater than 0.40 hhp and varieties of auxiliary pumps such as waterfall and pressure cleaner booster pumps, (the pool filter pump industry) and (2) those that offer integral filter pumps and pool filter pumps smaller than 0.40 hhp, but not other auxiliary pumps (the integral filter pump industry). The former typically offers larger self-priming pool filter pumps, non-self-priming pool filter pumps, waterfall pumps, and pressure cleaner booster pumps. The latter typically offers very small pool filter pumps, as well as integral cartridge and sand filter pumps that are sold as a package with a seasonal pool, or as a replacement for a pump sold with a seasonal pool. DOE is unaware of any manufacturers that participate in both segments. Consequently, the two categories are discussed separately.

In the pool filter pump industry, DOE identified 17 manufacturers. Of the 17, DOE found that three large manufacturers hold approximately 90 percent of the market in terms of equipment shipments: Hayward Industries, Inc.; Pentair Aquatic Systems; and Zodiac Pool Systems, Inc. These manufacturers primarily produce equipment at manufacturing facilities in the United States. The remaining 10 percent of the market is held by AquaPro Systems; Aquatech Corp.; Asia Connection LLC; Bridging China International, Ltd.; Carvin Pool Equipment, Inc.; ECO H2O Tech, Inc.; Fluidra USA, LLC; Hoffinger Industries; Raypak; Speck Pumps; SpectraLight Technologies; Waterway Plastics, Inc.; Waterco Ltd.; and Wayne Water Systems.

DOE identified four manufacturers in the integral filter pump industry: Bestway (USA), Inc.; Great American Merchandise and Events (GAME); Intex Recreation Corp.; and Polygroup. Based on public records found in Hoovers,³⁰ DOE determined that all four manufacturers are U.S.-based entities. During the DPPP Working Group

meeting on April 19, 2016, DOE presented the assumption that none of the integral cartridge and integral sand filter pumps are manufactured domestically. (See EERE–2015–BT–STD–0008–0067, at p. 104) When this information was presented to the DPPP Working Group, there were no objections to this assumption. (Docket No. EERE–2015–BT–STD–0008–0079, April 19 Working Group Meeting, at pp. 132–134) DOE therefore concludes that all manufacturers in the integral filter pump industry produce equipment abroad and import it for sale in the United States.

3. Existing Efficiency Programs

DOE reviewed several existing and proposed regulatory and voluntary energy conservation programs for pool pumps. These programs are described in the following sections.

a. U.S. State-Level Programs

The CEC first issued standards for residential pool pumps under the California Code of Regulations (CCR) 2006.³¹ See 20CCR section 1601–1608 (2013). The CEC standards (or similar variations) were subsequently adopted by a number of other states.³² The CEC's regulations cover all residential pool pump and motor combinations, replacement residential pool pump motors, and portable electric spas.

The CEC's current standard (amended in 2008) has prescriptive design requirements, rather than performance-based regulations for residential pool pump and motor combinations. See 20CCR section 1605.3(g)(5). The CEC defines “residential pool pump and motor combination” as a residential pool pump motor coupled to a residential pool pump. “Residential pool pump” is defined as an impeller attached to a motor that is used to circulate and filter pool water in order to maintain clarity and sanitation. “Residential pool pump motor” refers to

a motor that is used as a replacement residential pool pump motor or as part of a residential pool pump and motor combination. (Motors used in these applications are electrically driven.) The CEC imposes a design standard that prohibits the use of split-phase start³³ and capacitor-start-induction-run³⁴ motor designs in residential pool pump motors manufactured on or after January 1, 2006. (*Id.* section 1605.3(g)(5)(A)) The CEC also requires that residential pool pump motors with a motor capacity³⁵ of 1 hp or greater manufactured on or after January 1, 2010, have the capability of operating at two or more speeds. The low speed must have a rotation rate that is no more than one-half of the motor's maximum rotation rate, and must be operated with an applicable multi-speed pump control. (*Id.* section 1605.3(g)(5)(B))

The CEC also prescribes design requirements for pump controls. Pump motor controls that are manufactured on or after January 1, 2008, and are sold for use with a pump that has two or more speeds are required to be capable of operating the pool pump at a minimum of two speeds. The default circulation speed setting shall be no more than one half of the motor's maximum rotation rate, and high speed overrides should be temporary and not for a period exceeding 24 hours. (*Id.* section 1605.3(g)(5)(B))³⁶

In addition to these prescriptive design requirements, the CEC also requires manufacturers of residential pool pump and motor combinations and

³³ Defined as: A motor that employs a main winding with a starting winding to start the motor. After the motor has attained approximately 75 percent of rated speed, the starting winding is automatically disconnected by means of a centrifugal switch or by a relay. 20 CCR1602(g).

³⁴ Defined as: A motor that uses a capacitor via the starting winding to start an induction motor, where the capacitor is switched out by a centrifugal switch once the motor is up to speed. 20 CCR1602(g).

³⁵ Defined as a value equal to the product of motor's nameplate hp and service factor and also referred to a “total hp,” where “service factor (of an AC motor)” means a multiplier which, when applied to the rated hp, indicates a permissible hp loading which can be carried under the conditions specified for the service factor. 20 CCR 1602(g).

³⁶ California Energy Commission, 2014 Appliance Efficiency Regulations, available at www.energy.ca.gov/2014publications/CEC-400-2014-009/CEC-400-2014-009-CMF.pdf.

³⁰ Hoovers Inc., Company Profiles, Various Companies (Available at www.hoovers.com/).

³² See, e.g. Ariz. Rev. Stat. § 44–1375 (2015); Conn. Agencies Regs. § 16a–48.4 (2015); Fla. Stat. Ann. § 533.909 (2015); and Wash. Rev. Code Ann. § 19.260.040 (2015).

manufacturers of replacement residential pool pump motors³⁷ to report certain data regarding the characteristics of their certified equipment. This includes information necessary to verify compliance with the requirements of Section 1605.3(g)(5), as well as the tested flow and input power of the equipment at several specific load points. Manufacturers must also submit the pool pump and motor combinations' energy factor (EF) in gallons per watt-hour (gal/Wh) when tested in accordance with the specified test procedure for residential pool pumps. See 20CCR 1604(g)(3).

The CEC is considering revising its pool pump regulations. A recent CEC report³⁸ proposes updated regulations for all single-phase dedicated-purpose pool pump motors under 5 total horsepower³⁹ (thp). This report recommends that pool pump motors be covered regardless of whether they are sold with a new pump, or sold as replacement for use with an existing pump wet-end. The report recommends a timer requirement for integral filter pool pumps, and a requirement for freeze protection for pool filter pumps. Additionally, the report recommends that the CEC move to performance-based standards, rather than prescriptive design standards. The prescriptive standards that exist under the 2008 rule prohibit the use of certain motor technologies, and the 2016 proposal would allow these previously-prohibited technologies as long as they meet minimum efficiency standards. Using the modified CSA C747-09 test procedure, the CEC recommends that single-speed motors less than 0.5 thp use motors that are at least 70 percent efficient. Single-speed pumps greater than or equal to 0.5 thp and less than 1 thp must use motors that are at least 75 percent efficient. Variable-, multi-, and two-speed pumps greater than or equal to 1 and less than or equal to 5 thp must use motors with nameplate

efficiency of at least 80 percent efficient at full speed and at least 65 percent efficient at half speed.⁴⁰ The CEC presented portions of this report that are related to dedicated-purpose pool pumps to the DPPP Working Group. Members of the DPPP Working Group asked clarifying questions to confirm that with the proposed changes (1) California's reporting requirements for pumps will not change, (2) previously disallowed motor types would be allowed, provided they meet the minimum CEC motor efficiency requirements. (Docket No. EERE-2015-BT-STD-0008-0091, June 22 Working Group Meeting, at pp. 6-12) The DPPP Working Group had no further comments or objections. DOE also notes that the DPPP CEC regulations are preempted following the compliance date of this DFR.

b. Voluntary Standards

In response to the May 2015 DPPP RFI, APSP recommended that "DOE should rely on and reference, or recite the applicable language from the ANSI/APSP/ICC-15 2013 standard for residential swimming pool and spa energy efficiency." (Docket No. EERE-2015-BT-STD-0008, APSP, No. 10 at p. 2) In response DOE thoroughly reviewed the 2013 version of the American National Standards Institute (ANSI), APSP, and the International Code Council (ICC) published standard ANSI/APSP/ICC-15a-2013, "American National Standard for Residential Swimming Pool and Spa Energy Efficiency." Similar to the CEC's current standard (amended in 2008), ANSI/APSP/ICC-15a-2013 has prescriptive design requirements, rather than performance-based regulations for residential pool pump and motor combinations. This voluntary standard prohibits split-phase, shaded-pole, or capacitor start-induction run motors in dedicated-purpose pool pumps, with the exception of motors that are powered exclusively by onsite electricity generation from renewable energy sources. The standard also requires that pool pump motors with a capacity of 1.0 total horsepower or greater have the capability of operating at two or more speeds, with the low

speed having a rotation rate that is no more than one-half of the motor's maximum rotation rate. Ultimately, for the reasons discussed throughout this document, DOE is adopting a mix of performance-based and prescriptive standards that differ from those established in ANSI/APSP/ICC-15a-2013. DOE notes that five members of APSP (Waterway Plastics, Hayward Industries, Inc., Zodiac Pool Systems, Inc., Pentair Aquatic Systems, and Bestway USA, Inc.) participated in the DPPP Working Group and unanimously supported the term sheet that serves as the basis for the standards established in this direct final rule. (EERE-2015-BT-STD-0008, No. 51)

4. Shipments Information

DOE gathered annual DPPP shipment data from two general sources: (1) Veris Consulting and PK Data; and (2) interviews with individual manufacturers that were conducted under non-disclosure agreements with DOE's contractors.⁴¹ The Veris Consulting and PK Data information included industrywide shipment information for certain dedicated-purpose pool pump varieties. This data was previously aggregated by Veris Consulting and PK Data for use within the industry. DOE gathered and aggregated shipments information for all varieties of dedicated-purpose pool pump, specifically for this rulemaking. DOE used both sources to shape its initial shipment estimates. These shipments estimates were presented to the DPPP Working Group throughout the negotiation process and were revised based on the group's feedback.

DOE's final estimates of historical shipments by equipment class are shown in Table IV-3. The estimates show that the shipments of all classes of dedicated-purpose pool pumps have increased over the past 5 years. In 2015, the shipments of self-priming pool filter pumps were nearly double the shipments of non-self-priming pool filter pumps. Waterfall pumps made up a small portion of the industry, less than 0.5 percent of total shipments in 2015. Since 2013, the integral cartridge filter and integral sand filter pump classes have totaled over one million shipments per year.

³⁷ Defined as a replacement motor intended to be coupled to an existing residential pool pump that is used to circulate and filter pool water in order to maintain clarity and sanitation. Cal. Code Regs., tit. 20, § 1602, subd. (g).

⁴¹ In developing standards, DOE may choose to contract with third party organizations who specialize in various functions.

TABLE IV-3—ESTIMATES OF HISTORICAL DEDICATED-PURPOSE POOL PUMP SHIPMENTS, BY EQUIPMENT CLASS
[Thousands]

Equipment class	2011	2012	2013	2014	2015
Self-Priming Pool Filter Pump, standard-size	543.8	561.1	578.9	597.3	616.3
Self-Priming Pool Filter Pump, small-size	70.6	72.8	75.1	77.5	80.0
Non-Self-Priming Pool Filter Pump	329.0	339.5	350.2	361.4	372.9
Waterfall Pump	8.8	9.1	9.4	9.7	10.0
Pressure Cleaner Booster Pump	121.6	123.3	125.0	126.8	128.6
Integral Cartridge Filter Pool Pump	843.2	860.4	878.0	895.9	914.2
Integral Sand Filter Pool Pump	130.3	133.0	135.7	138.4	141.3

5. Market and Industry Trends

DOE gathered data on DPPP market and industry trends. Several of DOE's observations and conclusions are noted in the following sections.

a. Equipment Efficiency

DOE assembled a Pool Pump Performance Database that describes the capacity, speed configuration, and estimated efficiency of the majority of dedicated-purpose pool pumps that are available on the market.⁴² Using data from the database, Table IV-4 lists the

ranges of efficiency that are available for the different speed configurations of standard-size self-priming pool filter pumps. In terms of total annual energy consumption, standard-size self-priming pool filter pumps are the largest equipment class covered by this rulemaking.⁴³

TABLE IV-4—RANGES OF DEDICATED-PURPOSE POOL PUMP EFFICIENCY AVAILABLE FOR STANDARD-SIZE SELF-PRIMING POOL FILTER PUMPS

Speed configuration of self-priming pool filter pump, standard-size (0.711 to 2.5 hydro hp)	Efficiency range available in the pool pump performance database WEF
Single-Speed	1.81 to 3.73 kgal/kWh.
Two-speed	3.41 to 5.45 kgal/kWh.
Variable-Speed	5.81 to 10.25 kgal/kWh.

The engineering analysis, found in section IV.C of this document, provides a full discussion of DPPP efficiency data for all of the equipment classes, from the lowest performing pump available on the market to the highest performing pump that is technologically feasible.

b. Pump Sizing

Based on manufacturer interviews, DOE concluded that approximately 76 percent of the installed base of dedicated-purpose pool pumps are single-speed and two-speed pumps that use single-phase induction motors. These pumps come in a wide range of nominal horsepower ratings. Single-phase induction motor pumps are typically available in a wide variety of nominal horsepower ratings, such as 0.5 hp, 0.75 hp, 1 hp, 1.5 hp, 2 hp, 2.5 hp, and 3 hp, as well as other ratings above, below, and in between. This variety gives a pump installation contractor the ability to select a pump that is appropriately sized for the application. The contractor can make this decision based on the volume of water the pump needs to circulate (related to the pool volume) and the head that the pump needs to overcome (related to the piping

and ancillary pool equipment such as heaters and chlorinators).

The remainder of the installed base of dedicated-purpose pool pumps are variable-speed pool pumps that use electronically commutating motors (ECMs) or other variable-speed motor technologies. These variable-speed pumps are typically only available in a small number of nominal horsepower ratings, such as 1.65 hp, 2.40 hp, 2.70 hp, and 3.45 hp. Due to the limited number of nominal horsepower ratings available, it is common for variable-speed dedicated-purpose pool pumps to be oversized for their application, when evaluated at maximum speed capability. A variable-speed pump can be programmed by the installer or end user to operate at an appropriate speed that is less than 100 percent.

6. Technology Options

This section describes the technology options that can be used to reduce the energy consumption of DPPP equipment. The technology options are divided into two categories: Options relevant to DPPP equipment classes that are analyzed for performance standards (e.g., varieties of pool filter pumps, pressure cleaner booster pumps, and

waterfall pumps) and options relevant to DPPP equipment classes that are analyzed for prescriptive standards (e.g., integral cartridge filter pool pumps and integral sand filter pool pumps).

In the May 2015 RFI, DOE requested comments on technology options that could be considered to improve the energy efficiency of dedicated-purpose pool pumps. 80 FR 26483 (May 8, 2015). APSP commented that APSP-15 and California Title 20 capture many of the technology options that are available to the industry. APSP asked DOE to reference these programs. (APSP, No. 10 at p. 13) The following technologies are described in the APSP and California standards:

- APSP-15 and California Title 20 identify motor performance as a technology option to reduce energy consumption, and both standards prohibit the sale of pool pumps that incorporate particular motor constructions. See ANSI/APSP/ICC-15a-2013, section 4.1.1.1; and 20CCR section 1605.3 (g)(5)(A).
- APSP-15 and California Title 20 identify two-speed, multi-speed, and variable-speed pumps as a technology to reduce energy consumption. See ANSI/

⁴² See section IV.C.1.a for more information regarding the Pool Pump Performance Database.

⁴³ The self-priming pool filter pump equipment class is defined in section IV.A.1 of this document.

APSP/ICC–15a–2013, section 4.1.1.2; and 20CCR section 1605.3 (g)(5)(B).

- APSP–15 requires a time switch or similar control mechanism to control the pool pump's operation schedule. See ANSI/APSP/ICC–15a–2013, section 5.3.3.

Based on the DPPP Working Group's review of the APSP and California standards and independent research, DOE identified three technology options that can be used to reduce the energy consumption of the DPPP equipment classes for which performance standards were being analyzed (*i.e.*, self-priming pool filter pumps, non-self-priming pool filter pumps, pressure cleaner booster pumps, and waterfall pumps). Specifically, those performance standard technology options are:

- Improved motor efficiency;
- ability to operate at reduced speeds; and
- improved hydraulic design.

DOE identified one technology option, a pool pump timer, which could be used to reduce the energy consumption of the DPPP equipment classes for which prescriptive standards were being analyzed (*i.e.*, integral cartridge filter pool pumps and integral sand filter pool pumps).

The DPPP Working Group reviewed both sets of technology options (Docket No. EERE–2015–BT–STD–0008–0053, November 12 DPPP Working Group Meeting, at pp. 51–78; Docket No.

EERE–2015–BT–STD–0008–0094, March 21 DPPP Working Group Meeting, at pp. 37–38) and offered no objections to DOE's approach. The DPPP Working Group ultimately evaluated standards based on efficiency levels determined by these options.

Each technology option is addressed separately in the sections that follow.

a. Improved Motor Efficiency

Different varieties (or constructions) of motors have different achievable efficiencies. Two general motor constructions are present in dedicated-purpose pool pump market: Single-phase induction motors and electronically commutated motors (ECMs).⁴⁴ Single-phase induction motors may be further differentiated and include split phase, capacitor-start induction-run (CSIR), capacitor-start capacitor-run (CSCR), and permanent split capacitor (PSC) motors.

The majority of pool filter pumps available on the market come equipped with single-phase induction motors. According to manufacturer interviews, very few pool filter pumps on the market use split phase or CSIR motors. This is partly due to the regulatory prohibition of these motor constructions in California and other states. Most pool filter pumps on the market use CSCR or PSC motors; both have similar attainable efficiencies, although CSCR motors are

typically able to provide greater starting torque.

ECMs are typically used in variable-speed pool filter pump applications. However, induction motors, coupled to a proper variable speed drive, can also be used in variable-speed pool filter pump applications. ECMs are inherently more efficient than single-phase induction motors because their construction minimizes slip losses between the rotor and stator components. Unlike single-phase induction motors, ECMs require an electronic drive to function. This electronic drive consumes electricity, and variations in drive losses and mechanical designs lead to a range of ECM efficiencies.

As part of the engineering analysis (section IV.C), DOE assessed the range of attainable motor efficiency for certain representative motor capacities and constructions. As motor capacity increases, the attainable efficiency of the motor at full load also increases. Higher horsepower motors also operate close to their peak efficiency for a wider range of loading conditions.⁴⁵ Table IV–5 presents these ranges, based on nameplate (or nominal) motor efficiencies listed in the Pool Pump Performance Database. Motor efficiency data submitted by pump and motor manufacturers to DOE confirms the ranges reported in this table.

TABLE IV–5—RANGES OF NAMEPLATE MOTOR EFFICIENCIES REPORTED FOR THREE CAPACITIES OF SELF-PRIMING POOL FILTER PUMPS

Motor total horsepower (thp) *	Hydraulic horsepower on curve C of a typical dedicated-purpose pool pump with this motor	Range of full speed motor nameplate efficiencies reported in the pool pump performance database, by motor construction * (%) *		
		CSCR †	PSC †	ECM †
0.75	0.44	64–79	51–75	77
1.35	0.95	65–81	61–78	78–86
3.45	1.88	75–81	74–82	77–92

* The three pump capacities described in this table align with the representative unit capacities that are defined in section IV.C.2 and used throughout the engineering analysis in section IV.C.

** Neither split phase nor CSIR motors are listed in this table because no self-priming pool filter pumps in the Pool Pump Performance Database utilize these motor types.

† Members of the DPPP Working Group stated that there may be small errors in the motor nameplate efficiency data reported for pumps in the CEC database that DOE incorporated into the Pool Pump Performance Database. (Docket No. EERE–2015–BT–STD–0008–0056, December 7 DPPP Working Group Meeting, at pp. 38–40).

DPPP manufacturers do not typically manufacture motors inhouse. Instead, they purchase complete or partial motors from motor manufacturers and/or distributors. As such, improving the nameplate motor efficiency of the pump

is typically achieved by swapping a less efficient purchased motor component for a more efficient one.

b. Ability To Operate at Reduced Speeds Self-Priming and Non-Self-Priming Pool Filter Pumps

Self-priming and non-self-priming pool filter pumps at or above 49.4 gpm

⁴⁴ Three-phase induction motors also are found on certain self-priming pool filter pumps; however this motor construction is specifically excluded from the scope of this rulemaking for self-priming pool filter pumps (as described in section III.C).

⁴⁵ U.S. DOE Building Technologies Office. *Energy Savings Potential and Opportunities for High-Efficiency Electric Motors in Residential and Commercial Equipment*. December 2013. Prepared for the DOE by Navigant Consulting, pp. 4.

Available at <http://energy.gov/sites/prod/files/2014/02/f8/Motor%20Energy%20Savings%20Potential%20Report%202013-12-4.pdf>.

max flow on curve C can achieve a higher (more favorable) WEF value if they have the ability to operate at reduced speeds. As discussed previously in section III.C, the WEF metric is a weighted average of energy factors, measured at one or more test points. The DPPP test procedure allows WEF values for two-, multi-, and variable-speed pumps to be calculated as the weighted average of performance at both high and reduced speeds, while

WEF for single-speed pumps is calculated based only on performance at high speed. Due to pump affinity laws, most pumps will achieve higher energy factors at lower rotational speeds, compared to higher rotational speeds. As such, the WEF efficiency metric confers benefits on pool filter pumps that are able to operate at reduced rotational speeds.

Specifically, pump affinity laws describe the relationship of pump

operating speed, flow rate, head, and hydraulic power. According to the affinity laws, speed is proportional to flow such that a relative change in speed will result in a commensurate change in flow, as described in Equation 5. The affinity laws also establish that pump total head is proportional to speed squared, as described in Equation 6, and pump hydraulic power is proportional to speed cubed, as described in Equation 7.

$$\frac{Q_1}{Q_2} = \frac{N_1}{N_2}$$

Equation 5

$$\frac{H_1}{H_2} = \left(\frac{N_1}{N_2}\right)^2$$

Equation 6

$$\frac{P_1}{P_2} = \left(\frac{N_1}{N_2}\right)^3$$

Equation 7

Where:

Q_1 and Q_2 = volumetric flow rate at two operating points

H_1 and H_2 = pump total head at two operating points

N_1 and N_2 = pump rotational speed at two operating points

P_1 and P_2 = pump hydraulic power at two operating points

This means that a pump operating at half speed will provide one half of the pump's full-speed flow and one eighth of the pump's full-speed power.⁴⁶ However, pump affinity laws do not account for changes in hydraulic and motor efficiency that may occur as a pump's rotational speed is reduced. Typically, hydraulic efficiency and motor efficiency will be reduced at lower operating speeds. Consequently, at reduced speeds, power consumption is not reduced as drastically as hydraulic output power. Even so, the efficiency losses at low-speed operation are typically outweighed by the exponential reduction in hydraulic output power at low-speed operation;

this results in a higher (more beneficial) energy factor at low speed operation.

Self-priming and non-self-priming pool filter pumps with a two-speed motor configuration that produce less than 49.4 gpm maximum flow on curve C cannot achieve higher WEF score through reduced speed operation. This is because the test procedure final rule specifies two load points for two-speed self-priming and non-self-priming pool filter pumps—one at 100 percent of maximum speed and one 50 percent of maximum speed. Further, the test procedure final rule specifies that the lower of the two load points cannot be below 24.7 gpm, and that the pump will be tested at the “lowest speed capable of meeting the specified flow and head values.” Consequently, a two-speed pump that delivers less than 49.4 gpm of flow at maximum speed on curve C would deliver less than 24.7 gpm of flow at half of the maximum, which mean the half-speed setting would not be considered in the calculation of the pump's WEF.⁴⁷ Such a two-speed pump

would effectively be tested as a single-speed pump.

Self-priming and non-self-priming pool filter pumps with a variable- or multi-speed motor configuration that produce less than 49.4 gpm max flow on curve C could conceivably achieve a higher WEF score through reduced speed operation. However, DOE did not apply the “ability to operate at reduced speeds” technology option to pumps that provide less than 49.4 gpm at maximum speed on curve C. A flow of 49.4 gpm at maximum speed on curve C is equivalent to a hydraulic power of 0.25 hhp; such a pump would typically require a motor shaft power of approximately 0.60 horsepower. Comparatively, the smallest currently available variable-speed pool pump motor is 1.65 thp. Due to the mismatch in physical size and performance of such a wet end and motor combination, DOE concludes that it is not technologically feasible to pair a 1.65-thp motor with a pump wet end that provides only 49.4 gpm at maximum speed on curve C. For this reason, DOE's analysis assumes that that the design option described as “ability to operate at reduced speeds” does not apply to self-

⁴⁶ A discussion of reduced-speed pump dynamics is available at <https://www.regulations.gov/document?D=EERE-2015-BT-STD-0008-0099>.

⁴⁷ The DOE DPPP test procedure final rule specifies that flow be measured to the nearest tenth of a gpm.

priming or non-self-priming pool filter pumps that are below 49.4 gpm at maximum speed on curve C.

Pressure Cleaner Booster Pumps

In the field, pressure cleaner booster pumps are only operated at one speed and therefore the test procedure final rule specifies only one load point for testing pressure cleaner booster pumps. However, the test procedure final rule specifies that pressure cleaner booster pumps are tested at the lowest speed that can achieve 60 feet of head at the 10 gpm test condition. Consequently, a pressure cleaner booster pump can see benefits from the ability to operate at reduced speeds as the pump may vary its speed to achieve this load point.⁴⁸ For instance, a pressure cleaner booster pump equipped with a variable-speed motor may produce more than 60 feet of head when operated at maximum speed at the 10 gpm test point. Such a pump could be tested at a reduced speed that produces exactly 60 feet of head at 10 gpm, while consuming less power than it would at maximum speed. In this case, testing at a reduced speed would result in a higher (more beneficial) WEF value.

Waterfall Pumps

The test procedure final rule specifies that waterfall pumps are only tested at 100 percent speed. Consequently, waterfall pumps cannot achieve a higher (more beneficial) WEF value if they have the ability to operate at reduced speeds. Consequently, DOE did not consider the “ability to operate at reduced speeds” as a technology option for the waterfall pump equipment class.

c. Improved Hydraulic Design

The performance characteristics of a pump, such as flow, head, and efficiency, are a direct result of the pump’s hydraulic design. For purposes of the DOE analysis, “hydraulic design” is a broad term DOE used to describe the system design of the wetted components of a pump. Although hydraulic design focuses on the specific hydraulic characteristics of the impeller and the volute/casing, it also includes design choices related to bearings, seals, and other ancillary components.

Impeller and volute/casing geometries, clearances, and associated components can be redesigned to a higher efficiency (at the same flow and head) using a combination of historical best practices and modern computer-

aided design (CAD) and analysis methods. The wide availability of modern CAD packages and techniques now enables pump designers to more quickly reach designs with improved vane shapes, flow paths, and cutwater designs, all of which work to improve the efficiency of the pump as a whole.

Self-Priming Pool Filter Pumps

For self-priming pool filter pumps, DOE used empirical data from the Pool Pump Performance Database to estimate the potential efficiency gains available from improved hydraulic design. DOE used hydraulic power, line input power, and nameplate motor efficiency to estimate the hydraulic efficiency of these pumps and to observe the range of hydraulic efficiencies available for self-priming pool filter pumps at pump capacities less than 2.5 hhp. For any given capacity less than 2.5 hhp, DOE found that the best hydraulic efficiency of self-priming pool filter pumps at maximum speed on curve C could be 116.2 percent of the baseline hydraulic efficiency. Chapter 3 of the direct final rule TSD contains more details regarding the hydraulic improvements estimated for self-priming pool filter pumps.

Non-Self-Priming Pool Filter Pumps

For non-self-priming pool filter pumps, DOE attempted to follow a similar methodology to self-priming pumps. While DOE’s Pool Pump Performance Database contains few records of non-self-priming pool filter pumps, these records were sufficient to establish a baseline hydraulic efficiency, which DOE identified as 51.5 percent. In the May 2015 DPPP RFI, DOE requested information regarding the magnitude of efficiency improvements available from any potential technology options. 80 FR 26483 (May 8, 2015). DOE did not receive public comment regarding the range of hydraulic efficiency improvements that are available to pool filter pumps. With limited data, DOE was not able to use this database to empirically identify the maximum hydraulic efficiency that is technologically feasible, nor estimate the range of hydraulic efficiency improvements that are available to non-self-priming pool filter pumps.

Instead, DOE referred to empirical data gathered during the 2016 general pumps⁴⁹ rulemaking. During the general pumps rulemaking, DOE estimated the maximum technologically

feasible hydraulic efficiency for end suction, close-coupled pumps as a function of flow and specific speed.⁵⁰ For this dedicated-purpose pool pumps direct final rule, DOE evaluated a 0.52-hhp, end suction, close-coupled pump that is optimized for curve-C flow and head using equations from the general pumps rulemaking analysis, and found that such a pump can achieve a hydraulic efficiency of up to 69.7 percent.⁵¹ This pump has a configuration that is nearly identical to a non-self-priming pool filter pump, with the exception that non-self-priming pool filter pumps are defined by the presence (or requirement of) a basket strainer. As discussed in section IV.A, the addition of a basket strainer and strainer housing reduce a pump’s hydraulic efficiency by a measurable amount. Based on discussions with pump industry professionals, the impact may be in the range of 1 to 3 points of hydraulic efficiency. Consequently, DOE conservatively established a maximum hydraulic efficiency of 67 percent for non-self-priming pool filter pumps. This represents an improvement of 30 percent over the baseline hydraulic efficiency. At the April 18, 2016, Working Group meeting, DOE presented the DPPP Working Group with values for motor efficiency and wire-to-water efficiency of representative units at each efficiency level. This data enables the calculation of hydraulic efficiency, since wire-to-water efficiency equals the product of motor efficiency multiplied by hydraulic efficiency. (Docket No. EERE-2015-BT-STD-0008-0078, April 18, 2016 DPPP Working Group Meeting, at p. 20-30) At subsequent meetings, DOE presented max tech wire-to-water efficiency results, based on the aforementioned 67 percent hydraulic efficiency. DPPP Working Group members offered no objections to DOE’s hydraulic efficiency assumptions. The DPPP Working Group ultimately evaluated standards based on efficiency levels determined by these assumptions. (Docket No. EERE-2015-BT-STD-

⁵⁰ Specific speed is a dimensionless index describing the geometry of a pump impeller and provides an indication of the pump’s pressure/flow ratio at the pump’s best efficiency point. For more details, see chapter 3 of the general pumps rulemaking final rule TSD, at <https://www.regulations.gov/document?D=EERE-2011-BT-STD-0031-0056>.

⁵¹ See the discussion of efficiency levels for general pumps equipment in the general pumps final rule TSD, available at www.regulations.gov/document?D=EERE-2011-BT-STD-0031-0056. In particular, DOE calculates the standard pump efficiency η_{STD} of 69.7% for the max-tech level of the ESCC.3600 equipment class at a flow rate Q of 63 GPM, a constant C of 125.3, and a specific speed, N_s , of 2,760.

⁴⁸ The DPPP Working Group requested that DOE examine variable-speed pumps as a design option for pressure cleaner booster pumps. (Docket No. EERE-2015-BT-STD-0008-0095, March 22 DPPP Working Group Meeting, at pp. 197–203)

⁴⁹ The pumps energy conservation standard rulemaking docket EERE-2011-BT-STD-0031 contains all notices, public comments, public meeting transcripts, and supporting documents pertaining to this rulemaking.

0008–0100, May 18 DPPP Working Group Meeting, at p. 140–149) Chapter 3 of the direct final rule TSD contains more details regarding the hydraulic improvements estimated for non-self-priming pool filter pumps.

Pressure Cleaner Booster Pumps

DOE's contractor received motor specifications and test data for pressure cleaner booster pumps from manufacturers, which DOE used to calculate the total pump efficiency and the hydraulic efficiency for several pumps at the pressure cleaner booster pump test point of 10 gpm flow. DOE found that the best available hydraulic efficiency of pressure cleaner booster pumps, at the test point of 10 gpm, could be 112.2 percent of the baseline hydraulic efficiency. Chapter 3 of the direct final rule TSD contains more details regarding the hydraulic improvements estimated for pressure cleaner booster pumps.

Waterfall Pumps

DOE's contractor used manufacturer-supplied motor specifications and test data for waterfall pumps to calculate the total pump efficiency and the pump hydraulic efficiency for several pumps at the waterfall pump test point of 17 feet of head. DOE found that the best available hydraulic efficiency of waterfall pumps at this test point could be 111.5 percent of the baseline hydraulic efficiency. Chapter 3 of the direct final rule TSD contains more details regarding the hydraulic improvements estimated for waterfall pumps.

d. Pool Pump Timer

Pool pump timers can reduce the energy consumed by dedicated-purpose pool pumps by reducing the number of hours that the pump is operated unnecessarily.

Many smaller-size pools do not require a dedicated-purpose pool pump to operate 24 hours per day to achieve the desired turnover of pool water. DOE initially surveyed recommendations for pool turnover rates collected by the Consortium for Energy Efficiency.⁵² DOE stated that California recommends one turnover every 12 to 14 hours. (EERE–2015–BT–STD–0008–0059, October 20 DPPP Working Group Meeting, at p. 88) Several members of the DPPP Working Group commented that the California recommendation cited by DOE pertains to commercial

pools, and that the pool industry recommends one turnover per day for residential applications. (EERE–2015–BT–STD–0008–0059, October 20 DPPP Working Group Meeting, at p. 134–135; EERE–2015–BT–STD–0008–0053, November 12 DPPP Working Group Meeting, at p. 134) DOE only considered the pool pump timer design option for the integral cartridge filter pump and integral sand filter pump equipment classes. Pump models in these equipment classes are marketed exclusively to residential end users. Therefore, DOE assumed that the pool pump timer design option applies only to pumps that must provide a minimum of one turnover per day. In support of the DPPP Working Group, DOE reviewed the integral pump products on the market and the pool volumes that they are recommended to service. DOE concluded that, when paired with the appropriate size pool, integral filter pumps should achieve one turnover in 8 hours or less. If a pool pump timer turned off the pump after 10 hours, DOE concluded that it would have allowed at least one full turnover to occur (thus meeting the industry recommendation for daily turnovers and maintaining end user utility), and it would prevent the pump for running unnecessarily for the remainder of the day.

DOE initially suggested that a pool pump timer be defined as a pool pump control that automatically turns a dedicated-purpose pool pump on and off based on a pre-programmed user-selectable schedule. (Docket No. EERE–2015–BT–STD–0008–0101, May 19 Working Group Meeting, at pp. 112) In response, Bestway requested that the pool pump timer be defined instead as a type of countdown timer, where the end user turns on the pump, the pump runs for a set amount of time, and then the pump shuts off automatically and remains off until the end user starts the pump again. (Docket No. EERE–2015–BT–STD–0008–0101, May 19 Working Group Meeting, at pp. 39–40) Bestway commented that this style of timer is what currently exists in the market for integrated cartridge and integrated sand filter pumps. (Docket No. EERE–2015–BT–STD–0008–0101, May 19 Working Group Meeting, at pp. 124–125)

DOE also asked the DPPP Working Group whether end users should be able to program the run time of the pool pump timer or whether the pool pump timer should ship with a preprogrammed run-time that cannot be adjusted by the end user. (Docket No. EERE–2015–BT–STD–0008–0101, May 19 Working Group Meeting, at pp. 113–115) The DPPP Working Group clarified that integrated cartridge filter pumps

and integrated sand filter pumps are typically sold in a package with the pool that they are meant to service, so the pump run-time necessary to achieve one turnover may be determined prior to sale based upon the relative sizes of the pump and the pool. (Docket No. EERE–2015–BT–STD–0008–0101, May 19 Working Group Meeting, at pp. 116–117) Therefore, the Working Group agreed that there would be little benefit to allowing end users to modify the pump run-time that the pool pump timer allows.

The DPPP Working Group also discussed whether end users might be burdened by a pool pump timer that cannot automatically turn on a pump, since end users would be required to initiate the pump operation on a daily basis to maintain a sanitary pool. Bestway commented that the burden, if any, on the end user to activate their pump on a daily basis would be minimal. (Docket No. EERE–2015–BT–STD–0008–0101, May 19 Working Group Meeting, at pp. 116–119) A DPPP Working Group member speculated that if an end user were to leave their home for a week, a simple countdown timer would not be able to activate the pump on a daily basis to maintain sanitary pool conditions while the end user is away. Bestway commented that the pool pump timer definition Bestway proposed does not prevent manufacturers from offering a pool pump timer with automatic start and stop functionality. Bestway commented that, with their proposed definition, manufacturers could offer more advanced timers as a selling feature for their pumps. (Docket No. EERE–2015–BT–STD–0008–0101, May 19 Working Group Meeting, at pp. 119–121)

The DPPP Working Group voted, and did not reach consensus on a pool pump timer definition that included automatic on-off functionality and user-selectable scheduling. (Docket No. EERE–2015–BT–STD–0008–0101, May 19 Working Group Meeting, at pp. 124) Instead, the DPPP Working Group voted to recommend defining a pool pump timer to mean a pool pump control that automatically turns off a dedicated-purpose pool pump after a run-time of no longer than 10 hours. (EERE–2015–BT–STD–0008, No. 82 Recommendation #4 at p. 2) DOE agrees with this reasoning and is adopting the definition recommended by the DPPP Working Group in this direct final rule.

B. Screening Analysis

DOE uses the following four screening criteria to determine which technology options are suitable for further

⁵² Consortium for Energy Efficiency. 2012. "CEE High Efficiency Residential Swimming Pool Initiative." Boston, MA. https://library.cee1.org/sites/default/files/library/9986/cee_res_swimmingpoolinitiative_07dec2012_pdf_10557.pdf.

consideration in an energy conservation standards rulemaking:

1. *Technological feasibility.*

Technologies that are not incorporated in commercial products or in working prototypes will not be considered further.

2. *Practicability to manufacture, install, and service.* If it is determined that mass production and reliable installation and servicing of a technology in commercial products could not be achieved on the scale necessary to serve the relevant market at the time of the projected compliance date of the standard, then that technology will not be considered further.

3. *Impacts on product utility or product availability.* If it is determined that a technology would have significant adverse impact on the utility of the product to significant subgroups of consumers or would result in the unavailability of any covered product type with performance characteristics (including reliability), features, sizes, capacities, and volumes that are substantially the same as products generally available in the United States at the time, it will not be considered further.

4. *Adverse impacts on health or safety.* If it is determined that a technology would have significant adverse impacts on health or safety, it will not be considered further.

See 10 CFR part 430, subpart C, appendix A, 4(a)(4) and 5(b).

Technologies that pass through the screening analysis are referred to as “design options” in the engineering analysis. The screening analysis and engineering analysis are discussed in detail, respectively, in chapters 4 and 5 of the direct final rule TSD.

1. Screened-Out Technologies

Of the identified technology options, DOE was not able to identify any that would fail the screening criteria.

2. Remaining Technologies

After reviewing each technology, DOE concluded that all of the identified technologies listed in section IV.A.6 met all four screening criteria to be examined further as design options in DOE’s analysis. In summary, DOE continued its analysis for the following technology options:

- improved motor efficiency
- ability to operate at reduced speeds
- improved hydraulic design
- pool pump timers

DOE determined that these technology options are technologically feasible because they are being used or have been used in commercially

available products or working prototypes. DOE also found that these technology options met the other screening criteria (*i.e.*, practicable to manufacture, install, and service; and do not result in adverse impacts on consumer utility, equipment availability, health, or safety). For additional details, see chapter 4 of the direct final rule TSD.

C. *Engineering Analysis*

In the engineering analysis, DOE describes the relationship between manufacturer production cost (MPC) and improved DPPP efficiency. This relationship serves as the basis for cost-benefit calculations for individual end users, manufacturers, and the Nation. The following sections describe methods DOE used to conduct the engineering analysis.

1. Summary of Data Sources

For the engineering analysis, DOE used two principal data sources: (1) The Pool Pump Performance Database; and (2) the manufacturer production cost dataset. The following subsections provide a brief description of each data source. Complete details are found in chapter 5 of the direct final rule TSD.

a. Pool Pump Performance Database

DOE assembled a database of pool pump performance data by collecting current and archived records of pool pump performance from public databases maintained by the CEC,⁵³ APSP,⁵⁴ and the ENERGY STAR program.⁵⁵ The Pool Pump Performance Database also includes historic records from prior CEC database versions, which were provided to DOE by stakeholders. These historic records include pumps that met previous CEC efficiency standards but do not meet the current CEC standards.

The CEC, APSP, and ENERGY STAR databases contain third-party test data that manufacturers submit as a means of certifying their pump equipment to the relevant entity’s standards. The database records contain pump performance information such as motor horsepower, flow and head on pump performance curves, and pump speed configuration. DOE added records to the database based on pump data published in manufacturer specification sheets.

⁵³ Appliance Efficiency Database: Public Search, California Energy Commission. Available at <https://cacetappliances.energy.ca.gov/Pages/ApplianceSearch.aspx>.

⁵⁴ Energy Efficiency Pool Pumps, APSP. Available at <http://apsp.org/resources/energy-efficient-pool-pumps.aspx>.

⁵⁵ ENERGY STAR Certified Pool Pumps. Available at www.energystar.gov/productfinder/product/certified-pool-pumps/results.

These specification sheets typically publish motor horsepower and performance curves but they do not typically provide information regarding the pump’s electrical performance or efficiency.

DOE filtered the collected data to remove duplicate entries, entries that only represented a replacement motor (but no pump), and entries with incomplete data. To allow for easier analysis, DOE combined and reformatted the databases into a user-friendly format. DOE performed a regression analysis to estimate the part-load efficiencies of variable-speed pumps at the test points specified in the test procedure final rule. DOE then calculated the WEF value of each pump record in the database, according to the calculation method described in section III.C. Chapter 5 of the direct final rule TSD contains more detail regarding the regression analysis and the calculation of WEF values.

b. Manufacturer Production Cost Dataset

DOE collected MPC and performance data from manufacturers for pool pumps and motors across a range of capacities and equipment classes. Data collected for individual DPPP models included the nominal horsepower and efficiency of the pump motor; the MPC of the motor and the finished pump; and the efficiency, flow rate, head, and input power of the pump at full load and partial loads.

DOE also collected retail price data for DPPPs and replacement motors sold by the online retailers Leslie’s Swimming Pool Supplies,⁵⁶ INYO Pools,⁵⁷ and Pool Supply World.⁵⁸ These retail price data are publicly available on each retailer’s Web site. DOE estimated MPCs for various pump models using this retail price data and several assumptions about supply chain markups (see section IV.D for a discussion of markups). DOE primarily used this retail price data analysis to supplement and validate the individual MPCs submitted by manufacturers.

2. Representative Equipment

For the engineering analysis, DOE analyzed the MPC-efficiency relationships for the equipment classes specified in section IV.A.1. Generally, the manufacturing cost and the attainable efficiency of dedicated-purpose pool pumps vary as a function of pump capacity (*i.e.*, hydraulic horsepower). Because it is impractical to assess the MPC-efficiency relationship

⁵⁶ www.lesliespool.com/.

⁵⁷ www.inyopools.com/.

⁵⁸ www.poolsupplyworld.com/.

for all dedicated-purpose pool pump capacities available on the market, DOE selected a set of representative units to analyze. These representative units exemplify typical capacities in each equipment class and are used to quantify the manufacturing costs and the energy savings potential for each equipment class. In general, to determine representative capacities for each equipment class, DOE analyzed the distribution of available models and/or shipments and discussed its finding with the DPPP Working Group. The following subsections discuss each equipment class in further detail.

a. Self-Priming Pool Filter Pumps

The scope of this direct final rule includes self-priming pool filter pumps with capacities less than 2.5 hhp at maximum speed on curve C. As described in section IV.A.1.c of this document, the DPPP Working Group recommended that this range be subdivided into two equipment classes, with a breakpoint of 0.711 hhp. This breakpoint divides the range of self-priming pool filter pumps into a standard-size equipment class and a small-size equipment class. DOE used shipment distributions provided by manufacturers, distributions of models listed in the Pool Pump Performance Database, and feedback from the DPPP Working Group to select representative capacities for these equipment classes.

For the standard-size self-priming pool filter pumps, DOE selected two representative units, with 1.88 hhp and 0.95 hhp. At the baseline efficiency level (discussed further in section IV.C.3), a 1.88-hhp pump and a 0.95-hhp pump require 3.0 hp and 1.6 hp shaft input power from the motor, respectively. Typically, these pumps are equipped with motors rated between 3.5–3.9 thp and 1.7–2.2 thp, respectively.

b. Non-Self-Priming Pool Filter Pumps

For the small-size self-priming pool filter pump equipment class, DOE selected one representative unit with hydraulic horsepower of 0.44 hhp. DOE reviewed an initial selection of representative units with the DPPP Working Group. (Docket No. EERE–2015–BT–STD–0008–0078, April 18 DPPP Working Group Meeting, at pp. 12–19) The DPPP Working Group recommended a break point capacity of 0.711 hhp to separate the small- and standard-size self-priming pool filter pump equipment classes (see section IV.A.1.c for discussion of this break point). DOE revised the capacities of the representative units after this break point was introduced, to include a

representative capacity of 0.44 hhp for the small size self-priming pool filter pump equipment class.

The scope of this direct final rule also includes non-self-priming pool filter pumps with capacities less than 2.5 hhp at maximum speed on curve C. However, the majority of non-self-priming pool filter pump models on the market deliver less than 1.0 hhp at maximum speed on curve C. Accordingly, the representative capacities DOE used to analyze the non-self-priming pool filter pump equipment class were different from the representative capacities used to analyze the self-priming pool filter pump equipment classes. Specifically, DOE selected two representative capacities for non-self-priming pool filter pumps, 0.52 hhp and 0.09 hhp at maximum speed on curve C. The smaller unit (at 0.09 hhp) is representative of pumps that are typically sold with (or as replacements for) seasonal pools. These pumps are typically distributed in commerce on a skid with a sand filter, where the pump and the sand filter are connected with removable hoses. The larger representative unit (at 0.52 hhp) is representative of pumps that are typically sold for applications where the pump is installed and operated below the waterline of the pool that it services, such as in aboveground pool applications. These pumps are typically distributed in commerce as standalone pumps. DOE presented the larger representative capacity (at 0.52 hhp) and the smaller representative capacity (at 0.09 hhp) to the DPPP Working Group. (Docket No. EERE–2015–BT–STD–0008–0078, April 18 DPPP Working Group Meeting, at pp. 27–29; and Docket No. EERE–2015–BT–STD–0008–0091, June 22 DPPP Working Group Meeting, at pp. 115–118) The DPPP Working Group did not offer any opposition to the selected representative capacities and ultimately evaluated standards based on the analysis of these representative capacities.

c. Pressure Cleaner Booster Pumps

The pressure cleaner booster pumps on the market are clustered in a small range of capacities. For this equipment class, DOE selected a capacity that is representative of the cluster of models on the market.

Specifically, DOE selected a representative capacity of 10 gpm of flow and 112 feet of head, which equates to 0.28 hhp. Ten gpm aligns with the testing load point specified in the test procedure final rule for pressure cleaner booster pumps. The DPPP Working Group recommended that

pressure cleaner booster pumps be tested at the load point of 10 gpm and a head greater than 60 feet, to represent the typical pressure cleaner booster pump operation.⁵⁹ (Docket No. EERE–2015–BT–STD–0008, No. 82 Recommendation #8 at pp. 4–5)

At 10 gpm, the pressure cleaner booster pump models from the three largest manufacturers (representing the majority of the pressure cleaner booster pump market) all achieve a similar head in a range from 100 feet to 127 feet of head. To represent the average performance of the pressure cleaner booster pump models available on the market, DOE selected a head value of 112 feet as the value the representative unit would achieve at the test condition of 10 gpm.

d. Waterfall Pumps

The waterfall pumps on the market are clustered in a small range of capacities. For this equipment class, DOE selected a capacity that is representative of the cluster of models on the market. Specifically, DOE selected a representative capacity of 93 gpm of flow and 17 feet of head, which equates to 0.40 hhp. Seventeen feet of head aligns with the testing load point specified in the test procedure final rule for pressure cleaner booster pumps. The DPPP Working Group recommended the testing load point of 17 feet of head (and flow corresponding to 17 feet of head on the pump curve) to represent the typical waterfall pump operation. (Docket No. EERE–2015–BT–STD–0008, No. 51 Recommendation #6 at p. 5)

e. Integral Sand and Cartridge Filter Pool Pump

In this direct final rule, DOE is establishing a prescriptive design standard, rather than a performance standard, for integral sand and cartridge filter pool pumps. The DPPP Working

⁵⁹ The DPPP Working Group initially recommended that pressure cleaner booster pumps be tested at 90 feet of head and a volumetric flow rate that corresponds to 90 feet of head. (Docket No. EERE–2015–BT–STD–0008, No. 51 Recommendation #6 at pp. 5) However, the DPPP Working Group discussed that the minimum pressure requirement to drive a pressure cleaner is approximately 60 feet of head. (Docket No. EERE–2015–BT–STD–0008–0095, March 22 Working Group Meeting, at pp. 207–210) ASAP expressed a desire that the test procedure allow better ratings for variable-speed pressure cleaner pumps that are able to reduce speed to avoid supplying (and wasting) excess pressure beyond what is required to drive the cleaner. (Docket No. EERE–2015–BT–STD–0008–0101, May 19 Working Group Meeting, at pp. 49) The DPPP Working Group subsequently revised its recommendation to recommend that pressure cleaner booster pumps be tested at a flow rate of 10 gpm and the minimum head the pump can achieve that is greater than or equal to 60 feet. (Docket No. EERE–2015–BT–STD–0008, No. 82 Recommendation #8 at pp. 4)

Group considered two alternatives for this analysis: (1) A prescriptive standard that would require a timer for integrated cartridge and integrated sand filter pumps, and (2) a performance standard that would likely be achieved through the use of advanced motors. To help evaluate these alternatives, DOE developed cost-efficiency relationships for integrated cartridge and integrated sand filter pool pumps that describe (1) the use of a timer on all pumps, and (2) the use of advanced motors where possible. The DPPP Working Group reviewed these cost-efficiency relationships. DPPP Working Group members commented that a prescriptive standard requiring a timer may be economically justified, but that a performance standard with advanced motors would not be economically justified. A DPPP Working Group member commented that a prescriptive

standard requiring a timer may not be beneficial because some end users may choose to disable or circumvent the timer mechanism. DOE clarified that the analytical results will account for such instances of misuse, since the rulemaking analysis of a prescriptive standard takes into account that a certain percentage of end users may not use the prescribed technology properly. (Docket No. EERE-2015-BT-STD-0008-0053, November 12 DPPP Working Group Meeting, at pp. 45-78)

As such, in the test procedure final rule, DOE did not establish a test method for these equipment classes. However, as a part of this direct final rule, DOE still evaluated the incremental MPC-efficiency relationship for the prescriptive standard. To do so, DOE established representative models based on performance characteristics of these pumps on system curve C.

DOE examined model availability in the integral sand and cartridge filter pool pumps and selected one representative equipment capacity (0.03 hhp at maximum speed on curve C) for integral sand filter pool pumps, and two representative equipment capacities (0.02 hhp and 0.18 hhp at maximum speed on curve C) for integral cartridge filter pool pumps. The DPPP Working Group reviewed the representative equipment capacities for integral filter pumps and offered no objections. (Docket No. EERE-2015-BT-STD-0008-0094, March 21 DPPP Working Group Meeting, at pp. 54-58)

f. Summary of Representative Units

DOE's representative dedicated-purpose pool pump capacities are summarized in Table IV-6.

TABLE IV-6—CHARACTERISTICS OF REPRESENTATIVE UNITS, BY EQUIPMENT CLASS

DPPP equipment class	Test point	Performance at test point at 100% speed		
		Power hhp	Head feet	Flow gpm
Self-priming pool filter pump, standard-size	Curve C	1.88	76.8	96.8
	Curve C	0.95	48.7	77.1
Self-priming pool filter pump, small-size	Curve C	0.44	29.2	59.7
Non-self-priming pool filter pump	Curve C	0.52	32.6	63.1
	Curve C	0.09	10.1	35.1
Pressure cleaner booster pump	10 gpm flow	0.28	110.0	10.0
Waterfall pump	17 ft. head	0.40	17.0	93.0
Integral sand filter pool pump	n/a *	0.03	4.9	24.4
Integral cartridge filter pool pump	n/a *	0.18	16.1	44.3
	n/a *	0.02	3.7	21.3

** DOE did not establish a test procedure for integral sand filter pool pumps or integral cartridge filter pool pumps, because these equipment classes are not subject to performance standards. However, the performance reported for integral pumps in this table is measured on curve C.

3. Baseline Configuration and Performance

The baseline configuration defines the lowest efficiency equipment in each analyzed equipment class. DOE established baseline configurations by reviewing the configurations and performance of pumps listed in the Pool Pump Performance Database. DOE determined that, for pool filter pumps (including all sub-varieties) and pressure cleaner booster pumps, the baseline configuration has the following characteristics:

- single-speed
- low-efficiency motor
- low hydraulic efficiency

To determine an appropriate level of performance for each representative pool filter pump unit at the baseline, DOE identified pumps in the Pool Pump Performance Database that have similar hydraulic capacity to the representative units, and that share the baseline equipment characteristics. DOE adopted the estimated WEF values of these identified pumps as the baseline performance level for each representative unit. Pressure cleaner booster pumps and waterfall pumps are not listed in the Pool Pump Performance Database. Manufacturers provided test data for several models of pressure cleaner booster pumps and waterfall

pumps, and these test data enabled DOE to estimate the performance of representative units at the baseline.

The baseline configuration for integral filter pumps for which prescriptive standards were considered is characterized by median performance and lack of a timer mechanism.

Table IV-7 summarizes the baseline configurations and performance levels for the representative units used in this analysis. These baseline configurations ultimately define the energy consumption and associated costs for the lowest efficiency equipment analyzed in each equipment class.

TABLE IV-7—BASELINE CONFIGURATIONS AND PERFORMANCE FOR DPPP REPRESENTATIVE UNITS

DPPP representative unit	Baseline configuration	Baseline performance WEF
Self-priming pool filter pump, 1.88 hhp	Single-speed, low efficiency motor, low hydraulic efficiency.	1.74
Self-priming pool filter pump, 0.95 hhp		2.13

TABLE IV–7—BASELINE CONFIGURATIONS AND PERFORMANCE FOR DPPP REPRESENTATIVE UNITS—Continued

DPPP representative unit	Baseline configuration	Baseline performance WEF
Self-priming pool filter pump, 0.44 hhp	No timer	2.69
Non-self-priming pool filter pump, 0.52 hhp		2.77
Non-self-priming pool filter pump, 0.09 hhp		3.93
Pressure cleaner booster pump		0.34
Waterfall pump		7.46
Integral sand filter pool pump		n/a
Integral cartridge filter pool pump, 0.18 hhp		n/a
Integral cartridge filter pool pump, 0.02 hhp		n/a

Chapter 5 of the direct final rule TSD describes the process that DOE used to select the baseline configuration for each equipment class and discusses the baseline in greater detail.

4. Efficiency Levels

For each equipment class, DOE established and analyzed a set of efficiency levels above the baseline configuration to assess the relationship between MPC and DPPP efficiency. These efficiency levels are discrete tiers of energy efficiency that can be represented by the WEF test metric.

a. Design Option Applicability and Ordering

For pool filter pump varieties, DOE considered incremental improvements that could be applied to the baseline configuration; these improvements are related to the three design options discussed in section IV.A.6: (1) Improved motor efficiency, (2) ability to operate at reduced speeds, and (3) improved hydraulic design.

Specifically, for the “improved motor efficiency” design option, DOE considered three tiers of motor efficiency (low, medium, and high efficiency) for both single-speed and two-speed pump motors. The specific nameplate motor efficiency associated with these tiers varied by pump variety and capacity. For the “ability to operate at reduced speeds” design option, DOE considered three motor speed configurations: Single-speed, two-speed, and variable-speed. Finally, for the “improved hydraulic design” design option, DOE considered two hydraulic efficiencies (low and high efficiency). The specific hydraulic efficiencies associated with these tiers varied by pump variety and capacity.

For pressure cleaner booster pumps, DOE evaluated the same design options as pool filter pumps. However, DOE did not consider two-speed motors because pressure cleaner booster pumps only operate at one speed and cannot benefit from the ability to switch between two discrete speeds. Alternatively, DOE did

consider variable-speed motors for pressure cleaner booster pumps, as the WEF metric accounts for energy savings available from adjusting the pump speed to reach the minimum required pressure, *i.e.*, 60 feet.

For waterfall pumps, DOE evaluated the same improved motor efficiency and improved hydraulic efficiency design options as pool filter pumps, but did not evaluate the ability to operate at reduced speeds. This is because DOE determined that waterfall pumps only operate at one speed and therefore cannot benefit from the ability to switch speeds.

To order the design options for each equipment class, DOE considered all of the costs (both incremental MPCs and one-time product conversion costs) that would be incurred with each design option. Based on data from manufacturer interviews, as well as DPPP Working Group discussions (Docket No. EERE–2015–BT–0008, March 21 DPPP Working Group Meeting, at pp. 108–122), DOE concluded that a direct relationship exists between motor MPC and pump WEF score, while a flat relationship exists between motor-related conversion costs and WEF score, *i.e.*, better performing motors cost more, but manufacturers face similar conversion costs for all motor-related design options, regardless of whether they are substituting on the basis of motor efficiency or on the basis of motor speed configuration. DPPP Working Group members clarified that the motor-related conversion costs associated with upgrading a pump motor include the costs of sourcing and qualifying the pump motor as a purchased component, but they do not include the costs that motor manufacturers would incur (*e.g.*, the costs of designing, testing, and marketing a motor model). (Docket No. EERE–2015–BT–0008–0094, March 21 DPPP Working Group Meeting, at pp. 113–114; Docket No. EERE–2015–BT–0008–0100, May 18 DPPP Working Group Meeting, at pp. 89–90) DPPP

Working Group members also clarified that the conversion costs associated with upgrading motors are not cumulative across multiple efficiency levels, *i.e.*, if a manufacturer pays a conversion cost to upgrade from EL 0 to EL 2, they do not pay the conversion cost associated with an interim upgrade to EL 1. (Docket No. EERE–2015–BT–STD–0008–0100, May 18 DPPP Working Group Meeting, at pp. 102)

In discussions with the DPPP Working Group, DOE stated the assumption that MPC does not increase as hydraulic efficiency increases. Hayward commented that the addition of a diffuser would change the efficiency and the MPC of a pump wet end, but DOE noted that the analysis already accounts for this effect. The addition of a diffuser would change a pump’s ability to self-prime and thus, would change the pump’s equipment class, and DOE already determined the MPCs and efficiencies of the different equipment classes on the basis of these design differences. (Docket No. EERE–2015–BT–STD–0008–0094, March 21 DPPP Working Group Meeting, at pp. 117–118) Based on data from manufacturer interviews and these Working Group discussions, DOE concluded that hydraulic redesign has a negligible effect on MPC, but results in significant conversion costs—much greater than those incurred for motor-related improvement. The DPPP Working Group did not object to these conclusions. Complete discussions of incremental MPC and conversion costs are found in sections IV.C.5 and IV.J.2, respectively.

Ultimately, DOE ordered its design options to first employ all motor-related design options, based on ascending incremental MPC, followed by improved hydraulic design to reach the maximum technologically feasible efficiency level. This ordering was reviewed by the DPPP Working Group (Docket No. EERE–2015–BT–STD–0008–0094, March 21 DPPP Working Group Meeting, at pp. 58–105), which

offered no objections, and ultimately evaluated standards based on efficiency levels resulting from this ordering.

Table IV–8 describes the design options applied to each equipment class at each

efficiency level from the baseline up to the max-tech level.

TABLE IV–8—DESIGN OPTIONS BY EFFICIENCY LEVEL FOR PUMP VARIETIES SUBJECT TO PERFORMANCE STANDARDS

Efficiency level	DPPP variety		
	Pool filter pumps		Pressure cleaner booster pump
	Self-priming/Non-self-priming	Waterfall pump *	
0 (Baseline)	1-speed motor, Low efficiency motor, Low hydraulic efficiency.	1-speed motor, Low efficiency motor, Low hydraulic efficiency.	1-speed motor, Low efficiency motor, Low hydraulic efficiency.
1	1-speed motor, Medium efficiency motor, Low hydraulic efficiency.	1-speed motor, Medium efficiency motor, Low hydraulic efficiency.	1-speed motor, Medium efficiency motor, Low hydraulic efficiency.
2	1-speed motor, High efficiency motor, Low hydraulic efficiency.	1-speed motor, High efficiency motor, Low hydraulic efficiency.	1-speed motor, High efficiency motor, Low hydraulic efficiency.
3	2-speed motor, Low efficiency motor, Low hydraulic efficiency.	1-speed motor, High efficiency motor, High hydraulic efficiency.	Variable-speed motor, Low hydraulic efficiency.
4	2-speed motor, Medium efficiency motor, Low hydraulic efficiency.	Variable-speed motor, High hydraulic efficiency.
5	2-speed motor, High efficiency motor, Low hydraulic efficiency.		
6	Variable-speed motor, Low hydraulic efficiency.		
7 (max tech)	Variable-speed motor, High hydraulic efficiency.		

* As described in section IV.A.6.b, DOE did not consider efficiency levels above EL2 for non-self-priming pool filter pumps that produce less than 49.4 gpm maximum flow on curve C.

DOE analyzed one design option for the integral cartridge filter pool pump and integral sand filter pool pump classes that are subject to prescriptive

standards. Table IV–9 presents the two efficiency levels considered for those classes: The baseline (without a pool pump timer), and EL1 (with a pool

pump timer). Chapter 5 of the direct final rule TSD contains more details on the development of efficiency levels.

TABLE IV–9—DESIGN OPTIONS BY EFFICIENCY LEVEL FOR DPPP VARIETIES SUBJECT TO A PRESCRIPTIVE STANDARDS

Efficiency level	DPPP variety	
	Integral cartridge filter pumps	Integral sand filter pumps
0 (Baseline)	Does not include pool pump timer	Does not include pool pump timer.
1	Includes pool pump timer	Includes pool pump timer.

b. Summary of Available Motor Efficiencies

For the improved motor efficiency design option, DOE selected a discrete motor efficiency (or efficiencies, for two-speed motors) for each representative unit at each efficiency level. DOE presented initial motor efficiency assumptions to the DPPP Working Group. These initial figures showed full-speed nameplate motor efficiency ranging from 55 percent to 81 percent for motors used in small self-priming pool filter pumps and in 0.52-hhp non-self-priming pool filter pumps; ranging from 75 percent to 92 percent for motors used in 1.88-hp self-priming pool filter pumps; ranging from 55 percent to 77 percent for motors used in pressure cleaner booster pumps; and ranging from 38 percent to 50 percent for motors used in waterfall pumps. (Docket No. EERE–2015–BT–STD–0008–0094, March 21 DPPP Working

Group Meeting, at pp. 58–65) DPPP Working Group members commented that certain manufacturers offer a wider variety of two-speed motors than were represented in DOE's initial assumptions. In particular, certain manufacturers offer two-speed motors that are designed to have improved efficiency at low speed. The DPPP Working Group requested DOE revise the motor efficiency assumptions to include a new efficiency level representing a two-speed motor with an improved low-speed motor efficiency. (Docket No. EERE–2015–BT–STD–0008–0094, March 21 DPPP Working Group Meeting, at pp. 76–77) DOE subsequently added an efficiency level (specifically, EL 4) that incorporates a motor with high-speed efficiency of 68 percent and low-speed efficiency of 48 percent.

DPPP Working Group members also commented that the efficiency range DOE assumed for waterfall pumps was

lower than what exists in the market. DPPP Working Group members suggested that DOE examine typical motor efficiencies for dedicated 1725-rpm motors. (Docket No. EERE–2015–BT–STD–0008–0094, March 21 DPPP Working Group Meeting, at pp. 96–99) DOE reviewed motor catalog data and subsequently revised its waterfall pump motor efficiency assumptions upward. DOE revised the baseline waterfall pump motor efficiency from 38 percent to 65 percent efficient, and the max tech waterfall pump motor efficiency from 50 percent to 78 percent efficient.

Based on motor efficiency data in the CEC pool pump database, DOE initially assumed that variable-speed ECM motors are available with nameplate efficiency of 92 percent. Members of the DPPP Working Group commented that 92 percent would be too high for a nameplate motor efficiency, and suggested that the 92 percent figure did not account for efficiency losses in the

motor's electronic drive. DPPP Working Group members requested that DOE review its assumption for variable-speed nameplate motor efficiency and revise it appropriately. (Docket No. EERE-2015-BT-STD-0008-0094, March 21 DPPP Working Group Meeting, at pp. 80-82) DOE subsequently revised its assumption of typical variable-speed motor efficiency at high-speed from 92 percent downward to 82 percent. The DPPP Working Group did not object to this assumption.

DOE also initially assumed that smaller 48-frame motors typically used in non-self-priming pumps would be able to achieve the same nameplate motor efficiency as the larger 56-frame motors typically used in self-priming

pool filter pumps. DOE initially assumed that both 48-frame and 56-frame single-speed motors would be available ranging from 55 percent efficiency to 77 percent efficiency. DPPP Working Group members commented that, due to constraints of their smaller frame size, 48-frame motors could not always achieve the same efficiency as 56-frame motors at the same capacity, and that 48-frame motors likely could not achieve the 77 percent nameplate efficiency that DOE initially assumed. (Docket No. EERE-2015-BT-STD-0008-0091, June 22 DPPP Working Group Meeting, pp. 132-138 and pp. 189-191) DOE subsequently revised its assumption regarding the nameplate efficiency from 77 percent to 72 percent

for the larger (0.52-hhp) non-self-priming pool filter pump representative unit, which used a 48-frame motor. The DPPP Working Group did not object to this assumption.

Table IV-10 presents the revised motor efficiencies for each combination of motor efficiency and motor configuration described in Table IV-8. DOE selected these motor efficiencies based on data listed in the Pool Pump Performance Database, publicly available catalog data, and motor data that manufacturers submitted to DOE. Motor components with the efficiencies listed in Table IV-10 are currently available on the market at the appropriate frame sizes and capacities to drive the representative unit pumps.

TABLE IV-10—MOTOR NAMEPLATE EFFICIENCIES FOR REPRESENTATIVE UNITS WITH DIFFERENT MOTOR CONFIGURATIONS *

Motor description	Motor efficiencies (and corresponding ELs) for representative units at high speed except as noted						
	Self-priming pool filter pump			Non-self-priming pool filter pump		Pressure cleaner booster pump (%)	Water-fall pump (%)
	0.44 hhp (%)	0.95 hhp (%)	1.88 hhp (%)	0.09 hhp (%)	0.52 hhp (%)		
1-speed, low efficiency (Baseline).	55 (EL0)	55 (EL0)	75 (EL0)	55 (EL0)	55 (EL0)	55 (EL0)	65 (EL0)
1-speed, mid efficiency.	69 (EL1)	69 (EL1)	79 (EL1)	69 (EL1)	69 (EL1)	67 (EL1)	70 (EL1)
1-speed, high efficiency.	76 (EL2)	77 (EL2)	84 (EL2)	72 (EL2)	72 (EL2)	72 (EL2)	78 (EL2-3)
2-speed, low efficiency.	64 high, 38 low (EL3).	64 high, 38 low (EL3).	74 high, 49 low (EL3).	n/a **	61 high, 38 low (EL3).	n/a ‡	n/a ‡
2-speed, mid efficiency.	70 high, 46 low (EL4).	71 high, 46 low (EL4).	76 high, 55 low (EL4).	n/a **	68 high, 48 low (EL4).	n/a ‡	n/a ‡
2-speed, high efficiency.	73 high, 51 low (EL5).	73 high, 51 low (EL5).	83 high, 62 low (EL5).	n/a **	72 high, 51 low (EL5).	n/a ‡	n/a ‡
Variable Speed.	81 (EL6-7)	81 (EL6-7)	82 (EL6-7)	n/a †	81 (EL6-7)	81 (EL3-4)	n/a ‡

* The integral cartridge filter pool pump and integral sand filter pool pump equipment classes are not included in this table because DOE did not separately consider the motor costs for these equipment classes.

** As discussed in section IV.A.6.b this analysis does not consider two-speed motor configurations for the extra-small non-self-priming pool filter pump representative unit. According to the test procedure final rule, this representative unit would always be subject to the single-speed test procedure because the half-speed flow rate for a 0.09 hhp pump would be 17.8 gpm, which is less than the test procedure minimum flow rate of 24.7 gpm.

† As discussed in section IV.A.6.b, this analysis does not consider variable-speed motor configurations for the extra-small non-self-priming pool filter pump representative unit.

‡ Two-speed motors were not considered for waterfall pumps or pressure cleaner booster pumps, and variable-speed motors were not considered for waterfall pumps, because DOE assumes these pump varieties are always operated at a single-speed.

c. Summary of Available Hydraulic Efficiencies

For the “improved hydraulic design” design option, DOE evaluated two discrete hydraulic efficiencies (“low” and “high”) for each representative unit. The low hydraulic efficiency represents

the pump hydraulic efficiency of a baseline unit that has not been optimized. The high hydraulic efficiency represents the hydraulic efficiency of a pump that has been hydraulically redesigned to improve hydraulic efficiency, as described in section IV.A.6.c.

Table IV-11 presents the selected hydraulic efficiencies at each efficiency level described in Table IV-8. DOE selected these hydraulic efficiencies based on data listed in the Pool Pump Performance Database, publicly available catalog data, and pump test data submitted by manufacturers.⁶⁰

⁶⁰ For further information regarding the estimation of hydraulic efficiencies, refer to chapter 5 of the direct final rule TSD.

TABLE IV-11—HYDRAULIC EFFICIENCIES FOR REPRESENTATIVE UNITS

Hydraulic efficiency descriptor (%)	Hydraulic efficiencies and corresponding efficiency levels for representative units at maximum speed						
	Self-priming pool filter pump			Non-self-priming pool filter pump		Pressure cleaner booster pump (%)	Waterfall pump
	0.44 hhp (%)	0.95 hhp (%)	1.88 hhp (%)	0.09 hhp (%)	0.52 hhp (%)		
Low Hydraulic Efficiency (Applicable ELs).	45 (EL0–EL6) ...	59 (EL0–EL6)	62 (EL0–EL6)	23 (EL0–EL2)	51 (EL0–EL6)	24 (EL0–EL3)	61 (EL0–EL2)
High Hydraulic Efficiency (Applicable ELs).	49 (EL7)	63 (EL7)	72 (EL7)	n/a *	67 (EL7)	27 (EL4)	67 (EL3)

* DOE did not have sufficient data to evaluate a 0.09-hhp non-self-priming pool filter pump with high hydraulic efficiency.

d. Representative Unit Performance at Each Efficiency Level

In the previous sections of this direct final rule, DOE described efficiency levels and the available improvements in motor and hydraulic efficiency for different equipment classes. This section describes how DOE used that information to calculate the WEF value of each representative unit at each efficiency level.

The DPPP equipment classes within the scope of this direct final rule are varied in terms of the number of pump models that are offered on the market and in terms of the amount of data available for those models. Because of these variations, DOE calculated WEF values using slightly different methodologies for each equipment class. The following sections describe the methodologies that DOE used for each equipment class.

Self-Priming Pool Filter Pumps

This subsection describes how DOE used the baseline and incremental performance data presented in sections IV.C.3 through IV.C.4.c to determine the WEF value for three representative self-priming pool filter pump units (0.44 hhp, 0.95 hhp, and 1.88 hhp) from efficiency levels one through max tech.

Efficiency levels one and two represent single-speed pumps. For EL1 and EL2, DOE held hydraulic efficiency constant and replaced the baseline maximum speed motor efficiency with the EL1 and EL2 maximum speed motor efficiencies (presented in Table IV-10). In doing so, DOE was able to calculate the wire-to-water efficiency, input power, and ultimately the WEF at maximum speed on curve C. Chapter 5 of the direct final rule TSD provides full details regarding the calculations and estimations presented in this section.

Efficiency levels three through five represent two-speed pumps. For EL3, EL4, and EL5, DOE used the same method as described for EL1 and EL2 to determine pump performance at

maximum speed on curve C. However, a dedicated-purpose pool pump operating at half-speed will exhibit lower hydraulic efficiency and lower motor efficiency compared to its full speed operation. To characterize the performance of pumps at half-speed, DOE referred to the Pool Pump Performance Database, which includes half-speed performance data for listings of two-speed self-priming pool filter pumps. For all three representative units, DOE identified pumps in the Pool Pump Performance Database that exemplify EL3, with design characteristics of low motor efficiency, two-speed motor, and low hydraulic efficiency. DOE used the half-speed motor efficiency and input power for these EL3 units to estimate a representative baseline half-speed hydraulic efficiency.⁶¹ Then DOE calculated the total efficiency and the input power for EL4 and EL5 at half speed by holding the half-speed hydraulic efficiency constant at baseline and substituting the half-speed motor efficiencies assumed for EL4 and EL5 (presented in Table IV-10). DOE calculated WEF for representative units at EL4 and EL5 by combining the half-speed performance with the max-speed performance, as specified in the test procedure final rule.

Efficiency levels 6 and 7 describe variable-speed pumps. Similar to previous ELs, DOE assumed that the baseline motor would be replaced with the EL6 and EL7 motors presented in Table IV-10. Unlike two-speed pumps, the high-speed test point for variable speed pumps is at 80 percent of maximum speed on curve C, and the low-speed test point is at either 24.7 gpm flow or 31.1 gpm flow on curve C (depending on the pump capacity). Although the Pool Pump Performance Database contains performance data for

many variable-speed pumps, data for these pumps is not typically reported at these specific test points. Consequently, DOE used the variable-speed performance data available for other speeds to estimate performance for the representative units at the specific variable-speed test points.

Based on examination of power-flow curves for many variable-speed pumps and variable-speed motor performance data, DOE concluded that total efficiency at 80 percent of maximum speed is approximately equal to the pump's total efficiency at maximum speed. As such, the hydraulic and motor efficiency of each variable-speed representative unit remains constant, between 100 percent and 80 percent of maximum speed.⁶²

However, examination of the same power-flow curves and variable-speed motor performance data indicated that that pump's total efficiency will be lower at the low-speed test point, as hydraulic and motor efficiency tend to be significantly reduced at low speeds. DOE constructed a regression of these power-flow data to quantify the relationship between wire-to-water efficiency and speed reduction. This relationship allowed DOE to estimate wire-to-water efficiency, and thus input power, for each representative unit, based on each unit's wire-to-water efficiency at maximum speed on curve C. The DPPP Working Group reviewed this method of estimating low-speed performance and certain members expressed explicit agreement with the results of this low-speed estimation methodology. (Docket No. EERE-2015-BT-STD-0008-0094, March 21 DPPP Working Group Meeting, at pp. 26–35 and Docket No. EERE-2015-BT-STD-0008-0095, March 22 DPPP Working Group Meeting, at pp. 4–5) None of the DPPP Working Group members

⁶¹ For further information on this method of calculating the half-speed hydraulic efficiency and WEF for two-speed pumps, refer to chapter 5 of the direct final rule TSD.

⁶² See chapter 5 of the direct final rule TSD for more details regarding the estimation of variable-speed pump performance at the 80-percent-speed and the low-speed test points.

expressed disagreement with this method of estimating low-speed performance. The remainder of the DPPP Working Group offered no objections, and ultimately evaluated standards based on this methodology. Details regarding this regression and the estimation of low-speed performance is included in chapter 5 of the direct final rule TSD.

At EL6, DOE also estimated representative baseline low-speed and high-speed hydraulic efficiency using data from the Pool Pump Performance Database. To do so, DOE identified pumps in the Pool Pump Performance Database that exemplify EL6, (those with variable-speed motor and low hydraulic efficiency) and referenced the low-speed and high-speed motor efficiencies and input power values that DOE estimated for those units. DOE used these estimated values to calculate the representative hydraulic efficiency of these pumps at low speed and at high speed. Details regarding this estimation of hydraulic efficiency are included in chapter 5 of the direct final rule TSD.

Then DOE calculated the total efficiency and the input power for EL7 at low speed by holding the low-speed motor efficiency constant at its EL6 level and substituting an improved hydraulic efficiency at maximum speed on curve C, up to the values specified in Table IV–11. DOE calculated the high-speed performance at EL7 in the same way, by calculating total efficiency and input power holding the high-speed motor efficiency constant and substituting an improved hydraulic efficiency. Ultimately, DOE calculated WEF for representative units at EL6 and EL7 by combining low-speed performance with the high-speed performance, as specified in the test procedure final rule.

Non-Self-Priming Pool Filter Pumps

This subsection describes how DOE used the baseline and incremental performance data presented in sections IV.C.3 through IV.C.4.c to determine the WEF values for two representative non-self-priming pool filter pump units (0.09 hhp and 0.52 hhp) from efficiency levels 1 through max tech. DOE analyzed the 0.09-hhp non-self-priming representative unit separately from the 0.52-hhp non-self-priming representative unit.⁶³

⁶³ The DPPP Working Group ultimately determined that separate standard levels were not appropriate for standard-size non-self-priming and extra-small non-self-priming pool filter pumps (Docket No. EERE–2015–BT–STD–0008–0092, June 23 DPPP Working Group Meeting, pp. 277–280), and the two representative capacities are regulated together in one equipment class.

DOE did not analyze any efficiency levels above EL2 for the 0.09-hhp non-self-priming pool filter pump representative unit. As discussed in section IV.A.6.b, the design option described as “ability to operate at reduced speeds” does not benefit pool filter pumps that are below 49.4 gpm at maximum speed on curve C. The representative unit characteristics in Table IV–6 show that the 0.09-hhp non-self-priming representative unit achieves a flow rate of 35.1 gpm at maximum speed on curve C. This flow rate is below the 49.4 gpm threshold, so DOE analyzed only single-speed efficiency levels (EL0 through EL2) for the 0.09-hhp non-self-priming pool filter pump. DOE discussed this point with the DPPP Working Group and the group did not offer any comments or objections. (Docket No. EERE–2015–BT–STD–0008–0091, June 22 DPPP Working Group Meeting, pp. 115–116)

To calculate the WEF of non-self-priming pool filter pumps at EL1 and EL2 at maximum speed on curve C, DOE used the same methods as those described for self-priming pool filter pumps at EL1 and EL2.

To calculate the WEF of 0.52-hhp non-self-priming pool filter pumps at EL3, EL4, and EL5, DOE used the same methods as those described for self-priming pool filter pumps at EL3, EL4, and EL5.

Efficiency levels 6 and 7 describe variable-speed pumps. Similar to previous ELs, DOE assumed that the baseline motor would be replaced with the EL6 and EL7 motors presented in Table IV–10. As described in the discussion of self-priming pool filter pumps, the high-speed test point for variable-speed pumps is at 80 percent of maximum speed on curve C, and the low-speed test point is at either 24.7 gpm flow or 31.1 gpm flow on curve C (depending on the pump capacity). However, the Pool Pump Performance Database does not contain performance data for any variable-speed non-self-priming pool filter pumps, and DOE is not aware of any non-self-priming pool filter pumps on the market that incorporate a variable-speed motor. To characterize EL6 and EL7, DOE estimated the performance of a hypothetical variable-speed non-self-priming pool filter pump. Based on examinations of power-flow curves for self-priming and non-self-priming pool filter pumps, DOE concluded that these two pump varieties experience similar degradation of motor and hydraulic efficiency as pump flow is reduced. DOE estimated the low-speed efficiencies of non-self-priming pumps using the same relationship between

wire-to-water efficiency and speed reduction that was determined by regression of self-priming pool filter pump data. DOE applied this relationship to the 0.52-hhp representative non-self-priming unit to this representative unit at 80-percent speed and at low speed.

DOE then calculated the total efficiency and the input power for EL7 at low speed by holding the low-speed motor efficiency constant at its EL6 level and substituting an improved hydraulic efficiency at maximum speed on curve C, up to the values specified in Table IV–11. Ultimately, DOE calculated WEF for representative units at EL6 and EL7 by combining low-speed performance with the high-speed performance, as specified in the test procedure final rule.

Pressure Cleaner Booster Pumps

This subsection describes how DOE used the baseline and incremental performance data presented in sections IV.C.3 through IV.C.4.c to determine the WEF value for one representative pressure cleaner booster pump (at 0.28 hhp at the test point of 10 gpm flow) from efficiency levels 1 through max tech.

To calculate the WEF of pressure cleaner booster pumps at EL1 and EL2 at the pressure cleaner booster pump test point of 10 gpm of flow, DOE used the same methods as those described for self-priming pool filter pumps at EL1 and EL2.

EL 3 represents a variable-speed pump. As described in section IV.A.6.b, pressure cleaner booster pumps are tested at 100 percent speed or (for variable-speed pumps) at the lowest speed that can achieve 60 feet of head at the 10 gpm test condition.⁶⁴ DOE assumed that the representative unit's motor efficiency would improve from EL2 to EL3, as the shift from single speed to variable speed would likely be achieved by switching from induction motor technology to the more efficient ECM technology.⁶⁵ For EL3, DOE held hydraulic efficiency constant and replaced the EL2 motor efficiency with the EL3 maximum speed motor efficiency (presented in Table IV–10).

⁶⁴ The DPPP Working Group requested that DOE examine variable-speed pumps as a design option for pressure cleaner booster pumps. (Docket No. EERE–2015–BT–STD–0008–0095, March 22 DPPP Working Group Meeting, at pp. 197–203)

⁶⁵ As noted in section IV.A.6.a, ECMs are inherently more efficient than induction motors because their construction minimizes slip losses between the rotor and stator components.

DOE used pump affinity laws⁶⁶ to calculate the input power that the representative unit would consume at 60 feet of head at 10 gpm flow.⁶⁷ In doing so, DOE was able to calculate the wire-to-water efficiency and ultimately WEF at the waterfall pump test point of 10 gpm flow.

Efficiency level four represents a variable-speed pressure cleaner booster pump with improved hydraulic design. DOE calculated the total efficiency and the input power for EL4 by holding the motor efficiency constant at its EL3 level and substituting an improved hydraulic efficiency at maximum speed on curve C, up to the value specified in Table IV–11. Chapter 5 of the direct final rule TSD provides full details

regarding the calculations and estimations presented in this section.

Waterfall Pumps

This subsection describes how DOE used the baseline and incremental performance data presented in sections IV.C.3 through IV.C.4.c to determine the WEF value for one representative waterfall pump (at 0.40 hhp at the test point of 17 feet of head) from efficiency levels 1 through max tech.

To calculate the WEF of waterfall pumps at EL1 and EL2 at the waterfall pump test point of 17 feet of head, DOE used the same methods as those described for self-priming pool filter pumps at EL1 and EL2.

Efficiency level three represents a single-speed pump with improved

hydraulic design. DOE calculated the total efficiency and the input power for EL3 by holding the motor efficiency constant at its EL2 level and substituting an improved hydraulic efficiency at maximum speed on curve C, up to the values specified in Table IV–11. Chapter 5 of the direct final rule TSD provides full details regarding the calculations and estimations presented in this section.

Summary of Representative Unit Performance at Each Efficiency Level

Table IV–12 presents the performance in terms of WEF calculated for each of the representative units at each efficiency level.

TABLE IV–12 PERFORMANCE OF REPRESENTATIVE UNITS AT EACH EFFICIENCY LEVEL

Efficiency level	Representative units						
	Self-priming			Non-self-priming		Water-fall (WEF)	Pressure cleaner (WEF)

* DOE evaluated 0.09-hhp non-self-priming pool pumps at single-speed efficiency levels only.

** The max-tech efficiency level is EL3 for waterfall pumps and EL4 for pressure cleaner booster pumps.

e. Efficiency Level Structure for All Pump Capacities

The previous section summarizes the performance of the representative units at each efficiency level. However, the market for self-priming and non-self-priming pool filter pumps is more diverse than these representative units. The self-priming and non-self-priming pool filter pump classes include pumps less than 2.5 hhp, and the range of available pump efficiencies (as measured by WEF) decreases as pump capacity increases. To reflect this variation, DOE developed efficiency levels for these equipment classes in the form of equations to specify the WEF performance of equipment across the range of hydraulic power.

For self-priming and non-self-priming pool filter pumps, DOE constructed

mathematical functions that fit the performance of the representative units at each efficiency level. DOE observed that the natural logarithm function provides curves with the best fit (*i.e.*, the least error) when comparing the calculated curve values to the performance values that DOE estimated for representative units. DOE constructed scatterplots (Figure IV.4 and Figure IV.5) to visualize the performance of the self-priming and non-self-priming pool filter pumps listed in the Pool Pump Performance Database, along with the representative unit performance at each efficiency level and the efficiency level curve equations.

DOE manually adjusted coefficients in the efficiency level curves to shape the curves to meet the needs of the DPPP

Working Group. For instance, DOE adjusted the EL6 curve for self-priming pool filter pumps so that all variable-speed self-priming pool filter pumps listed in the Pool Pump Performance Database would meet a standard set at EL6. The development of the finished efficiency level curve equations is described further in chapter 5 of the direct final rule TSD. After DOE adjusted the efficiency level curves, the DPPP Working Group reviewed them (Docket No. EERE–2015–BT–STD–0008–0078, April 18 DPPP Working Group Meeting, at pp. 17–18), offered no objections, and ultimately evaluated standards based on these efficiency levels. DOE presented an alternate curve for EL 6 that accounted for the statistical error inherent in the estimation of WEF scores.⁶⁸ (Docket No. EERE–2015–BT–

⁶⁶ The pump affinity laws relevant to this calculation are stated in Equation 5, Equation 6, and Equation 7.

⁶⁷ DOE calculated that, for the representative pressure cleaner booster pump, this operating point represents 73 percent of the pump's maximum

speed. Based on examination of power-flow curves for many variable-speed self-priming pool filter pumps and variable-speed motor performance data, DOE concluded that this reduced-speed operation would incur negligible motor efficiency and hydraulic efficiency losses. Thus, DOE assumed

that the representative pressure cleaner booster pump operating at 73 percent speed would exhibit the same motor efficiency and hydraulic efficiency as it would when operating at 100 percent speed.

⁶⁸ DOE did not have access to performance data for variable-speed pool filter pumps at the load

STD-0008-0100, May 18 DPPP Working Group Meeting, at pp. 118-120) The DPPP Working Group ultimately reached consensus, with no dissenting

votes, to recommend the original EL 6 curve that does not include corrections for statistical error. (Docket No. EERE-2015-BT-STD-0008-0092, June 23

DPPP Working Group Meeting, at pp. 282-283).

Figure IV.4 WEF versus Hydraulic Power for Self-Priming Pool Filter Pumps, Representative Units, and Efficiency Levels

points prescribed in the test procedure final rule. DOE estimated the performance of pool filter pumps at these load points using statistical

regression analysis, as described in section IV.C.1.a. DOE estimated that the regression analysis introduces statistical error of about 8 percent for the

WEF scores calculated for representative pool filter pump units.

Figure IV.5 WEF versus Hydraulic Power for Non-Self-Priming Pool Filter Pumps, Representative Units, and Efficiency Levels

As evidenced in Figure IV.4 and Figure IV.5, the DPPP Working Group ultimately requested that each efficiency level curve become a flat line at 40 gpm (which is equivalent to 0.13 hhp on curve C) so that for each curve, all flow values below 40 gpm correspond to the WEF score for the efficiency level at 40 gpm. (Docket No. EERE-2015-BT-STD-0008-0092, June 23 DPPP Working Group Meeting, at pp. 277-280) The DPPP Working Group made this request for both self-priming and non-self-priming pool filter pumps.

The pressure cleaner booster pumps on the market are clustered in a small range of capacities, with hydraulic power ranging from 0.26 hhp to 0.32 hhp at the test point of 10 gpm flow. Due to the limit range of available capacities, DOE did not use equations to

describe the efficiency levels for pressure cleaner booster pumps. Instead, DOE selected fixed WEF values to represent the efficiency levels. The DPPP Working Group reviewed this method and recommended that DOE set a standard level for pressure cleaner booster pumps that is a single value. (EERE-2015-BT-STD-0008, No. 82, Recommendation #1 at pp. 1-2) Chapter 5 of the direct final rule TSD contains complete details regarding the development of efficiency levels for pressure cleaner booster pumps.

For waterfall pumps, DOE performed the economic analyses on the waterfall pump representative units from baseline to max tech and presented the results to the DPPP Working Group. DOE's analytical results showed that EL 1 and EL 2 would have negative LCC savings.

Many DPPP Working Group members commented that the energy savings for the waterfall class would be small and thus not economically justifiable to pursue standards for waterfall pumps. (Docket No. EERE-2015-BT-STD-0008-0101, May 19 DPPP Working Group Meeting, at pp. 35-36 and pp. 45-46) Consequently, DOE did not establish detailed potential standard levels for waterfall pumps beyond the aforementioned representative units.

Table IV-13 presents the equations used to calculate the WEF at each efficiency level as a function of hydraulic horsepower for self-priming and non-self-priming pool filter pumps. Table IV-14 presents the fixed WEF values at each efficiency level for pressure cleaner booster pumps.

TABLE IV-13—EFFICIENCY LEVEL WEF EQUATIONS FOR SELF-PRIMING AND NON-SELF-PRIMING POOL FILTER PUMPS

Efficiency level	Equipment class			
	Self-priming pool filter pumps, small and standard classes (WEF)*		Non-self-priming pool filter pumps** (WEF)*	
	≤0.13 hhp	>0.13 hhp	≤0.13 hhp	>0.13 hhp
0 (Baseline)	3.51	$-0.69 \times \ln(\text{hhp}) + 2.10$	3.71	$-0.69 \times \ln(\text{hhp}) + 2.30$.
1	4.84	$-1.10 \times \ln(\text{hhp}) + 2.60$	4.60	$-0.85 \times \ln(\text{hhp}) + 2.87$.

0 (Baseline)	0.34
1	0.42
2	0.45
3	0.51
4	0.56

5. Manufacturer Production Costs

This section presents the MPCs at each efficiency level, for each equipment class, and discusses the analytical methods used to develop these MPCs. This section contains six subsections. The first subsection describes the principal drivers of manufacturing costs. The second and third subsections focus on the motor costs and non-motor costs for pool filter pumps and pressure cleaner booster pumps. The fourth subsection focuses specifically on the costs of integral sand filter and integral cartridge filter pumps. The final two subsections present cost-efficiency tables and MPC breakdowns for all DPPP equipment classes.

a. Principal Drivers of DPPP Manufacturing Costs

For most models of pool filter pumps and pressure cleaner booster pumps, the motor is the most expensive component of the pump. As discussed previously, for these equipment classes, all efficiency levels except max tech are defined by a motor substitution. In a motor substitution, the pump motor of a representative baseline (low efficiency, single-speed) unit is exchanged with a motor that will provide improved performance (e.g.,

improved efficiency or ability to operate at reduced speed).

DOE researched the design and engineering constraints associated with motor substitution, examining manufacturer interview responses and holding discussions with the DPPP working group. In particular, Hayward commented that manufacturers would incur costs, such as costs associated with testing, packaging, and labeling, when substituting the motor component of a pump. (Docket No. EERE–2015–BT–STD–0008–0079, April 19 DPPP Working Group Meeting, at pp. 105–106) Zodiac commented that manufacturers would incur costs for motor substitutions associated with qualification testing, reliability testing, and updating catalogs and marketing materials. (Docket No. EERE–2015–BT–STD–0008–0100, May 18 DPPP Working Group Meeting, at pp. 78) DOE included the cost items described by Hayward and Zodiac in the product conversion costs (discussed in section IV.J.2.c) in the MIA and did not account for them in the MPC figures estimated for dedicated-purpose pool pumps. DOE concluded that for the representative equipment capacities being considered, a given DPPP wet end could be paired with a range of motors of various efficiencies and speed configurations without significant changes to the per-unit costs associated with manufacturing the wet end. In other words, a motor swap results in negligible incremental MPC to the non-motor components of the dedicated-purpose pool pump. Thus, DOE concluded that the incremental MPC of the motor swap design options (improved motor efficiency and ability to operate at reduced speeds) may be considered equivalent to the incremental MPC of the motor component being swapped.

Consequently, DOE broke the equipment MPCs for pool filter pumps and pressure cleaner booster pumps into two categories—motor costs and non-motor costs—and estimated the MPC of each separately. However, DOE did not break out the motor costs of the integral cartridge and integral sand filter pool pump classes because no motor design options were considered for these equipment classes.

b. Pool Filter Pump and Pressure Cleaner Booster Pump Motor Costs

DOE quantified pump motor MPCs at each efficiency level, for each representative unit. These MPCs represent the cost incurred by DPPP manufacturers to either purchase the motors or assemble them in house.

DOE estimated motor costs using two data sources: (1) Estimates provided by manufacturers, and (2) publicly available motor catalogs. DOE presented initial motor cost estimates to the DPPP Working Group and received feedback from the group. (Docket No. EERE–2015–BT–0008–0094, March 21 DPPP Working Group Meeting, at pp. 108–122) Hayward commented that the motor MPCs that DOE initially presented for variable-speed pump motors were extremely low, and Hayward asked DOE to ensure that these MPC figures include the cost of all three components (the motor, the motor drive, and the user interface) that are required to replace a single-speed or two-speed motor. (Docket No. EERE–2015–BT–0008–0100, May 18 DPPP Working Group Meeting, at pp. 130–131) DOE's contractor subsequently received new motor cost data and revised the MPC assumptions for variable-speed motors based on those numbers.

The revised motor component costs presented in Table IV–15 represent aggregate cost estimates for the dedicated-purpose pool pump industry,

and do not represent the costs incurred by any one pump manufacturer. The costs in Table IV–15 include all of the costs incurred to deliver finished motor components that are ready for assembly into a pump.⁶⁹ For variable-speed motors, the listed costs include the cost of controls (which include a motor driver and a user interface), as variable-speed motors require this equipment to operate. (Docket No. EERE–2015–BT–STD–0008–0079, April 19 DPPP Working Group Meeting, at pp. 207–208)

As discussed in section IV.A.5.b, variable-speed motors are not currently available in capacities smaller than 1.65 thp. Initially, DOE assumed that motor manufacturers would begin to offer variable-speed motors smaller than 1.65-thp, and DOE estimated the costs of these smaller motors by extrapolating the costs of larger variable-speed motors that are currently available. (Docket No.

EERE–2015–BT–STD–0008–0078, April 18 DPPP Working Group Meeting, at pp. 31–32) The DPPP Working Group recommended that DOE consider only motors that are currently available on the market. (EERE–2015–BT–STD–0008–0079, April 19 DPPP Working Group Meeting, at pp. 109–112) Specifically, the DPPP Working Group did not find it reasonable to assume that motor suppliers would develop smaller variable-speed motor that are not already available on the market. (Docket No. EERE–2015–BT–STD–0008–0079, April 19 DPPP Working Group Meeting, at pp. 109) Thus, DOE modeled a 1.65-thp variable-speed motor that would be the motor of choice for smaller representative units at efficiency levels that are defined by variable-speed motors.

DPPP Working Group members commented that smaller DPPP models may require additional design changes

to accommodate a 1.65-thp variable-speed motor. DOE requested comments on the product conversion costs that would be required to adapt smaller DPPP models to use 1.65-thp variable-speed motors. (Docket No. EERE–2015–BT–STD–0008–0079, April 19 DPPP Working Group Meeting, at pp. 108–113) DOE incorporated manufacturer feedback into the product conversion cost assumptions, which are discussed in section IV.J.2.c.

DOE presented the revised motor costs in Table IV–15 to the DPPP Working Group and the DPPP Working Group did not offer any comments in opposition. (Docket No. EERE–2015–BT–STD–0008–0100, May 18 DPPP Working Group Meeting, at pp. 115–116; Docket No. EERE–2015–BT–0008–0101, May 19 DPPP Working Group Meeting, at pp. 6–10)

TABLE IV–15—MPC OF DPPP MOTOR COMPONENTS *

Motor description	Representative units						
	Self-priming pool filter pump			Non-self-priming pool filter pump		Pressure cleaner booster pump (\$)	Water-fall pump (\$)
	0.44 hhp (\$)	0.95 hhp (\$)	1.88 hhp (\$)	0.09 hhp (\$)	0.52 hhp (\$)		
(Baseline) 1-speed low efficiency	55	66	142	24	46	53	58
1-speed, mid efficiency	68	85	177	30	50	63	69
1-speed, high efficiency	87	101	198	36	64	83	88
2-speed, low efficiency	90	102	226	** n/a	68	†† n/a	†† n/a
2-speed, mid efficiency	100	119	239	** n/a	82	†† n/a	†† n/a
2-speed, high efficiency	111	137	253	** n/a	96	†† n/a	†† n/a
Variable Speed	273	273	367	† n/a	273	273	†† n/a

* The integral cartridge filter pool pump and integral sand filter pool pump equipment classes are not included in this table because DOE did not separately consider the motor costs for these equipment classes.

** As discussed in section IV.A.6.b this analysis does not consider two-speed motor configurations for the 0.09-hhp non-self-priming pool filter pump representative unit. According to the test procedure final rule, this representative unit would always be subject to the single-speed test procedure because the half-speed flow rate for a 0.09-hhp pump would be 17.8 gpm, which is less than the test procedure minimum flow rate of 24.7 gpm.

† As discussed in section IV.A.6.b, this analysis does not consider variable-speed motor configurations for the 0.09-hhp non-self-priming pool filter pump representative unit.

†† Two-speed motors were not considered for waterfall pumps or pressure cleaner booster pumps, and variable-speed motors were not considered for waterfall pumps, because DOE assumes these pump varieties are always operated at a single-speed.

c. Pool Filter Pump and Pressure Cleaner Booster Pump Non-Motor Costs

The non-motor costs of manufacturing pool filter pumps and pressure cleaner booster pumps include the costs associated with manufacturing the wet end of the pump and the costs associated with assembling and packaging the pump. To determine the MPC of non-motor components, DOE developed a comprehensive spreadsheet model itemizing all component parts and their associated costs. The

spreadsheet model took inputs from virtual teardowns as well as data obtained through manufacturer interviews and independent research. For the virtual teardowns, DOE referenced catalogs of replacement pump parts and analyzed the materials and the manufacturing processes used to produce the various pump components. With this information, DOE calculated the amount a DPPP manufacturer would pay to produce each representative unit. Chapter 5 of the direct final rule TSD includes

further detail on the inputs and methods used to determine MPC, including material, labor, and overhead breakdowns.

Table IV–16 presents the non-motor MPCs associated with producing representative units in the pool filter pump and pressure cleaner booster pump equipment classes. DOE presented these costs to the DPPP Working Group (Docket No. EERE–2015–BT–STD–0008–0094, March 21 DPPP Working Group Meeting, at pp. 117–118) and received no objections.

⁶⁹ For manufacturers that purchase third-party motors, these costs include shipping and delivery costs, as well as the overhead associated with

ordering and inventory. For manufacturers that assemble motors in house, these costs include the

components, labor, and depreciation associated with motor assembly.

TABLE IV–16—NON-MOTOR MPC FOR POOL FILTER PUMP AND PRESSURE CLEANER BOOSTER PUMP CLASSES *

	Representative units					
	Self-priming pool filter pump			Non-self-priming pool filter pump		Pressure cleaner booster pump
	0.44 hhp	0.95 hhp	1.88 hhp	0.09 hhp	0.52 hhp	
Non-Motor Costs	\$47	\$47	\$50	\$23	\$24	\$35 \$42

* The integral cartridge filter pool pump and integral sand filter pool pump equipment classes are not included in this table because DOE did not separately consider the motor costs for these equipment classes.

DOE investigated the incremental MPC associated with manufacturing a pool filter pump with high hydraulic efficiency compared to a pool filter pump with low hydraulic efficiency. To do this, DOE identified several pairs of pool filter pumps that had identical capacities and motor efficiencies, but one pump had higher total efficiency than the other at maximum speed on curve C. DOE used a manufacturing cost model to individually model the MPCs of the higher efficiency wet end and the lower efficiency wet end. DOE determined that the MPC of producing a higher efficiency wet end would be approximately equal to the MPC of producing a low efficiency wet end. Thus, DOE concluded that there would be no incremental MPC associated with improving the hydraulic efficiency of a pool filter pump.⁷⁰ DOE presented this conclusion to the DPPP Working Group, which raised no objections. (Docket No. EERE–2015–BT–STD–0008–0094, March 21 DPPP Working Group Meeting, at pp. 117–118)

d. Cost Analysis of Integral Filter Pool Pump Equipment Classes

DOE did not break out the motor component costs for integral filter pool pump equipment classes estimating MPCs for that class. DOE first estimated the MPC of the three representative units associated with these classes at the baseline efficiency level. DOE then estimated the incremental cost of the sole design option (pool pump timer) considered for these classes.

Baseline MPCs of Integral Filter Pump Classes

DOE used several data sources to estimate the MPC of integral filter pumps at the baseline efficiency level:

- DOE received MPC estimates from manufacturers, including estimates of the MPC of integral filter pumps at the baseline level.
- DOE retrieved retail price data for integral filter pumps that are commercially available on the market. These retail prices represent the MPC of producing a unit plus the various markups and taxes that are applied

along the distribution chain.⁷¹ DOE aggregated retail price data for representative integral filter pump units and divided by a set of assumed markups to estimate the MPCs of representative units.

- DOE conducted a reverse-engineering teardown as a bottom-up approach to estimate the MPC of a representative unit. DOE purchased and disassembled an integral filter pump and created a manufacturing cost model to estimate the manufacturing costs associated with producing the pump at the same volumes as integral pump manufacturers.

DOE aggregated the cost data from these sources. Table IV–17 presents the estimated MPC for the three representative units of integral filter pool pumps. DOE presented the MPCs in Table IV–17 to the DPPP Working Group and the DPPP Working Group did not offer any opposition or additional comments. (Docket No. EERE–2015–BT–STD–0008–0094, March 21 DPPP Working Group Meeting, at pp. 132–133).

TABLE IV–17—MPCs FOR INTEGRAL FILTER PUMP EQUIPMENT CLASSES

	Representative equipment		
	Integral sand filter pool pump	Integral cartridge filter pool pump	
	0.03 hhp	0.02 hhp	0.18 hhp
Baseline MPC	\$57	\$17	\$92

Incremental Cost of Pool Pump Timer Design Option

The only design option considered for the integral cartridge filter pool pump and integral sand filter pool pump equipment classes is the addition of a pool pump timer. The DPPP Working Group recommended that the prescriptive standard for including a timer with integral filter pumps should

be fulfilled by a timer that is either integral to the pump or that is a separate component shipped with the pump. (Docket No. EERE–2015–BT–STD–0008–0082, Recommendation #2 at p. 2) Based on manufacturer interviews, DOE concluded that the incremental cost of adding a pool pump timer would be approximately the same for all three

representative units associated with the integral filter pump equipment classes.

DOE separately evaluated the costs of integrating a timer into an existing integral filter pump and the costs of including a timer with an existing pump. To estimate the cost of integrating a timer into an existing pump, DOE used MPC estimates provided by pump manufacturers.

⁷⁰ DOE notes that manufacturers would still likely incur costs for component design, prototyping, tooling, and testing. These costs are not included in the per-unit MPC figures described in this

section. Instead, these one-time conversion costs are discussed in the manufacturer impact analysis discussed in section IV.J of this direct final rule.

⁷¹ Markups are discussed in section IV.D of this notice and markup assumptions are presented in chapter 6 of the direct final rule TSD.

These data included manufacturer estimates of the incremental MPC of integrating a timer into existing integral pump products. To estimate the cost of including a timer with an existing pump, DOE conducted a retail price analysis of timers that are available off the shelf. DOE retrieved retail prices for off-the-shelf timers that would meet the criteria required for servicing an outdoor integral filter pump (e.g., timer is waterproof, timer is electrically

grounded, and is rated to an amperage greater than what the pump requires). DOE then derated the retail price to estimate the price of timers purchased in bulk.

DOE aggregated the cost data from these sources, and estimated that the industry average incremental cost of adding a pool pump timer to an integral filter pump is \$6.67 per unit. DOE presented this incremental cost to the DPPP Working Group and the DPPP Working Group did not oppose it or

offer additional comments. (Docket No. EERE-2015-BT-STD-0008-0094, March 21 DPPP Working Group Meeting, at pp. 132).

e. Cost-Efficiency Results

This subsection presents the cost-efficiency tables that result from the combination of motor and wet end costs at each efficiency level. Table IV-18 through Table IV-22 present results for each representative unit.

TABLE IV-18—MPCs FOR SELF-PRIMING POOL FILTER PUMP REPRESENTATIVE UNITS

f. MPC Cost Components

The MIA requires MPCs to be disaggregated the MPCs into material, labor, depreciation, and overhead costs. DOE estimated MPC breakdowns using the manufacturing cost model tool described in section IV.C.5.c, and the estimated MPC breakdowns during interviews with manufacturers. The MPC cost components are reported in the manufacturer impact analysis described in chapter 9 of the direct final rule TSD.

6. Other Analytical Outputs

As discussed previously in section III.C, the DOE test procedure specifies test points for the pool filter pump, waterfall pump, and pressure cleaner booster pump equipment classes covered by this direct final rule. For instance, the test points for self-priming and non-self-priming pool filter pumps are at specified pump speeds on system curve C, and the test point for pressure cleaner booster pumps is at 10 gpm of flow. In the field, the conditions in which these pumps operate will not exactly match the test points. For instance, some pumps may service pools with plumbing that approximates system curve A instead of curve C, and some variable-speed pumps will be programmed to operate at speeds that are higher or lower than the test point speeds specified in the DOE test procedure. These variations in installation conditions are modeled in the energy use analysis, which is discussed in section IV.D. To facilitate the energy use analysis, DOE estimated the power consumption of representative units across a variety of potential installation conditions.

For self-priming and non-self-priming pool filter pumps, DOE estimated the flow and energy factor of representative units operating on system curves A, B, and C. DOE developed these estimates using actual pump performance data on curves A, B, and C from the Pool Pump

Performance Database, combined with the motor substitution methodology described in section IV.C.4.c. For efficiency levels with single-speed motor configurations, DOE estimated flow and EF at 100-percent speed. For efficiency levels with two-speed motor configurations, DOE estimated flow and EF at 100 percent speed and at 50 percent speed. For efficiency levels with variable-speed motor configurations, DOE estimated flow and EF at 80 percent speed and at a low-speed test point of either 24.7 gpm or 31.1 gpm, depending on the pump capacity. For these variable-speed units, DOE also developed equations to estimate EF as a function of flow for variable-speed representative units operating at reduced speeds near the low-speed test point. DOE developed these equations using the pump affinity laws and the regressions of pump total efficiency versus pump speed described in section IV.C.4.c. Chapter 5 of the direct final rule TSD provides further details on these analytical outputs.

DOE also developed equations to estimate the power consumption as a function of flow for waterfall pumps and pressure cleaner booster pumps operating near the respective test points for those equipment classes. DOE developed these equations by aggregating pump test data that was submitted to DOE by manufacturers. The resulting equations estimate head and power consumption as a function of flow for waterfall pumps and pressure cleaner booster pumps at all efficiency levels. The distribution of field installations and their operating parameters are discussed further in the energy use analysis in section IV.E. Chapter 5 of the direct final rule TSD presents more details regarding these analytical outputs.

7. Manufacturer Selling Price

To account for manufacturers' non-production costs and profit margin, DOE

applied a non-production cost multiplier (the manufacturer markup) to the MPC. The resulting manufacturer selling price (MSP) is the price at which the manufacturer distributes a unit into commerce.

DOE developed an average manufacturer markup by examining the annual Securities and Exchange Commission (SEC) 10-K reports filed by publicly traded manufacturers primarily engaged in pool pump manufacturing and whose combined product range includes pool pumps. DOE adjusted these estimates based on feedback received during confidential manufacturer interviews. DOE estimated a manufacturer markup of 1.46 for self-priming and waterfall pool pumps, 1.35 for non-self-priming and pressure cleaner booster pool pumps, and 1.27 for integral cartridge filter and integral sand filter pool pumps.

D. Markups Analysis

The markups analysis develops appropriate markups in the distribution chain and sales taxes to convert the MSP estimates derived in the engineering analysis to consumer prices, which are then used in the LCC and PBP analyses. At each step in the distribution channel, companies mark up the price of the equipment to cover business costs and profit margin.

1. Dedicated-Purpose Pool Pump Markups

For this dedicated-purpose pool pump direct final rule, DOE identified two markets in which dedicated-purpose pool pumps pass from the manufacturer to residential and commercial consumers: (1) Replacement of a pool pump for an existing swimming pool; (2) installation of a pool pump in a new swimming pool.

Based on manufacturer interviews, the distribution channels for dedicated-purpose pool pumps were characterized as noted in Table IV-23.

TABLE IV–23—FRACTION OF DEDICATED-PURPOSE POOL PUMP DISTRIBUTION BY CHANNEL

Distribution channel	Fraction of dedicated-purpose pool pumps (%)
Replacement for an Existing Pool	
Manufacturer → Wholesaler → Pool Service Contractor → Consumer	75
Manufacturer → Pool Product Retailer → Consumer	20
New Installation for a New Pool	
Manufacturer → Pool Builder → Consumer	5

For all market participants except for manufacturers, DOE developed baseline and incremental markups. Baseline markups are applied to the price of equipment with baseline efficiency, while incremental markups are applied to the difference in price between baseline and higher efficiency models (the incremental cost increase). The incremental markup is typically less than the baseline markup, and is designed to maintain similar per-unit operating profit before and after new or amended standards.⁷²

To estimate baseline and incremental markups, DOE relied on several sources, including: (1) For pool wholesalers, SEC form 10–K from Pool Corp;⁷³ (2) for pool product retailers, SEC form 10–K from several major home improvement centers⁷⁴ and U.S. Census Bureau 2012 Annual Retail Trade Report,⁷⁵ and (3) for pool contractors and pool builders, U.S. Census Bureau 2012 Economic Census data⁷⁶ on the building construction industry.

2. Replacement Motor Markups

As discussed in section IV.F, in some cases, only the motor component in the

pool pump is replaced instead of the entire pool pump. DOE treated motor replacement as a repair of the pump. In this case, the replacement motor typically goes through different distribution channels than pool pumps. Based on inputs from motor manufacturers inputs, DOE considered three distribution channels to characterize how motors are distributed in the motor replacement market. Table IV–24 shows these distribution channels.

TABLE IV–24—FRACTION OF DEDICATED-PURPOSE POOL PUMP REPLACEMENT MOTOR DISTRIBUTION BY CHANNEL

Distribution channel	Fraction of pool pumps (%)
Via Motor Manufacturer	
(1) Motor Manufacturer → Wholesaler → Contractor → Consumer	25
(2) Motor Manufacturer → Wholesaler → Retailer → Consumer via Internet or direct sale at local stores	25
Via Pool Pump Manufacturer	
(3) Pump Manufacturer → Pump Product Retailer → Consumer	50

Due to limited available information, DOE assumed that the motor wholesaler markup in the second motor replacement channel via Internet and direct local store sales is the same as in the first motor replacement channel via contractor. To estimate baseline and incremental markups for each of the market participants (except for manufacturers) mentioned in Table

IV–24, DOE relied on several sources, including: (1) For motor wholesalers, U.S. Census Bureau 2012 Annual Wholesale Trade Report;⁷⁷ (2) for electrical contractors, *RSMeans* electrical cost data;⁷⁸ and (3) for motor retailers, U.S. Census Bureau 2012 Annual Retail Trade Report.⁷⁹

In addition to the markups, DOE obtained state and local taxes from data

provided by the Sales Tax Clearinghouse.⁸⁰ These data represent weighted average taxes that include county and city rates. DOE derived shipment-weighted average tax values for each region considered in the analysis.

Chapter 6 of the direct final rule TSD provides details on DOE's development of markups for pool pumps.

⁷² Because the projected price of standards-compliant equipment is typically higher than the price of baseline equipment, using the same markup for the incremental cost and the baseline cost would tend to result in higher per-unit operating profit. While such an outcome is possible, DOE maintains that in markets that are reasonably competitive it is unlikely that standards would lead to a sustainable increase in profitability in the long run.

E. Energy Use Analysis

The purpose of the energy use analysis is to determine the annual energy consumption of pool pumps at different efficiencies in representative U.S. applications, and to assess the energy savings potential of increased dedicated-purpose pool pump efficiency. The energy use analysis estimates the range of energy use of dedicated-purpose pool pumps in the field (*i.e.*, as they are actually used by consumers). The energy use analysis provides the basis for other analyses DOE performed, particularly assessments of the energy savings and the savings in consumer operating costs that could result from adoption of standards.

1. Dedicated-Purpose Pool Pump Consumer Samples

DOE created individual consumer samples for five dedicated-purpose pool

pump markets: (1) Single-family homes with a swimming pool; (2) indoor swimming pools in commercial applications; (3) single-family community swimming pools; (4) multi-family community swimming pools; and (5) outdoor swimming pools in commercial applications. DOE used the samples to determine dedicated-purpose pool pump annual energy consumption as well as for conducting the LCC and PBP analyses.

DOE used the Energy Information Administration's (EIA) 2009 Residential Energy Consumption Survey (RECS 2009) to establish a sample of single-family homes that have a swimming pool.⁸¹ For dedicated-purpose pool pumps used in indoor swimming pools in commercial applications, DOE developed a sample using the 2012 Commercial Building Energy Consumption Survey (CBECS 2012).⁸² RECS and CBECS include information such as the household or building

owner demographics and the location of the household or building.

Neither RECS nor CBECS provide data on community pools or outdoor swimming pools in commercial applications, so DOE created samples based on other available data. To develop samples for dedicated-purpose pool pumps in single or multi-family communities, DOE used a combination of RECS 2009, U.S. Census 2009 American Home Survey Data (2009 AHS),⁸³ and 2015 PK Data report.⁸⁴ To develop a sample for pool pumps in outdoor commercial swimming pools, DOE used a combination of CBECS 2012 and 2015 PK Data report.

Table IV–25 shows the estimated shares of the five dedicated-purpose pool pump markets in the existing stock based on the afore-mentioned sources. The vast majority of dedicated-purpose pool pumps are used for residential single-family swimming pools.

TABLE IV–25—FRACTION OF DEDICATED-PURPOSE POOL PUMPS BY DPPP MARKET

Pool type ID	Description	Fraction of pool pumps (%)
1	Residential Single Family Swimming Pools	95.1
2	Community Pools (Single Family)	0.8
3	Community Pools (Multi Family)	0.4
4	Commercial Indoor Pools	0.3
5	Commercial Outdoor Swimming Pools	3.4

Dedicated-purpose pool pumps can be installed with either above-ground or in-ground swimming pools. DOE established separate sets of consumer samples for in-ground pools and above-ground pools by adjusting the original sample weights based on the number of installed in-ground and above-ground pools in 2014 per state provided by APSP. (EERE–2015–BT–STD–0008–0010, No. 31 at pp. 14–15) The consumer samples for self-priming, auxiliary (waterfall) and pressure cleaner booster pumps are drawn from the in-ground pool samples; the consumer samples for non-self-priming and integral pumps are obtained from the above-ground pool samples.

See chapter 7 of the direct final rule TSD for more details about the creation of the consumer samples and the regional breakdowns.

2. Energy Use Estimation

DOE calculated the annual unit energy consumption (UEC) of pool pumps at the considered efficiency levels by multiplying the average daily UEC by the annual days of operation. For single-speed pool pumps, the daily UEC is simply the pool pump power multiplied by the daily operating hours. For two-speed and variable-speed pool pumps, the daily UEC is the sum of low-speed mode power multiplied by the low-speed daily operating hours and the high-speed mode power multiplied by the corresponding daily operating hours.

a. Power Inputs

Self-Priming and Non-Self-Priming Pumps

For self-priming and non-self-priming pool pumps, the power inputs are obtained by using flow (*Q*, in gallon/minute) divided by energy factor (in gallon/Wh). In the case of single-speed pumps, *Q* and *EF* are provided in the engineering analysis for each representative unit at each system curve (*A*, *B* or *C*).⁸⁵ In the case of two-speed pumps, *Q* and *EF* are provided for both low-speed and high-speed modes for each representative unit at each system curve. For variable-speed pumps, *Q* and *EF* are provided only for the high-speed mode, which, according to the DOE test procedure, corresponds to 80 percent of maximum speed; for the low-speed mode, *Q* is specific to each consumer

⁸⁴ PK Data. 2015 Swimming Pool and Pool Heater Customized Report for LBNL. (Last accessed: April 30, 2016.) www.pkdata.com/current-reports.html.

⁸⁵ The requirements of a pool (or any water system), can be expressed in terms of a system curve. When a pump is tested on a system curve (such as curve C), any one of the measurements hydraulic power, *P* (hp), volumetric flow, *Q* (gpm) and total dynamic head, *H* (feet of water) can be used to calculate the other two measurements. See section IV.A.1 for further details.

and EF is provided as a function of Q. For each consumer in the sample, DOE specified the system curve used (A, B or C) by drawing from a probability distribution suggested by the DPPP Working Group. The suggested distribution was based on field testing and experience indicating that many pools are closer to curve C, but additional amenities such as a sand filter or a heater would bring a pump's performance to curve A. (EERE-2015-BT-STD-0008-0094, pp. 144-147) In the recommended distribution, 35 percent of the pool pumps follow curve A, 10 percent of the pool pumps follow curve B, and the remaining 55 percent follow curve C.

For variable-speed pumps, to define the consumer-specific low-speed flow, DOE used the pool size divided by the desired time per turnover, which was assumed by the DPPP Working Group to be 12 hours for residential applications, and 6 or 10 hours for commercial applications (EERE-2015-BT-STD-0008-0094 pp. 143-144). DOE developed a distribution for pool size based on information given in several references.^{86 87 88} The minimum of the pool size distribution for standard-size self-priming pool pumps and integral pool pumps was then decreased by the DPPP Working Group based on the existing small pools on the market, and the mode of the pool size distribution for standard-size non-self-priming pool pumps was increased based on the DPPP Working Group's decision.

(EERE-2015-BT-STD-0008-0094 pp. 163-171) The pool size distributions for integral pumps were later adjusted by the DPPP Working Group based on the suggested pool sizes for the integral pumps on the market. (EERE-2015-BT-STD-0008-0078 pp. 75-77) A minimum threshold of flow Q is considered according to the capacity of the pumps. The variable-speed EF can therefore be calculated, as it was provided in the engineering analysis as a function of Q for each representative unit on each system curve.

Pressure Cleaner Booster Pumps and Waterfall Pumps

The test procedure final rule established a test point at 10 gpm of flow for pressure cleaner booster pumps and a test point at 17 feet of head for waterfall pumps. DOE developed a distribution for each of these equipment classes, in coordination with the DPPP Working Group, from which a flow or head value, respectively is drawn for each sampled consumer. (Pressure cleaner booster pumps: EERE-2015-BT-STD-0008-0092 pp. 310; waterfall pumps: EERE-2015-BT-STD-0008-0094 pp. 149-150) For waterfall pumps, DOE used the pump curve $H = f(Q)$ provided in the engineering analysis for each representative unit to determine the flow Q associated with the selected head, from which the corresponding power can be calculated based on the power curve $P = f(Q)$, also provided by the engineering analysis. For single-speed pressure cleaner booster pumps,

DOE calculated the power directly from the power curve $P = f(Q)$ from the engineering analysis. For variable-speed pressure cleaner booster pumps, DOE estimated power consumption at reduced speed for consumers with sampled Q above 10 gpm.

Integral Pumps

For integral pumps, the power value was provided for each representative unit. DOE did not apply a distribution to this value given that integral pumps are designed to be used for specific pools, and therefore the power is not expected to vary widely.

b. Operating Hours

The following sub-sections describe DOE's methodology for calculating daily operating hours for each pump variety. For self-priming and non-self-priming pool filter pumps in residential applications, operating hours are calculated uniquely for each consumer based on pool size, number of turnovers per day (itself based on ambient conditions), and the pump flow rate. In commercial applications, DOE assumes these pumps operate 24 hours per day. For integral pumps, those without a timer operate 12 hours a day, while those with a timer have operating hours determined the same way as for pool filter pumps. For pressure cleaner booster pumps and waterfall pumps, operating hours are drawn from a distribution. Table IV-26 summarizes the results of these calculations.

TABLE IV-26—WEIGHTED AVERAGE DAILY OPERATING HOURS BY PUMP VARIETY

Pump variety	Weighted average daily operating hours *	
	Residential	Commercial
Standard-Size Self-Priming Pool Filter Pump	10	24
Small-Size Self-Priming Pool Filter Pump	7.7
Standard-Size Non-Self-Priming Pool Filter Pump	6.2
Extra-Small Non-Self-Priming Pool Filter Pump	3.3
Waterfall Pump	2.0	12.0
Pressure Cleaner Booster Pump	2.5	2.5
Integral Cartridge Filter Pool Pump	5.0
Integral Sand Filter Pool Pump	4.8

* Only during the pool operating season.

Self-Priming and Non-Self-Priming Pool Filter Pumps

For self-priming and non-self-priming pool filter pumps in residential applications, the single-speed pump

daily run time is the product of the assigned pool size and the number of turnovers per day divided by pump flow rate. For two-speed and variable-speed pumps, DOE calculated run time at both

high speed and low speed. For high speed, DOE assumed a maximum of 2 hours a day based on the ENERGY

⁸⁶ CEE Residential Swimming Pool Initiative. (Last Accessed: July 28, 2016) http://library.cee1.org/sites/default/files/library/9986/cee_res_swimmingpoolinitiative_07dec2012_pdf_10557.pdf.

⁸⁸ Evaluation of potential best management practices—Pools, Spas, and Fountains 2010. (Last Accessed: July 28, 2016) <http://cuwcc.org/LinkClick.aspx?fileticket=3p3DgiY6ObY%3D>.

STAR calculator.⁸⁹ For low speed, DOE calculated the runtime in the same manner as for single-speed pumps and then subtracted two hours (for assumed high-speed operation).⁹⁰ In the two-speed analysis, DOE followed the recommendation of the DPPP Working Group based on the observations that some of the timer controls for two-speed pumps are not wired correctly, or some of the consumers never operate at low-speed. (EERE-2015-BT-STD-0008-0079 pp. 199-203) DOE assumed that 5 percent of the consumers either would not purchase or would not correctly operate the timer control to switch from high-speed mode (the default mode) to low-speed mode. For these consumers, high-speed runtime was calculated in the same manner as for single-speed pumps, and low-speed runtime was assumed to be zero.

For each equipment class, DOE developed distributions for the number of turnovers per day (*i.e.*, the number of times a pool's contents can be filtered through its filtration equipment in a 24-hour period). The number of turnovers per day is drawn from a probability distribution linked to the ambient condition of the sampled consumer (hot humid, warm or cold) and sanitary requirements, especially for the commercial pool samples. This distribution was adjusted and approved

by the DPPP Working Group based on the observation that some consumers do not follow the Centers for Disease Control and Prevention (CDC) recommendation⁹¹ and operate fewer turnovers than recommended. (EERE-2015-BT-STD-0008-0094 pp. 175-186)

For commercial applications, DOE assumed that single-speed pumps operate 24 hours a day. (EERE-2015-BT-STD-0008-0094 p. 151) For the two-speed and variable-speed pumps, based on the ENERGY STAR calculator, the high speed was assumed to operate 2 hours per day, while the low speed was assumed to operate the remaining 22 hours per day. (EERE-2015-BT-STD-0008-0094 pp. 172-185)

Pressure Cleaner Booster Pumps and Waterfall Pumps

For pressure cleaner booster pumps and waterfall pumps, DOE drew the operating hours from operating hours distributions suggested and approved by the DPPP Working Group. (EERE-2015-BT-STD-0008-0094 pp. 159-162)

Integral Pumps

For integral pumps, the DPPP Working Group suggested that 80 percent of the consumers use these pumps without a timer. (EERE-2015-BT-STD-0008-0094 p. 157) DOE assumed that integral pumps without a

timer operate 12 hours per day, based on the recommendation of the DPPP Working Group (EERE-2015-BT-STD-0008-0094 pp. 155-157). For those that have a timer, DOE calculated the operating hours the same way as for residential single-speed self-priming pool filter pumps.

c. Annual Days of Operation

DOE calculated the annual unit energy consumption (UEC) by multiplying the daily operating hours by the annual days of operation, which depends on the number of months of pool operation. For each consumer sample, DOE assigned different annual days of operation depending on the region in which the dedicated-purpose pool pump is installed. Table IV-27 provides the assumptions of pool pump operating season based on geographical locations. This assignment was based on DOE's Energy Saver Web site assumptions⁹² and PK Data⁹³ that include average pool season length (*i.e.*, operating months) by state, along with discussion of the geographic distribution of pool operating days by the DPPP Working Group, which suggested that although some of the regions had warm weather, the pool pumps should still be operating all year long. (EERE-2015-BT-STD-0008-0094 pp. 191-193)

Chapter 7 of the direct final rule TSD provides details on DOE's energy use analysis for pool pumps.

F. Life-Cycle Cost and Payback Period Analyses

DOE conducted LCC and PBP analyses to evaluate the economic impacts on individual consumers of potential energy conservation standards for dedicated-purpose pool pumps. The effect of new or amended energy conservation standards on individual consumers usually involves a reduction in operating cost and an increase in purchase cost. DOE used the following two metrics to measure consumer impacts:

- The LCC (life-cycle cost) is the total consumer expense of equipment over the life of that equipment, consisting of total installed cost (MSP, distribution chain markups, sales tax, and installation costs) plus operating costs (expenses for energy use, maintenance, and repair). To compute the operating costs, DOE discounts future operating costs to the time of purchase and sums them over the lifetime of the equipment.
- The PBP is the estimated amount of time it takes consumers to recover the increased purchase cost (including installation) of more-efficient equipment through lower operating costs. DOE calculates the PBP by dividing the change in purchase cost at higher efficiency levels by the change in annual operating cost for the year that amended or new standards are assumed to take effect.

For any given efficiency level, DOE measures the change in LCC relative to the LCC in the no-standards case, which reflects the estimated efficiency distribution of pool pumps in the absence of energy conservation standards. In contrast, the PBP for a given efficiency level is measured relative to the baseline equipment.

For each considered efficiency level in each equipment class, DOE calculated the LCC and PBP for a nationally representative set of consumers. As stated previously, DOE developed consumer samples from the 2009 RECS and 2012 CBECS. For each consumer in the sample, DOE determined the energy consumption for the pool pump and the appropriate energy price. By developing a representative sample of consumers, the analysis captured the variability in energy consumption and energy prices associated with the use of pool pumps.

Inputs to the calculation of total installed cost include the cost of the equipment—which includes MPCs, manufacturer markups, retailer and distributor markups, and sales taxes—and installation costs. Inputs to the calculation of operating expenses include annual energy consumption, energy prices and price projections, repair and maintenance costs, equipment lifetimes, and discount rates. DOE created distributions of values for equipment lifetime, discount rates, and sales taxes, with probabilities attached to each value, to account for their uncertainty and variability.

The computer model DOE uses to calculate the LCC and PBP, which incorporates Crystal Ball™ (a commercially-available software program), relies on a Monte Carlo simulation to incorporate uncertainty and variability into the analysis. The Monte Carlo simulations randomly sample input values from the probability distributions and pool pump consumer samples. The model calculated the LCC and PBP for equipment at each efficiency level for 10,000 units per simulation run.

DOE calculated the LCC and PBP for all consumers of pool pumps as if each were to purchase a new product in the expected year of required compliance with new energy efficiency standards. As discussed in section III.B, the standards would apply to pool pumps manufactured 54 months years after the date on which new standards are published. At the time of the analysis for this rule, DOE estimated publication of this direct final rule in the second half of 2016. Therefore, for purposes of its analysis, DOE used 2021 as the year of compliance with any new standards for pool pumps.

Table IV–28 summarizes the approach and data DOE used to derive inputs to the LCC and PBP calculations. The subsections that follow provide further discussion. Details of the spreadsheet model, and of all the inputs to the LCC and PBP analyses, are contained in chapter 8 of the direct final rule TSD and its appendices.

TABLE IV–28—SUMMARY OF INPUTS AND METHODS FOR THE LCC AND PBP ANALYSIS *

Inputs	Source/method
Equipment Cost	Derived by multiplying MPCs by manufacturer and retailer markups and sales tax, as appropriate. Used historical data to derive a price scaling index to project equipment costs.

TABLE IV–28—SUMMARY OF INPUTS AND METHODS FOR THE LCC AND PBP ANALYSIS *—Continued

Inputs	Source/method
Installation Costs	Baseline installation cost determined with data from manufacturer interviews.
Annual Energy Use	The daily energy consumption multiplied by the number of operating days per year.
Energy Prices	Variability: Based on regional data and 2009 RECS and 2012 CBECS. Electricity: Based on EIA's Form 861 data for 2014. Variability: Regional energy prices determined for 30 regions for pool pumps in individual single-family homes and 9 census divisions for pool pumps in community and commercial pool pumps. Marginal prices used for electricity.
Energy Price Trends	Based on <i>AEO2016 No-CPP</i> case price projections.
Repair and Maintenance Costs	Consider only motor replacement as repair cost, which includes labor cost from RS Means and motor cost provided with MPC.
Equipment Lifetime	For residential applications, on average 7 years for self-priming and waterfall pumps, 5 years for non-self-priming and pressure cleaner booster pumps, and 4 years for integral pumps. For commercial applications, the residential equipment lifetime is adjusted according to the ratio of commercial to residential daily operating hours. Variability: Based on Weibull distribution.
Discount Rates	Residential: Approach involves identifying all possible debt or asset classes that might be used to purchase the considered appliances, or might be affected indirectly. Primary data source was the Federal Reserve Board's Survey of Consumer Finances. Commercial: Calculated as the weighted average cost of capital for entities purchasing pool pumps. Primary data source was Damodaran Online.
Compliance Date	2021.

* References for the data sources mentioned in this table are provided in the sections following the table or in chapter 8 of the direct final rule TSD.

1. Equipment Cost

To calculate consumer equipment costs, DOE multiplied the MPCs developed in the engineering analysis by the markups described above (along with sales taxes). DOE used different markups for baseline products and higher efficiency products, because DOE applies an incremental markup to the increase in MSP associated with higher efficiency products.

To project an equipment price trend for the direct final rule, DOE derived an inflation-adjusted index of the Producer Price Index (PPI) for pumps and pumping equipment over the period 1984–2015.⁹⁴ These data show a general price index increase from 1987 through 2009. Since 2009, there has been no clear trend in the price index. Given the relatively slow global economic activity in 2009 through 2015, the extent to which the future trend can be predicted based on the last two decades is uncertain and the observed data do not provide a firm basis for projecting future cost trends for pump equipment. Therefore, for single-speed and two-speed pumps, DOE used a constant price assumption as the default trend to project future pump prices in 2021. For variable-speed pool pumps, however, DOE assumed that the controls portion of the electrically commutated motor would be affected by price learning. DOE used PPI data on “Semiconductors and related device manufacturing” between 1967 and 2015 to estimate the

historic price trend of electronic components in the control.⁹⁵ The regression performed as an exponential trend line fit results in an R-square of 0.98, with an annual price decline rate of 6 percent.

2. Installation Cost

Installation cost includes labor, overhead, and any miscellaneous materials and parts needed to install the product. DOE estimates all the installation costs associated with fitting a dedicated-purpose pool pump in a new housing unit (new owners), or as a replacement for an existing pool pump. To simplify the calculation, DOE only accounted for the difference of installation cost by efficiency levels. For two-speed pumps, DOE included the cost of a timer control and its installation where applicable, as recommended by the DPPP Working Group (EERE–2015–BT–STD–0008–0079 pp. 199–203). DOE used information obtained in the manufacturer interviews to calculate the supplemental installation labor costs for two-speed and variable-speed pumps.

See chapter 8 of the direct final rule TSD for more details on installation costs.

3. Annual Energy Consumption

For each sampled installation, DOE determined the energy consumption for a dedicated-purpose pool pump at different efficiency levels using the

approach described in section IV.E of this direct final rule.

4. Energy Prices

DOE used residential electricity prices for dedicated-purpose pool pumps in residential applications, and commercial electricity prices for dedicated-purpose pool pumps in commercial applications.

DOE derived average annual residential marginal electricity prices for 30 geographic regions and commercial marginal electricity prices for 9 census divisions using 2015 data from the EIA.⁹⁶

To estimate electricity prices in future years, DOE multiplied the average regional prices by annual energy price factors derived from the forecasts of annual average residential and commercial electricity price changes by region that are consistent with cases described on p. E–8 in *AEO 2016*.⁹⁷ *AEO*

⁹⁶ U.S. Department of Energy–Energy Information Administration, Form EIA–826 Database Monthly Electric Utility Sales and Revenue Data (2015) available at www.eia.doe.gov/cneaf/electricity/page/eia826.html.

⁹⁷ EIA, *Annual Energy Outlook 2016 with Projections to 2040*. Washington, DC. Available at www.eia.gov/forecasts/aeo/. The standards finalized in this rulemaking will take effect a few years prior to the 2022 commencement of the Clean Power Plan compliance requirements. As DOE has not modeled the effect of CPP during the 30 year analysis period of this rulemaking, there is some uncertainty as to the magnitude and overall effect of the energy efficiency standards. These energy efficiency standards are expected to put downward pressure on energy prices relative to the projections in the AEO 2016 case that incorporates the CPP. Consequently, DOE used the electricity price projections found in the AEO 2016 No-CPP case as

⁹⁴ Series ID PCU333911333911; www.bls.gov/ppi/.

⁹⁵ Semiconductors and related device manufacturing PPI series ID: PCU334413334413; www.bls.gov/ppi/.

2016 has an end year of 2040. To estimate price trends after 2040, DOE used the average annual rate of change in prices from 2030 to 2040.

5. Repair and Maintenance Costs

Repair costs are associated with repairing or replacing equipment components that have failed in an appliance; maintenance costs are associated with maintaining the operation of the equipment. Typically, small incremental increases in equipment efficiency produce no, or only minor, changes in repair and maintenance costs compared to baseline efficiency equipment. DOE assumed that for maintenance costs, there is no change with efficiency level, and therefore DOE did not include those costs in the model.

The primary repair cost for dedicated-purpose pool pumps is motor replacement, and cost of a motor does vary by efficiency level. DOE estimated that such replacement occurs at the halfway point in a pump's lifetime, but only for those dedicated-purpose pool pumps whose lifetime exceeds the average lifetime for the relevant equipment class. The cost of the motor was determined in the engineering analysis and the markups analysis. DOE used 2015 RS Means, a well-known and respected construction cost estimation source, to estimate labor costs for pump motor replacement.⁹⁸ DOE accounted for the difference in labor hours depending on the dedicated-purpose pool pump horsepower, as well as regional differences in labor hourly costs.

Further detail regarding the repair costs developed for dedicated-purpose pool pumps can be found in chapter 8 of the direct final rule TSD.

6. Equipment Lifetime

DOE used dedicated-purpose pool pump lifetime estimates from manufacturer input and the DPPP Working Group's discussion (EERE-2015-BT-STD-0008-0094 pp. 209–223). The data allowed DOE to develop a survival function, which provides a distribution of lifetime ranging from a minimum of 2 or 3 years based on warranty covered period, to a maximum of 15 years, with a mean value of 7 years for self-priming and waterfall pumps, 5 years for non-self-priming and pressure cleaner booster pumps, and 4 years for integral pumps. These values are

these electricity price projections are expected to be lower, yielding more conservative estimates for consumer savings due to the energy efficiency standards.

⁹⁸ RS Means Company, Inc., *RS Means Electrical Cost Data 2015* (2015).

applicable to pumps in residential applications. For commercial applications, DOE scaled the lifetime to acknowledge the higher operating hours compared to residential applications, resulting in a reduced average lifetime.

7. Discount Rates

In calculating the LCC, DOE applies discount rates appropriate to consumers to estimate the present value of future operating costs. The discount rate used in the LCC analysis represents the rate from an individual consumer's perspective. DOE estimated a distribution of residential discount rates for dedicated-purpose pool pumps based on the opportunity cost of funds related to appliance energy cost savings and maintenance costs.

To establish residential discount rates for the LCC analysis, DOE identified all relevant household debt or asset classes in order to approximate a consumer's opportunity cost of funds related to appliance energy cost savings. It estimated the average percentage shares of the various types of debt and equity by household income group using data from the Federal Reserve Board's Survey of Consumer Finances⁹⁹ (SCF) for 1995, 1998, 2001, 2004, 2007, 2010 and 2013. Using the SCF and other sources, DOE developed a distribution of rates for each type of debt and asset by income group to represent the rates that may apply in the year in which amended standards would take effect. DOE assigned each sample household a specific discount rate drawn from one of the distributions. The average rate across all types of household debt and equity and income groups, weighted by the shares of each type, is 4.6 percent.

DOE applies weighted average discount rates calculated from consumer debt and asset data, rather than marginal or implicit discount rates.¹⁰⁰ The LCC does not analyze the equipment purchase decision, so the implicit discount rate is not relevant in this model. The LCC estimates net present value over the lifetime of the equipment, so the appropriate discount rate will reflect the general opportunity cost of household funds, taking this

⁹⁹ Board of Governors of the Federal Reserve System. *Survey of Consumer Finances*. 1995, 1998, 2001, 2004, 2007, 2010, and 2013. (Last accessed December 15, 2015.) (www.federalreserve.gov/econresdata/scf/scfindex.htm).

¹⁰⁰ The implicit discount rate is inferred from a consumer purchase decision between two otherwise identical goods with different first cost and operating cost. It is the interest rate that equates the increment of first cost to the difference in net present value of lifetime operating cost, incorporating the influence of several factors: Transaction costs; risk premiums and response to uncertainty; time preferences; interest rates at which a consumer is able to borrow or lend.

time scale into account. Given the long time horizon modeled in the LCC, the application of a marginal interest rate associated with an initial source of funds is inaccurate. Regardless of the method of purchase, consumers are expected to continue to rebalance their debt and asset holdings over the LCC analysis period, based on the restrictions consumers face in their debt payment requirements and the relative size of the interest rates available on debts and assets. DOE estimates the aggregate impact of this rebalancing using the historical distribution of debts and assets.

To establish commercial discount rates for the small fraction of applications where businesses purchase and use dedicated-purpose pool pumps, DOE estimated the weighted-average cost of capital using data from Damodaran Online.¹⁰¹ The weighted-average cost of capital is commonly used to estimate the present value of cash flows to be derived from a typical company project or investment. Most companies use both debt and equity capital to fund investments, so their cost of capital is the weighted average of the cost to the firm of equity and debt financing. DOE estimated the cost of equity using the capital asset pricing model, which assumes that the cost of equity for a particular company is proportional to the systematic risk faced by that company.

See chapter 8 of the direct final rule TSD for further details on the development of consumer discount rates.

8. Energy Efficiency Distribution in the No-Standards Case

To accurately estimate the share of consumers that would be affected by a potential energy conservation standard at a particular efficiency level, DOE's LCC analysis considered the projected distribution (market shares) of equipment efficiencies under the no-standards case.

The estimated efficiency market shares for dedicated-purpose pool pumps for 2015 were based on manufacturer interviews. To project efficiencies to the compliance year, 2021, DOE shifted 1 percent per year of the market share in the single-speed efficiency levels to the variable-speed efficiency levels. (See section IV.H.1 for more detail.) For the equipment classes that don't have variable-speed efficiency levels (*i.e.*, waterfall pumps and integral

¹⁰¹ Damodaran Online, *Data Page: Costs of Capital by Industry Sector* (2016). (Last accessed April, 2016) <http://pages.stern.nyu.edu/~adamodar/>.

pumps), efficiency was held constant at 2015 levels based on the Working Group discussion. (EERE-2015-BT-STD-0008-0078 pp. 138-141)

Table IV-29 shows the efficiency distribution for the self-priming pool filter pump equipment class as an example. See chapter 8 of the direct final rule TSD for further information on

the derivation of the efficiency distributions, as well as the distributions for the remaining equipment classes.

TABLE IV-29—EFFICIENCY DISTRIBUTION IN THE NO-STANDARDS CASE FOR SELF-PRIMING POOL FILTER PUMPS IN 2021

Efficiency level	Description	National market share (%)
0 (Baseline)	Low efficiency single-speed motor; Low hydro efficiency	39
1	Medium efficiency single-speed motor; Low hydro efficiency	15
2	High efficiency single-speed motor; Low hydro efficiency	10
3	Low efficiency two-speed motor; Low hydro efficiency	2
4	Medium efficiency two-speed motor; Low hydro efficiency	2
5	High efficiency two-speed motor; Low hydro efficiency	2
6	Variable-speed motor; Low hydro efficiency (High speed is 80% of max)	11
7	Variable-speed motor; High hydro efficiency (High speed is 80% of max)	19

9. Payback Period Analysis

The payback period is the amount of time it takes the consumer to recover the additional installed cost of more-efficient equipment, compared to baseline equipment, through energy cost savings. Payback periods are expressed in years. Payback periods that exceed the life of the equipment mean that the increased total installed cost is not recovered in reduced operating expenses.

The inputs to the PBP calculation for each efficiency level are the change in total installed cost of the equipment and the change in the first-year annual operating expenditures relative to the baseline. The PBP calculation uses the same inputs as the LCC analysis, except that discount rates are not needed.

As noted above, EPCA, as amended, establishes a rebuttable presumption that a standard is economically justified if the Secretary finds that the additional cost to the consumer of purchasing a product complying with an energy conservation standard level will be less than three times the value of the first year's energy savings resulting from the standard, as calculated under the applicable test procedure. (42 U.S.C. 6295(o)(2)(B)(iii)) For each considered efficiency level, DOE determined the value of the first year's energy savings by calculating the energy savings in accordance with the applicable DOE test procedure, and multiplying those savings by the average energy price forecast for the year in which compliance with the new standards would be required.

G. Shipments Analysis

DOE uses projections of annual equipment shipments to calculate the national impacts of potential or new amended energy conservation standards on energy use, emissions, NPV, and

future manufacturer cash flows. The shipments model takes an accounting approach, tracking market shares of each equipment class and the vintage of units in the stock. Stock accounting uses equipment shipments as inputs to estimate the age distribution of in-service product stocks for all years. The age distribution of in-service product stocks is a key input to calculations of both the NES and NPV, because operating costs for any year depend on the age distribution of the stock.

For the direct final rule, because there was no readily available data on dedicated-purpose pool pump shipments, DOE estimated shipments in 2015 using data collected from manufacturer interviews. Shipments were projected from 2015 throughout the end of the analysis period (2050) initially using growth rates obtained from manufacturer interviews, the Veris Consulting report, and several macroeconomic indicators. These rates were then reviewed by the DPPP Working Group, which recommended minor modifications to the growth rates¹⁰² (EERE-2015-BT-STD-0008-0078, pp. 106-120). The modified growth rates were also applied in reverse to determine historical shipments. DOE was then able to apply retirement functions derived from dedicated-purpose pool pump lifetime estimates to each vintage in historical shipments to calculate the existing stock. Shipments were divided into two market segments: Replacements and

new pool construction. The market segment associated with dedicated-purpose pool pump replacements was calculated such that the stock is maintained, using historical shipments, lifetime curves, and repair-replace decision making. The market segment for new pool construction pool pump installations is thus the difference between total shipments and replacement shipments.

Because the standards-case projections take into account the increase in purchase price and the decrease in operating costs associated with higher efficiency equipment, projected shipments for a standards case typically deviate from those for the no-standards case. Because purchase price tends to have a larger impact than operating cost on equipment purchase decisions, standards-case projections typically show a decrease in shipments relative to the no-standards case. For dedicated-purpose pool pumps, DOE modeled this impact in two ways. In the replacement segment, DOE implemented a repair-replace model in which under the standards case where the pool pump is more expensive, 60 percent of the time the pump is repaired (*i.e.*, motor replacement) rather than replaced, compared to only around 40 percent in the base case. (EERE-2015-BT-STD-0008-0100 pp. 173-175) In the new construction segment, DOE implemented a relative price elasticity. However, DOE determined that where the cost of the pool far exceeds the incremental cost of a more-efficient pump (*i.e.*, inground pool installations or, where timers are considered, larger inflatable/rigid steel-framed installations), shipments would not be affected by an increase in purchase price of the dedicated-purpose pool pump. Therefore, a relative price elasticity, which accounts for the total

¹⁰² The initial growth rates for Non-Self-Priming Pool Filter Pumps and Integral Cartridge Filter Pumps were -2.77% and -2.0%, respectively. These were adjusted due to Working Group recommendations to 3.08% (so that Non-Self-Priming Pool Filter Pumps matched the rate of Self-Priming Pool Filter Pumps) and 2.0% (so that Integral Cartridge Filter Pumps matched the rate of Integral Sand Filter Pumps).

installed cost of the pool including the pump, is only applied to non-self-priming pool filter pumps, smaller integral cartridge filter pool pumps, and smaller integral sand filter pool pumps, and is based on DPPP Working Group recommendations and data obtained from manufacturer interviews. The elasticity¹⁰³ implemented was 0.2. (EERE-2015-BT-STD-0008-0079 pp. 67–72, 138–139) See chapter 9 of the direct final rule TSD for more detail on the shipments model.

H. National Impact Analysis

The NIA assesses the national energy savings (NES) and the national net present value from a national perspective of total consumer costs and savings that would be expected to result from new or amended standards at specific efficiency levels.¹⁰⁴ DOE calculates the NES and NPV for the potential standard levels considered

based on projections of annual equipment shipments, along with the annual energy consumption and total installed cost data from the energy use and LCC analyses. For the present analysis, DOE projected the energy savings, operating cost savings, equipment costs, and NPV of consumer benefits over the lifetime of pool pumps sold from 2021 through 2050.

DOE evaluated the impacts of new standards by comparing a case without such standards with standards-case projections. The no-standards case characterizes energy use and consumer costs for each equipment class in the absence of new energy conservation standards. For this projection, DOE considers trends in efficiency and various forces that are likely to affect the mix of efficiencies over time. DOE compares the no-standards case with projections characterizing the market for

each equipment class if DOE adopted new standards at specific energy efficiency levels (*i.e.*, the TSLs or standards cases) for that class. For the standards cases, DOE considers how a given standard would likely affect the market shares of equipment with efficiencies greater than the standard.

DOE uses a spreadsheet model to calculate the energy savings and the national consumer costs and savings from each TSL. Interested parties can review DOE's analyses by changing various input quantities within the spreadsheet. The NIA spreadsheet model uses typical values (as opposed to probability distributions) as inputs.

Table IV–30 summarizes the inputs and methods DOE used for the NIA analysis for the direct final rule. Discussion of these inputs and methods follows the table. See chapter 10 of the direct final rule TSD for further details.

TABLE IV–30—SUMMARY OF INPUTS AND METHODS FOR THE NATIONAL IMPACT ANALYSIS

Inputs	Method
Shipments	Annual shipments from shipments model.
Compliance Date of Standard	2021.
Efficiency Trends	No-standards case: Future trend shifts 1% per year from single-speed efficiency levels to variable-speed efficiency levels.
Annual Energy Consumption per Unit	Standards cases: Roll-up in the compliance year. 1% shift also used.
Total Installed Cost per Unit	Annual weighted-average values are a function of energy use at each efficiency level.
Annual Energy Cost per Unit	Annual weighted-average values are a function of cost at each efficiency level.
Repair and Maintenance Cost per Unit	Incorporates projection of future equipment prices based on historical data.
Energy Prices	Annual weighted-average values as a function of the annual energy consumption per unit and energy prices.
Energy Site-to-Primary and FFC Conversion	Annual values increase with higher efficiency levels.
Discount Rate	<i>AEO2016 no-CPP case</i> price forecasts (to 2040) and extrapolation through 2050.
Present Year	A time-series conversion factor based on <i>AEO2016</i> .
	Three and seven percent.
	2016.

1. Equipment Efficiency Trends

A key component of the NIA is the trend in energy efficiency projected for the no-standards case and each of the standards cases. Chapter 8 of the direct final rule TSD describes how DOE developed an energy efficiency distribution for the no-standards case for each of the considered equipment classes for the first year of anticipated compliance with an amended or new standard. To project the trend in efficiency absent standards for pool pumps over the entire shipments projection period, DOE shifted 1 percent per year of the market share in the single-speed efficiency levels to the variable-speed efficiency levels. For the equipment classes that do not have

variable-speed efficiency levels, efficiency was held constant at 2015 levels. The DPPP Working Group agreed with DOE's assumptions. (EERE-2015-BT-STD-0008-0078 pp. 138–141).

For the standards cases, DOE used a “roll-up” scenario to establish the shipment-weighted efficiency for the first year of compliance assumed for standards (2021). In this scenario, the market shares of equipment in the no-standards case that do not meet the standard under consideration would roll up” to meet the new standard level, and the market share of equipment above the standard would remain unchanged. In the standards cases, the efficiency after the compliance year increases at a rate similar to that of the no-standards case.

2. National Energy Savings

The national energy savings analysis involves a comparison of national energy consumption of the considered equipment between each potential standards case (TSL) and the case with no energy conservation standards. DOE calculated the national energy consumption by multiplying the number of units (stock) of each equipment (by vintage or age) by the unit energy consumption (also by vintage). DOE calculated annual NES based on the difference in national energy consumption for the no-standards case and for each higher efficiency standard case. DOE estimated energy consumption and savings based on site energy and converted the

¹⁰³ Elasticity of -0.2 was only applied to approximately 40% of the integral cartridge filter and integral sand filter pump shipments, thus yielding an effective elasticity of -0.08 for these

two categories rather than -0.2 . This percentage represents the smallest and least expensive segment of this market, where an increase in pump price due to standards is significant relevant to the pool price.

¹⁰⁴ The NIA accounts for impacts in the 50 States and U.S. territories.

electricity consumption and savings to primary energy (*i.e.*, the energy consumed by power plants to generate site electricity) using annual conversion factors derived from *AEO2016*.

Cumulative energy savings are the sum of the NES for each year over the timeframe of the analysis.

In 2011, in response to the recommendations of a committee on Point-of-Use and Full-Fuel-Cycle Measurement Approaches to Energy Efficiency Standards appointed by the National Academy of Sciences, DOE announced its intention to use full-fuel-cycle (FFC) measures of energy use and greenhouse gas and other emissions in the national impact analyses and emissions analyses included in future energy conservation standards rulemakings.⁷⁶ 76 FR 51281 (August 18, 2011). After evaluating the approaches discussed in the August 18, 2011 document, DOE published a statement of amended policy in which DOE explained its determination that EIA's National Energy Modeling System (NEMS) is the most appropriate tool for its FFC analysis and its intention to use NEMS for that purpose.⁷⁷ 77 FR 49701 (August 17, 2012). NEMS is a public domain, multi-sector, partial equilibrium model of the U.S. energy sector¹⁰⁵ that EIA uses to prepare its *Annual Energy Outlook*. The FFC factors incorporate losses in production and delivery in the case of natural gas (including fugitive emissions) and additional energy used to produce and deliver the various fuels used by power plants. The approach used for deriving FFC measures of energy use and emissions is described in appendix 10B of the direct final rule TSD.

3. Net Present Value Analysis

The inputs for determining the NPV of the total costs and benefits experienced by consumers are: (1) Total annual installed cost; (2) total annual operating costs (energy costs and repair and maintenance costs); and (3) a discount factor to calculate the present value of costs and savings. DOE calculates net savings each year as the difference between the no-standards case and each standards case in terms of total savings in operating costs versus total increases in installed costs. DOE calculates operating cost savings over the lifetime of each unit shipped during the projection period.

As previously noted in section IV.F.1, for single-speed and two-speed pumps,

DOE used a constant price assumption as the default price trend to project future pump prices for single-speed and two-speed pumps. For variable-speed pool pumps, however, DOE followed a suggestion from the Working Group and assumed that the controls portion of the electrically commutated motor would be affected by price learning,¹⁰⁶ and used an annual price decline rate of 6 percent. To evaluate the effect of uncertainty regarding the price trend estimates, DOE investigated the impact of different product price forecasts on the consumer NPV for the considered TSLs for dedicated-purpose pool pumps. In addition to the default price trend, DOE considered two product price sensitivity cases: (1) A low price trend based on an exponential fit to the integral horsepower motors and generators PPI from 1991 to 2000 for equipment classes with integral sized motors (self-priming 1 hp and self-priming 3 hp), and an exponential fit to fractional horsepower motors PPI from 1967 to 2015 for equipment classes with fractional sized motors (small-size self-priming pool filter pumps, standard-size non-self-priming pool filter pumps, extra-small non-self-priming pool filter pumps, waterfall pumps, pressure cleaner booster pumps, integral sand filter pool pumps, and integral cartridge filter pool pumps); and (2) a high price trend based on an exponential fit to the integral horsepower motors and generators PPI from 1969 to 2015 for the equipment classes with integral sized motors, and an exponential fit to the fractional horsepower motors PPI from 2001 to 2015 for the equipment classes with fractional sized motors.¹⁰⁷ The derivation of these price trends and the results of these sensitivity cases are described in appendix 10C of the direct final rule TSD.

The operating cost savings are the sum of the differences in energy cost savings, maintenance, and repair costs, which are calculated using the estimated energy savings in each year and the projected price of the appropriate form of energy. To estimate energy prices in future years, DOE multiplied the average regional prices by annual energy price factors derived from the forecasts of annual average residential and commercial electricity price changes by region that are consistent with cases described on p.

E-8 in *AEO 2016*,¹⁰⁸ which has an end year of 2040. To estimate price trends after 2040, DOE used the average annual rate of change in prices from 2030 to 2040. As part of the NIA, DOE also analyzed scenarios that used lower and higher energy price trends. NIA results based on these cases are presented in appendix 10C of the DPPP direct final rule TSD.

In calculating the NPV, DOE multiplies the net savings in future years by a discount factor to determine their present value. For this NOPR, DOE estimated the NPV of consumer benefits using both a 3-percent and a 7-percent real discount rate. DOE uses these discount rates in accordance with guidance provided by the Office of Management and Budget (OMB) to Federal agencies on the development of regulatory analysis.¹⁰⁹ The discount rates for the determination of NPV are in contrast to the discount rates used in the LCC analysis, which are designed to reflect a consumer's perspective. The 7-percent real value is an estimate of the average before-tax rate of return to private capital in the U.S. economy. The 3-percent real value represents the "social rate of time preference," which is the rate at which society discounts future consumption flows to their present value.

I. Consumer Subgroup Analysis

In analyzing the potential impact of new or amended energy conservation standards on consumers, DOE evaluates the impact on identifiable subgroups of consumers that may be disproportionately affected by a new or amended national standard. The purpose of a subgroup analysis is to determine the extent of any such disproportional impacts. DOE evaluates impacts on particular subgroups of consumers by analyzing the LCC impacts and BPB for those particular consumers from alternative standard

¹⁰⁸ The standards finalized in this rulemaking will take effect a few years prior to the 2022 commencement of the Clean Power Plan compliance requirements. As DOE has not modeled the effect of CPP during the 30 year analysis period of this rulemaking, there is some uncertainty as to the magnitude and overall effect of the energy efficiency standards. These energy efficiency standards are expected to put downward pressure on energy prices relative to the projections in the AEO 2016 case that incorporates the CPP. Consequently, DOE used the electricity price projections found in the AEO 2016 No-CPP case as these electricity price projections are expected to be lower, yielding more conservative estimates for consumer savings due to the energy efficiency standards.

¹⁰⁹ United States Office of Management and Budget. Circular A-4: Regulatory Analysis (September 17, 2003), section E. (Available at www.whitehouse.gov/omb/memoranda/m03-21.html).

¹⁰⁵ For more information on NEMS, refer to *The National Energy Modeling System: An Overview*, DOE/EIA-0581 (2009) (Oct. 2009) (Available at [www.eia.gov/forecasts/aeo/nems/overview/pdf/0581\(2009\).pdf](http://www.eia.gov/forecasts/aeo/nems/overview/pdf/0581(2009).pdf)).

¹⁰⁶ A member of the Working Group suggested adding price learning to the controls portion of variable-speed efficiency levels, similar to what was done in the Ceiling Fans Rulemaking (EERE-2015-BT-STD-0008-0079, pp. 95-96, and also EERE-2015-BT-STD-0008-0100, pp. 159-161).

¹⁰⁷ U.S. Census. Producer Price Index data. Available at www.bls.gov/ppi/

levels. For this direct final rule, DOE analyzed the impacts of the considered standard levels on senior-only households.¹¹⁰ The analysis used a subset of the RECS 2009 sample is comprised of households that meet the criteria for the subgroup. DOE used the LCC and PBP spreadsheet model to estimate the impacts of the considered efficiency levels on the subgroup. Chapter 11 in the direct final rule TSD describes the consumer subgroup analysis.

J. Manufacturer Impact Analysis

1. Overview

DOE conducted an MIA for dedicated-purpose pool pumps to estimate the financial impact of standards on manufacturers of dedicated-purpose pool pumps. The MIA has both quantitative and qualitative aspects. The quantitative part of the MIA relies on the GRIM, an industry cash-flow model customized for the dedicated-purpose pool pumps covered in this rulemaking. The key GRIM inputs are data on the industry cost structure, MPCs, shipments, assumptions about manufacturer markups, and conversion costs. The key MIA output is INPV. DOE used the GRIM to calculate cash flows using standard accounting principles and to compare changes in INPV between the no-standards case and various TSLs (the standards cases). The difference in INPV between the no-standards case and the standards cases represents the financial impact of energy conservation standards on dedicated-purpose pool pump manufacturers. Different sets of assumptions (scenarios) produce different INPV results. The qualitative part of the MIA addresses factors such as manufacturing capacity; characteristics of, and impacts on, any particular subgroup of manufacturers, including small manufacturers; and impacts on competition.

DOE conducted the MIA for this rulemaking in three phases. In the first phase, DOE prepared an industry characterization based on the market and technology assessment and publicly available information. In the second phase, DOE estimated industry cash flows in the GRIM using industry financial parameters derived in the first phase and the shipments derived in the shipment analysis. In the third phase, DOE conducted interviews with dedicated-purpose pool pump manufacturers that account for the large majority of domestic DPPP sales covered

by this rulemaking. During these interviews, DOE discussed engineering, manufacturing, procurement, and financial topics specific to each company, and obtained each manufacturer's view of the dedicated-purpose pool pump industry as a whole. The interviews provided information that DOE used to evaluate the impacts of amended standards on manufacturers' cash flows, manufacturing capacities, and direct domestic manufacturing employment levels. See section V.B.2.b of this direct final rule for the discussion on the estimated changes in the number of domestic employees involved in manufacturing dedicated-purpose pool pumps covered by energy conservation standards.

During the third phase, DOE used the results of the industry characterization analysis in the first phase and feedback from manufacturer interviews to group manufacturers that exhibit similar production and cost structure characteristics. DOE identified one manufacturer subgroup for a separate impact analysis: Small businesses. DOE determined that dedicated-purpose pool pump manufacturing falls under the North American Industry Classification System (NAICS) code 333911, pump and pumping equipment manufacturing. The U.S. Small Business Administration (SBA) defines a small business as having less than 750 total employees for manufacturing under this NAICS code. This threshold includes all employees in a business' parent company and any other subsidiaries. Based on this classification, DOE identified five domestic dedicated-purpose pool pump businesses that manufacture dedicated-purpose pool pumps in the United States and qualify as small businesses per the SBA threshold. DOE analyzed the impact on the small business subgroup in the complete MIA in the Regulatory Flexibility analysis, required by the Regulatory Flexibility Act, 5 U.S.C. 601, *et. seq.*, presented in section VII.B of this final rule.

2. Government Regulatory Impact Model and Key Inputs

DOE uses the GRIM to quantify the changes in cash flow due to new standards that result in a higher or lower industry value. The GRIM uses an annual discounted cash-flow analysis that incorporates MPCs, manufacturer markups, shipments, and industry financial information as inputs. The GRIM models the changes in MPCs, the distribution of shipments, manufacturing investments, and manufacturer margins that could change as a result from new energy

conservation standards. The GRIM spreadsheet uses the inputs to arrive at a series of annual cash flows, beginning in 2016 (the reference year of the analysis) and continuing to 2050 (the terminal year of the analysis). DOE calculated INPVs by summing the stream of annual discounted cash flows during this period. DOE used a real discount rate of 11.8 percent for all dedicated-purpose pool pump equipment classes. This discount rate is derived from industry financials and modified based on feedback received during manufacturer interviews.

The GRIM calculates cash flows using standard accounting principles and compares changes in INPV between the no-standards case and each standards case. The difference in INPV between the no-standards case and the standards cases represents the financial impact of new energy conservation standards on manufacturers. As discussed previously, DOE developed critical GRIM inputs using a number of sources, including publicly available data, results of the engineering analysis, results of the shipments analysis, and information gathered from industry stakeholders during the course of manufacturer interviews and subsequent working group meetings. The GRIM results are presented in section V.B.2. Additional details about the GRIM, the discount rate, and other financial parameters can be found in chapter 12 of the direct final rule TSD.

a. Manufacturer Production Costs

Manufacturing more efficient equipment is typically more expensive than manufacturing baseline equipment due to the use of more complex components, which are typically more costly than baseline components. The changes in the MPCs of covered equipment can affect the revenues, gross margins, and cash flow of the industry.

In the MIA, DOE used the MPCs calculated in the engineering analysis, as described in section IV.C.5 and further detailed in chapter 5 of the direct final rule TSD. DOE made several revisions to the MPCs based on feedback and data that was received during the working group meetings. The MIA used these MPCs as inputs to the MIA for the direct final rule.

b. Shipments Forecasts

The GRIM estimates manufacturer revenues based on (1) total unit shipment forecasts and the distribution of those shipments by efficiency level, (2) MPCs, and (3) manufacturer markups. Changes in sales volumes and efficiency mix over time can significantly affect manufacturer

¹¹⁰ DOE did not evaluate low-income consumer subgroup impacts because the sample size of the subgroup is too small for meaningful analysis.

finances. For this analysis, the GRIM uses the annual shipment forecasts derived from the shipments analysis from 2016 to 2050. See section IV.G of this direct final rule for additional details.

c. Product and Capital Conversion Costs

Energy conservation standards could cause manufacturers to incur conversion costs to bring their production facilities and equipment designs into compliance. DOE evaluated the level of conversion-related expenditures that would be needed to comply with each considered efficiency level in each equipment class. For the MIA, DOE classified these conversion costs into two major groups: (1) Product conversion costs; and (2) capital conversion costs. Product conversion costs are investments in research and development, testing, marketing, and other non-capitalized costs necessary to make product designs to comply with new energy conservation standards. Capital conversion costs are investments in property, plant, and equipment necessary to adapt or change existing production facilities such that new compliant product designs can be fabricated and assembled.

In general, DOE assumes all conversion-related investments occur between the year of publication of the direct final rule and the year by which manufacturers must comply with the new standards. DOE used inputs from manufacturer interviews and feedback from the working group meetings to evaluate the level of conversion costs manufacturers would likely incur to comply with new energy conservation standards. The majority of design options analyzed represent the implementation of more efficient motors, either single-speed, two-speed, or variable-speed. For standard-size self-priming, small-size self-priming, standard-size non-self-priming, waterfall, and pressure cleaner booster pool pumps, the max-tech efficiency level represents a hydraulic wet-end redesign. For extra-small non-self-priming pool filter pumps max-tech represents the implementation of a more efficient single-speed motor, and for integral cartridge-filter pool pumps and integral sand filter pool pumps DOE analyzed the incorporation of a timer as a design option.

Product conversion costs represent the majority of conversion costs for efficiency levels that represent a motor redesign and are estimated on a per model basis. DOE estimated product conversion costs of \$140,000, \$160,000, and \$500,000 per model to implement a single-speed, two-speed, or variable-

speed motor in a dedicated-purpose pool pump, respectively. DOE estimated the incorporation of a variable-speed motor to cost an additional \$100,000 for standard-size non-self-priming pool filter pumps, because there are currently no non-self-priming pool filter pumps on the market with variable-speed motors. The additional product conversion costs represent housing redesign costs to accommodate variable-speed motors.

In addition to motor redesign costs and testing and certification costs, DOE estimated the per-model cost for new tooling and machinery that would be needed as a result of new standards. DOE approximated capital conversion costs of \$100,000 per wet-end when incorporating single-speed, two-speed, or variable-speed motors in dedicated-purpose pool pumps. These estimates are based on comments from manufacturers made during working group meetings that a motor change could alter the dimensions of a dedicated-purpose pool pump and require investments in packaging machines and other equipment. The working group offered no objections to this estimate. (Docket No. EERE-2015-BT-STD-0008-0079, April 19 DPPP Working Group Meeting, at p. 105)

Max-tech represents a hydraulic wet-end redesign for all equipment classes except for extra-small non-self-priming pool filter pumps, integral cartridge filter pumps, and integral sand filter pumps. DOE estimated product conversion costs for a hydraulic redesign at \$500,000 per wet-end, in addition to the previously discussed \$500,000 per model to incorporate a variable-speed motor. The hydraulic redesign costs represent research and development costs associated with optimizing the impeller and the volute for efficiency. For capital conversion costs, at max-tech, DOE estimated \$1.5 million per wet-end for self-priming and waterfall pumps, \$750,000 per wet-end for non-self-priming pool filter pumps, and \$375,000 per wet-end for pressure cleaner booster pumps. These estimates vary based on the type of tooling and machinery that is used to manufacture pumps in different equipment classes.

Max-tech for extra-small non-self-priming pool filter pumps represents the incorporation of a more efficient single-speed motor. DOE used the conversion cost estimates previously described to implement a single-speed motor.

After gathering per-model and per-wet-end conversion cost estimates, DOE analyzed self-priming pool filter pump equipment offerings to estimate the number of dedicated-purpose pool pumps that would be redesigned at each

efficiency level. DOE used catalogs from the three largest dedicated-purpose pool pump manufacturers that have approximately 75 percent of all self-priming pool filter pump models in the market based on DOE's product database. DOE first listed all self-priming pool filter pumps of the three manufacturers and estimated their efficiency based on descriptions found in catalogs. All analyzed manufacturer catalogs list the number of speeds (*i.e.*, single-speed, two-speed, multi-speed, or variable-speed) and the catalogs provided an estimate of their efficiency (*i.e.*, single-speed standard efficiency compared to single-speed energy efficient).

After DOE estimated the efficiency of each dedicated-purpose pool pump, DOE grouped pumps together for each manufacturer based on their performance characteristics, including: The pump wet-ends, port size, voltage, total horsepower, and pump performance curve (*i.e.*, head vs. flow curve). This allowed DOE to make a mapping with pump characteristics on one axis and pump efficiency level on the other axis. DOE used this mapping to estimate the number of dedicated-purpose pool pumps that would be redesigned if a standard were set at each efficiency level. DOE assumed that:

- Pumps with the same performance characteristics, but a different efficiency, can replace each other.
- There can be no gaps in equipment offerings. At least one pump has to meet the efficiency at each performance characteristic.
- A redesigned single- or two-speed pump can only replace one other pump.
- A variable-speed pump can replace multiple single and two-speed pumps with the same wet-end, port size, voltage, and similar total horsepower.

These assumptions were discussed during the working group meetings and allowed DOE to estimate the number of self-priming pool filter pumps needed to be redesigned at each efficiency level for each manufacturer. (Docket No. EERE-2015-BT-STD-0008-0100, May 18 DPPP Working Group Meeting, at p. 23-24) To estimate the total number of industry redesigns DOE divided the number of redesigns per efficiency level by the percent of models that belongs to the three largest manufacturers.

DOE did not have reliable performance data for non-self-priming, waterfall, and pressure cleaner booster pumps. Therefore, DOE used the shipments distribution to estimate the number of pumps that do not meet each efficiency level. In the absence of data, DOE assumed manufacturers would redesign 25 percent of non-compliant

non-self-priming models. DOE presented this number to the working group, which included manufacturers of such equipment. However the working group offered no suggestions on how to change the number. Therefore DOE continued using the assumption that manufacturers would redesign 25 percent of non-compliant non-self-priming models. (Docket No. EERE-2015-BT-STD-0008-0079, April 19 DPPP Working Group Meeting, at p. 64) Further, DOE assumed that all non-compliant pressure cleaner booster and waterfall models would be redesigned due to the limited number of models in the market.

The design option analyzed for integral cartridge filter and integral sand filter pool pumps represents the incorporation of a timer. Based on confidential interviews with manufacturers that represent the majority of the market, DOE estimates that the R&D required to design a pump with a timer requires a full month of work for three engineers, and involves testing and certification costs. DOE estimated that the per model product conversion costs associated with adding a timer are \$50,000 for integral cartridge filter pumps and \$60,000 for integral sand filter pumps. DOE used specification sheets to determine the number of integral cartridge filter pumps and integral sand filter pumps that do not have a timer and multiplied this by the per model product conversion cost to calculate industry product conversion costs.

In addition, manufacturers that own tooling and machinery may incur capital conversion costs to replace molding machines and tooling. DOE estimated that the capital conversion costs associated with these activities would be \$220,000 per manufacturer. DOE multiplied this by the number of manufacturers that own tooling and machinery, to calculate industry capital conversion costs. DOE presented these conversion cost estimates to the DPPP working group.

In responses, Hayward stated that the product conversion costs [for integral pumps] are probably nominally low. (Docket No. EERE-2015-BT-STD-0008-0079, April 19 DPPP Working Group Meeting, at p. 130) However, Hayward is not a manufacturer of integral cartridge filter and integral sand filter pool pumps and did not provide specific recommendations to alter the estimates. In addition the numbers presented during the working group reflect input from manufacturers that represent the majority of the market. Therefore, DOE used the product

conversion costs estimates presented during the working group.

Testing and Certification Costs

DOE also estimated the magnitude of the aggregate industry compliance testing costs needed to conform to new energy conservation standards. Although compliance testing costs are a subset of product conversion costs, DOE estimated these costs separately. DOE pursued this approach because no energy conservation standards currently exist for dedicated-purpose pool pumps; as such, all basic models will be required to be tested and certified to comply with new energy conservation standards regardless of the level of such a standard. As a result, the industry-wide magnitude of these compliance testing costs will be constant, regardless of the selected standard level.

DOE notes that new energy conservation standards will require every model offered for sale to be tested according to the sampling plan proposed in the test procedure final rule. This sampling plan specifies that a minimum of two units must be tested to certify a basic model as compliant. DOE estimated the industry-wide magnitude of compliance testing by multiplying the estimated number of models currently in each equipment class by the cost to test each model. DOE used product specification sheets and information from manufacturer interviews to estimate the total number of models in each equipment class. DOE estimated testing and certification costs based on input from third-party test labs and manufacturers to be \$11,000 per model, which applies to all self-priming, all non-self-priming, pressure cleaner booster and waterfall pumps.

d. Markup Scenarios

As discussed in section IV.C.5, the MPCs for dedicated-purpose pool pumps are the manufacturers' production costs for those units. These costs include materials, labor, depreciation, and overhead, which are collectively referred to as the cost of goods sold. The MSP is the price received by DPPP manufacturers from the first sale, typically to a wholesaler or a retailer, regardless of the downstream distribution channel through which the dedicated-purpose pool pumps are ultimately sold. The MSP is not the same as the cost the end user pays for the dedicated-purpose pool pump, because there are typically multiple sales along the distribution chain and various markups applied to each sale. The MSP equals the MPC multiplied by the manufacturer markup. The manufacturer markup covers all the

dedicated-purpose pool pump manufacturer's non-production costs (*i.e.*, selling, general, and administrative expenses; research and development; interest) as well as profit. Total industry revenue for DPPP manufacturers equals the MSPs at each efficiency level multiplied by the number of shipments at that efficiency level.

Modifying these manufacturer markups in the standards cases yields a different set of impacts on DPPP manufacturers than in the no-standards case. For the MIA, DOE modeled three standards case markup scenarios for dedicated-purpose pool pumps to represent the uncertainty regarding the potential impacts on prices and profitability for DPPP manufacturers following the implementation of standards. The three scenarios are: (1) A preservation of gross margin markup scenario, or flat markup; (2) a preservation of operating profit markup scenario; and (3) a two-tiered markup scenario. Each scenario leads to different manufacturer markup values, which, when applied to the inputted MPCs, result in varying revenue and cash-flow impacts on DPPP manufacturers.

Under the preservation of gross margin percentage scenario, DOE applied a single uniform "gross margin percentage" markup across all efficiency levels, which assumes that manufacturers would be able to maintain the same amount of profit as a percentage of revenues at all efficiency levels within an equipment class. DOE used manufacturer interviews, and publicly available financial information for manufacturers to estimate the preservation of gross margin markup for each equipment class. DOE estimated a manufacturer markup of 1.46 for all self-priming and waterfall pumps, 1.35 for all non-self-priming and pressure cleaner booster pumps, and 1.27 for integral cartridge filter and integral sand filter pool pumps. DOE presented these manufacturer markups to the working group and did not receive any objection. (Docket No. EERE-2015-BT-STD-0008-0079, April 19 DPPP Working Group Meeting, at p. 92-99)

The preservation of operating profit markup scenario assumes that manufacturers are not able to yield additional operating profit from higher production costs and the investments that are required to comply with new DPPP energy conservation standards. Instead this scenario assumes that manufacturers are only able to maintain the no-standards case total operating profit in absolute dollars in the standards cases, despite higher product costs and investment.

DOE implemented the two-tiered markup scenario because multiple manufacturers stated in interviews that they offer tiers of product lines that are differentiated, in part, by efficiency level. Specifically, manufacturers stated that they earn lower markups on self-priming pool filter pumps that have variable-speed functionality, compared to self-priming pool filter pumps with single or two-speed functionality. As higher standards push more consumers to purchase variable-speed motors, manufacturers lose sales of higher margin single- and two-speed motor dedicated-purpose pool pumps. Therefore, average manufacturer markups decrease.

A comparison of industry financial impacts under the three markup scenarios is presented in section V.B.2.a of this direct final rule.

K. Emissions Analysis

The emissions analysis consists of two components. The first component estimates the effect of potential energy conservation standards on power sector and site (where applicable) combustion emissions of CO₂, NO_x, SO₂, and Hg. The second component estimates the impacts of potential standards on emissions of two additional greenhouse gases, CH₄ and N₂O, as well as the reductions to emissions of all species due to “upstream” activities in the fuel production chain. These upstream activities comprise extraction, processing, and transporting fuels to the site of combustion. The associated emissions are referred to as upstream emissions.

The analysis of power sector emissions uses marginal emissions factors that were derived from data in *AEO2016*, as described in section IV.M. The methodology is described in chapter 13 and chapter 15 of the DPPP direct final rule TSD.

Combustion emissions of CH₄ and N₂O are estimated using emissions intensity factors published by the EPA: Greenhouse Gases HG Emissions Factors Hub.¹¹¹ The FFC upstream emissions are estimated based on the methodology described in chapter 15 of the DPPP direct final rule TSD. The upstream emissions include both emissions from fuel combustion during extraction, processing, and transportation of fuel, and “fugitive” emissions (direct leakage to the atmosphere) of CH₄ and CO₂.

The emissions intensity factors are expressed in terms of physical units per megawatt-hour (MWh) or million Btu

(MMBtu) of site energy savings. Total emissions reductions are estimated using the energy savings calculated in the national impact analysis.

For CH₄ and N₂O, DOE calculated emissions reduction in tons and also in terms of units of CO₂-equivalent (CO₂eq). Emissions of CH₄ and N₂O are often converted to CO₂eq by multiplying each ton of gas by the gas’ global warming potential (GWP) over a 100-year time horizon. Based on the Fifth Assessment Report of the Intergovernmental Panel on Climate Change,¹¹² DOE used GWP values of 28 for CH₄ and 265 for N₂O.

The *AEO* incorporates the projected impacts of existing air quality regulations on emissions. *AEO2016* generally represents current legislation and environmental regulations, including recent government actions, for which implementing regulations were available as of the end of February 2016. DOE’s estimation of impacts accounts for the presence of the emissions control programs discussed in the following paragraphs.

SO₂ emissions from affected electric generating units (EGUs) are subject to nationwide and regional emissions cap-and-trade programs. Title IV of the Clean Air Act sets an annual emissions cap on SO₂ for affected EGUs in the 48 contiguous States and the District of Columbia (DC). (42 U.S.C. 7651 *et seq.*) SO₂ emissions from 28 eastern States and DC were also limited under the Clean Air Interstate Rule (CAIR). 70 FR 25162 (May 12, 2005). CAIR created an allowance-based trading program that operates along with the Title IV program. In 2008, CAIR was remanded to EPA by the U.S. Court of Appeals for the District of Columbia Circuit, but it remained in effect.¹¹³ In 2011, EPA issued a replacement for CAIR, the Cross-State Air Pollution Rule (CSAPR). 76 FR 48208 (Aug. 8, 2011). On August 21, 2012, the D.C. Circuit issued a decision to vacate CSAPR,¹¹⁴ and the court ordered EPA to continue administering CAIR. On April 29, 2014, the U.S. Supreme Court reversed the judgment of the D.C. Circuit and remanded the case for further

proceedings consistent with the Supreme Court’s opinion.¹¹⁵ On October 23, 2014, the D.C. Circuit lifted the stay of CSAPR.¹¹⁶ Pursuant to this action, CSAPR went into effect (and CAIR ceased to be in effect) as of January 1, 2015.¹¹⁷ *AEO2016* incorporates implementation of CSAPR.

The attainment of emissions caps is typically flexible among EGUs and is enforced through the use of emissions allowances and tradable permits. Under existing EPA regulations, any excess SO₂ emissions allowances resulting from the lower electricity demand caused by the adoption of an efficiency standard could be used to permit offsetting increases in SO₂ emissions by any regulated EGU. In past years, DOE recognized that there was uncertainty about the effects of efficiency standards on SO₂ emissions covered by the existing cap-and-trade system, but it concluded that negligible reductions in power sector SO₂ emissions would occur as a result of standards.

Beginning in 2016, however, SO₂ emissions will fall as a result of the Mercury and Air Toxics Standards (MATS) for power plants. 77 FR 9304 (Feb. 16, 2012). In the MATS final rule, EPA established a standard for hydrogen chloride as a surrogate for acid gas hazardous air pollutants (HAP), and also established a standard for SO₂ (a non-HAP acid gas) as an alternative equivalent surrogate standard for acid gas HAP. The same controls are used to reduce HAP and non-HAP acid gas; thus, SO₂ emissions will be reduced as a result of the control technologies installed on coal-fired power plants to comply with the MATS requirements for acid gas. *AEO2016* assumes that, in order to continue operating, coal plants must have either flue gas desulfurization or dry sorbent injection systems installed by 2016. Both technologies, which are used to reduce acid gas emissions, also reduce SO₂ emissions. Under the MATS, emissions will be far below the cap established by

¹¹⁵ See *EPA v. EME Homer City Generation*, 134 S. Ct. 1584, 1610 (U.S. 2014). The Supreme Court held in part that EPA’s methodology for quantifying emissions that must be eliminated in certain States due to their impacts in other downwind States was based on a permissible, workable, and equitable interpretation of the Clean Air Act provision that provides statutory authority for CSAPR.

¹¹⁶ See *EME Homer City Generation, L.P. v. EPA*, Order (D.C. Cir. filed October 23, 2014) (No. 11–1302).

¹¹⁷ On July 28, 2015, the D.C. Circuit issued its opinion regarding the remaining issues raised with respect to CSAPR that were remanded by the Supreme Court. The D.C. Circuit largely upheld CSAPR, but remanded to EPA without *vacatur* certain States’ emission budgets for reconsideration. *EME Homer City Generation, LP v. EPA*, 795 F.3d 118 (D.C. Cir. 2015).

¹¹¹ Available at www.epa.gov/climateleadership/center-corporate-climate-leadership-ghg-emission-factors-hub.

¹¹² IPCC (2013). *Climate Change 2013: The Physical Science Basis. Contribution of Working Group I to the Fifth Assessment Report of the Intergovernmental Panel on Climate Change* Stocker, T.F., D. Qin, G.-K. Plattner, M. Tignor, S.K. Allen, J. Boschung, A. Nauels, Y. Xia, V. Bex and P.M. Midgley (eds.). Cambridge University Press, Cambridge, United Kingdom and New York, NY, USA. Chapter 8.

¹¹³ See *North Carolina v. EPA*, 531 F.3d 896 (D.C. Cir. 2008), modified on rehearing, 550 F.3d 1176 (D.C. Cir. 2008).

¹¹⁴ See *EME Homer City Generation, LP v. EPA*, 696 F.3d 7.

CSAPR, so it is unlikely that excess SO₂ emissions allowances resulting from the lower electricity demand would be needed or used to permit offsetting increases in SO₂ emissions by any regulated EGU.¹¹⁸ Therefore, DOE believes that energy conservation standards that decrease electricity generation will generally reduce SO₂ emissions in 2016 and beyond.

CSAPR established a cap on NO_x emissions in 28 eastern States and the District of Columbia. Energy conservation standards are expected to have little effect on NO_x emissions in those States covered by CSAPR because excess NO_x emissions allowances resulting from the lower electricity demand could be used to permit offsetting increases in NO_x emissions from other facilities. However, standards would be expected to reduce NO_x emissions in the States not affected by the caps, so DOE estimated NO_x emissions reductions from the standards considered in this direct final rule for these States.

The MATS limit mercury emissions from power plants, but they do not include emissions caps and, as such, DOE's energy conservation standards would likely reduce Hg emissions. DOE estimated mercury emissions reduction using emissions factors based on *AEO2016*, which incorporates the MATS.

The *AEO2016* Reference case (and some other cases) assumes implementation of the Clean Power Plan (CPP), which is the EPA program to regulate CO₂ emissions at existing fossil-fired electric power plants.¹¹⁹ DOE used

the *AEO2016* No-CPP case as a basis for developing emissions factors for the electric power sector to be consistent with its use of the No-CPP case in the NIA.¹²⁰

L. Monetizing Carbon Dioxide and Other Emissions Impacts

As part of the development of this rule, DOE considered the estimated monetary benefits from the reduced emissions of CO₂, CH₄, N₂O and NO_x that are expected to result from each of the TSLs considered. In order to make this calculation analogous to the calculation of the NPV of consumer benefit, DOE considered the reduced emissions expected to result over the lifetime of products shipped in the projection period for each TSL. This section summarizes the basis for the values used for monetizing the emissions benefits and presents the values considered in this direct final rule.

1. Social Cost of Carbon

The SC-CO₂ is an estimate of the monetized damages associated with an incremental increase in carbon emissions in a given year. It is intended to include (but is not limited to) climate-change-related changes in net agricultural productivity, human health, property damages from increased flood risk, and the value of ecosystem services. Estimates of the SC-CO₂ are provided in dollars per metric ton of CO₂. A domestic SC-CO₂ value is meant to reflect the value of damages in the United States resulting from a unit change in CO₂ emissions, while a global SC-CO₂ value is meant to reflect the value of damages worldwide.

Under section 1(b)(6) of Executive Order 12866, "Regulatory Planning and Review," 58 FR 51735 (Oct. 4, 1993), agencies must, to the extent permitted by law, "assess both the costs and the benefits of the intended regulation and, recognizing that some costs and benefits are difficult to quantify, propose or adopt a regulation only upon a reasoned determination that the benefits of the intended regulation justify its costs."

Units" (Washington, DC: October 23, 2015). <https://www.federalregister.gov/articles/2015/10/23/2015-22842/carbon-pollution-emission-guidelines-for-existing-stationary-sources-electric-utility-generating>.

¹²⁰ As DOE has not modeled the effect of CPP during the 30 year analysis period of this rulemaking, there is some uncertainty as to the magnitude and overall effect of the energy efficiency standards. With respect to estimated CO₂ and NO_x emissions reductions and their associated monetized benefits, if implemented the CPP would result in an overall decrease in CO₂ emissions from electric generating units (EGUs), and would thus likely reduce some of the estimated CO₂ reductions associated with this rulemaking.

The purpose of the SC-CO₂ estimates presented here is to allow agencies to incorporate the monetized social benefits of reducing CO₂ emissions into cost-benefit analyses of regulatory actions. The estimates are presented with an acknowledgement of the many uncertainties involved and with a clear understanding that they should be updated over time to reflect increasing knowledge of the science and economics of climate impacts.

As part of the interagency process that developed these SC-CO₂ estimates, technical experts from numerous agencies met on a regular basis to consider public comments, explore the technical literature in relevant fields, and discuss key model inputs and assumptions. The main objective of this process was to develop a range of SC-CO₂ values using a defensible set of input assumptions grounded in the existing scientific and economic literatures. In this way, key uncertainties and model differences transparently and consistently inform the range of SC-CO₂ estimates used in the rulemaking process.

a. Monetizing Carbon Dioxide Emissions

When attempting to assess the incremental economic impacts of CO₂ emissions, the analyst faces a number of challenges. A report from the National Research Council¹²¹ points out that any assessment will suffer from uncertainty, speculation, and lack of information about (1) future emissions of GHGs, (2) the effects of past and future emissions on the climate system, (3) the impact of changes in climate on the physical and biological environment, and (4) the translation of these environmental impacts into economic damages. As a result, any effort to quantify and monetize the harms associated with climate change will raise questions of science, economics, and ethics and should be viewed as provisional.

Despite the limits of both quantification and monetization, SC-CO₂ estimates can be useful in estimating the social benefits of reducing CO₂ emissions. Although any numerical estimate of the benefits of reducing carbon dioxide emissions is subject to some uncertainty, that does not relieve DOE of its obligation to attempt to factor those benefits into its cost-benefit analysis. Moreover, the interagency working group (IWG) SC-CO₂ estimates are well supported by the existing scientific and economic

¹²¹ National Research Council. *Hidden Costs of Energy: Unpriced Consequences of Energy Production and Use*. 2009. National Academies Press: Washington, DC.

¹¹⁸ DOE notes that on June 29, 2015, the U.S. Supreme Court ruled that the EPA erred when the agency concluded that cost did not need to be considered in the finding that regulation of hazardous air pollutants from coal- and oil-fired electric utility steam generating units (EGUs) is appropriate and necessary under section 112 of the Clean Air Act (CAA). *Michigan v. EPA*, 135 S. Ct. 2699 (2015). The Supreme Court did not vacate the MATS rule, and DOE has tentatively determined that the Court's decision on the MATS rule does not change the assumptions regarding the impact of energy conservation standards on SO₂ emissions. Further, the Court's decision does not change the impact of the energy conservation standards on mercury emissions. The EPA, in response to the U.S. Supreme Court's direction, has now considered cost in evaluating whether it is appropriate and necessary to regulate coal- and oil-fired EGUs under the CAA. EPA concluded in its final supplemental finding that a consideration of cost does not alter the EPA's previous determination that regulation of hazardous air pollutants, including mercury, from coal- and oil-fired EGUs, is appropriate and necessary. 79 FR 24420 (April 25, 2016). The MATS rule remains in effect, but litigation is pending in the D.C. Circuit Court of Appeals over EPA's final supplemental finding MATS rule.

¹¹⁹ U.S. Environmental Protection Agency, "Carbon Pollution Emission Guidelines for Existing Stationary Sources: Electric Utility Generating

literature. As a result, DOE has relied on the IWG SC-CO₂ estimates in quantifying the social benefits of reducing CO₂ emissions. DOE estimates the benefits from reduced (or costs from increased) emissions in any future year by multiplying the change in emissions in that year by the SC-CO₂ values appropriate for that year. The NPV of the benefits can then be calculated by multiplying each of these future benefits by an appropriate discount factor and summing across all affected years.

It is important to emphasize that the current SC-CO₂ values reflect the IWG's best assessment, based on current data, of the societal effect of CO₂ emissions. The IWG is committed to updating these estimates as the science and economic understanding of climate change and its impacts on society improves over time. In the meantime, the interagency group will continue to explore the issues raised by this analysis and consider public comments as part of the ongoing interagency process.

In 2009, an interagency process was initiated to offer a preliminary assessment of how best to quantify the benefits from reducing carbon dioxide emissions. To ensure consistency in how benefits are evaluated across Federal agencies, the Administration sought to develop a transparent and defensible method, specifically designed for the rulemaking process, to quantify avoided climate change damages from reduced CO₂ emissions. The interagency group did not

undertake any original analysis. Instead, it combined SC-CO₂ estimates from the existing literature to use as interim values until a more comprehensive analysis could be conducted. The outcome of the preliminary assessment by the interagency group was a set of five interim values that represented the first sustained interagency effort within the U.S. government to develop an SC-CO₂ estimate for use in regulatory analysis. The results of this preliminary effort were presented in several proposed and final rules issued by DOE and other agencies.

b. Current Approach

After the release of the interim values, the IWG reconvened on a regular basis to generate improved SC-CO₂ estimates. Specially, the IWG considered public comments and further explored the technical literature in relevant fields. It relied on three integrated assessment models commonly used to estimate the SC-CO₂: The FUND, DICE, and PAGE models. These models are frequently cited in the peer-reviewed literature and were used in the last assessment of the Intergovernmental Panel on Climate Change (IPCC). Each model was given equal weight in the SC-CO₂ values that were developed.

Each model takes a slightly different approach to model how changes in emissions result in changes in economic damages. A key objective of the interagency process was to enable a consistent exploration of the three models, while respecting the different

approaches to quantifying damages taken by the key modelers in the field. An extensive review of the literature was conducted to select three sets of input parameters for these models: Climate sensitivity, socio-economic and emissions trajectories, and discount rates. A probability distribution for climate sensitivity was specified as an input into all three models. In addition, the IWG used a range of scenarios for the socio-economic parameters and a range of values for the discount rate. All other model features were left unchanged, relying on the model developers' best estimates and judgments.

In 2010, the IWG selected four sets of SC-CO₂ values for use in regulatory analyses. Three sets of values are based on the average SC-CO₂ from the three integrated assessment models, at discount rates of 2.5, 3, and 5 percent. The fourth set, which represents the 95th percentile SC-CO₂ estimate across all three models at a 3-percent discount rate, was included to represent higher-than-expected impacts from climate change further out in the tails of the SC-CO₂ distribution. The values grow in real terms over time. Additionally, the IWG determined that a range of values from 7 percent to 23 percent should be used to adjust the global SC-CO₂ to calculate domestic effects,¹²² although preference is given to consideration of the global benefits of reducing CO₂ emissions. Table IV–31 presents the values in the 2010 IWG report.¹²³

TABLE IV–31—ANNUAL SCC VALUES FROM 2010 IWG REPORT
[2007\$ per metric ton CO₂]

Year	Discount rate and statistic			
	5%	3%	2.5%	3%
	Average	Average	Average	95th Percentile
2010	4.7	21.4	35.1	64.9
2015	5.7	23.8	38.4	72.8
2020	6.8	26.3	41.7	80.7
2025	8.2	29.6	45.9	90.4
2030	9.7	32.8	50.0	100.0
2035	11.2	36.0	54.2	109.7
2040	12.7	39.2	58.4	119.3
2045	14.2	42.1	61.7	127.8
2050	15.7	44.9	65.0	136.2

In 2013 the IWG released an update (which was revised in July 2015) that contained SC-CO₂ values that were

generated using the most recent versions of the three integrated assessment models that have been published in the peer-reviewed literature.¹²⁴ DOE used

¹²² It is recognized that this calculation for domestic values is approximate, provisional, and highly speculative. There is no *a priori* reason why domestic benefits should be a constant fraction of net global damages over time.

¹²³ United States Government–Interagency Working Group on Social Cost of Carbon. *Social Cost of Carbon for Regulatory Impact Analysis Under Executive Order 12866*. February 2010. <https://www.whitehouse.gov/sites/default/files/omb/inforeg/for-agencies/Social-Cost-of-Carbon-for-RIA.pdf>.

¹²⁴ United States Government–Interagency Working Group on Social Cost of Carbon. *Technical Support Document: Technical Update of the Social Cost of Carbon for Regulatory Impact Analysis*

these values for this direct final rule. Table IV–32 shows the four sets of SC-CO₂ estimates from the 2013 interagency update (revised July 2015) in 5-year increments from 2010 through 2050.

The full set of annual SC-CO₂ estimates from 2010 through 2050 is reported in appendix 14A of the direct final rule TSD. The central value that emerges is the average SC-CO₂ across models at the

3-percent discount rate. However, for purposes of capturing the uncertainties involved in regulatory impact analysis, the IWG emphasizes the importance of including all four sets of SC-CO₂ values.

TABLE IV–32—ANNUAL SC-CO₂ VALUES FROM 2013 IWG UPDATE (REVISED JULY 2015)
[2007\$ per metric ton CO₂]

Year	Discount rate and statistic			
	5%	3%	2.5%	3%
	Average	Average	Average	95th Percentile
2010	10	31	50	86
2015	11	36	56	105
2020	12	42	62	123
2025	14	46	68	138
2030	16	50	73	152
2035	18	55	78	168
2040	21	60	84	183
2045	23	64	89	197
2050	26	69	95	212

It is important to recognize that a number of key uncertainties remain, and that current SC-CO₂ estimates should be treated as provisional and revisable because they will evolve with improved scientific and economic understanding. The interagency group also recognizes that the existing models are imperfect and incomplete. The National Research Council report mentioned previously points out that there is tension between the goal of producing quantified estimates of the economic damages from an incremental ton of carbon and the limits of existing efforts to model these effects. There are a number of analytical challenges that are being addressed by the research community, including research programs housed in many of the Federal agencies participating in the interagency process to estimate the SC-CO₂. The interagency group intends to periodically review and reconsider those estimates to reflect increasing knowledge of the science and economics of climate impacts, as well as improvements in modeling.¹²⁵

DOE converted the values from the 2013 interagency report (revised July 2015) to 2015\$ using the implicit price deflator for gross domestic product (GDP) from the Bureau of Economic Analysis. For each of the four sets of SC-

CO₂ cases, the values for emissions in 2020 are \$13.5, \$47.4, \$69.9, and \$139 per metric ton avoided (values expressed in 2015\$). DOE derived values after 2050 based on the trend in 2010–2050 in each of the four cases in the interagency update.

DOE multiplied the CO₂ emissions reduction estimated for each year by the SC-CO₂ value for that year in each of the four cases. To calculate a present value of the stream of monetary values, DOE discounted the values in each of the four cases using the specific discount rate that had been used to obtain the SC-CO₂ values in each case.

2. Social Cost of Methane and Nitrous Oxide

While carbon dioxide is the most prevalent greenhouse gas emitted into the atmosphere, other GHGs are also important contributors. These include methane and nitrous oxide. Global warming potential values (GWPs) are often used to convert emissions of non-CO₂ GHGs to CO₂-equivalents to facilitate comparison of policies and inventories involving different GHGs. While GWPs allow for some useful comparisons across gases on a physical basis, using the social cost of carbon to value the damages associated with

changes in CO₂-equivalent emissions is not optimal. This is because non-CO₂ GHGs differ not just in their potential to absorb infrared radiation over a given time frame, but also in the temporal pathway of their impact on radiative forcing, which is relevant for estimating their social cost but not reflected in the GWP. Physical impacts other than temperature change also vary across gases in ways that are not captured by GWP.

In light of these limitations and the paucity of peer-reviewed estimates of the social cost of non-CO₂ gases in the literature, the 2010 SCC Technical Support Document did not include an estimate of the social cost of non-CO₂ GHGs and did not endorse the use of GWP to approximate the value of non-CO₂ emission changes in regulatory analysis. Instead, the IWG noted that more work was needed to link non-CO₂ GHG emission changes to economic impacts.

Since that time, new estimates of the social cost of non-CO₂ GHG emissions have been developed in the scientific literature, and a recent study by Marten *et al.* (2015) provided the first set of published estimates for the social cost of CH₄ and N₂O emissions that are consistent with the methodology and

Under Executive Order 12866. May 2013. Revised July 2015. <https://www.whitehouse.gov/sites/default/files/omb/inforeg/scc-td-final-july-2015.pdf>. In 2015, the IWG asked the National Academies of Science, Engineering and Medicine (NAS) to review the latest research on modeling the economic aspects of climate change to inform future revisions of the SC-CO₂. The NAS Committee on the Social Cost of Carbon issued an interim report in January 2016 that recommended against a near-term update of the SC-CO₂ estimates, but included recommendations for enhancing the presentation

and discussion of uncertainty around the current estimates. A new Technical Support Document, released by the IWG in August 2016, responds to these recommendations (https://www.whitehouse.gov/sites/default/files/omb/inforeg/scc-td-final_clean_8_26_16.pdf). The NAS Committee's final report, expected in early 2017, will provide longer term recommendations for a more comprehensive update.

¹²⁵ In November 2013, OMB announced a new opportunity for public comment on the interagency

technical support document underlying the revised SCC estimates. 78 FR 70586. In July 2015 OMB published a detailed summary and formal response to the many comments that were received: This is available at <https://www.whitehouse.gov/blog/2015/07/02/estimating-benefits-carbon-dioxide-emissions-reductions>. It also stated its intention to seek independent expert advice on opportunities to improve the estimates, including many of the approaches suggested by commenters.

modeling assumptions underlying the IWG SC-CO₂ estimates.¹²⁶ Specifically, Marten *et al.* used the same set of three integrated assessment models, five socioeconomic and emissions scenarios, equilibrium climate sensitivity distribution, three constant discount rates, and the aggregation approach used by the IWG to develop the SC-CO₂ estimates. An addendum to the IWG's Technical Support Document on Social Cost of Carbon for Regulatory Impact Analysis under Executive Order 12866 summarizes the Marten *et al.* methodology and presents the SC-CH₄ and SC-N₂O estimates from that study as a way for agencies to incorporate the social benefits of reducing CH₄ and N₂O emissions into benefit-cost analyses of

regulatory actions that have small, or "marginal," impacts on cumulative global emissions.¹²⁷

The methodology and estimates described in the addendum have undergone multiple stages of peer review and their use in regulatory analysis has been subject to public comment. The estimates are presented with an acknowledgement of the limitations and uncertainties involved and with a clear understanding that they should be updated over time to reflect increasing knowledge of the science and economics of climate impacts, just as the IWG has committed to do for the SC-CO₂. The OMB has determined that the use of the Marten *et al.* estimates in regulatory analysis is consistent with

the requirements of OMB's Information Quality Guidelines Bulletin for Peer Review and OMB Circular A-4.

The SC-CH₄ and SC-N₂O estimates are presented in Table IV-33. Following the same approach as with the SC-CO₂, values for 2010, 2020, 2030, 2040, and 2050 are calculated by combining all outputs from all scenarios and models for a given discount rate. Values for the years in between are calculated using linear interpolation. The full set of annual SC-CH₄ and SC-N₂O estimates between 2010 and 2050 is reported in appendix 14-A of the direct final rule TSD. DOE derived values after 2050 based on the trend in 2010-2050 in each of the four cases in the IWG addendum.

TABLE IV-33—ANNUAL SC-CH₄ AND SC-N₂O ESTIMATES FROM 2016 IWG ADDENDUM
[2007\$ per metric ton]

Year	SC-CH ₄				SC-N ₂ O			
	Discount rate and statistic				Discount rate and statistic			
	5%	3%	2.5%	3%	5%	3%	2.5%	3%
	Average	Average	Average	95th percentile	Average	Average	Average	95th percentile
2010	370	870	1,200	2,400	3,400	12,000	18,000	31,000
2015	450	1,000	1,400	2,800	4,000	13,000	20,000	35,000
2020	540	1,200	1,600	3,200	4,700	15,000	22,000	39,000
2025	650	1,400	1,800	3,700	5,500	17,000	24,000	44,000
2030	760	1,600	2,000	4,200	6,300	19,000	27,000	49,000
2035	900	1,800	2,300	4,900	7,400	21,000	29,000	55,000
2040	1,000	2,000	2,600	5,500	8,400	23,000	32,000	60,000
2045	1,200	2,300	2,800	6,100	9,500	25,000	34,000	66,000
2050	1,300	2,500	3,100	6,700	11,000	27,000	37,000	72,000

DOE multiplied the CH₄ and N₂O emissions reduction estimated for each year by the SC-CH₄ and SC-N₂O estimates for that year in each of the four cases. To calculate a present value of the stream of monetary values, DOE discounted the values in each of the four cases using the specific discount rate that had been used to obtain the SC-CH₄ and SC-N₂O estimates in each case.

3. Social Cost of Other Air Pollutants

As noted previously, DOE estimated how the considered energy conservation standards would decrease power sector NO_x emissions in those 22 States not

affected by CSAPR. Unlike greenhouse gas emissions, the social cost of other air pollution emissions depends upon the location of those emissions (and conversely, the social benefit of emissions reductions depends on the location of those reductions), making monetization more complicated.

DOE estimated the monetized value of NO_x emissions reductions from electricity generation using benefit per ton estimates from the *Regulatory Impact Analysis for the Clean Power Plan Final Rule*, published in August 2015 by EPA's Office of Air Quality Planning and Standards.¹²⁸ The report

includes high and low values for NO_x (as PM_{2.5}) for 2020, 2025, and 2030 using discount rates of 3 percent and 7 percent; these values are presented in appendix 14B of the direct final rule TSD. DOE primarily relied on the low estimates to be conservative.¹²⁹ DOE developed values specific to the sector for dedicated-purpose pool pumps using a method described in appendix 14B of the direct final rule TSD. For this analysis DOE used linear interpolation to define values for the years between 2020 and 2025 and between 2025 and 2030; for years beyond 2030 the value is held constant.

[default/files/omb/infocore/august_2016_sc_ch4_sc_n2o_addendum_final_8_26_16.pdf](https://www.whitehouse.gov/sites/default/files/omb/infocore/august_2016_sc_ch4_sc_n2o_addendum_final_8_26_16.pdf).

¹²⁸ Available at www.epa.gov/cleanpowerplan/clean-power-plan-final-rule-regulatory-impact-analysis. See Tables 4A-3, 4A-4, and 4A-5 in the report. *The U.S. Supreme Court has stayed the rule implementing the Clean Power Plan until the current litigation against it concludes. Chamber of Commerce, et al. v. EPA, et al., Order in Pending Case, 577 U.S. ____ (2016). However, the benefit-per-ton estimates established in the Regulatory Impact Analysis for the Clean Power Plan are based on scientific studies that remain valid irrespective of the legal status of the Clean Power Plan.*

¹²⁹ For the monetized NO_x benefits associated with PM_{2.5}, the related benefits are primarily based on an estimate of premature mortality derived from the ACS study (Krewski *et al.* 2009), which is the lower of the two EPA central tendencies. Using the lower value is more conservative when making the policy decision concerning whether a particular standard level is economically justified. If the benefit-per-ton estimates were based on the Six Cities study (Lepule *et al.* 2012), the values would be nearly two-and-a-half times larger. (See chapter 14 of the direct final rule TSD for citations for the studies mentioned above.)

DOE multiplied the emissions reduction (in tons) in each year by the associated \$/ton values, and then discounted each series using discount rates of 3 percent and 7 percent as appropriate.

DOE is evaluating appropriate monetization of reduction in other emissions in energy conservation standards rulemakings. DOE has not included monetization of those emissions in the current analysis.

M. Utility Impact Analysis

The utility impact analysis estimates several effects on the electric power generation industry that would result from the adoption of new or amended energy conservation standards. The utility impact analysis estimates the changes in installed electrical capacity and generation that would result for each TSL. The analysis is based on published output from the NEMS associated with *AEO2016*. NEMS produces the *AEO* Reference case, as well as a number of side cases that estimate the economy-wide impacts of changes to energy supply and demand. For the current analysis, impacts are quantified by comparing the levels of electricity sector generation, installed capacity, fuel consumption and emissions consistent with the projections described on page E–8 of *AEO 2016* and various side cases. Details of the methodology are provided in the appendices to chapters 13 and 15 of the direct final rule TSD.

The output of this analysis is a set of time-dependent coefficients that capture the change in electricity generation, primary fuel consumption, installed capacity, and power sector emissions due to a unit reduction in demand for a given end use. These coefficients are multiplied by the stream of electricity savings calculated in the NIA to provide estimates of selected utility impacts of potential new or amended energy conservation standards.

N. Employment Impact Analysis

DOE considers employment impacts in the domestic economy as one factor in selecting a proposed standard. Employment impacts from new conservation standards include both direct and indirect impacts. Direct employment impacts are any changes in the number of employees of manufacturers of the products subject to standards, their suppliers, and related service firms. The MIA addresses those impacts. Indirect employment impacts are changes in national employment that occur due to the shift in expenditures and capital investment caused by the purchase and operation of

more-efficient appliances. Indirect employment impacts from standards consist of the net jobs created or eliminated in the national economy, other than in the manufacturing sector being regulated, caused by: (1) Reduced spending by consumers on energy, (2) reduced spending on new energy supply by the utility industry, (3) increased consumer spending on the products to which the new standards apply and other goods and services, and (4) the effects of those three factors throughout the economy.

One method for assessing the possible effects on the demand for labor of such shifts in economic activity is to compare sector employment statistics developed by the Labor Department's Bureau of Labor Statistics (BLS).¹³⁰ BLS regularly publishes its estimates of the number of jobs per million dollars of economic activity in different sectors of the economy, as well as the jobs created elsewhere in the economy by this same economic activity. Data from BLS indicate that expenditures in the utility sector generally create fewer jobs (both directly and indirectly) than expenditures in other sectors of the economy.¹³¹ There are many reasons for these differences, including wage differences and the fact that the utility sector is more capital-intensive and less labor-intensive than other sectors. Energy conservation standards have the effect of reducing consumer utility bills. Because reduced consumer expenditures for energy likely lead to increased expenditures in other sectors of the economy, the general effect of efficiency standards is to shift economic activity from a less labor-intensive sector (*i.e.*, the utility sector) to more labor-intensive sectors (*e.g.*, the retail and service sectors). Thus, the BLS data suggest that net national employment may increase due to shifts in economic activity resulting from energy conservation standards.

DOE estimated indirect national employment impacts for the standard levels considered in this direct final rule using an input/output model of the U.S. economy called Impact of Sector Energy Technologies version 4 (ImSET).¹³²

¹³⁰ Data on industry employment, hours, labor compensation, value of production, and the implicit price deflator for output for these industries are available upon request by calling the Division of Industry Productivity Studies (202–691–5618) or by sending a request by email to dipsweb@bls.gov.

¹³¹ See Bureau of Economic Analysis, *Regional Multipliers: A User Handbook for the Regional Input-Output Modeling System (RIMS II)*, U.S. Department of Commerce (1992).

¹³² J. Livingston, O.V., S.R. Bender, M.J. Scott, and R.W. Schultz (2015). ImSET 4.0: Impact of Sector Energy Technologies Model Description and

ImSET is a special-purpose version of the “U.S. Benchmark National Input-Output” (I–O) model, which was designed to estimate the national employment and income effects of energy-saving technologies. The ImSET software includes a computer-based I–O model having structural coefficients that characterize economic flows among 187 sectors most relevant to industrial, commercial, and residential building energy use.

DOE notes that ImSET is not a general equilibrium forecasting model, and understands the uncertainties involved in projecting employment impacts, especially changes in the later years of the analysis. Because ImSET does not incorporate price changes, the employment effects predicted by ImSET may over-estimate actual job impacts over the long run for this rule. Therefore, DOE used ImSET only to generate results for near-term timeframes (2028), where these uncertainties are reduced. For more details on the employment impact analysis, see chapter 16 of the direct final rule TSD.

V. Analytical Results and Conclusions

The following section addresses the results from DOE's analyses with respect to the considered energy conservation standards for dedicated-purpose pool pumps. It addresses the TSLs examined by DOE, the projected impacts of each of these levels if adopted as energy conservation standards for dedicated-purpose pool pumps, and the standards levels that DOE is adopting in this direct final rule. Additional details regarding DOE's analyses are contained in the direct final rule TSD supporting this document.

A. Trial Standard Levels

DOE analyzed the benefits and burdens of five TSLs for dedicated-purpose pool pumps. These TSLs were developed by combining specific efficiency levels for each of the equipment classes analyzed by DOE. DOE presents the results for the TSLs in this direct final rule. The results for all efficiency levels that DOE analyzed are in the direct final rule TSD.

Table V–1 presents the TSLs and the corresponding efficiency levels that DOE identified for potential amended energy conservation standards for dedicated-purpose pool pumps. TSL 5 represents the maximum technologically feasible energy efficiency for all equipment classes. TSL 4 represents the combination of highest

efficiency levels without hydraulic improvements (variable speed for relevant equipment classes). TSL 3 represents the standard levels recommended by the DPPP Working

Group. (EERE-2015-BT-STD-0008, No. 82 Recommendation #1 at p. 1-2) TSL 2 represents the efficiency levels with the highest NPV based on dual speed for relevant equipment classes, and in other

classes the same efficiency level as in TSL 1. TSL 1 represents the efficiency levels with the highest NPV based on single-speed technology and no hydraulic improvements.

TABLE V-1—TRIAL STANDARD LEVELS FOR DEDICATED-PURPOSE POOL PUMPS

Equipment class	Trial standard level				
	1	2	3	4	5
	Efficiency level				
Standard-Size Self-Priming Pool Filter Pump	2	5	6	6	7
Small-Size Self-Priming Pool Filter Pump	2	5	2	6	7
Standard-Size Non-Self-Priming Pool Filter Pump	1	4	1	6	7
Extra-Small Non-Self-Priming Pool filter Pump	1	1	1	2	2
Waterfall Pump	1	1	0	2	3
Pressure Cleaner Booster Pump	1	1	1	3	4
Integral Cartridge Filter Pool Pump	0	0	1	0	0
Integral Sand Filter Pool Pump	0	0	1	0	0

DOE only considers an efficiency level above the baseline for integral cartridge filter and integral sand filter pumps in TSL3, the recommended TSL, because DOE is only able to adopt prescriptive standards and performance standards for the same equipment through use of a direct final rule based on consensus recommendations. (42 U.S.C. 6295(p)(4)(A) and 6316(a))

B. Economic Justification and Energy Savings

1. Economic Impacts on Individual Consumers

DOE analyzed the economic impacts on consumers of pool pumps by looking at the effects potential standards at each TSL would have on the LCC and PBP. DOE also examined the impacts of potential standards on selected

consumer subgroups. These analyses are discussed below.

a. Life-Cycle Cost and Payback Period

In general, higher efficiency equipment affects consumers in two ways: (1) Purchase price increases and (2) annual operating costs decrease. Inputs used for calculating the LCC and PBP include total installed costs (*i.e.*, equipment price plus installation costs), and operating costs (*i.e.*, annual energy use, energy prices, energy price trends, repair costs, and maintenance costs). The LCC calculation also uses equipment lifetime and a discount rate. Chapter 8 of the direct final rule TSD provides detailed information on the LCC and PBP analyses.

Table V-2 through Table V-17 show the LCC and PBP results for the TSLs considered for each equipment class. In

the first of each pair of tables, the simple payback is measured relative to the baseline equipment. In the second of each pair of tables, the impacts are measured relative to the efficiency distribution in the no-standards case in the compliance year (see Section IV.F.8 of this document). Because some consumers purchase equipment with higher efficiency in the no-standards case, the average savings are less than the difference between the average LCC of the baseline equipment and the average LCC at each TSL. The savings refer only to consumers who are affected by a standard at a given TSL. Those who already purchase equipment with efficiency at or above a given TSL are not affected. Consumers for whom the LCC increases at a given TSL experience a net cost.

TABLE V-2—AVERAGE LCC AND PBP RESULTS FOR STANDARD-SIZE SELF-PRIMING POOL FILTER PUMP

TSL	Efficiency level	Average costs (2015\$)				Simple payback (years)	Average lifetime (years)
		Installed cost	First year's operating cost	Lifetime operating cost	LCC		
—	Baseline	481	774	4,565	5,046	n/a	6.7
1	2	576	605	3,640	4,216	0.6	6.7
2	5	823	315	2,082	2,906	0.7	6.7
3,4	6	853	223	1,644	2,497	0.7	6.8
5	7	853	181	1,402	2,255	0.6	6.8

Note: The results for each TSL are calculated assuming that all consumers use equipment at that efficiency level. The PBP is measured relative to the baseline equipment.

TABLE V-3—AVERAGE LCC SAVINGS RELATIVE TO THE NO-STANDARDS CASE FOR STANDARD-SIZE SELF-PRIMING POOL FILTER PUMP

TSL	Efficiency level	Life-cycle cost savings	
		Average LCC savings* (2015\$)	Percent of consumers that experience net cost (%)
1	2	669	1
2	5	1,779	5
3,4	6	2,140	10
5	7	2,085	8

* The savings represent the average LCC for affected consumers.

TABLE V-4—AVERAGE LCC AND PBP RESULTS FOR SMALL-SIZE SELF-PRIMING POOL FILTER PUMP

TSL	Efficiency level	Average costs (2015\$)				Simple payback (years)	Average lifetime (years)
		Installed cost	First year's operating cost	Lifetime operating cost	LCC		
—	Baseline	320	282	1,743	2,063	n/a	6.8
1,3	2	386	200	1,294	1,679	0.8	6.8
2	5	588	146	1,004	1,593	2.0	6.8
4	6	720	94	826	1,546	2.1	6.8
5	7	720	77	723	1,443	1.9	6.8

Note: The results for each TSL are calculated assuming that all consumers use equipment at that efficiency level. The PBP is measured relative to the baseline equipment.

TABLE V-5—AVERAGE LCC SAVINGS RELATIVE TO THE NO-STANDARDS CASE FOR SMALL-SIZE SELF-PRIMING POOL FILTER PUMP

TSL	Efficiency level	Life-cycle cost savings	
		Average LCC savings* (2015\$)	Percent of consumers that experience net cost (%)
1,3	2	295	4
2	5	322	27
4	6	360	29
5	7	414	26

* The savings represent the average LCC for affected consumers.

TABLE V-6—AVERAGE LCC AND PBP RESULTS FOR STANDARD-SIZE NON-SELF-PRIMING POOL FILTER PUMP

TSL	Efficiency level	Average costs (2015\$)				Simple payback (years)	Average lifetime (years)
		Installed cost	First year's operating cost	Lifetime operating cost	LCC		
—	Baseline	199	225	1,055	1,254	n/a	4.7
1,3	1	208	177	858	1,066	0.2	4.7
2	4	411	131	684	1,095	2.3	4.7
4	6	576	64	541	1,117	2.3	4.8
5	7	576	45	458	1,034	2.1	4.8

Note: The results for each TSL are calculated assuming that all consumers use equipment at that efficiency level. The PBP is measured relative to the baseline equipment.

TABLE V-7—AVERAGE LCC SAVINGS RELATIVE TO THE NO-STANDARDS CASE FOR STANDARD-SIZE NON-SELF-PRIMING POOL FILTER PUMP

TSL	Efficiency level	Life-cycle cost savings	
		Average LCC savings* (2015\$)	Percent of consumers that experience net cost (%)
1,3	1	191	0
2	4	35	58
4	6	10	51
5	7	93	47

* The savings represent the average LCC for affected consumers.

TABLE V-8—AVERAGE LCC AND PBP RESULTS FOR EXTRA-SMALL NON-SELF-PRIMING POOL FILTER PUMP

TSL	Efficiency level	Average costs (2015\$)				Simple payback (years)	Average lifetime (years)
		Installed cost	First year's operating cost	Lifetime operating cost	LCC		
—	Baseline	135	57	305	440	n/a	4.7

b. Consumer Subgroup Analysis

In the consumer subgroup analysis, DOE estimated the impact of the considered TSLs on senior-only households. Table V-18 through Table V-25 compare the average LCC savings

and PBP at each efficiency level for the consumer subgroups, along with the average LCC savings for the entire consumer sample. In most cases, the average LCC savings and PBP for senior-only households at the considered

efficiency levels are not substantially different from the average for all households. Chapter 11 of the direct final rule TSD presents the complete LCC and PBP results for the subgroup analysis.

TABLE V-18—COMPARISON OF LCC SAVINGS AND PBP FOR CONSUMER SUBGROUP AND ALL HOUSEHOLDS FOR STANDARD-SIZE SELF-PRIMING POOL FILTER PUMP

TSL	Average life-cycle cost savings (2015\$)		Simple payback period (years)	
	Senior-only households	All households	Senior-only households	All households
1	741	651	0.6	0.6

c. Rebuttable Presumption Payback

As discussed in section III.G.3, EPCA establishes a rebuttable presumption that an energy conservation standard is economically justified if the increased purchase cost for a product that meets the standard is less than three times the value of the first-year energy savings resulting from the standard. In calculating a rebuttable presumption payback period for each of the considered TSLs, DOE used discrete values, and as required by EPCA, based

the energy use calculation from the DOE test procedures for dedicated-purpose pool pumps. In contrast, the PBPs presented in section V.B.1.a were calculated using distributions that reflect the range of energy use in the field.

Table V-26 presents the rebuttable-presumption payback periods for the considered TSLs for dedicated-purpose pool pumps. While DOE examined the rebuttable-presumption criterion, it considered whether the standard levels considered for this rule are

economically justified through a more detailed analysis of the economic impacts of those levels, pursuant to 42 U.S.C. 6295(o)(2)(B)(i) and 6316(a), that considers the full range of impacts to the consumer, manufacturer, Nation, and environment. The results of that analysis serve as the basis for DOE to definitively evaluate the economic justification for a potential standard level, thereby supporting or rebutting the results of any preliminary determination of economic justification.

TABLE V-26—REBUTTABLE-PRESUMPTION PAYBACK PERIODS

Equipment class	TSL				
	1	2	3	4	5
	(Years)				
Self-Priming, Standard Size	0.5	0.8	0.8	0.8	0.8
Self-Priming, Small Size	0.9	2.1	0.9	2.4	2.1
Non-Self-Priming, Standard Size	0.2	2.4	0.2	2.8	2.5
Non-Self-Priming, Extra-Small	1.0	1.0	1.0	1.8	1.8
Waterfall	3.9	3.9	n/a	4.7	3.2
Pressure Cleaner Booster	0.6	0.6	0.6	7.8	6.5
Integral Cartridge	n/a	n/a	0.3	n/a	n/a
Integral Sand	n/a	n/a	0.5	n/a	n/a

2. Economic Impacts on Manufacturers

DOE performed an MIA to estimate the impact of new energy conservation standards on manufacturers of dedicated-purpose pool pumps. The next section describes the expected impacts on manufacturers at each considered TSL. Chapter 12 of the direct final rule TSD explains the analysis in further detail.

a. Industry Cash-Flow Analysis Results

In this section, DOE provides results from the GRIM, which examines changes to the industry that would result from the analyzed standards. Table V-27 through Table V-29 illustrate the estimated financial impacts (represented by changes in INPV) of analyzed energy conservation standards on manufacturers of dedicated-purpose pool pumps, as well as the conversion costs that DOE

estimates DPPP manufacturers would incur at each TSL.

As discussed in section IV.J.2.d, DOE modeled three different manufacturer markup scenarios to evaluate a range of cash flow impacts on the DPPP industry: (1) The preservation of gross margin markup scenario, (2) the preservation of operating profit markup scenario, and (3) a two-tiered markup scenario. To assess the upper (less severe) bound on the range of potential impacts on DPPP manufacturers, DOE

modeled a preservation of gross margin markup scenario. This scenario assumes that in the standards cases, manufacturers would be able to pass along the higher production costs required for more efficient products to their consumers. Specifically, the industry would be able to maintain its no-standards case gross margin (as a percentage of revenue) for each equipment class despite the higher production costs in the standards cases.

To assess the lower (more severe) bound on the range of potential impacts on DPPP manufacturers, DOE modeled two additional manufacturer markup scenarios; a preservation of operating profit markup scenario and a two-tiered markup scenario. In the preservation of operating profit markup scenario manufacturers are not able to yield additional operating profit from higher production costs and the investments that are required to comply with new DPPP energy conservation standards, but instead are only able to maintain the same per-unit operating profit in the standards cases that was earned in the no-standards case. This scenario represents a potential lower bound on the range of impacts on manufacturers

because manufacturers are only able to maintain the operating profit, in dollars, that they would have earned in the no-standards case despite higher production costs and investments. Manufacturers must, therefore, reduce margins as a result of this manufacturer markup scenario, which reduces profitability.

DOE also modeled a two-tiered markup scenario as a potential lower (more severe) bound on the range of potential impacts on DPPP manufacturers. In this manufacturer markup scenario, manufacturers have two tiers of markups that are differentiated, in part, by efficiency level. Several manufacturers suggested that new standards would lead to a reduction in overall markups and could reduce their overall profitability. During manufacturer interviews, manufacturers stated that they have lower margins on self-priming pool filter pumps that use a variable-speed motor. DOE used this information to estimate manufacturer markups for self-priming pool filter pumps under a two-tiered pricing strategy in the no-standards case. In the standards cases, DOE modeled the situation in which standards result in

more variable-speed self-priming pool filter pumps being purchased by consumers. Since these products are modeled to have a lower manufacturer markup than the single- and two-speed self-priming pool filter pumps, the overall manufacturer markup declines and results in a lower overall manufacturer markup and reduction in profitability.

Each of the modeled scenarios results in a unique set of cash-flows and corresponding industry values at each TSL. In the following discussion, the INPV results refer to the difference in industry value between the no-standards case and each standards case resulting from the sum of discounted cash-flows from 2016 (the reference year) through 2050 (the end of the analysis period). To provide perspective on the short-run cash-flow impact, DOE includes in the discussion of results a comparison of free cash flow between the no-standards case and the standards case at each TSL in the year before new standards take effect.

Table V-27 through Table V-29 show the MIA results for each TSL using the manufacturer markup scenarios previously described.

TABLE V-27—MANUFACTURER IMPACT ANALYSIS FOR DEDICATED-PURPOSE POOL PUMPS UNDER THE PRESERVATION OF GROSS MARGIN MARKUP SCENARIO *

	Units	No-standards case	Trial standard level				
			1	2	3	4	5
INPV	2015(\$ MM)	212.8	209.0	197.8	219.8	195.9	110.5
Change in INPV	2015(\$ MM)		(3.7)	(15.0)	7.0	(16.9)	(102.3)
Change in INPV	%		(1.8)	(7.1)	3.3	(7.9)	(48.1)
Product Conversion Costs	2015(\$ MM)		11.7	29.8	30.8	61.7	116.3
Capital Conversion Costs	2015(\$ MM)		3.5	6.0	4.8	6.7	83.3
Total Investment Required	2015(\$ MM)		15.2	35.8	35.6	68.4	199.5

* INPV results do not trend monotonically due to the efficiency level composition. The efficiency levels for each TSL are depicted in Table V-1 in section V.A.

TABLE V-28—MANUFACTURER IMPACT ANALYSIS FOR DEDICATED-PURPOSE POOL PUMPS UNDER THE PRESERVATION OF OPERATING PROFIT MARKUP SCENARIO

	Units	No-standards case	Trial standard level				
			1	2	3	4	5
INPV	2015(\$ MM)	212.8	201.0	178.8	166.5	126.2	36.8
Change in INPV	2015(\$ MM)		(11.7)	(34.0)	(46.3)	(86.6)	(176.0)
Change in INPV	%		(5.5)	(16.0)	(21.8)	(40.7)	(82.7)
Product Conversion Costs	2015(\$ MM)		11.7	29.8	30.8	61.7	116.3
Capital Conversion Costs	2015(\$ MM)		3.5	6.0	4.8	6.7	83.3
Total Investment Required	2015(\$ MM)		15.2	35.8	35.6	68.4	199.5

TABLE V-29—MANUFACTURER IMPACT ANALYSIS FOR DEDICATED-PURPOSE POOL PUMPS UNDER THE TWO-TIERED MARKUP SCENARIO

	Units	No-standards case	Trial standard level				
			1	2	3	4	5
INPV	2015(\$ MM)	212.8	210.9	200.2	182.6	144.9	59.3

TABLE V-29—MANUFACTURER IMPACT ANALYSIS FOR DEDICATED-PURPOSE POOL PUMPS UNDER THE TWO-TIERED MARKUP SCENARIO—Continued

	Units	No-standards case	Trial standard level				
			1	2	3	4	5
Change in INPV	2015(\$ MM)	(1.9)	(12.6)	(30.2)	(67.8)	(153.5)
Change in INPV	%	(0.9)	(5.9)	(14.2)	(31.9)	(72.1)
Product Conversion Costs	2015(\$ MM)	11.7	29.8	30.8	61.7	116.3
Capital Conversion Costs	2015(\$ MM)	3.5	6.0	4.8	6.7	83.3
Total Investment Required	2015(\$ MM)	15.2	35.8	35.6	68.4	199.5

At TSL 1, DOE estimates impacts on INPV range from –\$11.7 million to –\$1.9 million, or a change in INPV of –5.5 percent to –0.9 percent. At TSL 1, industry free cash-flow is expected to decrease by \$5.3 million to \$13.2 million, compared to the no-standards case value of \$18.5 million in 2020, the year leading up to the standards.

DOE estimates that 46 percent of all self-priming shipments, 67 percent of extra-small non-self-priming shipments, 71 percent of standard-size non-self-priming shipments, 87 percent of pressure cleaner booster shipments, 30 percent of waterfall shipments, 100 percent of integral cartridge filter shipments, and 100 percent of integral sand filter DPPP shipments would already meet or exceed the efficiency levels required at TSL 1 in the standards year. To bring non-compliant equipment into compliance, DOE expects DPPP manufacturers to incur \$11.7 million in product conversion costs for redesign and testing. In addition, DOE estimates manufacturers will incur \$3.5 million in capital conversion costs at TSL 1.

At TSL 1, the shipment-weighted average MPC for all dedicated-purpose pool pumps increases by 6.1 percent relative to the no-standards case shipment-weighted average MPC for all dedicated-purpose pool pumps in 2021, the year of compliance for new DPPP energy conservation standards. In the preservation of gross margin markup scenario, manufacturers are able to fully pass on this cost increase to consumers. The increase in shipment-weighted average MPC for all dedicated-purpose pool pumps is outweighed by the \$15.2 million in conversion costs, causing a slightly negative change in INPV at TSL 1 under the preservation of gross margin markup scenario.

Under the preservation of operating profit markup scenario, manufacturers earn the same operating profit as would be earned in the no-standards case, but manufacturers do not earn additional profit from their investments. The average manufacturer markup for both the preservation of operating profit and two-tiered markup scenarios is

calculated by averaging the DPPP industry manufacturer markup, for all DPPP equipment classes in aggregate, from the year of compliance (2021) until the terminal year (2050). In this preservation of operating profit markup scenario, the 6.1 percent increase in the shipment-weighted average MPC for all dedicated-purpose pool pumps results in a slight reduction in average manufacturer markup, from 1.413 in the no-standards case to 1.409 at TSL 1. The slight reduction in average manufacturer markup and \$15.2 million in conversion costs causes a negative change in INPV at TSL 1 under the preservation of operating profit markup scenario.

Under the two-tiered markup scenario, where manufacturers earn lower markups for more efficient products, the average manufacturer markup increases from 1.409 in the no-standards case to 1.412 at TSL 1. The increase in the average manufacturer markup and the increase in the shipment-weighted average MPC for all dedicated-purpose pool pumps are outweighed by the \$15.2 million in conversion costs, causing a slightly negative change in INPV at TSL 1 under the two-tiered markup scenario.

At TSL 2, DOE estimates impacts on INPV range from –\$34.0 million to –\$12.6 million, or a change in INPV of –16.0 percent to –5.9 percent. At TSL 2, industry free cash-flow is expected to decrease by \$11.9 million to \$6.6 million, compared to the no-standards case value of \$18.5 million in 2020, the year leading up to the standards.

DOE estimates that 32 percent of all self-priming shipments, 67 percent of extra-small non-self-priming shipments, 7 percent of standard-size non-self-priming shipments, 87 percent of pressure cleaner booster shipments, 30 percent of waterfall shipments, 100 percent of integral cartridge filter shipments, and 100 percent of integral sand filter pool pump shipments would already meet or exceed the efficiency levels required at TSL 2 in the standards year. To bring non-compliant equipment into compliance, DOE expects dedicated-purpose pool pump

manufacturers to incur \$29.8 million in product conversion costs for redesign and testing. In addition, DOE estimates manufacturers will incur \$6.0 million in capital conversion costs associated with TSL 2, to make investments in tooling and machinery required to incorporate the design options analyzed at TSL 2.

At TSL 2, the shipment-weighted average MPC for all dedicated-purpose pool pumps decreases by 3.4 percent relative to the no-standards case shipment-weighted average MPC for all dedicated-purpose pool pumps in 2021. At TSL 2, consumers will repair existing self-priming and non-self-priming pool pumps instead of replacing the entire pump, which reduces shipments in the standards year by 0.5 million compared to the no-standards case shipments. In the preservation of gross margin markup scenario, the decrease in the shipment-weighted average MPC for all dedicated-purpose pool pumps, the reduction in shipments, and the \$35.8 million in conversion costs, causes a negative change in INPV at TSL 2 under the preservation of gross margin markup scenario.

Under the preservation of operating profit markup scenario, the 3.4 percent decrease in the shipment-weighted average MPC for all dedicated-purpose pool pumps results in a reduction in average manufacturer markup, from 1.413 in the no-standards case to 1.399 at TSL 2. The reduction in average manufacturer markup, the reduction in shipments, and the \$35.8 million in conversion costs causes a negative change in INPV at TSL 2 under the preservation of operating profit markup scenario.

Under the two-tiered markup scenario, where manufacturers earn lower markups for more efficient products, the average manufacturer markup slightly increases from 1.409 in the no-standards case to 1.412 at TSL 2. The increase in the average manufacturer markup is outweighed by the reduction in shipments, and the \$35.8 million in conversion costs, causing a negative change in INPV at

TSL 2 under the two-tiered markup scenario.

At TSL 3, DOE estimates impacts on INPV range from $-\$46.3$ million to $\$7.0$ million, or a change in INPV of -21.8 percent to 3.3 percent. At TSL 3, industry free cash flow is expected to decrease by $\$11.9$ million to $\$6.6$ million, compared to the no-standards case value of $\$18.5$ million in 2020, the year leading up to the standards.

DOE estimates that 46 percent of small-size self-priming shipments, 30 percent of standard-size self-priming shipments, 67 percent of extra-small non-self-priming shipments, 71 percent of standard-size non-self-priming shipments, 87 percent of pressure cleaner booster shipments, 100 percent of waterfall shipments, 20 percent of integral cartridge filter shipments, and 20 percent of integral sand filter pool pump shipments would already meet or exceed the efficiency levels required at TSL 3 in the standards year. To bring non-compliant equipment into compliance, DOE expects DPPP manufacturers to incur $\$30.8$ million in product conversion costs for redesign and testing. In addition, DOE estimates manufacturers will incur $\$4.8$ million in capital conversion costs to make changes to machinery and tooling.

At TSL 3, the shipment-weighted average MPC for all dedicated-purpose pool pumps increases by 10.5 percent relative to the no-standards case shipment-weighted average MPC for all dedicated-purpose pool pumps in 2021. At TSL 3 consumers repair existing self-priming pool filter pumps instead of replacing the entire pump, which reduces shipments in the standards year by 0.3 million compared to the no-standards case shipments. In the preservation of gross margin markup scenario, the increase in the shipment-weighted average MPC for all dedicated-purpose pool pumps outweighs the reduction in shipments in the standards year, and the $\$35.6$ million in conversion costs, which causes a slightly positive change in INPV at TSL 3 under the preservation of gross margin markup scenario.

Under the preservation of operating profit markup scenario, the 10.5 percent increase in the shipment-weighted average MPC for all dedicated-purpose pool pumps results in a reduction in average manufacturer markup, from 1.413 in the no-standards case to 1.380 at TSL 3. The reduction in average manufacturer markup, the reduction in shipments, and $\$35.6$ million in conversion costs causes a negative change in INPV at TSL 3 under the preservation of operating profit markup scenario.

Under the two-tiered markup scenario, where manufacturers earn lower markups for more efficient products, the average manufacturer markup decreases from 1.409 in the no-standards case to 1.389 at TSL 3. The decrease in the average manufacturer markup, the reduction in shipments, and the $\$35.6$ million in conversion costs cause a negative change in INPV at TSL 3 under the two-tiered markup scenario.

At TSL 4, DOE estimates impacts on INPV range from $-\$86.6$ million to $-\$16.9$ million, or a change in INPV of -40.7 percent to -7.9 percent. At TSL 4, industry free cash-flow is expected to decrease by $\$23.1$ million to $-\$4.6$ million, compared to the no-standards case value of $\$18.5$ million in 2020, the year leading up to the standards.

DOE estimates that 30 percent of all self-priming shipments, 33 percent of extra-small non-self-priming shipments, 6 percent of standard-size non-self-priming shipments, 6 percent of pressure cleaner booster shipments, 10 percent of waterfall shipments, 100 percent of integral cartridge filter shipments and 100 percent of integral sand filter pool pump shipments would already meet or exceed the efficiency levels required at TSL 4 in the standards year. To bring non-compliant equipment into compliance, DOE expects DPPP manufacturers to incur $\$61.7$ million in product conversion costs for redesign and testing. In addition, DOE estimates manufacturers will incur $\$6.7$ million in capital conversion costs associated with TSL 4 to make changes to machinery and tooling.

At TSL 4, the shipment-weighted average MPC for all dedicated-purpose pool pumps increases by 39.4 percent relative to the no-standards case shipment-weighted average MPC for all dedicated-purpose pool pumps in 2021. At TSL 4, consumers repair existing self-priming, non-self-priming, and pressure cleaner booster pumps instead of replacing the entire pump, which reduces total shipments in the standards year by 0.6 million units compared to the no-standards case shipments. In the preservation of gross margin markup scenario, the increase in the shipment-weighted average MPC for all dedicated-purpose pool pumps is outweighed by the reduction in shipments and the $\$68.4$ million in conversion costs, which causes a negative change in INPV at TSL 4 under the preservation of gross margin markup scenario.

Under the preservation of operating profit markup scenario, the 39.4 percent increase in the shipment-weighted average MPC for all dedicated-purpose pool pumps results in a reduction in

average manufacturer markup, from 1.413 in the no-standards case to 1.367 at TSL 4. The reduction in average manufacturer markup, the reduction in shipments, and $\$68.4$ million in conversion costs causes a significantly negative change in INPV at TSL 4 under the preservation of operating profit markup scenario.

Under the two-tiered markup scenario, where manufacturers earn lower markups for more efficient products, the average manufacturer markup decreases from 1.409 in the no-standards case to 1.376 at TSL 4. The decrease in the average manufacturer markup, the reduction in shipments, and the $\$68.4$ million in conversion costs cause a significantly negative change in INPV at TSL 4 under the two-tiered markup scenario.

At TSL 5, DOE estimates impacts on INPV range from $-\$176.0$ million to $-\$102.3$ million, or a change in INPV of -82.7 percent to -48.1 percent. At TSL 5, industry free cash flow is expected to decrease by $\$79.3$ million to $-\$60.9$ million, compared to the no-standards case value of $\$18.5$ million in 2020, the year leading up to the standards.

DOE estimates that 19 percent of all self-priming shipments, 33 percent of extra-small non-self-priming shipments, 3 percent of standard-size non-self-priming shipments, 3 percent of pressure cleaner booster shipments, 0 percent of waterfall shipments, 100 percent of integral cartridge filter shipments and 100 percent of integral sand filter pool pump shipments would already meet the efficiency levels required at TSL 5 in the standards year. To bring non-compliant equipment into compliance, DOE expects dedicated-purpose pool pump manufacturers to incur $\$116.3$ million in product conversion costs for redesign and testing. In addition, DOE estimates manufacturers will incur $\$83.3$ million in capital conversion costs associated with TSL 5 to make changes to machinery and tooling.

At TSL 5, the shipment-weighted average MPC for all dedicated-purpose pool pumps increases by 39.4 percent relative to the no-standards case shipment-weighted average MPC for all dedicated-purpose pool pumps in 2021. At TSL 5, consumers repair existing self-priming, non-self-priming, and pressure cleaner booster pumps instead of replacing the entire pump, which reduces total shipments in the standards year by 0.6 million units compared to the no-standards case shipments. In the preservation of gross margin markup scenario, the increase in the shipment-weighted average MPC for all dedicated-

purpose pool pumps is outweighed by the reduction in shipments and the \$199.5 million in conversion costs, which causes a significantly negative change in INPV at TSL 5 under the preservation of gross margin markup scenario.

Under the preservation of operating profit markup scenario, the 39.4 percent increase in the shipment-weighted average MPC for all dedicated-purpose pool pumps results in a reduction in average manufacturer markup, from 1.413 in the no-standards case to 1.363 at TSL 5. The reduction in average manufacturer markup, the reduction in shipments, and \$199.5 million in conversion costs causes a significantly negative change in INPV at TSL 5 under the preservation of operating profit markup scenario.

Under the two-tiered markup scenario, where manufacturers earn lower markups for more efficient products, the average manufacturer markup decreases from 1.409 in the no-standards case to 1.375 at TSL 5. The decrease in the average manufacturer markup, the reduction in shipments, and the \$199.5 million in conversion costs cause a negative change in INPV at TSL 5 under the two-tiered markup scenario.

b. Impacts on Direct Employment

To quantitatively assess the impacts of new energy conservation standards on direct employment, DOE used the GRIM to estimate the domestic labor expenditures and number of employees in the no-standards case and at each TSL from 2016 through 2050. DOE used statistical data from the U.S. Census Bureau's 2014 *Annual Survey of Manufacturers (ASM)* and the results of the engineering analysis to calculate industry-wide labor expenditures and domestic employment levels. Labor expenditures related to equipment manufacturing depend on the labor intensity of the equipment, the sales volume, and an assumption that wages remain fixed in real terms over time. The total labor expenditures in each year are calculated by multiplying the MPCs by the labor percentage of MPCs.

The total labor expenditures in the GRIM were then converted to domestic production employment levels by dividing production labor expenditures by the annual payment per production worker (production worker hours multiplied by the labor rate found in the *ASM*). The estimates of production workers in this section cover workers, including line supervisors, who are directly involved in fabricating and

assembling equipment within the original equipment manufacturer facility. Workers performing services that are closely associated with production operations, such as materials handling tasks using forklifts, are also included as production labor. DOE's production worker estimates only account for workers who manufacture the specific equipment covered by this rulemaking.

DOE calculated the total direct employment associated with the covered equipment by multiplying the number of production workers by the ratio of "number of employees" to "production workers average per year" calculated using the employment data in the 2014 *ASM*. Using the GRIM, DOE estimates there would be 101 domestic production workers for original equipment manufacturers in 2021 in the absence of new energy conservation standards. Using *ASM* data, DOE estimated 175 full-time employees work directly on the covered equipment. Table V-30 shows the range of the impacts of energy conservation standards on U.S. production on dedicated-purpose pool pumps. Additional detail on the analysis of direct employment can be found in chapter 12 of the direct final rule TSD.

TABLE V-30—TOTAL NUMBER OF DOMESTIC DEDICATED-PURPOSE POOL PUMP WORKERS IN 2021

	No-standards case	Trial standard level				
		1	2	3	4	5
Domestic Production Workers in 2021 (without changes in production locations)	101	101	80	94	78	78
Total Number of Domestic Employees in 2021	175	175	139	163	135	135
Potential Changes in Domestic Production Workers in 2021		(10)–0	(25)–(21)	(51)–(7)	(51)–(23)	(51)–(23)

The employment impacts shown in Table V-30 represent the potential employment changes that could result following the compliance date for dedicated-purpose pool pumps. The upper end of the results in the table (less severe) estimates the decline in employment due to the decrease in the number of DPPP's sold in 2021, as more customers repair their dedicated-purpose pool pumps instead of replacing them as they would in the no-standards case. This case assumes that manufacturers would continue to produce the same scope of covered equipment within the United States. The lower end of the range (more severe) represents the maximum potential decrease to employment due to production moving to lower labor-cost countries, in addition to the decrease in the number of DPPP's sold in 2021.

DOE estimated the lower end of the range based on manufacturer interviews. Manufacturers could move production abroad depending on the requirements of a standard for self-priming pool filter pumps. Based on the complexity of the motor technology used in dedicated-purpose pool pumps, either single-speed, two-speed, or variable-speed, DOE estimated that the number of domestic production workers could be reduced by 10 percent if standards were set at TSL 1 (represented by a single-speed motor for self-priming pool filter pumps), 25 percent if standards were set at TSL 2 (represented by a two-speed motor for self-priming pool filter pumps), and 50 percent if standards were set at TSL 3, TSL 4, or TSL 5 (represented by a variable-speed motor for self-priming pool filter pumps).

The direct employment impacts shown are independent of the

employment impacts from the broader U.S. economy, which are documented in the employment impact analysis found in chapter 16 of the direct final rule TSD.

c. Impacts on Manufacturing Capacity

DOE did not identify any significant capacity constraints for the design options being evaluated for this rulemaking. 46 percent of small-size self-priming, 30 percent of standard-size self-priming, 67 percent of extra-small non-self-priming, 71 percent of standard-size non-self-priming, 87 percent of pressure cleaner booster, 100 percent of waterfall, 20 percent of integral cartridge filter, and 20 percent of integral sand filter pool pump shipments already meet or exceed the adopted standard levels. In addition, the design options being evaluated are

widely available as products that are on the market today.

DOE believes there is a sufficient supply of variable-speed motors to be used in all standard-size self-priming pool filter pumps in 2021. Variable speed motors are used a wide variety of equipment, and dedicated-purpose pool pumps only represent a small fraction all the equipment that use variable speed motors. As such existing production lines can cope with the change in equipment offerings, and DOE does not expect the industry to experience capacity constraints due to the increase in demand of variable speed motors or for any other reason directly resulting from new energy conservation standards.

d. Impacts on Subgroups of Manufacturers

As discussed in section IV.J.1, using average cost assumptions to develop an industry cash-flow estimate may not be adequate for assessing differential impacts among manufacturer subgroups. Small manufacturers, niche manufacturers, and manufacturers exhibiting a cost structure substantially different from the industry average could be affected disproportionately. DOE used the results of the industry characterization to group manufacturers exhibiting similar characteristics. Consequently, DOE identified small

business manufacturers as a subgroup for a separate impact analysis.

For the small business subgroup analysis, DOE applied the small business size standards published by the SBA to determine whether a company is considered a small business. The size standards are codified at 13 CFR part 121. To be categorized as a small business under NAICS code 333911, "Pump and Pumping Equipment Manufacturing," a DPPP manufacturer and its affiliates may employ a maximum of 750 employees. The 750-employee threshold includes all employees in a business' parent company and any other subsidiaries. Based on this classification, DOE identified five manufacturers that qualify as domestic small businesses. The small business subgroup analysis is discussed in section VII.B of this document and in chapter 12 of the direct final rule TSD.

e. Cumulative Regulatory Burden

One aspect of assessing manufacturer burden involves considering the cumulative impact of multiple DOE standards and the product-specific regulatory actions of other Federal agencies that affect the manufacturers of a covered product or equipment. While any one regulation may not impose a significant burden on manufacturers, the combined effects of several existing or impending regulations may have

serious consequences for some manufacturers, groups of manufacturers, or an entire industry. Assessing the impact of a single regulation may overlook this cumulative regulatory burden. In addition to energy conservation standards, other regulations can significantly affect manufacturers' financial operations. Multiple regulations affecting the same manufacturer can strain profits and lead companies to abandon product lines or markets with lower expected future returns than competing equipment. For these reasons, DOE conducts an analysis of cumulative regulatory burden as part of its rulemakings pertaining to appliance efficiency.

Some DPPP manufacturers also make other products or equipment that could be subject to energy conservation standards set by DOE. DOE looks at these regulations that could affect DPPP manufacturers that will take effect approximately 3 years before or after the estimated 2021 compliance date or during the compliance period of the new energy conservation standards for DPPPs.

The compliance dates and expected industry conversion costs of relevant energy conservation standards are indicated in Table V–31. Also, included in the table are Federal regulations that have compliance dates beyond the three years before or after the DPPP compliance date.

TABLE V–31—COMPLIANCE DATES AND EXPECTED CONVERSION EXPENSES OF FEDERAL ENERGY CONSERVATION STANDARDS AFFECTING DEDICATED-PURPOSE POOL PUMP MANUFACTURERS

Federal energy conservation standard	Number of manufacturers *	Number of manufacturers from today's rule **	Approximate standards year	Industry conversion costs (Millions \$)	Industry conversion costs/revenue ***
Small, Large, and Very Large Commercial Package Air Conditioning and Heating Equipment 81 FR 2420 (January 15, 2016)	13	1	2018	520.8 (2014\$)	4.9%.
Commercial Packaged Boilers 81 FR 15836 (March 24, 2016) †	45	1	2019	27.5 (2014\$)	2.3%.
Commercial Water Heaters 81 FR 34440 (May 31, 2016) †	25	1	2019	29.8 (2014\$)	3.0%.
Commercial Warm Air Furnaces 81 FR 2420 (January 15, 2016)	13	1	2019	7.5 to 22.2 (2014\$)	1.7%–5.2%.
Furnace Fans 79 FR 3813 (July 3, 2014) ...	38	1	2019	40.6 (2013\$)	1.6%.
Commercial Compressors 81 FR 40197 (June 21, 2016) †	40	1	2019	99.0–125.1 (2014\$)	3.1%–3.9%.
Commercial and Industrial Pumps 80 FR 17826 (January 26, 2016)	86	5	2020	81.2 (2014\$)	5.6%.
Residential Boilers 81 FR 2320 (January 15, 2016)	36	2	2021	2.5 (2014\$)	<1%.
Residential Furnace 80 FR 13120 (March 12, 2015) †	14	1	2021	55.0 (2013\$)	<1%.
Direct Heating Equipment and Residential Water Heaters 75 FR 20112 (April 16, 2010) ††	39	1	2015	17.5 (2009\$)	4.9%.
Residential Central Air Conditioners and Heat Pumps 76 FR 37408 (June 27, 2011) ††	39	4	2015	44.0 (2009\$)	0.1%.

TABLE V-31—COMPLIANCE DATES AND EXPECTED CONVERSION EXPENSES OF FEDERAL ENERGY CONSERVATION STANDARDS AFFECTING DEDICATED-PURPOSE POOL PUMP MANUFACTURERS—Continued

Federal energy conservation standard	Number of manufacturers *	Number of manufacturers from today's rule **	Approximate standards year	Industry conversion costs (Millions \$)	Industry conversion costs/revenue ***
External Power Supplies 79 FR 7846 (February 10, 2014) ††	243	1	2016	43.4 (2012\$)	2.3%.
Walk-in Cooler and Walk-in Freezer Components 79 FR 32049 (June 3, 2014) ††	63	1	2017	33.6 (2012\$)	2.7%.

* This column presents the total number of manufacturers identified in the energy conservation standard rule contributing to cumulative regulatory burden.

** This column presents the number of manufacturers producing dedicated-purpose pool pumps that are also listed as manufacturers in the energy conservation standard contributing to cumulative regulatory burden.

*** This column presents conversion costs as a percentage of cumulative revenue for the industry during the conversion period. The conversion period is the timeframe over which manufacturers must make conversion cost investments and lasts from the announcement year of the final rule to the standards year of the final rule. This period typically ranges from 3 to 5 years, depending on the energy conservation standard.

† The final rule for this energy conservation standard has not been published. The compliance date and analysis of conversion costs have not been finalized at this time. If a value is provided for total industry conversion expense, this value represents an estimate from the NOPR or SNOPR.

†† Consistent with Chapter 12 of the TSD, DOE has assessed whether this rule will have significant impacts on manufacturers that are also subject to significant impacts from other EPCA rules with compliance dates within three years of this rule's compliance date. However, DOE recognizes that a manufacturer incurs costs during some period before a compliance date as it prepares to comply, such as by revising product designs and manufacturing processes, testing products, and preparing certifications. As such, to illustrate a broader set of rules that may also create additional burden on manufacturers, DOE has included another rule with compliance dates that fall within six years of the compliance date of this rule by expanding the timeframe of potential cumulative regulatory burden. Note that the inclusion of any given rule in this Table does not indicate that DOE considers the rule to contribute significantly to cumulative impact. DOE has chosen to broaden its list of rules in order to provide additional information about its rulemaking activities. DOE will continue to evaluate its approach to assessing cumulative regulatory burden for use in future rulemakings to ensure that it is effectively capturing the overlapping impacts of its regulations. DOE plans to seek public comment on the approaches it has used here (*i.e.*, both the 3 and 6 year timeframes from the compliance date) in order to better understand at what point in the compliance cycle manufacturers most experience the effects of cumulative and overlapping burden from the regulation of multiple products.

In addition to the Federal energy conservation standards listed in Table V-31, there are appliance standards in progress that do not yet have a proposed rule or final rule. The compliance date, manufacturer lists, and analysis of conversion costs are not available at this time. These appliance standards include pool heaters 80 FR 15922 (March 17, 2015), circulator pumps 80 FR 51483, (August 25, 2015), central air conditioners, and commercial and industrial fans and blowers.

During the working group negotiations manufacturers did not indicate that cumulative regulatory burden was a concern. In the DPPP Working Group meeting on April 19, 2016, DOE presented initial cumulative regulatory burden findings and provided interested parties the opportunity to comment. Interested parties did not identify any additional federal regulations. (Docket No. EERE-2015-BT-STD-0008-0079, April 19

DPPP Working Group Meeting, at p. 136) DOE identified one manufacturer that was affected by more federal regulations than other DPPP manufacturers.

DOE discusses these and other requirements and includes the full details of the cumulative regulatory burden analysis in chapter 12 of the direct final rule TSD. DOE will continue to evaluate its approach to assessing cumulative regulatory burden for use in future rulemakings to ensure that it is effectively capturing the overlapping impacts of its regulations. DOE plans to seek public comment on the approaches it has used here (*i.e.*, both the 3 and 6 year timeframes from the compliance date) in order to better understand at what point in the compliance cycle manufacturers most experience the effects of cumulative and overlapping burden from the regulation of multiple product classes.

3. National Impact Analysis

This section presents DOE's estimates of the national energy savings and the NPV of consumer benefits that would result from each of the TSLs considered as potential amended standards.

a. Significance of Energy Savings

To estimate the energy savings attributable to potential standards for dedicated-purpose pool pumps, DOE compared their energy consumption under the no-standards case to their anticipated energy consumption under each TSL. The savings are measured over the entire lifetime of equipment purchased in the 30-year period that begins in the year of anticipated compliance with amended standards (2021–2050). Table V-32 presents DOE's projections of the national energy savings for each TSL considered for pool pumps. The savings were calculated using the approach described in section IV.H.2 of this document.

TABLE V-32—CUMULATIVE NATIONAL ENERGY SAVINGS FOR POOL PUMPS; 30 YEARS OF SHIPMENTS [2021–2050]

	Trial standard level				
	1	2	3	4	5
	Quads				
Primary energy	0.75	2.9	3.6	3.9	4.4
FFC energy	0.79	3.0	3.8	4.1	4.6

OMB Circular A-4¹³³ requires agencies to present analytical results, including separate schedules of the monetized benefits and costs that show the type and timing of benefits and costs. Circular A-4 also directs agencies to consider the variability of key elements underlying the estimates of benefits and costs. For this rulemaking, DOE undertook a sensitivity analysis using nine, rather than 30, years of

product shipments. The choice of a 9-year period is a proxy for the timeline in EPCA for the review of certain energy conservation standards and potential revision of and compliance with such revised standards.¹³⁴ The review timeframe established in EPCA is generally not synchronized with the product lifetime, product manufacturing cycles, or other factors specific to dedicated-purpose pool pumps. Thus,

such results are presented for informational purposes only and are not indicative of any change in DOE's analytical methodology. The NES sensitivity analysis results based on a 9-year analytical period are presented in Table V-33. The impacts are counted over the lifetime of pool pumps purchased in 2021–2029.

TABLE V-33—CUMULATIVE NATIONAL ENERGY SAVINGS FOR POOL PUMPS; 9 YEARS OF SHIPMENTS
[2021–2029]

	Trial standard level				
	1	2	3	4	5
	Quads				
Primary energy	0.24	0.76	0.95	1.0	1.1
FFC energy	0.25	0.80	1.0	1.0	1.2

b. Net Present Value of Consumer Costs and Benefits

DOE estimated the cumulative NPV of the total costs and savings for

consumers that would result from the TSLs considered for pool pumps. In accordance with OMB's guidelines on regulatory analysis,¹³⁵ DOE calculated NPV using both a 7-percent and a 3-

percent real discount rate. Table V-34 shows the consumer NPV results with impacts counted over the lifetime of equipment purchased in 2021–2050.

TABLE V-34—CUMULATIVE NET PRESENT VALUE OF CONSUMER BENEFITS FOR POOL PUMPS; 30 YEARS OF SHIPMENTS
[2021–2050]

Discount rate	Trial standard level (billion 2015\$)				
	1	2	3	4	5
3 percent	5.1	17	24	21	25
7 percent	2.5	8.1	11	10	12

The NPV results based on the aforementioned 9-year analytical period are presented in Table V-35. The impacts are counted over the lifetime of

equipment purchased in 2021–2029. As mentioned previously, such results are presented for informational purposes only and are not indicative of any

change in DOE's analytical methodology or decision criteria.

TABLE V-35—CUMULATIVE NET PRESENT VALUE OF CONSUMER BENEFITS FOR POOL PUMPS; 9 YEARS OF SHIPMENTS
[2021–2029]

Discount rate	Trial standard level (billion 2015\$)				
	1	2	3	4	5
3 percent	2.1	6.4	8.5	7.7	8.8
7 percent	1.3	4.2	5.6	5.0	5.7

The above results reflect the use of a default price trend to estimate the change in price for dedicated-purpose

pool pumps over the analysis period (see section IV.F.1 of this document). DOE also conducted a sensitivity

analysis that considered one scenario with a low price trend and one scenario with a high price trend. The results of

¹³³ U.S. Office of Management and Budget. *Circular A-4: Regulatory Analysis*. September 17, 2003. www.whitehouse.gov/omb/circulars_a004_a-4/.

¹³⁴ Section 325(m) of EPCA requires DOE to review its standards at least once every 6 years, and requires, for certain equipment, a 3-year period after any new standard is promulgated before

compliance is required, except that in no case may any new standards be required within 6 years of the compliance date of the previous standards. While adding a 6-year review to the 3-year compliance period adds up to 9 years, DOE notes that it may undertake reviews at any time within the 6 year period and that the 3-year compliance date may yield to the 6-year backstop. A 9-year analysis

period may not be appropriate given the variability that occurs in the timing of standards reviews and the fact that for some equipment, the compliance period is 5 years rather than 3 years.

¹³⁵ U.S. Office of Management and Budget. *Circular A-4: Regulatory Analysis*. September 17, 2003. www.whitehouse.gov/omb/circulars_a004_a-4/.

these alternative cases are presented in appendix 10C of the direct final rule TSD. In the high price case, the NPV of consumer benefits is lower than in the default case. In the low price case, the NPV of consumer benefits is higher than in the default case.

c. Indirect Impacts on Employment

DOE expects that energy conservation standards for dedicated-purpose pool pumps would reduce energy expenditures for consumers of those equipment, with the resulting net savings being redirected to other forms of economic activity. These expected shifts in spending and economic activity could affect the demand for labor. As described in section IV.N of this document, DOE used an input/output model of the U.S. economy to estimate indirect employment impacts of the TSLs that DOE considered. There are uncertainties involved in projecting employment impacts, especially changes in the later years of the analysis. Therefore, DOE generated results for near-term timeframes (2021–2026), where these uncertainties are reduced.

The results suggest that the adopted standards would be likely to have a negligible impact on the net demand for labor in the economy. The net change in jobs is so small that it would be imperceptible in national labor statistics and might be offset by other, unanticipated effects on employment. Chapter 16 of the direct final rule TSD

presents detailed results regarding anticipated indirect employment impacts.

4. Impact on Utility or Performance of Equipment

As discussed in section IV.B.2 of this direct final rule, DOE has concluded that the standards adopted in this direct final rule would not lessen the utility or performance of the pool pumps under consideration in this rulemaking. Manufacturers of these equipment currently offer units that meet or exceed the adopted standards.

5. Impact of Any Lessening of Competition

EPCA directs DOE to consider the impact of any lessening of competition, as determined in writing by the Attorney General, that is likely to result from a proposed standard. (42 U.S.C. 6313(a)(6)(B)(ii)(V)) Specifically, it instructs DOE to consider the impact of any lessening of competition, as determined in writing by the Attorney General, that is likely to result from the imposition of the standard. DOE is simultaneously publishing a NOPR containing proposed energy conservation standards identical to those set forth in this direct final rule and has transmitted a copy of the rule and the accompanying TSD to the Attorney General, requesting that the DOJ provide its determination on this issue. DOE will consider DOJ's comments on the direct final rule in determining whether to proceed with

finalizing its standards. DOE will also publish and respond to the DOJ's comments in the **Federal Register** in a separate document.

6. Need of the Nation To Conserve Energy

Enhanced energy efficiency, where economically justified, improves the Nation's energy security, strengthens the economy, and reduces the environmental impacts (costs) of energy production. Reduced electricity demand due to energy conservation standards is also likely to reduce the cost of maintaining the reliability of the electricity system, particularly during peak-load periods. As a measure of this reduced demand, chapter 15 in the direct final rule TSD presents the estimated reduction in generating capacity, relative to the no-new-standards case, for the TSLs that DOE considered in this rulemaking.

Energy conservation resulting from potential energy conservation standards for dedicated-purpose pool pumps is expected to yield environmental benefits in the form of reduced emissions of certain air pollutants and greenhouse gases. Table V–36 provides DOE's estimate of cumulative emissions reductions expected to result from the TSLs considered in this rulemaking. The emissions were calculated using the multipliers discussed in section IV.K. DOE reports annual emissions reductions for each TSL in chapter 13 of the direct final rule TSD.

TABLE V–36—CUMULATIVE EMISSIONS REDUCTION FOR POOL PUMPS SHIPPED IN 2021–2050

	Trial standard level				
	1	2	3	4	5
Power Sector Emissions					
CO ₂ (million metric tons)	40	152	192	205	233
SO ₂ (thousand tons)	30	115	145	155	176
NO _x (thousand tons)	22	82	103	110	125
Hg (tons)	0.10	0.39	0.50	0.53	0.60
CH ₄ (thousand tons)	4.2	16	20	22	25
N ₂ O (thousand tons)	0.61	2.3	2.9	3.1	3.5
Upstream Emissions					
CO ₂ (million metric tons)	2.2	8.3	11	11	13
SO ₂ (thousand tons)	0.26	0.99	1.2	1.3	1.5

NO _x (thousand tons)	53	203	257	275	313
Hg (tons)	0.10	0.39	0.50	0.53	0.60
CH ₄ (thousand tons)	200	765	968	1,035	1,179

TABLE V-36—CUMULATIVE EMISSIONS REDUCTION FOR POOL PUMPS SHIPPED IN 2021–2050—Continued

	Trial standard level				
	1	2	3	4	5
N ₂ O (thousand tons)	0.62	2.3	3.0	3.2	3.6

As part of the analysis for this rule, DOE estimated monetary benefits likely to result from the reduced emissions of CO₂ that DOE estimated for each of the considered TSLs for dedicated-purpose pool pumps. As discussed in section IV.L of this document, DOE used the most recent values for the SC-CO₂ developed by the interagency working group. The four sets of SC-CO₂ values

correspond to the average values from distributions that use a 5-percent discount rate, a 3-percent discount rate, and a 2.5-percent discount rate, and the 95th-percentile values from a distribution that uses a 3-percent discount rate. The actual SC-CO₂ values used for emissions in each year are presented in appendix 14A of the direct final rule TSD.

Table V-37 presents the global value of the CO₂ emissions reduction at each TSL. DOE calculated domestic values as a range from 7 percent to 23 percent of the global values; these results are presented in chapter 14 of the direct final rule TSD. Table V-38 presents the annualized values for CO₂ emissions reduction at each TSL.

TABLE V-37—ESTIMATES OF PRESENT VALUE OF CO₂ EMISSIONS REDUCTION FOR POOL PUMPS SHIPPED IN 2021–2050

TSL	SCC case			
	5% Discount rate, average	3% Discount rate, average	2.5% Discount rate, average	3% Discount rate, 95th percentile
Billion 2015\$				
Total FFC Emissions

As discussed in section IV.L.2, DOE estimated monetary benefits likely to result from the reduced emissions of methane and N₂O that DOE estimated for each of the considered TSLs for dedicated-purpose pool pumps. DOE

used the recent values for the SC-CH₄ and SC-N₂O developed by the interagency working group. Table V-39 presents the value of the CH₄ emissions reduction at each TSL, and Table V-40 presents the value of the N₂O emissions

reduction at each TSL. The annualized values for CH₄ and N₂O emissions reductions at each TSL are presented in Table V-40 and Table V-42, respectively.

DOE is well aware that scientific and economic knowledge about the contribution of CO₂ and other GHG emissions to changes in the future global climate and the potential resulting damages to the world economy continues to evolve rapidly. Thus, any value placed on reduced GHG emissions

in this rulemaking is subject to change. DOE, together with other Federal agencies, will continue to review various methodologies for estimating the monetary value of reductions in CO₂ and other GHG emissions. This ongoing review will consider the comments on this subject that are part of the public

record for this and other rulemakings, as well as other methodological assumptions and issues. Consistent with DOE's legal obligations, and taking into account the uncertainty involved with this particular issue, DOE has included in this rule the most recent values resulting from the interagency review

process. DOE notes, however, that the adopted standards would be economically justified, as defined under EPCA, even without inclusion of monetized benefits of reduced GHG emissions.

DOE also estimated the monetary value of the economic benefits

associated with NO_x emissions reductions anticipated to result from the considered TSLs for dedicated-purpose pool pumps. The dollar-per-ton values that DOE used are discussed in section IV.L of this document. Table V-43 presents the present value for NO_x emissions reduction for each TSL

calculated using 7-percent and 3-percent discount rates. This table presents results that use the low benefit-per-ton values, which reflect DOE's primary estimate. Results that reflect the range of NO_x benefit-per-ton values are presented in Table V-45.

TABLE V-43—ESTIMATES OF PRESENT VALUE OF NO_x EMISSIONS REDUCTION FOR POOL PUMPS SHIPPED IN 2021–2050

5	575	250

Note: Results are based on the low benefit-per-ton values.

7. Other Factors

The Secretary of Energy, in determining whether a standard is economically justified, may consider any other factors that the Secretary deems to be relevant. (42 U.S.C. 6295(o)(2)(B)(i)(VII) and 6316(a)) No

other factors were considered in this analysis.

8. Summary of National Economic Impacts

Table V-44 presents the NPV values that result from adding the estimates of

the potential economic benefits resulting from reduced GHG and NO_x emissions to the NPV of consumer savings calculated for each TSL considered in this rulemaking≤

TABLE V-44—CONSUMER NPV COMBINED WITH PRESENT VALUE OF BENEFITS FROM EMISSIONS REDUCTIONS

	Billion 2015\$			
1	2.9	4.2	5.1	7.5
2	9.7	14	18	27
3	13	19	24	35
4	12	19	23	35
5	14	22	27	41

Note: The GHG benefits include the estimated benefits for reductions in CO₂, CH₄, and N₂O emissions using the four sets of SC-CO₂, SC-CH₄, and SC-N₂O values developed by the interagency working group. See section IV.L.

The national operating cost savings are domestic U.S. monetary savings that occur as a result of purchasing the covered equipment, and are measured for the lifetime of equipment shipped in 2021–2050. The benefits associated with reduced GHG emissions achieved as a

result of the adopted standards are also calculated based on the lifetime of dedicated-purpose pool pumps shipped in 2021–2050. However, the CO₂ reduction is a benefit that accrues globally because CO₂ emissions have a very long residence time in the

atmosphere, the SC-CO₂ values for future emissions reflect climate-related impacts that continue through 2300.

C. Conclusion

When considering new energy conservation standards, the standards

that DOE adopts for any type (or class) of covered equipment must be designed to achieve the maximum improvement in energy efficiency that the Secretary determines is technologically feasible and economically justified. (42 U.S.C. 6295(o)(2)(A) and 6316(a)) In determining whether a standard is economically justified, the Secretary must determine whether the benefits of the standard exceed its burdens by, to the greatest extent practicable, considering the seven statutory factors discussed previously. (42 U.S.C. 6295(o)(2)(B)(i) and 6316(a)) The new standard must also result in significant conservation of energy. (42 U.S.C. 6295(o)(3)(B) and 6316(a))

For this direct final rule, DOE considered the impacts of potential standards for pool pumps at each TSL, beginning with the maximum

technologically feasible level, to determine whether that level was economically justified. Where the max-tech level was not justified, DOE then considered the next most efficient level and undertook the same evaluation until it reached the highest efficiency level that is both technologically feasible and economically justified, as defined under EPCA, and saves a significant amount of energy.

To aid the reader, as DOE discusses the benefits and/or burdens of each TSL, tables in this section present a summary of the results of DOE's quantitative analysis for each TSL. In addition to the quantitative results presented in the tables, DOE also considers other burdens and benefits that affect economic justification. These include the impacts on identifiable subgroups of consumers who may be

disproportionately affected by a national standard and impacts on employment.

1. Benefits and Burdens of TSLs Considered for Dedicated-Purpose Pool Pumps

Table V–45 and Table V–46 summarize the quantitative impacts estimated for each TSL for pool pumps. The national impacts are measured over the lifetime of dedicated-purpose pool pumps purchased in the 30-year period that begins in the anticipated year of compliance with new standards (2021–2050). The energy savings, emissions reductions, and value of emissions reductions refer to full-fuel-cycle results. The efficiency levels contained in each TSL are described in section V.A of this direct final rule.

* Parentheses indicate negative (–) values.

DOE first considered TSL 5, which represents the max-tech efficiency levels. TSL 5 would save an estimated 4.6 quads of energy, an amount DOE considers significant. Under TSL 5, the NPV of consumer benefit would be \$12 billion using a discount rate of 7 percent, and \$25 billion using a discount rate of 3 percent.

The cumulative emissions reductions at TSL 5 are 246 Mt of CO₂; 178 thousand tons of SO₂; 313 thousand tons of NO_x; 0.60 tons of Hg; 1,179 thousand tons of CH₄; and 3.6 thousand tons of N₂O. The estimated monetary value of the GHG emissions reduction at TSL 5 ranges from \$1.8 billion to \$25 billion for CO₂, from \$393 million to 3,202 million for CH₄, and from \$10 million to \$110 million for N₂O. The estimated monetary value of the NO_x emissions reduction at TSL 5 is \$250 million using a 7-percent discount rate and \$575 million using a 3-percent discount rate.

At TSL 5, the average LCC impact is a savings that ranges from \$10 for extra-small non-self-priming pumps, to \$2,085 for standard-size self-priming pump, except for pressure cleaner booster pumps, which have a savings of negative \$313. The simple payback period ranges from 0.6 years for standard-size self-priming pumps to 5.1 years for pressure cleaner booster pumps. The fraction of consumers experiencing a net LCC cost ranges from eight percent for standard-size self-priming pumps to 68 percent for pressure cleaner booster pumps.

At TSL 5, the projected change in INPV ranges from a decrease of \$176.0 million to a decrease of \$102.3 million, which correspond to decreases of 82.7 percent and 48.1 percent, respectively. DOE estimates that industry must invest \$199.5 million to comply with standards set at TSL 5. Manufacturers would need to redesign a significant portion of the equipment they offer, including hydraulic redesigns to convert the vast majority of their standard-size self-priming pool filter pumps.

The Secretary concludes that at TSL 5 for dedicated-purpose pool pumps, the benefits of energy savings, positive NPV of consumer benefits, emission reductions, and the estimated monetary value of the emissions reductions would be outweighed by the economic burden on some consumers, and the significant impacts on manufacturers, including the large conversion costs and profit margin impacts that could result in a large reduction in INPV. Consequently, the Secretary has concluded that TSL 5 is not economically justified.

DOE then considered TSL 4, which represents efficiency levels based on variable speed technology for most equipment classes. TSL 4 would save an estimated 4.1 quads of energy, an amount DOE considers significant. Under TSL 4, the NPV of consumer benefit would be \$10 billion using a discount rate of 7 percent, and \$21 billion using a discount rate of 3 percent.

The cumulative emissions reductions at TSL 4 are 216 Mt of CO₂, 156

thousand tons of SO₂, 275 thousand tons of NO_x, 0.53 tons of Hg, 1,035 thousand tons of CH₄, and 3.2 thousand tons of N₂O. The estimated monetary value of the GHG emissions reduction at TSL 4 ranges from \$1.6 billion to \$22 billion for CO₂, from \$346 million to \$2,812 million for CH₄, and from \$8.8 million to \$97 million for N₂O. The estimated monetary value of the NO_x emissions reduction at TSL 4 is \$222 million using a 7-percent discount rate and \$508 million using a 3-percent discount rate.

At TSL 4, the average LCC impact is a savings that ranges from \$10 for extra-small non-self-priming pumps, to \$2,140 for standard-size self-priming pumps, except for pressure cleaner booster pumps, which have a savings of negative \$372, and waterfall pumps, which have a savings of negative \$20. The simple payback period ranges from 0.7 years for standard-size self-priming pumps to 6.0 years for pressure cleaner booster pumps. The fraction of consumers experiencing a net LCC cost ranges from 10 percent for standard-size self-priming pumps to 70 percent for waterfall pumps.

At TSL 4, the projected change in INPV ranges from a decrease of \$86.6 million to a decrease of \$16.9 million, which correspond to decreases of 40.7 percent and 7.9 percent, respectively. DOE estimates that industry must invest \$68.4 million to comply with standards set at TSL 4.

The Secretary concludes that at TSL 4 for dedicated-purpose pool pumps,

the benefits of energy savings, positive NPV of consumer benefits, emission reductions, and the estimated monetary value of the emissions reductions, would be outweighed by the economic burden on some consumers, and the significant impacts on manufacturers, including the large conversion costs and profit margin impacts that could result in a large reduction in INPV.

Consequently, the Secretary has concluded that TSL 4 is not economically justified.

DOE then considered TSL 3, the recommended TSL, which would save an estimated 3.8 quads of energy, an amount DOE considers significant. Under TSL 3, the NPV of consumer benefit would be \$11 billion using a discount rate of 7 percent, and \$24 billion using a discount rate of 3 percent.

The cumulative emissions reductions at TSL 3 are 202 Mt of CO₂; 147 thousand tons of SO₂; 257 thousand tons of NO_x, 0.50 tons of Hg, 968 thousand tons of CH₄; and 3.0 thousand tons of N₂O. The estimated monetary value of the GHG emissions reduction at TSL 3 ranges from \$1.5 billion to \$21 billion for CO₂, from \$324 million to

\$2,632 million for CH₄, and from \$8.3 million to \$91 million for N₂O. The estimated monetary value of the NO_x emissions reduction at TSL 3 is \$210 million using a 7-percent discount rate and \$477 million using a 3-percent discount rate.

At TSL 3, the average LCC impact is a savings that ranges from \$36 for extra-small non-self-priming pool filter pumps to \$2,140 for standard-size self-priming pumps. The simple payback period ranges from 0.2 years for standard-size non-self-priming pool filter pumps to 0.8 years for extra-small non-self-priming pool filter pumps. The fraction of consumers experiencing a net LCC cost ranges from zero percent for standard-size non-self-priming pumps and pressure cleaner booster pumps to 10 percent for standard-size self-priming pumps.

At TSL 3, the projected change in INPV ranges from a decrease of \$46.3 million to an increase of \$7.0 million, which represents a decrease of 21.8 percent to an increase of 3.3 percent, respectively. DOE estimates that industry must invest \$35.6 million to comply with standards set at TSL 3.

After considering the analysis and weighing the benefits and burdens, the Secretary has concluded that, at TSL 3 for dedicated-purpose pool pumps, the benefits of energy savings, positive NPV of consumer benefits, emission reductions, the estimated monetary value of the emissions reductions, and positive average LCC savings, would outweigh the potential negative impacts on manufacturers. Accordingly, the Secretary has concluded that TSL 3 would offer the maximum improvement in efficiency that is technologically feasible and economically justified, as defined under EPCA, and would result in the significant conservation of energy.

Therefore, based on the above considerations, as well as those discussed in section III.A, DOE adopts the energy conservation standards for pool pumps at TSL 3. The new performance-based energy conservation standards for pool pumps, which are expressed as kgal/kWh, are shown in Table V-47. The new prescriptive energy conservation standards for pool pumps are shown in Table V-48.

TABLE V-47—ADOPTED PERFORMANCE-BASED ENERGY CONSERVATION STANDARDS FOR DEDICATED-PURPOSE POOL PUMPS

Equipment class			Minimum allowable WEF score [kgal/kwh]
Dedicated-purpose pool pump variety	hhp applicability *	Motor phase	
Self-priming pool filter pumps	0.711 hp ≤ hhp < 2.5 hp	Single	− 2.30 * ln (hhp) + 6.59.
Self-priming pool filter pumps	hhp < 0.711 hp	Single	5.55, for hhp ≤ 0.13 hp − 1.30 * ln (hhp) + 2.90, for hhp > 0.13 hp.
Non-self-priming pool filter pumps**.	hhp < 2.5 hp	Any	4.60, for hhp ≤ 0.13 hp − 0.85 * ln (hhp) + 2.87, for hhp > 0.13 hp.
Pressure cleaner booster pumps ...	Any	Any	0.42.

* All instances of hhp refer to rated hydraulic horsepower as determined in accordance with the DOE test procedure at 10 CFR 431.464 and applicable sampling plans.

** Because DOE selected the same efficiency level for both extra-small and standard-size non-self-priming pool filter pumps, the two equipment classes were ultimately merged into one.

TABLE V-48—ADOPTED PRESCRIPTIVE ENERGY CONSERVATION STANDARDS FOR DEDICATED-PURPOSE POOL PUMPS

Equipment class			Prescriptive standard
Dedicated-purpose pool pump variety	hhp applicability *	Motor phase	
Integral sand filter pool pump	Any	Any	Must be distributed in commerce with a pool pump timer that is either integral to the pump or a separate component that is shipped with the pump.
Integral cartridge filter pool pump ..	Any	Any	Must be distributed in commerce with a pool pump timer that is either integral to the pump or a separate component that is shipped with the pump.

2. Annualized Benefits and Costs of the Adopted Standards

The benefits and costs of the adopted standards can also be expressed in terms of annualized values. The annualized net benefit is (1) the annualized national

economic value (expressed in 2015\$) of the benefits from operating equipment that meet the adopted standards (consisting primarily of operating cost savings from using less energy), minus increases in product purchase costs, and

(2) the annualized monetary value of the benefits of GHG and NO_x emission reductions.

Table V-49 shows the annualized values for dedicated-purpose pool pumps under TSL 3, expressed in

2015\$. The results under the primary estimate are as follows.

Using a 7-percent discount rate for benefits and costs other than GHG reduction (for which DOE used average social costs with a 3-percent discount rate),¹³⁶ the estimated cost of the standards in this rule is \$138 million per year in increased equipment costs,

while the estimated annual benefits are \$1.3 billion in reduced equipment operating costs, \$449 million in GHG reductions, and \$22 million in reduced NO_x emissions. In this case, the net benefit amounts to \$1.7 billion per year.

Using a 3-percent discount rate for all benefits and costs, the estimated cost of the adopted standards for dedicated-

purpose pool pumps is \$149 million per year in increased equipment costs, while the estimated annual benefits are \$1.5 billion in reduced operating costs, \$449 million in CO₂ reductions, and \$27 million in reduced NO_x emissions. In this case, the net benefit amounts to \$1.8 billion per year.

TABLE V-49—ANNUALIZED BENEFITS AND COSTS OF ADOPTED STANDARDS (TSL 3) FOR DEDICATED-PURPOSE POOL PUMPS

Total ‡	7% plus GHG range ..	1,371 to 2,570	1,245 to 2,292	1,535 to 2,881.
	7%	1,673	1,509	1,875.
	3% plus GHG range ..	1,542 to 2,741	1,387 to 2,433	1,748 to 3,094.
	3%	1,844	1,651	2,088.

* This table presents the annualized costs and benefits associated with pool pumps shipped in 2021–2050. These results include benefits to consumers which accrue after 2050 from the pool pumps purchased from 2021–2050. The incremental equipment costs include incremental equipment cost as well as installation costs. The costs account for the incremental variable and fixed costs incurred by manufacturers due to the adopted standards, some of which may be incurred in preparation for the rule. The Primary, Low Net Benefits, and High Net Benefits Estimates utilize projections of energy prices and real GDP from the *AEQ2016 No-CPP* case, a Low Economic Growth case, and a High Economic Growth case, respectively. In addition, incremental product costs reflect the default price trend in the Primary Estimate, a high price trend in the Low Benefits Estimate, and a low price trend in the High Benefits Estimate. The methods used to derive projected price trends are explained in section IV.F.1. Note that the Benefits and Costs may not sum to the Net Benefits due to rounding.

** The interagency group selected four sets of SC-CO₂, SC-CH₄, and SC-N₂O values for use in regulatory analyses. Three sets of values are based on the average social costs from the integrated assessment models, at discount rates of 5 percent, 3 percent, and 2.5 percent. The fourth set, which represents the 95th percentile of the social cost distributions calculated using a 3-percent discount rate, is included to represent higher-than-expected impacts from climate change further out in the tails of the social cost distributions. The social cost values are emission year specific. The GHG reduction benefits are global benefits due to actions that occur nationally. See section IV.L for more details.

† DOE estimated the monetized value of NO_x emissions reductions associated with electricity savings using benefit per ton estimates from the *Regulatory Impact Analysis for the Clean Power Plan Final Rule*, published in August 2015 by EPA's Office of Air Quality Planning and Standards. (Available at www.epa.gov/cleanpowerplan/clean-power-plan-final-rule-regulatory-impact-analysis.) See section IV.L.3 for further discussion. For the Primary Estimate and Low Net Benefits Estimate, DOE used national benefit-per-ton estimates for NO_x emitted from the Electric Generating Unit sector based on an estimate of premature mortality derived from the ACS study (Krewski *et al.* 2009). For the High Net Benefits Estimate, the benefit-per-ton estimates were based on the Six Cities study (Lepuele *et al.* 2011); these are nearly two-and-a-half times larger than those from the ACS study.

¹³⁶ DOE used average social costs with a 3-percent discount rate these values are considered as the "central" estimates by the interagency group.

‡ Total Benefits for both the 3-percent and 7-percent cases are presented using the average social costs with 3-percent discount rate. In the rows labeled “7% plus GHG range” and “3% plus GHG range,” the operating cost and NO_x benefits are calculated using the labeled discount rate, and those values are added to the full range of social cost values.

†† Manufacturers are estimated to incur \$35.6 million in conversion costs between 2017 and 2020.

VI. Other Prescriptive Requirements

As part of the DPPP Working Group’s extended charter, the DPPP Working Group considered requirements for pumps distributed in commerce with freeze protection controls. (Docket No. EERE–2013–BT–NOC–0005, No. 71 at pp. 20–52) Freeze protection controls, as defined in the test procedure final rule, are controls that, at certain ambient temperature, turn on the dedicated-purpose pool pump to circulate water for a period of time to prevent the pool and water in plumbing from freezing. As the control schemes for freeze protection vary widely between manufacturers, the resultant energy consumption associated with such control can also vary depending on control settings and climate. To ensure freeze protection controls on dedicated-purpose pool pumps only operate when necessary and do not result in unnecessary energy use, the DPPP Working Group discussed two different approaches for regulating freeze protection controls: (1) Regulation by incorporating freeze protection into the WEF metric, and (2) regulation with a prescriptive standard. Several DPPP Working Group members commented that regulation by prescriptive standard would be the simplest approach, since it would not involve revision of the WEF metric that the DPPP Working Group previously recommended. The DPPP Working Group reached consensus that freeze protection should be regulated by prescriptive standard. (Docket No. EERE–2015–BT–STD–0008–0079, April 19 DPPP Working Group Meeting, at pp. 148)

The CA IOUs suggested that the prescriptive standard prescribe the default settings for trigger temperature, run time, and operation speed that would be pre-programmed into freeze-protection-enabled dedicated-purpose pool pumps at the time of shipment. The CA IOUs commented that models with default settings of 42 degrees Fahrenheit, 12 hours of run time, and high-speed operation result in unnecessary energy use. The CA IOUs proposed that freeze-protection-enabled pumps either ship with freeze protection disabled or ship with default settings with maximums of 39 degrees Fahrenheit, 30 minutes of run time, and a half-speed operation. Hayward and Pentair commented that the suggested default settings were too restrictive and may cause end users to experience

frozen piping. Pentair proposed default freeze protection settings with a trigger temperature of 40 degrees Fahrenheit and a run time of one hour. The DPPP Working Group agreed to these amended settings. (Docket No. EERE–2015–BT–STD–0008–0101, May 19 DPPP Working Group Meeting, at pp. 93–104)

Ultimately, the DPPP Working Group recommended establishing prescriptive requirements for dedicated-purpose pool pumps that are distributed in commerce with freeze protection controls. Specifically, the DPPP Working Group made the following recommendation, which it purports to maintain end-user utility while also reducing energy consumption:

All dedicated-purpose pool pumps distributed in commerce with freeze protection controls must be shipped either with freeze protection disabled, or with the following default, user-adjustable settings: (1) The *default* dry-bulb air temperature setting is no greater than 40 °F; and (2) the *default* run time setting shall be no greater than 1 hour (before the temperature is rechecked); and (3) the *default* motor speed shall not be more than half of the maximum available speed. *Id.* (Docket No. EERE–2015–BT–STD–0008, No. 82, Recommendation #6A at p. 4). DOE agrees with the DPPP Working Group’s reasoning, and given the considerations discussed in section III.A, DOE adopts the recommended prescriptive standard for dedicated-purpose pool pumps distributed in commerce with freeze protection controls.

VII. Procedural Issues and Regulatory Review

A. Review Under Executive Orders 12866 and 13563

Section 1(b)(1) of Executive Order 12866, “Regulatory Planning and Review,” 58 FR 51735 (Oct. 4, 1993), requires each agency to identify the problem that it intends to address, including, where applicable, the failures of private markets or public institutions that warrant new agency action, as well as to assess the significance of that problem. The problems that the adopted standards for dedicated-purpose pool pumps are intended to address are as follows:

(1) Insufficient information and the high costs of gathering and analyzing relevant information leads some consumers to miss opportunities to

make cost-effective investments in energy efficiency.

In some cases the benefits of more efficient equipment are not realized due to misaligned incentives between purchasers and users. An example of such a case is when the equipment purchase decision is made by a building contractor or building owner who does not pay the energy costs.

There are external benefits resulting from improved energy efficiency of products and equipment that are not captured by the users of such equipment. These benefits include externalities related to public health, environmental protection and national energy security that are not reflected in energy prices, such as reduced emissions of air pollutants and greenhouse gases that impact human health and global warming. DOE attempts to qualify some of the external benefits through use of social cost of carbon values.

The Administrator of the Office of Information and Regulatory Affairs (OIRA) in the OMB has determined that the regulatory action in this direct final rule is a significant regulatory action under section (3)(f) of Executive Order 12866. Accordingly, pursuant to section 6(a)(3)(B) of the Order, DOE has provided to OIRA: (i) The text of the draft regulatory action, together with a reasonably detailed description of the need for the regulatory action and an explanation of how the regulatory action will meet that need; and (ii) an assessment of the potential costs and benefits of the regulatory action, including an explanation of the manner in which the regulatory action is consistent with a statutory mandate. DOE has included these documents in the rulemaking record.

In addition, the Administrator of OIRA has determined that the regulatory action is an “economically” significant regulatory action under section (3)(f)(1) of Executive Order 12866. Accordingly, pursuant to section 6(a)(3)(C) of the Order, DOE has provided to OIRA an assessment, including the underlying analysis, of benefits and costs anticipated from the regulatory action, together with, to the extent feasible, a quantification of those costs; and an assessment, including the underlying analysis, of costs and benefits of potentially effective and reasonably feasible alternatives to the planned regulation, and an explanation why the planned regulatory action is preferable

to the identified potential alternatives. These assessments can be found in the direct final rule TSD.

DOE also has reviewed this regulation pursuant to Executive Order 13563, issued on January 18, 2011. 76 FR 3281, Jan. 21, 2011. E.O. 13563 is supplemental to and explicitly reaffirms the principles, structures, and definitions governing regulatory review established in E.O. 12866. To the extent permitted by law, agencies are required by E.O. 13563 to (1) propose or adopt a regulation only upon a reasoned determination that its benefits justify its costs (recognizing that some benefits and costs are difficult to quantify); (2) tailor regulations to impose the least burden on society, consistent with obtaining regulatory objectives, taking into account, among other things, and to the extent practicable, the costs of cumulative regulations; (3) select, in choosing among alternative regulatory approaches, those approaches that maximize net benefits (including potential economic, environmental, public health and safety, and other advantages; distributive impacts; and equity); (4) to the extent feasible, specify performance objectives, rather than specifying the behavior or manner of compliance that regulated entities must adopt; and (5) identify and assess available alternatives to direct regulation, including providing economic incentives to encourage the desired behavior, such as user fees or marketable permits, or providing information upon which choices can be made by the public.

DOE emphasizes as well that E.O. 13563 requires agencies to use the best available techniques to quantify anticipated present and future benefits and costs as accurately as possible. In its guidance, OIRA has emphasized that such techniques may include identifying changing future compliance costs that might result from technological innovation or anticipated behavioral changes. In response to this guidance, DOE will conduct a retrospective review of the seven EPCA statutory factors that DOE evaluated to determine that the energy conservation standards in this direct final rule were economically justified. (42 U.S.C. 6295(o)(2)(B)(i)(I)(VII)) and 6316(a)). For example, DOE's review will seek to verify the projected manufacturer impacts following compliance with the rule by comparing the estimated product conversion costs and industry net present value to the actual costs. Other parts of the review will cover the estimated impacts on consumers by assessing the accuracy of the assumed pool pump operating hours in order to

update, as necessary, the estimated consumer energy savings, lifecycle savings, and payback period estimates associated with this direct final rule. DOE's review will investigate any potential utility or consumer welfare impacts that may not have been quantified in the engineering cost analysis. DOE's research will cover publicly available information, but will also consist of a survey of manufacturers and pool owners to assess the agency's assumptions. DOE will conduct this retrospective review of this direct final rulemaking prior to issuing any future revised energy efficiency standards for this product category.

For the reasons stated in the preamble, this direct final rule is consistent with these principles, including the requirement that, to the extent permitted by law, benefits justify costs.

B. Review Under the Regulatory Flexibility Act

The Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*) requires preparation of an initial regulatory flexibility analysis (IRFA) and a final regulatory flexibility analysis (FRFA) for any rule that by law must be proposed for public comment, unless the agency certifies that the rule, if promulgated, will not have a significant economic impact on a substantial number of small entities. As required by Executive Order 13272, "Proper Consideration of Small Entities in Agency Rulemaking," 67 FR 53461 (Aug. 16, 2002), DOE published procedures and policies on February 19, 2003, to ensure that the potential impacts of its rules on small entities are properly considered during the rulemaking process. 68 FR 7990. DOE has made its procedures and policies available on the Office of the General Counsel's Web site (<http://energy.gov/gc/office-general-counsel>). DOE has prepared the following IRFA for the equipment that are the subject of this rulemaking.

1. Description of Reasons Why Action Is Being Considered

Currently, no Federal energy conservation standards exist for dedicated-purpose pool pumps. DOE excluded this category of pumps from its recent consensus-based energy conservation standard final rule for general pumps. 81 FR 4368 (January 26, 2016). That final rule, which was the product of a pumps working group that had been created through the ASRAC, examined a variety of pump categories. While dedicated-purpose pool pumps were one of the pump categories that were considered during the working

group's discussions, the working group ultimately recommended that DOE initiate a separate rulemaking for dedicated-purpose pool pumps. (Docket No. EERE-2013-BT-NOC-0039, No. 0092 at p. 2)

2. Objectives of, and Legal Basis for, the Rule

Title III, Part C¹³⁷ of the Energy Policy and Conservation Act of 1975 (EPCA), (42 U.S.C. 6311–6317, as codified) established the Energy Conservation Program for Certain Industrial Equipment, a program covering certain industrial equipment.¹³⁸ "Pumps" are listed as a type of covered industrial equipment. (42 U.S.C. 6311(1)(A))

While pumps are listed as a type of covered equipment, EPCA does not define the term "pump." To address this, in January 2016, DOE published a test procedure final rule (January 2016 general pumps test procedure final rule) that established a definition for the term "pump." 81 FR 4086, 4147 (January 25, 2016). Dedicated-purpose pool pumps meet the definition of "pump" and are therefore a category of pump.

3. Description and Estimate of the Number of Small Entities Affected

a. Methodology for Estimating the Number of Small Entities

For manufacturers of dedicated-purpose pool pumps, the Small Business Administration (SBA) has set a size threshold, which defines those entities classified as "small businesses" for the purposes of the statute. DOE used the SBA's small business size standards to determine whether any small entities would be subject to the requirements of this rule. The size standards are codified at 13 CFR part 121. The standards are listed by North American Industry Classification System (NAICS) code and industry description and are available at: www.sba.gov/sites/default/files/files/Size_Standards_Table.pdf.

DPPP manufacturing is classified under NAICS 333911, pump and pumping equipment manufacturing. The SBA sets a threshold of 750 employees or fewer for an entity to be considered a small business for this category.

DOE reviewed the potential standard levels considered in this direct final rule under the provisions of the Regulatory

¹³⁷ For editorial reasons, upon codification in the U.S. Code, Part C was re-designated Part A–1.

¹³⁸ All references to EPCA refer to the statute as amended through the Energy Efficiency Improvement Act of 2015, Public Law 114–11 (April 30, 2015).

Flexibility Act and the procedures and policies published on February 19, 2003. During its market survey, DOE used publicly available information, such as databases from the CEC, APSP, and ENERY STAR; individual company Web sites; and market research tools (e.g., Hoover's reports) to create a list of companies that manufacture dedicated-purpose pool pumps covered by this direct final rule. During manufacturer interviews, DOE also asked stakeholders and industry representatives if they were aware of any additional small manufacturers. DOE then reviewed the list of companies manufacturing equipment covered by this direct final rule, used publicly available data sources (e.g., Hoovers,¹³⁹ Cortera,¹⁴⁰ LinkedIn,¹⁴¹ etc.), and direct contact with various companies to determine if they met the SBA's definition of a small business manufacturer. DOE screened out companies that do not offer equipment affected by this direct final rule, do not meet the definition of a "small business," are foreign owned and operated, or do not manufacture dedicated-purpose pool pumps in the United States.

DOE identified 21 manufacturers of dedicated-purpose pool pumps products affected by this rulemaking. Of these, DOE identified five as domestic small businesses.

b. Manufacturer Participation

DOE contacted the five identified small businesses and invited them to take part in a manufacturer impact analysis interview. Of the small businesses contacted, DOE was able to discuss potential standards with one. DOE also obtained information about small businesses and potential impacts on small businesses while interviewing large manufacturers.

c. Dedicated-Purpose Pool Pump Industry Structure and Nature of Competition

Self-priming pool filter pumps account for approximately 65 percent of manufacturer revenues in the dedicated-purpose pool pump industry. Three manufacturers have approximately 75 percent of all self-priming pool filter pump models in the market, which accounts for approximately 90 percent of shipments. None of these three major manufacturers are small businesses. Besides the three major manufacturers, DOE identified twelve other manufacturers that make self-priming

pool filter pumps, including all five small businesses.

The same three manufacturers that control the majority of the self-priming pool filter pump market also control the majority of the standard-size non-self-priming pool filter pump, pressure cleaner booster pump, and waterfall pump market. Manufacturer revenues for these equipment classes are substantially smaller than revenues for the self-priming pool filter pump equipment classes. One small business only makes standard-size self-priming pool filter pumps; three small businesses make small-size self-priming, standard-size self-priming pool filter pumps, and standard-size non-self-priming pool filter pumps; and one small business makes small-size self-priming, standard-size self-priming, standard-size non-self-priming, and pressure cleaner booster pumps.

The large majority of integral cartridge filter pool pumps, integral sand filter pool pumps, and extra-small non-self-priming pool filter pumps market is controlled by manufacturers that focus on seasonal pools, such as inflatable or collapsible frame pools. These manufacturers typically design dedicated-purpose pool pumps and have them manufactured overseas. DOE did not identify any small businesses that manufacture integral cartridge-filter pool pumps and integral sand filter pool pumps, since this equipment is imported from China.

4. Description of Compliance Requirements

As previously stated, DOE identified five small DPPP manufacturers. The small manufacturers make small-size self-priming, standard-size self-priming, standard-size non-self-priming, and pressure cleaner booster pumps. Accordingly, this analysis of small business impacts focuses exclusively on these equipment classes.

To evaluate impacts facing manufacturers of dedicated-purpose pool pumps, DOE estimated both the capital conversion costs (i.e., investments in property, plant, and equipment) and product conversion costs (i.e., expenditures on R&D, testing, marketing, and other non-depreciable expense) manufacturers would incur to bring their manufacturing facilities and product designs into compliance with adopted standards. As outlined in section IV.C and in chapter 5 of the direct final rule TSD, the design options analyzed to comply with the adopted energy conservation standards include changing the motor to either variable-speed for standard-size self-priming pool filter pumps, or a more efficient

single-speed motor for small-size self-priming, non-self-priming, and pressure cleaner booster pumps. DOE estimated per-model and per-wet-end redesign costs to determine product and capital conversion costs.

DOE used manufacturer specification sheets and product catalogs to estimate the number of models that each small business needs to redesign to comply with the adopted standards. DOE then multiplied this number by the per model redesign costs. This methodology is outlined in more detail in section IV.J.2.c.

The largest burden small businesses face is to bring standard-size self-priming pool filter pumps into compliance with the adopted standard. All five small businesses manufacture standard-size self-priming pool filter pumps and all of them make at least one compliant variable-speed pool filter pump. These small manufacturers could decide to ramp up the production of their already-compliant models and discontinue their non-compliant equipment. However, this could cause gaps in equipment offerings for manufacturers. Therefore, it is likely that manufacturers will redesign some non-compliant pumps to fill potential gaps in their equipment offerings. As described in section IV.J.2.c, DOE assumed that one variable-speed pool filter pump can replace multiple single- and two-speed pool filter pumps. Using this assumption DOE estimated that small businesses will incur \$5.3 million in conversion costs to bring non-compliant standard-size self-priming pool filter pumps into compliance.

Four small businesses make small-size self-priming pool filter pumps. The adopted efficiency level for this equipment class analyzes the incorporation of a more efficient single-speed motor. All four manufacturers make multiple single-speed models and some might need to be redesigned to maintain a complete product offering. DOE expected that two small businesses will not incur any conversion costs, and the other two small businesses will incur a combined total of \$0.6 million in conversion costs to bring non-compliant small-size self-priming pool filter pumps into compliance.

DOE identified four small businesses that make standard-size non-self-priming pool filter pumps. The adopted efficiency level for this equipment class can be achieved through the incorporation of a more efficient single-speed motor. Two manufacturers offer all non-self-priming pool filter pumps in both single- and two-speed configurations. DOE estimated that these manufacturers will not incur any

¹³⁹ www.hoovers.com.

¹⁴⁰ www.cortera.com.

¹⁴¹ www.linkedin.com.

conversion costs, because they could discontinue non-compliant single-speed dedicated-purpose pool pumps and still continue to have the same product offering with their two-speed dedicated-purpose pool pumps. The two other manufacturers have a greater number of single-speed than two-speed non-self-priming pool filter pumps and DOE expected these manufacturers will redesign some dedicated-purpose pool pumps to maintain a complete product offering. In total, small manufacturers of non-self-priming pool filter pumps are estimated to redesign two standard-size non-self-priming pool filter pumps and incur \$0.7 million in conversion costs to bring non-compliant equipment into compliance.

Only one pressure cleaner booster pump model is offered in the market by small businesses. DOE did not have performance data for this pump; however, based on the no-standards case shipments distribution, 87 percent of pressure cleaner booster shipments already meet or exceed the adopted standard. Therefore, DOE expected that this model does not have to be redesigned under the adopted standard.

DOE estimates that the five small business will incur a total of \$6.6 million in conversion costs to bring non-complaint standard-size self-priming, small-size self-priming, standard-size non-self-priming, and pressure cleaner booster pool pumps into compliance. Using publicly available data, DOE estimates the average annual revenue of the five small manufacturers to be \$53.6 million.¹⁴² DOE expects small manufacturers will be able to spread their conversion costs over the four-and-a-half year and a half year compliance period between the expected publication of a final rule (2016) and the expected compliance year (2021). Given these assumptions, DOE estimates that conversion costs are 0.55 percent of total small business four-and-a-half year revenue. While the standards creates additional business risk for these small businesses, DOE's calculations show that the conversion costs associated with this increase in efficiency are moderate.

5. Duplication, Overlap, and Conflict With Other Rules and Regulations

DOE is not aware of any rules or regulations that duplicate, overlap, or conflict with the rule being considered today.

6. Significant Alternatives Considered and Steps Taken To Minimize Significant Economic Impacts on Small Entities

The discussion in the previous section analyzes impacts on small businesses that would result from adoption of this direct final rule, represented by TSL 3. In reviewing alternatives to the adopted rule, DOE examined energy conservation standards set at lower efficiency levels. While TSL 1 and TSL 2 would reduce the impacts on small business manufacturers, it would come at the expense of a reduction in energy savings and NPV benefits to consumers. TSL 1 achieves 79 percent lower energy savings and 77 percent less NPV benefits discounted at 7 percent to consumers compared to the energy savings and NPV benefits at TSL 3. TSL 2 achieves 21 percent lower energy savings and 26 percent less NPV benefits discounted at 7 percent to consumers compared to the energy savings and NPV benefits at TSL 3.

Establishing standards at TSL 3 balances the benefits of the energy savings and benefits to consumers at TSL 3 with the potential more significant burdens placed on DPPP manufacturers, including small business manufacturers. Accordingly, DOE is choosing not to adopt one of the other TSLs considered in the analysis, or the other policy alternatives examined as part of the regulatory impact analysis, included in chapter 17 of the direct final rule TSD.

Additional compliance flexibilities may be available through other means. EPCA provides that a manufacturer whose annual gross revenue from all of its operations does not exceed \$8 million may apply for an exemption from all or part of the energy conservation standards for a period not longer than 24 months after the effective date of a final rule establishing the standards. Additionally, Section 504 of the Department of Energy Organization Act, 42 U.S.C. 7194, provides authority for the Secretary to adjust a rule issued under EPCA in order to prevent "special hardship, inequity, or unfair distribution of burdens" that may be imposed on that manufacturer as a result of such rule. Manufacturers should refer to 10 CFR part 430, subpart E, and 10 CFR part 1003 for additional details.

C. Review Under the Paperwork Reduction Act

Manufacturers of dedicated-purpose pool pumps must certify to DOE that their products comply with any

applicable energy conservation standards. In certifying compliance, manufacturers must test their products according to the DOE test procedures for dedicated-purpose pool pumps, including any amendments adopted for those test procedures. DOE has established regulations for the certification and recordkeeping requirements for all covered consumer products and commercial equipment, including pumps. 76 FR 12422 (March 7, 2011); 80 FR 5099 (Jan. 30, 2015). The collection-of-information requirement for the certification and recordkeeping is subject to review and approval by OMB under the Paperwork Reduction Act (PRA). This requirement has been approved by OMB under OMB control number 1910-1400. Public reporting burden for the certification is estimated to average 30 hours per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information.

Notwithstanding any other provision of the law, no person is required to respond to, nor shall any person be subject to a penalty for failure to comply with, a collection of information subject to the requirements of the PRA, unless that collection of information displays a currently valid OMB Control Number.

D. Review Under the National Environmental Policy Act of 1969

Pursuant to the National Environmental Policy Act (NEPA) of 1969, DOE has determined that this direct final rule fits within the category of actions included in Categorical Exclusion (CX) B5.1 and otherwise meets the requirements for application of a CX. (See 10 CFR part 1021, app. B, B5.1(b); 1021.410(b) and App. B, B(1)–(5).) The rule fits within this category of actions because it is a rulemaking that establishes energy conservation standards for consumer products or industrial equipment, and for which none of the exceptions identified in CX B5.1(b) apply. Therefore, DOE has made a CX determination for this rulemaking, and DOE does not need to prepare an Environmental Assessment or Environmental Impact Statement for this rule. DOE's CX determination for this rule is available at <http://energy.gov/nepa/categorical-exclusion-cx-determinations-cx>.

E. Review Under Executive Order 13132

Executive Order 13132, "Federalism," 64 FR 43255 (Aug. 10, 1999) imposes certain requirements on Federal agencies formulating and implementing policies or regulations that preempt

¹⁴² This estimate is based on estimates from Hoovers (www.hoovers.com). Last accessed July 27, 2016.

State law or that have Federalism implications. The Executive Order requires agencies to examine the constitutional and statutory authority supporting any action that would limit the policymaking discretion of the States and to carefully assess the necessity for such actions. The Executive Order also requires agencies to have an accountable process to ensure meaningful and timely input by State and local officials in the development of regulatory policies that have Federalism implications. On March 14, 2000, DOE published a statement of policy describing the intergovernmental consultation process it will follow in the development of such regulations. 65 FR 13735.

DOE understands that publication of this direct final rule will preempt certain California Energy Commission regulations governing energy efficiency requirements for pool pumps. In accordance with Executive Order 13132, DOE has examined this rule and has determined that it would not have a substantial direct effect on any States, including California, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government. EPCA governs and prescribes Federal preemption of State regulations as to energy conservation for the products, including DPPP, that are the subject of this direct final rule. Additionally, DOE solicited and received comments from the California Energy Commission, which are reflected in this rulemaking. Finally, States, including California, can petition DOE for exemption from such preemption to the extent, and based on criteria, set forth in EPCA. (42 U.S.C. 6297) Therefore, no further action is required by Executive Order 13132.

F. Review Under Executive Order 12988

With respect to the review of existing regulations and the promulgation of new regulations, section 3(a) of Executive Order 12988, "Civil Justice Reform," imposes on Federal agencies the general duty to adhere to the following requirements: (1) Eliminate drafting errors and ambiguity, (2) write regulations to minimize litigation, (3) provide a clear legal standard for affected conduct rather than a general standard, and (4) promote simplification and burden reduction. 61 FR 4729 (Feb. 7, 1996). Regarding the review required by section 3(a), section 3(b) of Executive Order 12988 specifically requires that Executive agencies make every reasonable effort to ensure that the regulation (1) clearly specifies the preemptive effect, if any, (2) clearly

specifies any effect on existing Federal law or regulation, (3) provides a clear legal standard for affected conduct while promoting simplification and burden reduction, (4) specifies the retroactive effect, if any, (5) adequately defines key terms, and (6) addresses other important issues affecting clarity and general draftsmanship under any guidelines issued by the Attorney General. Section 3(c) of Executive Order 12988 requires Executive agencies to review regulations in light of applicable standards in section 3(a) and section 3(b) to determine whether they are met or it is unreasonable to meet one or more of them. DOE has completed the required review and determined that, to the extent permitted by law, this direct final rule meets the relevant standards of Executive Order 12988.

G. Review Under the Unfunded Mandates Reform Act of 1995

Title II of the Unfunded Mandates Reform Act of 1995 (UMRA) requires each Federal agency to assess the effects of Federal regulatory actions on State, local, and Tribal governments and the private sector. (2 U.S.C. 1531) For a regulatory action likely to result in a rule that may cause the expenditure by State, local, and Tribal governments, in the aggregate, or by the private sector of \$100 million or more in any one year (adjusted annually for inflation), section 202 of UMRA requires a Federal agency to publish a written statement that estimates the resulting costs, benefits, and other effects on the national economy. (2 U.S.C. 1532(a), (b)) The UMRA also requires a Federal agency to develop an effective process to permit timely input by elected officers of State, local, and Tribal governments on a "significant intergovernmental mandate," and requires an agency plan for giving notice and opportunity for timely input to potentially affected small governments before establishing any requirements that might significantly or uniquely affect them. On March 18, 1997, DOE published a statement of policy on its process for intergovernmental consultation under UMRA. 62 FR 12820. DOE's policy statement is also available at http://energy.gov/sites/prod/files/gcprod/documents/umra_97.pdf.

DOE has concluded that this direct final rule may require expenditures of \$100 million or more in any one year by the private sector. Such expenditures may include (1) investment in research and development and in capital expenditures by pool pump manufacturers in the years between the direct final rule and the compliance date for the new standards and (2)

incremental additional expenditures by consumers to purchase higher-efficiency pool pumps, starting at the compliance date for the applicable standard.

Section 202 of UMRA authorizes a Federal agency to respond to the content requirements of UMRA in any other statement or analysis that accompanies the direct final rule. (2 U.S.C. 1532(c)) The content requirements of section 202(b) of UMRA relevant to a private sector mandate substantially overlap the economic analysis requirements that apply under section 325(o) of EPCA and Executive Order 12866. The **SUPPLEMENTARY INFORMATION** section of this document and the TSD for this direct final rule respond to those requirements.

Under section 205 of UMRA, the Department is obligated to identify and consider a reasonable number of regulatory alternatives before promulgating a rule for which a written statement under section 202 is required. (2 U.S.C. 1535(a)) DOE is required to select from those alternatives the most cost-effective and least burdensome alternative that achieves the objectives of the rule unless DOE publishes an explanation for doing otherwise, or the selection of such an alternative is inconsistent with law. As required by 42 U.S.C. 6295(m) and 6316(a), this direct final rule establishes energy conservation standards for pumps that are designed to achieve the maximum improvement in energy efficiency that DOE has determined to be both technologically feasible and economically justified, as required by 6295(o)(2)(A), 6295(o)(3)(B) and 6316(a)). A full discussion of the alternatives considered by DOE is presented in chapter [17] of the TSD for this direct final rule.

H. Review Under the Treasury and General Government Appropriations Act, 1999

Section 654 of the Treasury and General Government Appropriations Act, 1999 (Pub. L. 105-277) requires Federal agencies to issue a Family Policymaking Assessment for any rule that may affect family well-being. This rule would not have any impact on the autonomy or integrity of the family as an institution. Accordingly, DOE has concluded that it is not necessary to prepare a Family Policymaking Assessment.

I. Review Under Executive Order 12630

Pursuant to Executive Order 12630, "Governmental Actions and Interference with Constitutionally Protected Property Rights," 53 FR 8859 (March 18, 1988), DOE has determined that this rule

would not result in any takings that might require compensation under the Fifth Amendment to the U.S. Constitution.

J. Review Under the Treasury and General Government Appropriations Act, 2001

Section 515 of the Treasury and General Government Appropriations Act, 2001 (44 U.S.C. 3516, note) provides for Federal agencies to review most disseminations of information to the public under information quality guidelines established by each agency pursuant to general guidelines issued by OMB. OMB's guidelines were published at 67 FR 8452 (Feb. 22, 2002), and DOE's guidelines were published at 67 FR 62446 (Oct. 7, 2002). DOE has reviewed this direct final rule under the OMB and DOE guidelines and has concluded that it is consistent with applicable policies in those guidelines.

K. Review Under Executive Order 13211

Executive Order 13211, "Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use," 66 FR 28355 (May 22, 2001), requires Federal agencies to prepare and submit to OIRA at OMB, a Statement of Energy Effects for any significant energy action. A "significant energy action" is defined as any action by an agency that promulgates or is expected to lead to promulgation of a direct final rule, and that (1) is a significant regulatory action under Executive Order 12866, or any successor order; and (2) is likely to have a significant adverse effect on the supply, distribution, or use of energy, or (3) is designated by the Administrator of OIRA as a significant energy action. For any significant energy action, the agency must give a detailed statement of any adverse effects on energy supply, distribution, or use should the proposal be implemented, and of reasonable alternatives to the action and their expected benefits on energy supply, distribution, and use.

DOE has concluded that this regulatory action, which sets forth energy conservation standards for pool pumps, is not a significant energy action because the standards are not likely to have a significant adverse effect on the supply, distribution, or use of energy, nor has it been designated as such by the Administrator at OIRA. Accordingly, DOE has not prepared a Statement of Energy Effects on this direct final rule.

L. Information Quality

On December 16, 2004, OMB, in consultation with the Office of Science and Technology Policy (OSTP), issued its Final Information Quality Bulletin for Peer Review (the Bulletin). 70 FR 2664 (Jan. 14, 2005). The Bulletin establishes that certain scientific information shall be peer reviewed by qualified specialists before it is disseminated by the Federal Government, including influential scientific information related to agency regulatory actions. The purpose of the bulletin is to enhance the quality and credibility of the Government's scientific information. Under the Bulletin, the energy conservation standards rulemaking analyses are "influential scientific information," which the Bulletin defines as "scientific information the agency reasonably can determine will have, or does have, a clear and substantial impact on important public policies or private sector decisions." Id at FR 2667.

In response to OMB's Bulletin, DOE conducted formal peer reviews of the energy conservation standards development process and the analyses that are typically used and prepared a report describing that peer review.¹⁴³ Generation of this report involved a rigorous, formal, and documented evaluation using objective criteria and qualified and independent reviewers to make a judgment as to the technical/scientific/business merit, the actual or anticipated results, and the productivity and management effectiveness of programs and/or projects. DOE has determined that the peer-reviewed analytical process continues to reflect current practice, and the Department followed that process for developing energy conservation standards in the case of the present rulemaking.

M. Congressional Notification

As required by 5 U.S.C. 801, DOE will report to Congress on the promulgation of this rule prior to its effective date. The report will state that it has been determined that the rule is a "major rule" as defined by 5 U.S.C. 804(2).

VIII. Approval of the Office of the Secretary

The Secretary of Energy has approved publication of this direct final rule.

¹⁴³ The 2007 "Energy Conservation Standards Rulemaking Peer Review Report" is available at the following Web site: <http://energy.gov/eere/buildings/downloads/energy-conservation-standards-rulemaking-peer-review-report-0>.

List of Subjects in 10 CFR Part 431

Administrative practice and procedure, Confidential business information, Energy conservation, Imports, Intergovernmental relations, Small businesses.

Issued in Washington, DC, on December 23, 2016.

David J. Friedman,

Acting Assistant Secretary, Energy Efficiency and Renewable Energy.

For the reasons set forth in the preamble, DOE amends part 431 of chapter II, subchapter D, of title 10 of the Code of Federal Regulations, as set forth below:

PART 431—ENERGY EFFICIENCY PROGRAM FOR CERTAIN COMMERCIAL AND INDUSTRIAL EQUIPMENT

■ 1. The authority citation for part 431 continues to read as follows:

Authority: 42 U.S.C. 6291–6317; 28 U.S.C. 2461 note.

■ 2. Section 431.462 is amended by adding the definition for "pool pump timer" in alphabetical order to read as follows:

§ 431.462 Definitions.

* * * * *

Pool pump timer means a pool pump control that automatically turns off a dedicated-purpose pool pump after a run-time of no longer than 10 hours.

* * * * *

■ 3. Section 431.465 is amended by adding paragraphs (e), (f), (g) and (h) to read as follows:

§ 431.465 Pumps energy conservation standards and their compliance dates.

* * * * *

(e) For the purposes of paragraph (f) of this section, "WEF" means the weighted energy factor and "hhp" means the rated hydraulic horsepower, as determined in accordance with the test procedure in § 431.464(b) and applicable sampling plans in § 429.59 of this chapter.

(f) Each dedicated-purpose pool pump that is not a submersible pump and is manufactured starting on July 19, 2021 must have a WEF rating that is not less than the value calculated from the following table:

Equipment class		Minimum allowable WEF score [kgal/kWh]	Minimum allowable WEF score [kgal/kWh]
Dedicated-purpose pool pump variety	hhp Applicability		
		Motor phase	
Self-priming pool filter pumps	0.711 hp ≤ hhp < 2.5 hp	Single	WEF = $-2.30 * \ln(hhp) + 6.59$.
Self-priming pool filter pumps	hhp < 0.711 hp	Single	WEF = 5.55, for hhp ≤ 0.13 hp $- 1.30 * \ln(hhp) + 2.90$, for hhp > 0.13 hp.
Non-self-priming pool filter pumps ...	hhp < 2.5 hp	Any	WEF = 4.60, for hhp ≤ 0.13 hp $- 0.85 * \ln(hhp) + 2.87$, for hhp > 0.13 hp.
Pressure cleaner booster pumps	Any	Any	WEF = 0.42.

(g) Each integral cartridge filter pool pump and integral sand filter pool pump that is manufactured starting on July 19, 2021 must be distributed in commerce with a pool pump timer that is either integral to the pump or a separate component that is shipped with the pump.

(h) For all dedicated-purpose pool pumps distributed in commerce with freeze protection controls, the pump must be shipped with freeze protection disabled or with the following default, user-adjustable settings:

(1) The default dry-bulb air temperature setting is no greater than 40 °F;

(2) The default run time setting shall be no greater than 1 hour (before the temperature is rechecked); and

(3) The default motor speed shall not be more than 1/2 of the maximum available speed.

7 CFR Part 1255

Organic Research, Promotion, and Information Order; Proposed Rule

DEPARTMENT OF AGRICULTURE**Agricultural Marketing Service****7 CFR Part 1255**

[Document Number AMS–SC–16–0112; PR–A1]

RIN 0581–AD55

Organic Research, Promotion, and Information Order**AGENCY:** Agricultural Marketing Service, USDA.**ACTION:** Proposed rule.

SUMMARY: This rulemaking proposes the establishment of an industry-funded promotion, research, and information program for certified organic products. The purpose of the program would be to strengthen the position of certified organic products in the marketplace, support research to benefit the organic industry, and improve access to information and data across the organic sector. The proposed program, the Organic Research, Promotion, and Information Order (proposed Order), was submitted to the U.S. Department of Agriculture (USDA) by the Organic Trade Association (OTA). Under the proposed Order, certified producers (producers) and certified handlers (handlers) with gross sales in excess of \$250,000 for the previous marketing year of certified organic agricultural commodities would pay an assessment of one-tenth of one percent of net organic sales. Importers importing greater than \$250,000 in transaction value of organic products for the previous marketing year would pay an assessment of one-tenth of one percent of the transaction value of certified organic products reported to the U.S. Customs and Border Protection (Customs or CBP). Producers, handlers, and importers that fall below these thresholds could choose to pay assessments into the program as a “voluntarily assessed” entity. The proposed program would be implemented under the Commodity Promotion, Research, and Information Act of 1996 (the Act) and would be administered by a board of assessment payers and one public member appointed by the Secretary of Agriculture (Secretary). An initial referendum would be held among mandatorily and voluntarily assessed entities (*i.e.* domestic producers, handlers, and importers) to determine whether they favor implementation of the program prior to it going into effect. This proposed rule also announces the Agricultural Marketing Service’s (AMS)

intent to request approval from the Office of Management and Budget (OMB) of new information collection requirements to implement the program.

DATES: Comments must be received by March 20, 2017. Pursuant to the Paperwork Reduction Act (PRA), comments on the information collection burden that would result from this proposal must be received by March 20, 2017.

ADDRESSES: Interested persons are invited to submit written comments concerning this proposal. Comments may be submitted on the Internet at: <http://www.regulations.gov> or to the Promotion and Economics Division, Specialty Crops Program, AMS, USDA, 1400 Independence Avenue SW., Room 1406–S, Stop 0244, Washington, DC 20250–0244; facsimile: (202) 205–2800. All comments should reference the docket number and the date and page number of this issue of the **Federal Register** and will be made available for public inspection, including name and address, if provided, in the above office during regular business hours or it can be viewed at <http://www.regulations.gov>.

Pursuant to the PRA, comments regarding the accuracy of the burden estimate, ways to minimize the burden, including the use of automated collection techniques or other forms of information technology, or any other aspect of this collection of information, should be sent to the above address. In addition, comments concerning the information collection should also be sent to the Desk Office for Agriculture, Office of Information and Regulatory Affairs, OMB, New Executive Office Building, 725 17th Street NW., Room 725, Washington, DC 20503.

FOR FURTHER INFORMATION CONTACT: Heather Pichelman, Division Director, Promotion and Economics Division, Specialty Crops Program, AMS, USDA, 1400 Independence Avenue SW., Room 1406–S, Stop 0244, Washington, DC 20250–0244; facsimile: (202) 205–2800; or electronic mail: Heather.Pichelman@ams.usda.gov.

SUPPLEMENTARY INFORMATION: This rule is issued pursuant to the Commodity Promotion, Research, and Information Act of 1996 (the Act) (7 U.S.C. 7411–7425).

Executive Summary

This action invites comments on a proposed industry-funded research, promotion, and information program for certified organic products. Organic products are products produced under the authority of the Organic Foods Production Act of 1990 (7 U.S.C. 6501–

6522) and its implementing regulations at 7 CFR part 205. The organic market includes a range of agricultural commodities such as fruits, vegetables, dairy, meat, poultry, breads, grains, snack foods, condiments, beverages, and packaged and prepared foods as well as non-food items such as fiber (linen and clothing), personal care products, pet food, and flowers. The program would be financed by an assessment on domestic producers, handlers and importers of organic products and would be administered by a board of industry members nominated by organic stakeholders and appointed by the Secretary. The proposed initial assessment rate would be one tenth of one percent of net organic sales for producers and handlers, and one tenth of one percent of the transaction value of organic products imported into the United States for importers. Citing domestic supply shortages, challenges with viable pest management, and market confusion, program proponents have proposed an organic research and promotion program for the purposes of: (1) Developing and financing an effective and coordinated program of research, promotion, industry information, and consumer education regarding organic commodities; and (2) maintaining and expanding existing markets for organic commodities.

A referendum would be held among eligible domestic producers, handlers and importers to determine whether they favor implementation of the program prior to it going into effect. The proposal was submitted to USDA by the Organic Trade Association (OTA), a membership business association, in collaboration with the 7-member GRO Organic Core Committee. OTA is a membership-based trade organization representing growers, processors, certifiers, farmers associations, distributors, importers, exporters, consultants, retailers, and others involved in the organic sector. The GRO Organic Core Committee is a subset of OTA’s larger Organic Research and Promotion Program Steering Committee. It included OTA subcommittee chairs and other industry leaders who built on the outreach and input from the larger committee to guide the development of a proposed Order.

This proposed rule also announces AMS’s intent to request approval from OMB of new information collection requirements to implement the program.

I. General Information

A. An Overview of “Organic”

Organic is a labeling term that indicates that a food or other agricultural product has been produced in accordance with the Organic Foods Production Act of 1990 (OFPA) and the regulations in 7 CFR part 205. USDA certified organic products have strict production and labeling requirements,

and must be grown and processed according to federal regulations which address, among many factors, soil quality, animal husbandry practices, pest and weed control, and use of additives. Organic producers rely on natural substances and physical, mechanical, or biologically based farming methods to the fullest extent possible. Certified organic handlers must use certified organic ingredients (for a minimum of 95 percent of the product) and only approved non-organic ingredients to label processed products as organic. Organic producers and handlers must prevent commingling and contact of organic ingredients and products with non-organic products and substances not allowed under the USDA organic regulations.

To make an organic claim or use the USDA Organic Seal, the final product must follow the applicable production, handling and labeling regulations and go through the organic certification process specified at 7 CFR part 205. To become certified, producers and handlers must apply to a USDA-accredited certifying agent, develop and implement an organic system plan, and

be inspected. Organic certification allows producers and handlers to sell their raw or processed agricultural products as organic. Each production or handling operation that produces or handles crops, livestock, livestock products, or other agricultural products that are intended to be sold, labeled, or represented as “100 percent organic,” “organic,” or “made with organic (specified ingredients or food group(s))” must be certified according to the USDA organic regulations (7 CFR part 205).¹

B. Does this action apply to me?

You may be potentially affected by this action if you are engaged in the organic industry. Potentially affected entities may include, but are not limited to:

- Persons (entities) that are currently certified to produce or handle organic products under the USDA organic regulations (7 CFR part 205);

This includes entities that are currently eligible for organic assessment exemption under the regulations of 25 Federal marketing orders and 22 research and promotion (R&P) programs.²

Exempt commodities under R&P programs	Exempt commodities under Federal marketing orders
Beef—7 CFR part 1260; Christmas trees—7 CFR part 1214; Cotton—7 CFR part 1205; Dairy—7 CFR part 1150; Eggs—7 CFR part 1250; Fluid milk—7 CFR part 1160; Hass Avocados—7 CFR part 1219; Highbush Blueberries—7 CFR part 1218; Honey—7 CFR part 1212; Lamb—7 CFR part 1280; Mangos—7 CFR part 1206; Mushrooms—7 CFR part 1209; Paper and Paper-Based Packaging—7 CFR part 1222; Peanuts—7 CFR part 1216; Popcorn—7 CFR part 1215; Pork—7 CFR part 1230; Potatoes—7 CFR part 1207; Processed Raspberries—7 CFR part 1208; Softwood Lumber—7 CFR part 1217; Sorghum—7 CFR part 1221; Soybeans—7 CFR part 1220; and Watermelons—7 CFR part 1210.	Florida citrus—7 CFR part 905; Texas citrus—7 CFR part 906; Florida avocados—7 CFR part 915; California—kiwifruit 7 CFR part 922; Washington apricots—7 CFR part 922; Washington sweet cherries—7 CFR part 923; Southeastern California grapes—7 CFR part 925; Oregon/Washington pears—7 CFR part 927; Cranberries grown in the States of Massachusetts, <i>et al.</i> —7 CFR part 929; Tart cherries grown in the States of Michigan, <i>et al.</i> —7 CFR part 930; California olives—7 CFR part 932; Colorado potatoes—7 CFR part 948; Georgia Vidalia onions—7 CFR part 955; Washington/Oregon Walla Walla onions—7 CFR part 956; Idaho-Eastern Oregon onions—7 CFR part 958; Texas onions—7 CFR part 959; Florida tomatoes—7 CFR part 966; California almonds—7 CFR part 981; Oregon-Washington hazelnuts—7 CFR part 982; California walnuts—7 CFR part 984; Far West spearmint oil—7 CFR part 985; California dates—7 CFR part 987; Pecans grown in the States of Alabama, <i>et al.</i> —7 CFR part 986; California raisins—7 CFR part 989; and California dried prunes—7 CFR part 993

- Persons (entities) that import USDA certified organic products into the U.S.
- Persons (entities) that import products into the U.S. under an organic equivalency arrangement.³

C. What should I consider as I prepare my comments for AMS?

Your comments should clearly indicate whether or not you support any or all of the provisions put forth for the research and promotion program being

proposed. You should clearly indicate the reason(s) for the stated position(s). Your comments should also offer any recommended language changes that would be appropriate for your position. Please include relevant information and data to further support your position (e.g. industry and impact information, etc.). Specifically, AMS is requesting comments on the following items:

1. Under the proposed Order, importers importing greater than

\$250,000 in transaction value of organic products for the previous marketing year would pay an assessment. AMS is seeking:

a. Comments from importers on the proposed order, including their level of support and any alternatives for AMS to consider.

b. Given the limitations of organic trade data, comments regarding the accuracy of information in the proposal

¹ The USDA organic regulations at 7 CFR 205.101 provides for some exclusions and exemptions from certification. For example, a production or handling operation that sells agricultural products as “organic” but whose gross agricultural income from organic sales totals \$5,000 or less annually is exempt from certification but must comply with the applicable organic production and handling requirements as specified at 7 CFR 205.101(a)(1).

² Section 10004 of the Agricultural Act of 2014 (2014 Farm Bill) (Pub. L. 113–79) amended Section 501 of the Federal Agriculture Improvement and Reform Act of 1996 (FAIR Act) (7 U.S.C. 7401) on February 7, 2014. AMS issued Final Rule “Exemption of organic products from assessment under a commodity promotion law” (80 FR 82006) on December 31, 2015.

³ The U.S. has established organic equivalency trade partnerships with Canada, European Union, Japan, Republic of Korea, and Switzerland (accessed on August 24, 2016). For more information on current partnerships, refer to the “International Trade Partners” page available at www.ams.usda.gov/NOPInternationalAgreements.

and any other data sources that AMS should consider.

c. Comments on AMS' proposed approach of using transaction value rather than the proponents proposal to use gross organic sales for the purpose of determining assessments;

2. Under the proposed Order, both organic food and organic non-food items (e.g., flowers, pet food, and personal care products) would be subject to assessment. AMS is seeking:

a. Comments on the inclusion of organic non-food items under the proposed program.

b. Comments regarding additional data that could support further analysis of the impacts and implementation of a program that includes organic non-food items.

3. Under the proposed Order, producers, handlers, and importers, including those with trade in "dual-covered commodities" (i.e., commodities for which an existing commodity promotion program exists), could be subject to assessment. AMS is seeking:

a. Comments on the proposed assessment approach, on the scenarios describing how entities, including those with "dual-covered commodities", could be assessed or exempted from the program, and on any tools that AMS should consider to minimize the burden of calculating assessments on the affected entities.

b. Comments on additional procedures that would address assessments to be paid by or refunded to entities with "dual-covered commodities" that operate on different fiscal year calendars.

c. Comments on the proposed de minimis level and its effects on the proposed program.

4. The Regulatory Flexibility Act analysis, particularly on the number and size of entities covered under the proposed Order.

5. The proposed definitions for "gross organic sales" and "net organic sales" given that these would be used to determine exemptions and calculation of assessments owed. In particular, AMS is interested on the impacts of using "gross organic sales" in instances when profits could be low.

6. The proposed requirement that "voluntarily assessed entities" would need to pay assessments for the majority of years after initial referendum and leading up to any subsequent referenda. AMS is also interested in comments about the requirement that such entities would need to be active assessment payers should they serve on the Board.

7. The proposed approach for the distribution of Board seats.

II. Executive Order 12988

This rulemaking has been reviewed under Executive Order 12988, Civil Justice Reform. It is not intended to have retroactive effect. Section 524 of the Act provides that it shall not affect or preempt any other Federal or State law authorizing promotion or research relating to an agricultural commodity.

Under section 519 of the Act, a person subject to an order may file a written petition with the U.S. Department of Agriculture (USDA) stating that an order, any provision of an order, or any obligation imposed in connection with an order, is not established in accordance with the law, and request a modification of an order or an exemption from an order. Any petition filed challenging an order, any provision of an order, or any obligation imposed in connection with an order, shall be filed within two years after the effective date of an order, provision, or obligation subject to challenge in the petition. The petitioner will have the opportunity for a hearing on the petition. Thereafter, USDA will issue a ruling on the petition. The Act provides that the district court of the United States for any district in which the petitioner resides or conducts business shall have the jurisdiction to review a final ruling on the petition, if the petitioner files a complaint for that purpose not later than 20 days after the date of the entry of USDA's final ruling.

III. Background

A. Statutory and Regulatory Authority

The Organic Foods Production Act of 1990 (7 U.S.C. 6501–6522), as amended, provided the authority for USDA to establish the USDA organic regulations at 7 CFR part 205. The regulations in 7 CFR part 205 define 'organic' as a labeling term that refers to an agricultural product produced in accordance with the Organic Foods Production Act of 1990 (OFPA) and the regulations in 7 CFR part 205.

The Act authorizes USDA to establish agricultural commodity research and promotion orders which may include a combination of promotion, research, industry information, and consumer information activities funded by mandatory assessments. These programs are designed to maintain and expand markets and uses for agricultural commodities. To date, there are 10 commodity promotion programs (i.e., research and promotion programs or R&P programs) operating under the authority of the Act. On February 7, 2014, section 10004 of the Agricultural Act of 2014 (2014 Farm Bill) (Pub. L. 113–79) amended section 501 of the

Federal Agriculture Improvement and Reform Act of 1996 (7 U.S.C. 7401), which authorizes generic commodity promotion programs under the various commodity promotion laws, to allow for an organic commodity promotion order. Specifically, the definition of "agricultural commodity" under section 513(1)(E) of the Act was amended to include "products, as a class, that are produced on a certified organic farm (as defined in 7 U.S.C. 6502); and certified to be sold or labeled as "organic" or "100 percent organic" (as defined in part 205 of title 7, Code of Federal Regulations (or a successor regulation)). Should this proposed rule become final, pursuant to section 10004 of the 2014 Farm Bill, the regulatory language currently exempting organic commodities from assessment by generic commodity promotion programs created under the various commodity promotion laws (7 U.S.C. 7401(e)) shall no longer be in effect. Such commodities would then become "dual-covered commodities", and persons producing, handling and importing them would need to elect to pay assessments to the commodity-specific program, or the organic commodity promotion program. For example, an organic blueberry producer that is currently exempt under the Blueberry Research and Promotion Order may no longer be exempt upon finalization of an organic research and promotion order. If a blueberry producer would be subject to assessment under both the Blueberry Promotion, Research, and Information Order and the proposed organic Order, they would need to select which program to pay their assessments into and submit the required forms to effectuate that election. AMS provides several scenarios for how the "dual-covered commodities" provision would work in the "Expenses and Assessments" section of this proposed rule and requests public comments on this issue.

The Act provides for a number of optional provisions that allow the tailoring of orders for different commodities. Section 516 of the Act provides permissive terms for orders, and other sections provide for alternatives. For example, section 514 of the Act provides for orders applicable to (1) producers, (2) first handlers and others in the marketing chain as appropriate, and (3) importers (if imports are subject to assessments). Section 516 states that an order may include an exemption of de minimis quantities of an agricultural commodity; different payment and reporting schedules; coverage of research,

promotion, and information activities to expand, improve, or make more efficient the marketing or use of an agricultural commodity in both domestic and foreign markets; provision for reserve funds; provision for credits for generic and branded activities; and assessment of imports.

In addition, section 518 of the Act provides for referenda to ascertain approval of an order to be conducted either prior to its going into effect or within three years after assessments first begin under the order. An order also may provide for its approval in a referendum based upon different voting patterns. Section 515 provides for establishment of a board from among producers, first handlers and others in the marketing chain as appropriate, and importers, if imports are subject to assessment.

This proposed rule also announces AMS's intent to request approval by the OMB of new information collection requirements to implement the program.

B. Overview of Proposal

The 2014 Farm Bill amended the Act to allow the organic industry to submit a proposal for an organic R&P program. As the membership-based business association for the organic industry in North America, the OTA took on the role as a proponent group in the development of an organic R&P program proposal. OTA represents businesses across the organic supply chain and addresses all things organic, including food, fiber/textiles, personal care products, and new sectors as they develop. To develop the proposal, OTA established and collaborated with the 7-member GRO Organic Core Committee. The GRO Organic Core Committee is a subset of OTA's larger Organic Research and Promotion Program Steering Committee. It included OTA subcommittee chairs and other industry leaders who built on the outreach and input from the larger committee to guide the development of a proposed Order.

Following the signing of the Farm Bill in February 2014, AMS met with OTA and other industry stakeholders, where they were informed that AMS works with program proponents once an industry proposal is submitted, and that implementing a program takes approximately 24–36 months from the time a final proposal is submitted to AMS for review. Of note, AMS also shared that the timing for promulgation of an order depends mostly on industry support, the number of comments received, and whether the proposal becomes controversial.

On May 15, 2015, OTA submitted a formal proposal for an organic R&P

program to AMS. In its petition for a proposed organic R&P program, OTA outlined its outreach to the industry to garner whether there was support for the program. OTA stated that it, among other things, facilitated six webinars, six panel debates and twenty town hall meetings across the country between 2012 and 2013. OTA said that it continued through 2014 and 2015 with its outreach through participation in gatherings of the organic industry such as the Western Organic Dairy Producers Alliance Conference in California, the Minnesota Department of Agriculture Organic Conference, and the Pennsylvania Farmers Union Annual Convention, staffing booths and participating in panels at these events. OTA also sent direct mailings to over 17,000 organic operations with information regarding a proposed organic R&P program in May and June of 2014, with a follow up mailing to over 11,000 organic operations in August 2014 based on feedback from the first mailing. OTA also conducted phone surveys of over 3,700 organic operations in 2014. According to OTA, of those who responded to these surveys, twice as many certified organic operations supported the establishment of an organic R&P program as opposed to the establishment of such a program. The proponent estimates that the completed surveys constitute a statistically representative sample with 11 percent of crop certificate holders, 13 percent of livestock certificate holders, and 8 percent of handling certificate holders completing the survey. The proponent group did not specify if any of these certificate holders were importers. AMS requests comments from importers conveying their views on this proposal.

While OTA's advocacy for an R&P program for organic products has garnered many supporters in the organic community, AMS has also heard from some farmers and farm organizations expressing opposition. In the interest of correctly gauging the level and specific topics of support and opposition, AMS issued an announcement inviting the public to submit alternative proposals or partial proposals on May 18, 2015. AMS allowed 60 days for submissions and received eight partial proposals. Since this time, AMS has maintained communication with OTA as the agency evaluated the proposal and researched how to propose such a new and complex order in a manner that is both equitable and functionally sound.

On April 1, 2016, AMS issued a Notice to Trade announcing a new procedure of posting all proposals for new R&P programs on the AMS Web

site, with the first proposal being OTA's proposed organic R&P program.⁴ The eight partial proposals were also made publicly available.⁵ On May 3, 2016, OTA submitted a letter to the AMS Administrator to formally amend its proposal to include some stakeholder feedback and language from the partial proposals. OTA submitted an amended proposal along with its letter.⁶ In its amended proposal, OTA revised its proposed definition of "research" to ensure it included agronomic and other production oriented research. The proponents also revised its proposed allocation of expenditures to ensure the majority of funds for research would go to agricultural research and the majority of funds for information would go to producer information. In its revision, OTA clarified that regional organic producer Board members establish the priorities, including regional considerations, for investments in agricultural research. Finally, OTA made a number of technical edits such as staggering Board terms.

Based on the information provided to date, AMS is publishing this proposed rule to invite comments on a proposed industry-funded research, promotion and information program for organic agricultural commodities. The program would cover the range of organic products that are certified and sold per the OFPA and its implementing regulations as well as organic products imported into the U.S. under an organic equivalency arrangement. Based on OTA's proposal, organic products would include both food items (e.g. fruits, vegetables, dairy, meat, poultry, breads, grains, snack foods, condiments, beverages, and packaged and prepared foods)⁷, and non-food items (fiber (linen

⁴ OTA's May 15, 2015 proposal is available on the AMS Web site at: https://www.ams.usda.gov/sites/default/files/media/OTAOrganicCheckoffApplicationUSDA_Combined.pdf.

⁵ The eight partial proposals submitted are available on the AMS Web site at: <https://www.ams.usda.gov/rules-regulations/research-promotion/proposals/organic>. The following organizations submitted partial proposals: Food & Water Watch (FWW), the Food & Water Watch (FWW), the Midwest Organic & Sustainable Education Service (MOSES), the National Farmers Union (NFU), the Northeast Organic Dairy Producers Alliance (NODPA), the Northeast Organic Farming Association (NOFA), the Ohio Ecological Food & Farming Association (OEFFA), the Organic Farmers' Agency for Relationship Marketing (OFARM), and the Western Organic Dairy Producers Alliance (WODPA).

⁶ OTA's May 2016 amended proposal is available on the AMS Web site at: <https://www.ams.usda.gov/sites/default/files/media/Revised20Organic20OTA20Proposal20Bundle200520022016.pdf>.

⁷ Of note, the USDA organic regulations at 7 CFR part 205 do not currently provide for organic certification of fish. Only upon issuance of a final rule on organic certification of fish would these

and clothing), supplements, personal care products, pet food, household products, and flowers). While the USDA organic regulations do not detail standards specific to non-food items, items that are agricultural products (e.g., pet food) and that meet the certification requirements of the USDA organic regulations can be certified and labeled “organic”, irrespective of the end use of the product.⁸ AMS seeks comments about the inclusion of non-food items in the proposed Order and any data that could support AMS analysis of the impacts and implementation of a program on the non-food organic sector.

The program would be financed by an assessment on domestic producers, handlers and importers of organic products and would be administered by a board of industry members nominated by organic stakeholders and selected by the Secretary. The initial assessment rate would be one tenth of one percent of net organic sales for producers and handlers with gross annual organic sales greater than \$250,000, and one tenth of one percent of the declared transaction value of organic products imported into the United States for importers of organic products declaring a transaction value greater than \$250,000 for the previous marketing year. While the program would provide for an exemption for (a) producers and handlers with gross organic sales of \$250,000 or less for the previous marketing year, and (b) importers with \$250,000 or less in transaction value of

imported organic products during the prior marketing year, it would also allow for such entities to voluntarily participate in the program by committing to pay assessments for the majority of years until the next referendum. While the proponent indicated a preference for mandating voluntarily assessed entities’ participation for the seven years following the initial referendum, AMS has modified this period to a majority of years for the purpose of consistency with subsequent referenda. Exports from the United States would also be exempt from assessments. The purpose of this program would be to: (1) Develop and finance an effective and coordinated program of research, promotion, industry information, and consumer education regarding organic commodities; and (2) maintain and expand existing markets for organic commodities.

A referendum would be held among eligible domestic producers, handlers and importers to determine whether they favor implementation of the program prior to it going into effect.

C. Industry Background

The Organic Marketplace

Organic foods and non-food items started out as a niche market primarily sold in direct-to-consumer markets. Double-digit annual growth in consumer demand in most years since the 1990s have allowed organic products to

expand from direct-to-consumer markets and specialty food stores to conventional supermarkets.⁹ In the following paragraphs, AMS used multiple data sources to describe the domestic production, imports, and export markets for organic products used to build the baseline and quantitative estimates for this proposed rule. Much of AMS’ analysis for this rule focuses on organic production, which produces raw agricultural commodities, livestock feed, and ingredients for food and non-food items (e.g., organic grains could be used for flour, for animal feed, or for pet food). Further, food items are covered in greater detail as they comprise the majority of the organic market and data on non-food items is more limited. AMS invites comments on the justification and limitations associated with each data source provided and any additional information on the non-food organic sector.

OTA’s 2016 Organic Industry Survey was used as a data source in several sections of this proposed rule owing to its focus on summarizing market information and trends within the organic industry across both food and non-food sectors. The Nutrition Business Journal conducts this survey on behalf of OTA. Data from the 2016 Organic Industry Survey (Table 1) shows that total organic food and non-food sales in the U.S. tripled from 2005 to 2015.

TABLE 1—U.S. ORGANIC SALES (\$1,000,000)

	2005	2006	2007	2008	2009	2010	2011	2012	2013	2014	2015
Food	13,260	15,629	18,188	21,571	22,497	24,123	26,336	29,023	32,335	35,952	39,754
Non-food	745	938	1,182	1,649	1,800	1,974	2,195	2,455	2,770	3,152	3,555

Non-food	33	26	26	40	9	10	11	12	13	14	13
Total	20	18	17	20	5	7	9	10	12	11	11

Source: OTA 2016 Organic Industry Survey, conducted 1/7/2016–3/25/2016

Also shown in Table 1, sales of organic non-food items in 2015 were nearly five times what they were in 2005. Between 2005 and 2015, organic sales increased most significantly from 2005 to 2008. Non-food sales had its

highest point in 2008 at 40 percent growth from the previous year. In 2009, growth of organic non-food sales fell to 9 percent, and leveled off to between 10 and 14 percent in 2010 to 2015. Similarly, food sales hit a high point in

2008 at 19 percent growth before falling to 4 percent in 2009. Between 2010 and 2015, organic food sales experienced growth of 7 to 11 percent in each year.

Sales of all food, organic and conventional, as shown in Table 2, has

commodities be subject to assessment under this proposed Order.

⁸In August 2005, the NOP issued a Policy Memorandum 11–2 to certifying agents, stating that agricultural products which meet the NOP

certification standards can be certified and labeled “organic,” irrespective of the end use of the product. Policy Memo 11–2 is available on the AMS Web site in the NOP Handbook at: <http://www.ams.usda.gov/rules-regulations/organic/handbook>.

⁹Catherine Greene, *Organic Agriculture*, Economic Research Service, USDA (last modified April 07, 2014), see *Overview*, available at <http://www.ers.usda.gov/topics/natural-resources-environment/organic-agriculture.aspx>.

increased between 3 and 5 percent in each of the last five years. In 2005, about 2 percent of total food sales was organic;

in 2015, organic food made up about 5 percent of total food sales. On average,

organic food sales make up about 93 percent of total organic sales.

TABLE 2—U.S. SALES OF ORGANIC FOOD COMPARED TO TOTAL FOOD SALES (\$1,000,000)

	2005	2006	2007	2008	2009	2010	2011	2012	2013	2014	2015

Source: OTA 2016 Organic Industry Survey, conducted 1/7/2016–3/25/2016

Organic foods continue to receive a price premium over their conventional counterparts, though the price premium fluctuates significantly depending upon the commodity. Organic produce and milk receive some of the highest price premiums over their conventional counterparts. These categories are also the top organic food sales categories.¹⁰ For the majority of organic produce, the price premium represents less than a 30 percent price differential. Milk, on the other hand, has been documented receiving a price premium anywhere from 60 to 109 percent.¹¹

Studies show that the vast majority of American consumers purchase organic food products, with a 2014 Consumer Reports survey showing that 84 percent of American consumers purchase organic food. The frequency at which they purchase organic food products,

however, varies significantly. Of those surveyed, 18 percent purchase organic food every week. Another 18 percent purchase organic food two to three times a month, while 9 percent said they purchase organic food once a month. Thirty-nine percent said they purchased organic food rarely and 15 percent said they never purchase organic food. One percent said they did not know or were unsure. Almost half of the 84 percent who buy organic foods, do so rarely.¹² A study conducted by OTA and KIWI magazine from 2009 to 2015 on U.S. parent consumer attitudes and beliefs showed that 83 percent of parents say they have purchased organic products, and 40 percent of parents are “making a great deal of effort” to choose organic foods and products.¹³

Domestic Producers and Production

AMS also utilized information from the National Agricultural Statistics Service (NASS) 2014 Organic Production Survey.¹⁴ In this survey, NASS reports acreage, production and sales data for organic crops and livestock for the 2014 production year. While NASS data from the 2015 production year became available on September 15, 2016, AMS has primarily used data sources for 2014 to produce a conservative estimate of the quantity of assessments that would be collected from covered entities through this proposed program. Given the increase in organic acreage, sales and value of organic products in 2015, the quantity of assessments is likely higher than our conservative estimate.¹⁵ A high-level comparison of 2014 and 2015 survey data is provided in Table 3.

TABLE 3—VALUE OF SALES OF CERTIFIED ORGANICALLY PRODUCED COMMODITIES

	2014	2015	Growth
Crops, including nursery and greenhouse	\$3,290,188,000	\$3,509,632,000	7
Livestock, poultry and their products	2,164,792,000	2,653,840,000	23
Total value of agricultural products sold	5,454,979,000	6,163,472,000	13

Source: NASS 2014 Organic Survey and NASS 2015 Certified Organic Survey

Prior to NASS's 2014 Organic Survey, USDA's Economic Research Service (ERS) collected information on U.S. organic production. Through analysis of USDA's Agricultural Resource Management Survey (ARMS) data, ERS continues to compare the costs of production and returns for organic and

conventional production in major crop/livestock sectors, and analyzes other economic characteristics of organic agriculture. Accordingly, this proposed rule references both NASS and ERS data on organic production where appropriate.

According to the NASS 2014 Organic Survey, there are 14,093 USDA-certified organic and exempt operations in the U.S. Exempt operations are those with annual sales of less than \$5,000, which are not certified, but may use the term “organic” to market their products. Exempt operations are prohibited from

¹⁴ National Agricultural Statistics Service, *2014 Organic Survey*, U.S. Department of Agriculture (September 2015), p. 1, available at <http://usda.mannlib.cornell.edu/usda/current/OrganicProduction/OrganicProduction-09-17-2015.pdf>.

¹⁵ This is also true with regard to AMS's analysis on imports.

using the “USDA Organic” seal. The total of certified organic producers in the U.S. amounts to 12,634 farms, with the remaining 1,459 operations exempt from certification.

Across the U.S., California has the greatest number of certified organic producers with 2,632 farms, 21 percent of the total U.S. population of certified organic producers. The next greatest is Wisconsin at 9 percent, followed by New York at 7 percent. The states of Iowa, Pennsylvania, and Washington each had 5 percent of total U.S. certified organic producers while Maine, Minnesota, Ohio, Oregon, and Vermont each have 4 percent. The following states have between 1 and 2 percent of total U.S. certified organic producers: Colorado, Connecticut, Florida, Georgia, Hawaii, Idaho, Illinois, Indiana, Kansas, Kentucky, Maryland, Massachusetts, Michigan, Missouri, Montana, Nebraska,

New Hampshire, New Mexico, North Carolina, North Dakota, South Dakota, Texas, Utah and Virginia. The remaining 15 of 50 states have less than 1 percent of total U.S. certified organic producers.

Because the proposed rule aims to cover all organic commodities, there are a variety of units of measurement that cannot be compared as they stand. For example, the unit of measurement for cotton is the U.S. Gin Universal Density Bale (bale), which is equal to 500 lbs. of lint cotton, while the unit of measurement for dairy products is the hundredweight (cwt). In an effort to address the Act requirement to quantify the geographical distribution of organic production in the United States, AMS used the 1992 ERS publication “Weights, Measures, and Conversion Factors for Agricultural Commodities and Their Products” to convert all data

from the 2014 NASS Organic Production Survey into the measurement unit of pounds. While conversion factors for many commodities can change from year to year, this is the most up-to-date publication by ERS with regard to conversion factors. The conversion factors for poultry and cattle, according to ERS, are as follows:

- 1 dozen eggs = 1.6 pounds
 - 1 head of chicken = 4.3 pounds
 - 1 head of turkey = 20.56 pounds
 - 1 head of cattle = 1,091 pounds
- Using production data converted into a single, comparable unit, AMS has prepared an analysis of different aspects of the composition of organic industry production in the U.S. in 2014. Starting with Table 4, AMS estimated the makeup of the U.S. organic industry by production volume on a per pound basis.

TABLE 4—U.S. CERTIFIED ORGANIC PRODUCTION BY AGRICULTURAL COMMODITY CATEGORY

	Fruits	Vegetables	Field crops	Dairy	Poultry
U.S.	7%	13%	47%	30%	2%

Source: NASS 2014 Organic Survey; units of measure converted lbs. by AMS using ERS conversion factors.

In terms of organic production volume in the U.S., field crops is largest with 47 percent of total volume, followed by dairy at 30 percent,

vegetables at 13 percent, fruits at 7 percent, and poultry at 2 percent. Organic production of beef cattle, nuts and turkey makes up the remaining 1

percent of total organic production volume.

Figure 1. Certified Organic Production by State, 2014

Certified Organic Production by State, 2014

Figure 1 above shows the distribution of organic production by volume across the U.S. Of total organic production across the U.S., California accounts for 21 percent. Based on NASS 2014 Organic Survey data, California produces the majority of the volume in most agricultural commodities. In descending order, California produced the following portion of organic agricultural commodities across the U.S.: 63 percent of nuts, 57 percent of vegetables, 50 percent of poultry (excluding eggs), 27 percent of fruit, 23 percent of dairy products, 23 percent of beef cattle, and 10 percent of field crops.

After California, Washington State is the next largest producer of organic commodities in the U.S. with 7 percent of total volume. The majority of Washington's production is in fruit, with 64 percent of the total organic non-citrus fruit production volume in the U.S. Florida's citrus industry accounts for 2 percent of all organic fruit production and 16 percent of U.S. organic citrus production. Washington also accounts for 12 percent of egg production, 6 percent production of vegetables, 5 percent of beef cattle, 3 percent of dairy products, and 1 percent of field crops.

New York, Oregon, and Wisconsin each produce 6 percent of total organic

volume in the U.S. Second only to California, Oregon produces 8 percent of organic vegetables. After California, New York and Oregon have the highest production of dairy products at 9 percent of total production each. New York and Oregon also produce 7 and 6 percent, respectively, of organic field crops. Wisconsin follows California in field crop production at 9 percent and in beef cattle at 3 percent. Wisconsin also produces 5 percent of organic dairy products, behind Pennsylvania at 6 percent and California.

In summary, production of organic agriculture in the U.S. is primarily concentrated in five states: California with 21 percent; Washington with 7 percent; and New York, Oregon, and Wisconsin with 6 percent total organic production each. In addition to these five top-producing states, 19 states produced between 1 and 5 percent of total production. The remaining 26 states produced less than 1 percent of total certified organic production in the U.S. The total sum of production data at the state level does not equal total production as reported for the entire U.S. Rather, production data reported by state in each of the categories discussed previously makes up 80 percent of total production data as reported at the national level. The reason for this

limitation is the withholding of data by state by NASS for proprietary reasons. The 20 percent absent data represent information that if disclosed by NASS would violate the anonymity of some of its survey respondents in their given states. This 20 percent absent data is mainly attributable to three commodities: Eggs, poultry, and cattle/beef, which amounts to less than 2.1 of total production. The missing 20 percent, however, would not likely alter the portions of production by state as they relate to each other as there are production values missing for 49 out of the 50 states. As discussed in §§ 1255.40 through 1255.47 of the proposed Order, which details the establishment and membership of the proposed Organic Research and Promotion Board, adding 2 of production to any of the proposed production regions would not alter the distribution of board seats. We invite comments on the determination that the 20 percent absent data would not be so significant as to modify the distribution of Board membership by production region.

Domestic Acreage

The U.S. had less than 1 million acres of certified organic farmland in 1990. This number doubled between 1990 and 2002, and doubled again between 2002

and 2005. Figure 2 below shows combined certified organic pasture and cropland and farm operations for 2000 to 2011, using data from ERS.¹⁶ No data exists for 2009. Between 2005 and 2011, the amount of organic pasture and rangeland fluctuated, but certified

organic cropland expanded by close to 80 percent. The organic livestock sector experienced even faster growth during the same time period. In 2011, there were roughly 5.4 million acres of certified organic farmland—with 3.1 million acres of cropland and 2.3

million acres of rangeland/pasture.¹⁷ Despite the growth in certified organic farmland over the last decade, certified organic farmland remains below one percent of the total farmland acreage in the U.S.

Organic acreage data from ERS stops at 2011. NASS released its first report on organic production with certified operations segregated from exempt operations in 2011. Data from ERS and NASS overlap in 2011 only. According to NASS, 2011 certified organic acreage totaled about 3.65 million acres, which included 2.03 million acres of cropland and 1.62 million acres of pasture and rangeland.¹⁸ In 2014, total certified organic acres operated was 3.64 million acres, a slight decrease from three years prior.¹⁹ As referenced earlier, data recently released by NASS in September 2015 shows a trend toward increased organic acreage (e.g., from 3.64 million acres in 2014 to 4.36 million acres in 2015).

The number of U.S. farms with acres in operation for certified organic production, however, increased 38 percent from 9,140 farms in 2011 to 12,595 farms in 2014. The amount of land transitioning to organic in 2014 was 122,175 acres on 1,365 farms, down from 2008 at 194,384 acres on 1,938 farms.²⁰ Land transitioning to organic was not reported by NASS in 2011.

Organic production has grown not only when measured in terms of acreage, but also when measured by the number of certified organic operations. When USDA first started certifying organic operations under the USDA organic regulations, which provided the authority for the National Organic Program (NOP), there were just over

7,000 certified organic operations. NASS reported 2011 total sales of organic products at more than \$3.5 billion.²² In 2014, total certified organic sales were nearly \$5.5 billion, up 54 percent from three years previously.²³ It should be noted that sales as reported by NASS represent sales by producers or farmers only. The figures aforementioned do not encompass sales by handlers, manufacturers, or retailers.

Geographic Distribution of U.S. Certified Operations

One of the limitations of the NASS 2014 survey is that it does not include all certified organic handlers. Thus, a list of certified organic producers and handlers was obtained from the "2014

¹⁶ Catherine Greene, *Organic Production*, Economic Research Service, U.S. Department of Agriculture, see Table 4. Certified organic producers, pasture, and cropland.

Annual Count of USDA–NOP Certified Organic Operations” report from the Organic Integrity Database managed by NOP.²⁴ The 2014 data show a total U.S. certified organic operations (producers

and handlers) at 19,465 entities, up 5 percent from 2013. As Figure 3 shows, the majority of certified operations are in California with more than 4,000 entities, or 21 percent of the U.S. total.

Wisconsin had more than 1,500 certified operations or 8 percent of the total. New York and Washington each had 6 percent of total U.S. certified operations with more than 1,000 entities apiece.

Figure 3. U.S. Certified Operations, 2014

Certified Organic Operations by State, 2014

International Markets

Products produced in foreign countries can also be USDA certified organic under the USDA organic regulations and imported into the U.S. In addition, products produced in foreign countries can be certified to a foreign standard and imported into the U.S. under an organic equivalency arrangement. Given that importers would be assessed under a proposed organic R&P program, a baseline

understanding of the international market for organic products is valuable.

The Foreign Agricultural Service (FAS) reports on imports and exports of agricultural commodities flowing into and out of the U.S. Specific trade data is available by FAS through its Global Agricultural Trade System (GATS).²⁵ Trade data for over 30 selected organic commodities show that U.S. organic exports measured more than \$553 million in value, while imports were about \$1.2 billion in value in 2014. The

majority of U.S. organic exports go to Canada and Mexico at 48 percent and 30 percent, respectively, but the U.S. also exports organic products to over 80 countries. Exports of organic products to Canada amounted to more than \$265 million in 2014, while organic exports to Mexico totaled nearly \$166 million in value. The top exports of organic agricultural products in 2014 were fresh apples, lettuce, and grapes at 21 percent, 13 percent, and 12 percent, respectively.

²⁵ Report to the Organic Trade Association—Preliminary Analysis of USDA's Organic Trade Data: 2011 to 2014. Edward C. Jaenicke, Iryna

Demko, April 2015 http://ota.com/sites/default/files/indexed_files/OTAJaenickeMay2015_TradeDataReport.pdf.

A key point of distinction between importers and organic producers and handlers is that under the regulations at 7 CFR part 205, a person that only sells, transports, stores, receives, or acquires products that are received in and remain in a container without being processed is “excluded” from certification (*i.e.*, does not need to be certified). This means that, in many cases, an importer who is only acquiring products to then sell in the U.S. in an existing container (*e.g.*, functioning as a broker) are not themselves certified. Such entities would not appear in NOP’s database of certified operations and can only be captured through other data sources (*e.g.*, through the U.S. Customs and Border Protection (CBP) database). According to data from CBP, there were more than 2,135 importers of organic products with codes in the Harmonized Tariff Schedule (HTS) in 2014. As reported by the U.S. Department of Commerce, Census Bureau, Foreign Trade Statistics data, organic products in the GATS database represent over \$1.2 billion in imports for 2014. More generally, USDA reports that all agricultural imports were valued at \$111.7 billion in 2014. Organic coffee, soybeans, bananas, and olive oil were the top organic imports.²⁶ It is important to note that due to the limited number of established HTS codes for organic products, the organic export and import figures do not capture all international trade for organic products.

AMS acknowledges that the limited organic trade data indicates that the number of importers of organic products is underreported. For this reason, AMS is requesting comments on how to obtain information on these importers for the purposes of this program.

D. Need for a Program

In the following paragraphs, AMS summarizes three lines of reasoning OTA provided as evidence of the need for the establishment of a national organic research and promotion program. OTA’s justification includes (1) domestic supply shortages of organic products, particularly feed and ingredients; (2) the need for viable pest management in organic production; and (3) market confusion.

Domestic Supply Shortages

Today, 93 percent of organic sales take place in conventional and natural food supermarkets and chains.²⁷

²⁶ Foreign Agricultural Service. Global Agricultural Trade System (GATS) database. U.S. Department of Agriculture. Available at <http://www.fas.usda.gov/gats>.

²⁷ Catherine Greene, *Organic Agriculture*, Economic Research Service, USDA (last modified

Organic foods are currently available in three out of four traditional grocery stores and about 20,000 natural food stores across the U.S.²⁸ The remaining 7 percent of organic food sales occur in farmers’ markets, foodservice, and marketing channels other than retail stores. The dramatic increase in conventional store participation in organic sales is not due to any decrease of direct-to-consumer markets. Farmers’ markets, to the contrary, have grown steadily from 1,755 markets in 1994 to 8,144 in 2013.²⁹ According to a USDA survey, farmers’ market managers believed that more organic farmers were needed to meet consumer demand.³⁰ According to a 2004 ERS report, “44 percent of organic handlers reported short supplies of needed ingredients or products” and “13 percent were unable to meet market demand for at least one of their organic products that year.”³¹ In addition, 52 percent of organic companies said that “a lack of dependable supply of organic raw materials has restricted their company from generating more sales of organic products.” In a nutshell, overcoming the challenge of meeting the demand for U.S. organic supply requires an increase in: (a) Certified organic farmers, (b) organic acreage, and (c) viable pest management options.

U.S. producers have been challenged to keep pace with growing consumer demand for organic products for over a decade, and new statistics from the U.S. Department of Commerce show that organic imports play a key role in meeting U.S. demand. Among all organic product imports, soybeans showed the biggest jump in value from 2011 to 2012, more than doubling to \$90.2 million, and imports of organic rice, wheat, and other U.S. staple crops also grew.³² There has also been increasing news coverage of the organic supply shortage. In 2014, demand for organic eggs was up, but there were not enough U.S. farmers growing organic soybeans and organic corn to feed the organic chickens. As a result, organic

egg producers cut back on production or bought foreign organic feed as reported by NPR.³³ *Bloomberg* recently wrote about the lack of organic farmers and low supplies of organic feed grain that is restraining organic dairy production across the U.S. and causing “severe shortages in the organic dairy aisle.”³⁴ Despite potentially higher returns, a 2015 ERS study stated that: “the adoption of organic field crop production has been slow and is challenging due to such factors as achieving effective weed control and the processes involved with organic certification.”³⁵

There is a three-year transition period to convert conventional farmland into organic farmland. During the transition period, the farm must adhere to all organic practices, but it is not allowed to market, sell, use the organic seal, or otherwise represent as organic products grown on that land during transition. While there are several USDA programs (*e.g.* Environmental Quality Incentives Program (EQIP), National Institute of Food and Agriculture (NIFA), and Natural Resources Conservation Service (NRCS)) that are designed to assist farms in the transition process, this three-year period can be difficult. During this time, the farm internalizes the increased production costs of an organic farm without receiving the price premium and, depending on the size and existing practices of the farm, may need to make dramatic changes to farming techniques. The proponent OTA stated its belief that a national industry-funded program could aim at increasing organic acreage by funding farmer education programs on organic certification, organic labeling, and organic farming techniques to help encourage farmers to transition to organic and help them during the transitional period.

Viable Pest Management

Organic and conventional farmers face similar challenges in finding the right combination of tools to help protect their products from pests. Just as in conventional farming, organic farming faces very real and imminent

threats from invasive species and other types of pests. There was a supply shortage of organic apples across the U.S. in April 2014 due to insect problems and some acreage reduction.³⁶ Organic farmers are restricted to the pest management substances that are approved in the National List of Allowed and Prohibited Substances (National List), which includes limited approved pest management strategies.

The National Organic Standards Board (NOSB), a Federal Advisory Committee Act (FACA) Committee, makes recommendations for amendments to the National List (List). Under the Sunset Provision of the OFPA, a substance must be reviewed by the NOSB within five years of its addition to the National List or its last sunset review, and renewed by the Secretary, or the substance will sunset. The NOSB also reviews petitions from individuals and organizations to add, remove, or change a listed substance and makes recommendations based on those petitions to the USDA twice a year.³⁷ The List has been amended several times since it went into effect in 2002. Several synthetic substances that were once allowed on the National List are now prohibited. With the removal of certain substances, organic farmers must reevaluate how to manage particular pests with what remains available to them.

The transition of organic apples and pears from antibiotic to non-antibiotic fire blight management tools is one example of changing pest management strategies that the proponent has said the proposed Order could help organic producers develop. Antibiotic fire blight management tools were phased out of organic production in late 2014. There are a number of completed and ongoing studies on non-antibiotic fire blight management tools with approved substances, but the time lag between when results are released and when they can be translated into actual farming practices can leave organic farmers unprotected against some very serious pests.³⁸ Additional funding for research (via an R&P program) could help farmers during these gaps, and

could anticipate changes to the List so that alternative farming techniques can already be in place when a substance is phased out.

The proposed program could also direct additional research dollars towards pest management. Such funds could provide for on-farm research devoted to helping organic farmers develop practices and techniques for current and future pest management issues, such as citrus greening disease. There is currently no strategy, either conventional or organic, that has proven to be 100 percent effective at treating or preventing the spread of citrus greening disease. Organic citrus producers need viable alternatives to the non-National List materials currently being used to treat citrus greening disease and other pest issues.

Market Confusion

The proponent group states that market confusion is another concern that could be addressed through R&P activities (e.g., consumer information). OTA cited a Consumer Reports survey to show that, while 84 percent of U.S. consumers buy organic foods sometimes, and 45 percent buy them at least once a month, there is a disparity in the marketplace between what the seal means and what consumers think it means.³⁹ OTA points to a Natural Marketing Institute report that states most consumers are: (a) Unaware of the characteristics or regulations of organic products, (b) are unclear about the benefits, or (c) easily confuse it with the term “natural”.⁴⁰ In its proposal, the proponent emphasizes that the number of labels and labeling claims in the market today contributes to consumer confusion. OTA identifies consumer confusion as the basis for the development of a federal organic law in 1990 and states that there is an ever increasing number of regulated and non-regulated labels that may be used on packaging (e.g. natural, local, non-GMO, etc.).

As one example, OTA cites recent research on U.S. and Canadian consumers showing that 17 percent of the people surveyed incorrectly believed that foods labelled “organic” were also locally grown. Another 23

percent falsely believed that local produce is grown organically.⁴¹

According to OTA consumer surveys in recent years, new organic consumers (i.e. those who only began purchasing organic products in the past two years) account for between 30 and 40 percent of American families. In 2014, 34 percent of surveyed consumers fell into this category.⁴² This means that for sales of organic agricultural commodities to maintain and expand in the long term, the industry must continually invest in educating consumers on the meaning of the USDA organic label.

Through an R&P program, the proponent hopes to educate those who are unaware of the benefits of organic products, as well as clear up confusion among consumers regarding what it means for food to be “organic”—as compared to other regulated and unregulated claims in the marketplace. The assessment is anticipated to generate over \$25 million annually. According to OTA, this assessment is vital to the long-term success of organic so that the resources of the diverse organic community can be pooled together to benefit the entire industry.

E. Provisions of Proposed Program

i. Definitions

Pursuant to section 513 of the Act, §§ 1255.1 through 1255.37 of the proposed Order define certain terms that would be used throughout the Order. Several of the terms are common to all R&P programs authorized under the Act while other terms are specific to the proposed Order. The following discussion explains the definitions and provisions of the proposed Order and describes AMS’s substantive departures from OTA’s proposal.

Sections 1255.11, 1255.13, 1255.22, 1255.27, 1255.33, 1255.34, 1255.35, 1255.36, and 1255.37 would define the terms “conflict of interest,” “Department or USDA,” “Order,” “person,” “Secretary,” “State,” “suspend,” “terminate,” and “United States,” respectively. The definitions are the same as those specified in section 513 of the Act.

Section 1255.1 would define the term “Act” to mean the Commodity Promotion, Research, and Information

Act of 1996 (7 U.S.C. 7411–7425), and any amendments thereto.

AMS added the term “Agricultural inputs” at section 1255.2 for consistency with the USDA organic regulations at 7 CFR part 205. Examples of agricultural inputs from the NASS 2014 Organic Production Survey description of “production expenses” have also been included for clarity. Lastly, this term also gives context to the term “Net organic sales” at section 1255.21. Thus, “Agricultural inputs” would be defined as: “all substances or materials used in the production or handling of organic agricultural products (e.g. fertilizer, lime, soil conditioners, agricultural chemicals, beneficial insects, other approved materials for pest control, seed, plants, vines, trees, feed purchased for livestock, etc.)”.

AMS added the term “Agricultural product” at proposed section 1255.3 for consistency with the USDA organic regulations at 7 CFR part 205. An “agricultural product” would be any agricultural commodity or product, whether raw or processed, including any commodity or product derived from livestock, which is marketed in the United States for human or livestock consumption. This term is also necessary to remain consistent with the regulated and recognized terms used by certified entities in the U.S., and to give context to the terms “ingredient” at section 1255.19 and “organic” at section 1255.23.

Consistent with the definition of “covered person” at 7 U.S.C. 7401 which describes who may be subject to an organic commodity promotion order as “a producer, handler, marketer, or importer of an organic agricultural commodity”, the definition for “assessed entity” at section 1255.4 states that this order is applicable to certified organic producers, certified organic handlers, and importers. Under the permissive terms under section 516 of the Act, the term “assessed entity” also provides exemptions for covered persons. More specifically, any certified organic producer or certified organic handler (as defined in §§ 1255.10 and 1255.9) that has gross organic sales in excess of \$250,000 for the previous marketing year must pay assessments to the proposed Board.

OTA’s proposal to assess entities based on the proposed definition of “gross organic sales” (see section 1255.16) makes it challenging to assess importers at the U.S. port of entry, because the importer may engage in a variety of roles (e.g., as a wholesaler that has purchased the product from abroad, but has yet not sold it in the U.S., or as

a customs broker that is paid a fee to transact customs business on behalf of others).⁴³ An importer can, however, report on the transaction value (the price actually paid from the buyer to the seller for the merchandise) for the imported merchandise (19 CFR 152.103). Therefore, AMS determined that domestic importers (§ 1255.17) with a transaction value (“Entered Value” on CBP Form 7501) greater than \$250,000 for organic products during the previous marketing year would be assessed under the proposed Order.⁴⁴ AMS seeks comments on this approach.

Additionally, any exempt covered person may elect to participate in the proposed Order by remitting an assessment pursuant to § 1255.52 (see “voluntarily assessed entity” at sections 1255.38 and 1255.52).

Section 1255.5 would define the term “Board” or “Organic Research and Promotion Board” to mean the administrative body established pursuant to § 1255.40, or such other name as recommended by the Board and approved by the Secretary.

Pursuant to the permissive terms under section 516 of the Act, the proposed Order would provide for three exemptions which would need to be applied for annually. The document the Board would use to grant an exemption would be a “certificate of exemption” which is defined as a certificate issued by the Board, pursuant to § 1255.53, to an eligible certified organic producer, certified organic handler or importer. The three exemptions are discussed in further detail in the description of section 1255.53.

Organic certification verifies that a farm or handling facility located anywhere in the world complies with OFPA and the USDA organic regulations and allows an entity to sell,

⁴³ Customs business. “Customs business” means those activities involving transactions with CBP concerning the entry and admissibility of merchandise, its classification and valuation, the payment of duties, taxes, or other charges assessed or collected by CBP on merchandise by reason of its importation, and the refund, rebate, or drawback of those duties, taxes, or other charges. “Customs business” also includes the preparation, and activities relating to the preparation, of documents in any format and the electronic transmission of documents and parts of documents intended to be filed with CBP in furtherance of any other customs business activity, whether or not signed or filed by the preparer. However, “customs business” does not include the mere electronic transmission of data received for transmission to CBP and does not include a corporate compliance activity. <https://www.law.cornell.edu/cfr/text/19/111.1>

⁴⁴ U.S. Customs and Border Protection relies upon CBP Form 7501 “Entry Summary” to determine relevant information (e.g., transaction value, classification, origin, etc.) regarding the imported commodity. Available at: <https://www.cbp.gov/trade/programs-administration/entry-summary/cbp-form-7501>.

label, and represent products as organic. The regulations at 7 CFR part 205 describe the specific standards required for the use of the word “organic” or the USDA organic seal on food, feed, or fiber products. For this reason, AMS added two new terms to the proposed Order for “certification” and “certified operation” for consistency with the regulations at 7 CFR part 205. Additional language regarding the recognition of organic products imported under established organic equivalency arrangements is included in the section 1255.7 definition of “certification or certified”, which is defined as: “a determination made by a USDA-accredited certifying agent that a production or handling operation is in compliance with the Organic Foods Production Act of 1990 (7 U.S.C. 6501–6522) and the regulations in 7 CFR part 205 or to an authorized international standard, and any amendments thereto, and which is documented by a certificate of organic operation”.⁴⁵ Section 1255.8 defines a “certified operation” as a crop or livestock production operation, wild-crop harvesting or handling operation, or portion of such operation that is certified by a USDA-accredited certifying agent as utilizing a system of organic production or handling as described by the Organic Foods Production Act of 1990 (7 U.S.C. 6501–6522) and the regulations in 7 CFR part 205. The products that such certified operations are certified to produce and/or handle are documented by a certificate of operation, and are commonly referred to as “certified organic” or “certified” products.

The USDA organic regulations at 7 CFR part 205 provide separate definitions for the terms “handle”, “handler”, “handling operation” and “producer” that share similarities with the Act’s definitions for the terms “first handler” and “producer”. To make a clear distinction between the proposed Order’s terms and the Act’s commonly used terms “first handler” and “producer”, and to reiterate that organic products must be produced by certified entities, AMS departed from OTA’s proposal and has changed the term in section 1255.9 from “organic handler” to “certified organic handler”. A “certified organic handler” would be defined as a person who handles certified organic products in accordance

⁴⁵ The United States has trade arrangements with several nations to facilitate the exchange of organic products. These arrangements provide additional market opportunities for USDA organic producers. The current terms of such arrangements are available at: <https://www.ams.usda.gov/services/organic-certification/international-trade>.

with the definition specified in 7 CFR 205.100, the requirements specified in 7 CFR 205.270 through 7 CFR 205.272, and all other applicable requirements of 7 CFR part 205 and receives, sells, consigns, delivers, or transports certified organic products into the current of commerce in the United States, the District of Columbia, the Commonwealth of Puerto Rico, or any territory or possession of the United States. Further, section 1255.10 was changed from “organic producer” to “certified organic producer”, which is defined as a person who produces certified organic products in accordance with the definition specified in 7 CFR 205.100, the requirements specified in 7 CFR 205.202 through 7 CFR 205.207 or 7 CFR 205.236 through 7 CFR 205.240, and all other applicable requirements of 7 CFR part 205.

Consistent with the Act, section 1255.11 defines “Conflict of interest” as a situation in which a member or employee of the Board has a direct or indirect financial interest in a person who performs a service for, or enters into a contract with, the Board for anything of economic value.

OTA’s proposed term “covered entity” was omitted because it was duplicative of the term “assessed entities”.

Section 1255.12 defined “Customs or CBP” as the United States Customs and Border Protection, an agency of the United States Department of Homeland Security.

Section 1255.13 defined “Department” as the U.S. Department of Agriculture, or any officer or employee of the Department to whom authority has heretofore been delegated, or to whom authority may hereafter be delegated, to act in the Secretary’s stead.

The 2014 Farm Bill amendments to 7 U.S.C. 7401 (Commodity promotion and evaluation), which provided the authority for USDA to issue an organic commodity promotion order, also specified that persons covered by both an organic commodity promotion order and another agricultural commodity promotion order would be allowed to elect which order to be assessed under. Such “dual-covered commodities” include the commodities covered under the 22 research and promotion programs and the 25 marketing orders listed previously in this rule. Consistent with 7 U.S.C. 7401, section 1255.14 would define a “dual-covered commodity” as an agricultural commodity that (a) is produced on a certified organic farm; and (b) is covered under both—(1) this Part; and (2) any other agricultural commodity promotion order issued under a commodity promotion law.

More simply put, under an organic commodity promotion order, an organic blueberry *producer* (emphasis added) would be producing a “dual-covered commodity”, because there is already a Blueberry Promotion, Research and Information Order (7 CFR part 1218), and that order assesses blueberry *producers* (emphasis added). Under the proposed Order, an organic blueberry producer would have the option to pay into either the blueberry program or the organic program.

However, only covered persons under an applicable commodity promotion order (which can include producers, handlers, first handlers, processors, importers, exporters, feeders, and seed stock producers, depending upon the order) are entitled to such an election. For example, an organic blueberry handler would not have the ability to elect to pay into the blueberry program instead of the organic program, as blueberry handlers are not “covered” by the blueberry program and are not assessed. AMS provides several scenarios for how the “dual-covered commodities” provision would work in the “Expenses and Assessments” section of this proposed rule and requests public comments on this issue. The scenarios include how assessments would work for a person producing both organic and conventional products (*i.e.*, “split operations”) and a person producing multiple commodities.

Many crop producers use the terms “marketing year” and “crop year” interchangeably.⁴⁶ For example, the 2008 wheat crop year, was June 1, 2008, through May 30, 2009. Not only does the crop year vary for each commodity, but it also often does not coincide with the calendar year. For example, for peanuts, which would be a dual-covered commodity under the Order, producers currently pay assessments based on the crop year (August 1 to July 31). For the purposes of this Order, section 1255.15 would define “fiscal year and marketing year” as the 12-month period ending on December 31 or such other period as recommended by the Board and approved by the Secretary. AMS invites public comments on additional procedures that would address assessments to be paid by or refunded to producers, handlers, and importers of dual-covered commodities covered under commodity promotion programs

⁴⁶ USDA ERS Farm Policy Glossary definition for “crop year” is “the 12-month period starting with the month when the harvest of a specific crop typically begins”. <http://www.ers.usda.gov/topics/farm-economy/farm-commodity-policy/farm-policy-glossary.aspx>.

operating under different fiscal year calendars.

The definitions for the terms “gross organic sales” and “net organic sales” at sections 1255.16 and 1255.21, respectively, are highly important to those entities that could potentially be affected should this proposed rule become final. AMS is inviting comments specific to the definitions for these two terms because their wording establishes the structure for: (a) determining which entities are eligible for exemptions, and (b) calculating the assessments certified producers and certified handlers shall pay to the Board.

ERS and NASS employ a variety of terms and measures to describe different aspects of sales and income of U.S. farms. For example, one descriptor of U.S. farms comes from the ERS 2012 Census of Agriculture Farm Typology Report, which uses farm size classifications based on a measure called “gross cash farm income” (GCFI). GCFI includes the farm operator’s sales of crops and livestock, fees for delivering commodities under production contracts, government payments, and farm-related income. Another measure, which is used in the NASS and RMA’s (Risk Management Agency) 2014 Organic Survey, is “value of sales”, which is defined as: “the gross value of sales before taxes and production expenses of all organic agricultural products sold or removed from the place in 2014 regardless of who received the payment. The gross value of sales is at the commodity level and does not include value-added organic products”.⁴⁷

ERS’s 2014 edition of the Structure and Finances of U.S. Farms: Family Farm Report states that gross value of sales “can be much larger than GCFI for farms with livestock production contracts, because the value of the livestock removed is included in gross [value of] farm sales. Contract producers receive a production contract fee for their services, but the fee is a fraction of the value of livestock removed.”⁴⁸ In other words, a dairy farmer operating under a production contract to raise heifers, or a poultry operation under a production contract to raise broilers,

⁴⁷ USDA NASS, 2012 Census of Agriculture, Special Study: 2014 Organic Survey. Special Tabulation on Certified Organic Farms Sales. Public Survey can be accessed at https://www.agsensus.usda.gov/Publications/2012/Online_Resources/Organics/ORGANICS.pdf.

⁴⁸ Hoppe, Robert A. *Structure and Finances of U.S. Farms: Family Farm Report, 2014 Edition*, EIB-132, U.S. Department of Agriculture, Economic Research Service, December 2014. Accessed at www.ers.usda.gov/publications/eib-economic-information-bulletin/eib132.

could both have high gross sales, but low net profit. AMS is requesting public comment on this issue owing to its being highlighted as an issue of concern in a partial proposal submitted to AMS from an organic dairy producers association.⁴⁹

In an effort to reduce the burden of reporting time associated with this proposed program, AMS researched what measures of sales and incomes that private businesses already calculate on an annual basis for the purpose of filing U.S. income tax returns. Consequently, for the purposes of clarity and bringing the definition closer into alignment with the IRS definition of “gross receipts”, AMS has chosen not to adopt OTA’s proposed definition for “gross organic revenue”, which was defined as: “total gross sales in organic products”. AMS instead proposes the term: “Gross organic sales”, which would be defined at section 1255.16 as: “the total amount the person received for all organic products during the fiscal year without subtracting any costs or expenses.”

As previously noted, importers currently do not need to be certified. Given this point, section 1255.17 would define an “importer” as: any person who imports certified organic products from outside the United States for sale in the United States as a principal or as an agent, broker, or consignee of any person who produces organic products outside the United States for sale in the United States, and who is listed in the import records as the importer of record for such organic products. Importers of organic products can be identified through organic certificates, import certificates, HTS codes, or any other demonstration that they meet the definition above.

Section 1255.18 would define “information” as information and programs for consumers, the organic industry, and producers. This includes educational activities and information and programs designed to enhance and broaden the understanding of the use and attributes of organic products, increase organic production, support the transition of acres and farms to organic production in the United States, provide technical assistance, maintain and expand existing markets, engage in crisis management, and develop new markets and marketing strategies. These include:

(a) Consumer education, advertising and information, which means any effort taken to provide information to,

and broaden the understanding of, the general public regarding organic products; and

(b) Industry information, which means information and programs that would enhance the image of the organic industry, maintain and expand existing markets, engage in crisis management, and develop new markets and marketing strategies; and

(c) Producer information, which means information related to agronomic and animal husbandry practices and certification requirements, and information supporting the sustainable transition of acreage, farms and ranches to organic production in the United States, long-term system management, increasing organic production, direct and local marketing opportunities, export opportunities, and organic research.

AMS notes that the proposed definition incorporates feedback on the definition from a number of partial proposals.

AMS added the term “ingredient” at proposed section 1255.19 for consistency with the USDA organic regulations at 7 CFR part 205 and to give context to the terms “net organic sales” at section 1255.21. An “ingredient” would be defined to mean: any substance used in the preparation of an agricultural product that is still present in the final commercial product as consumed.

Section 1255.20 would define the term “National Organic Program” to mean: the program authorized by the Organic Foods Production Act of 1990 (OFPA) (7 U.S.C. 6501–6522) for the purpose of implementing its provisions.

Distinct from the commonly held definition of “net sales”, which can be described as: The amount of sales generated after the deduction of returns, allowances for damaged or missing goods and any discounts allowed, section 1255.21 would define “Net organic sales” to mean: Gross sales in organic products minus (a) the cost of certified organic ingredients, feed, and agricultural inputs used in the production of organic products and (b) the cost of any non-organic agricultural ingredients used in the production of organic products.⁵⁰

Section 1255.22 would define “Order” to mean: An order issued by the Secretary under section 514 of the Act that provides for a program of generic promotion, research, education and information regarding organic products authorized under the Act.

OTA’s proposed term “organic certificate holder” was omitted because it was duplicative of the terms “certified organic handler” and “certified organic producer”.

For statutory and regulatory consistency, AMS added the term “organic” at section 1255.23 to mean: A labeling term that refers to an agricultural product produced in accordance with the Organic Foods Production Act of 1990 (OFPA) 1990 (7 U.S.C. 6501–6522) and the regulations in 7 CFR part 205. The primary purpose of the term “organic” in the proposed Order is as a modifier in reference to products produced by certified organic producers and/or certified organic handlers. For clarification, the phrase “organic products” used throughout the Order are synonymous with the terms: “certified products” or “certified organic products”.⁵¹

Section 1255.24 would define “organic products” to mean: Products produced and certified under the authority of the Organic Foods Production Act of 1990 (7 U.S.C. 6501–6522) and the regulations in 7 CFR part 205 or to an authorized international standard, and any amendments thereto.

Section 1255.25 would define Organic Trade Association (OTA) as a membership business association who, in collaboration with the GRO Organic Core Committee, petitioned USDA for the Organic Research, Promotion, and Information Order. OTA is a membership-based trade organization representing growers, processors, certifiers, farmers associations, distributors, importers, exporters, consultants, retailers, and others involved in the organic sector. The GRO Organic Core Committee is a subset of OTA’s larger Organic Research and Promotion Program Steering Committee. This was added to clarify the organization who would assist the Department with nominations for the initial Board under section 1255.41.

Section 1255.26 would define “part” to mean: The Organic Research, Promotion, and Information Order and all rules, regulations, and supplemental orders issued pursuant to the Act and the Order. The Order shall be a *subpart* of such part.

Throughout the order, the terms “person/persons” and “entity/entities” are often used interchangeably. Section 1255.27 would define “person” to mean: Any individual, group of individuals, partnership, corporation,

⁴⁹ Northeast Organic Dairy Producers Alliance, Partial proposal on an organic commodity promotion order. <https://www.ams.usda.gov/sites/default/files/media/OrganicCheckoff/PartialProposal20NODPA207.18.15.pdf>.

⁵⁰ The regulations at 7 CFR part 205 specify strict conditions for the use of non-organic agricultural ingredients in organic products.

⁵¹ The term “organic” is also used in the terms “certified organic handler” at section 1255.9 and “certified organic producer” at section 1255.10, to more clearly identify the types of products such entities are certified to sell.

association, cooperative, or any other legal entity.⁵² Comparable to the same definition at 7 CFR part 205, section 1255.28 would define a “product processor” as: a certified organic handler who cooks, bakes, heats, dries, mixes, grinds, churns, separates, extracts, cuts, ferments, eviscerates, preserves, dehydrates, freezes, or otherwise manufactures organic products, and includes the packaging, canning, jarring, or otherwise enclosing organic food in a container.

Section 1255.29 would define “programs, plans and projects” to mean: Those research, promotion, and information programs, plans or projects established pursuant to the Order.

Section 1255.30 would define “promotion” to mean: Any action, including paid advertising and the dissemination of information, utilizing public relations or other means, to enhance and broaden the understanding of the use and attributes of organic products for the purpose of maintaining and expanding markets for the organic industry.

Section 1255.31 would define the term “Qualified State Commodity Board” to mean: For purposes of section 1255.54 governing assessment offsets, an existing or future producer or handler governed entity—

- (a) That is authorized by State law or a State government agency;
- (b) That is organized and operating within a State;
- (c) That is not federally administered; and
- (d) That receives mandatory contributions and conducts promotion, research, and/or information programs.

In response to stakeholder feedback obtained from the partial proposals previously mentioned, OTA’s May 2016 revised proposal broadened the proposed definition of “research” to include agricultural research as a priority. Therefore, section 1255.32 would define “research” to include definitions for both agricultural and other research:

- (a) Agricultural research includes any type of investigation, study, evaluation or analysis (including related education, extension, and outreach activities) designed to improve organic farm production systems and practices, increase farm profitability and productivity, expand organic farming opportunities, and enhance sustainability for farms, farm families and their communities; enhance plant

and animal breeding and varietal development for organic systems and improve the availability of other production inputs; optimize natural resource conservation, biodiversity, ecosystem services, and other environmental outcomes of organic agriculture, and advance organic farm and food safety objectives.

(b) Other research includes any type of investigation, study, evaluation or analysis (including related education, extension, and outreach activities) designed to enhance or increase the consumption, image, desirability, use, marketability, or production of organic products; or to do studies on nutrition, market data, processing, environmental and human health benefits, quality of organic products, including research directed to organic product characteristics and product development, including new uses of existing organic products, new organic products or improved technology in the production, processing and packaging of organic products.

Section 1255.33 would define “Secretary” to mean: The Secretary of Agriculture of the United States, or any other officer or employee of the Department to whom authority has been delegated, or to whom authority may hereafter be delegated, to act in the Secretary’s stead.

Section 1255.34 would define “state” as: Any of the 50 States of the United States, the District of Columbia, the Commonwealth of Puerto Rico, or any territory or possession of the United States.

Section 1255.35 would define “suspend” to mean: To issue a rule under 5 U.S.C. 553 to temporarily prevent the operation of an order or part thereof during a particular period of time specified in the rule.

Section 1255.36 would define “terminate” to mean: To issue a rule under 5 U.S.C. 553 to cancel permanently the operation of an order or part thereof beginning on a date certain specified in the rule.

Section 1255.37 would define “United States” to mean: Collectively the 50 States, the District of Columbia, the Commonwealth of Puerto Rico and the territories and possessions of the United States.

Section 1255.38 would define a “voluntarily assessed entity” to mean: Any covered person with gross organic sales or transaction value of \$250,000 or less for the previous marketing year that elects to participate in the Order by remitting an assessment pursuant to § 1255.52.

ii. Establishment of the Board

Pursuant to section 515 of the Act, §§ 1255.40 through 1255.47 of the proposed Order would detail the establishment and membership of the proposed Organic Research and Promotion Board, nominations and appointments, the term of office, removal and vacancies, procedure, reimbursement and attendance, powers and duties, and prohibited activities.

Section 1255.40 would specify the Board establishment and membership. The Board would be composed of mandatorily and voluntarily assessed entities (*i.e.* domestic certified organic producers, handlers, and importers for the U.S. market who produce, handle, and import organic products in the United States during a fiscal period). The Board would be comprised of 17 seats as follows: 8 certified organic producer seats (including a voluntarily assessed producer), 7 certified organic handler seats, one importer seat, and one at-large public member, who shall be a non-voting member. Thus, each voting member of the board represents 6.25 percent of the votes.

While OTA’s proposal took the approach of distributing the producer seats based on the number of certified operations per state (see Table 5), AMS took a different approach to ensure consistency with section 7414 of the Act. Section 7414 of the Act states that “the composition of each board shall reflect the geographical distribution of the production of the agricultural commodity involved in the United States and the quantity or value of the agricultural commodity imported into the United States”. For this reason, AMS combined the commodity-level production data available from the 2014 NASS Organic Production Survey to estimate certified organic production as a whole for each state. As previously mentioned, AMS used ERS conversion factors to convert commodity production volumes (*e.g.* bushels of blueberries, gallons of milk, tons of grapes, etc.) to the same measurement of pounds. This made it possible to generate an estimate of the percent certified organic production by state, and combine them into “production regions” representing the number of producer seats that OTA proposed.

Table 5, below, shows the geographical distribution of producer board seats by region as proposed by OTA in May 2016. The portion of total U.S. certified organic production and certified organic farm operations has been calculated to illustrate how the proposed distribution comports with the Act. As previously stated, NASS data on

⁵² Under existing research and promotion programs, the identification method for a “person” or “entity” is a taxpayer identification number (TIN) used by the Internal Revenue Service (IRS).

certified organic production at the state level represents around 80 percent of

total production at the national level. This is due to proprietary concerns that

prevent NASS from publishing data on a more micro level.

TABLE 5—GEOGRAPHIC REGIONS AS PROPOSED BY OTA, MAY 216

	States	Portion of U.S. certified organic production (percent)	Portion of U.S. certified organic farm operations (percent)	Board seats for producers
Region 1	AK, AZ, CO, HI, ID, MT, NM, NV, OR, UT, WA, WY	20	16	1
Region 2	CA	21	21	1
Region 3	IL, IN, MI, WI	10	15	1
Region 4	AR, IA, KA, LA, MN, MO, NE, ND, OK, SD, TX	11	15	1
Region 5	AL, DE, DC, FL, GA, KY, MD, MS, NC, NJ, OH, PA, SC, TN, VA, WV.	8	16	1
Region 6	CT, ME, MA, NH, NY, RI, VT	10	17	1
Voluntarily assessed entity	1
Total	80	100	7

Source: NASS 2014 Organic Survey data; calculations by AMS.

It should be noted that the proponent group revised its proposed regions in July 2016 after discussions with AMS. The revision changed the number of regions to 7, divided as follows:

- (1) AK, AZ, HI, NM, NV, OR, WA, 6 Southern CA counties;
- (2) The remaining counties of CA;
- (3) IL, MI, WI;
- (4) AR, IA, IN, MO, OH;
- (5) MA, ME, NH, NY, VT;

- (6) AL, CT, DE, FL, GA, KY, LA, MD, MS, NC, NJ, PA, RI, SC, TN, VA, WV;
- (7) CO, ID, KA, MN, MT, ND, NE., OK, SD, TX, UT, WY.

In its July 2016 revision, the proponent group also changed “voluntarily assessed entity” to “voluntarily assessed producer”, thereby adding another producer seat to the board and bringing total producer seats to 8 out of 17 total board members.

The absence of NASS production data at the county level makes it difficult to estimate the production volume that would result from dividing California into two separate regions.

Table 6 shows an example of the regions similar to OTA’s proposal divided by AMS using certified organic production volume rather than number of certified organic entities.

TABLE 6—GEOGRAPHIC REGIONS DIVIDED BY PRODUCTION VOLUME

	States	Portion of U.S. certified organic production (percent)	Portion of U.S. certified organic farm operations (percent)	Board seats for producers
Region 1	AK, CA, HI	21	22	2
Region 2	OR, WA	13	9	1
Region 3	AZ, CO, ID, KA, MT, NE, NV, NM, ND, OK, SD, TX, UT, WY.	12	11	1
Region 4	IA, MN, WI	11	17	1
Region 5	AL, AR, DE, FL, GA, IL, IN, KY, LA, MD, MI, MS, MO, NJ, NC, OH, PA, SC, TN, VA, WV.	12	24	1
Region 6	CT, ME, MA, NH, NY, RI, VT	10	17	1
Voluntarily assessed producer	1
Total	80	100	8

Source: NASS 2014 Organic Survey data; calculations by AMS.

As proposed, of the 8 producer seats, one would be an at-large, voluntarily assessed certified organic producer. The remaining 7 seats were spread among 6 production regions as shown by Table 6. Of the 6 regions, 5 regions represent between 10 and 13 percent of certified organic production in the U.S. Region 1,

which represents Alaska, California, and Hawaii, represents 21 percent of certified organic production. Due to the lack of county-level data that would make it possible to divide California into two regions, Region 1 would hold 2 certified organic producer seats. Remaining Regions 2 through 6 would

each hold one certified organic producer seat. Specific areas within each production region would be specified in § 1255.40(b)(1) of the proposed Order. The proposed production regions are shown below in Figure 4.

Figure 4. U.S. Certified Organic Production by State, 2014*

*States not displaying a percent of production have less than 1% of U.S. production.

Based on the Act, the composition of each board should reflect “the quantity or value of the agricultural commodity imported into the United States”. It would be difficult to determine the number of importer seats based on quantity; therefore, the proposal relies upon value of imports to determine importer representation on the Board. As previously mentioned, a single member’s vote out of the 16 voting members would represent a little over 6 percent of the total votes. Thus, the single importer seat on the Board would constitute 6 percent of the vote. As a share of the total estimated assessment revenue from the proposed Order, about 5 percent would come from total assessments on importer sales value of organic products (see Table 7). Comparing these two proportions indicates that the share of the single importer seat on the Board (6 percent) is similar to the share of the total estimated assessment revenue that importers would pay into the program (5 percent).

Seven members would be certified organic handlers at large, but of those seven members, two shall be product processors as defined in section 1255.28. OTA chose to have product processor member representation on the

Board for the purpose of providing representation for the diversity of the organic value chain. One member shall be an importer of organic products. For clarity, with the exception of the at-large public member, both voluntarily and mandatorily assessed entities are eligible to be nominated for the Board seats for which they meet the definitions. AMS invites comments on the proposed distribution of Board seats for producers, handlers, and importers.

OTA also opted to have no alternate Board members. The proponent stated that it wanted to ensure that industry members who seek representation and serve on the Board are committed to their service and participate in all Board meetings.

At least once in every five-year period, but not more frequently than once in every 3-year period, the Board must review, based on a 3-year average, the geographical distribution of production of organic agricultural commodities and the value of organic agricultural commodities imported into the United States. The review would be conducted using the surveys and databases generated and maintained by USDA (e.g. NASS surveys, the NOP Organic Integrity Database (OID), the GATS database, ITDS/ACE, etc.) and, if

available, other reliable reports from the industry. If warranted, the Board would recommend to the Secretary that the Board membership be reapportioned appropriately to reflect such changes. The distribution of production between regions also shall be considered. Any changes in Board composition would be implemented by the Secretary through rulemaking.

Further, OTA wanted to periodically consider reapportionment based on the participation rate of voluntarily assessed entities. Hence, at least once in every five-year period, but not more frequently than once in every 3-year period, the Board would review the annual assessment receipts for voluntarily assessed entities in order to determine if the size of the Board should be changed to reflect changes in the number of participating voluntarily assessed entities. If warranted, the Board would recommend to the Secretary that the Board membership be reapportioned appropriately to reflect such changes. Any changes in Board composition would be implemented by the Secretary through rulemaking.

Section 1255.41 of the proposed Order would specify Board nominations and appointments. While the proponent proposed for Board candidates to submit

nominations for the initial and subsequent Boards directly to the Secretary, this would be inconsistent with the Department's role in the nomination process with respect to the research and promotion programs that were established under the Act. Therefore, the initial nominations would be conducted by OTA with the support of USDA. Before considering any nominations, OTA and USDA would publicize the nomination process, using trade press or other means it deems appropriate, and conduct outreach to all U.S. certified organic producers, certified organic handlers, and importers of organic products. OTA would use meetings, mail or other methods to solicit potential nominees and would work with USDA to help ensure that all interested persons are apprised of the nomination process. Entities that are a combination of a certified organic producer, certified organic handler, or importer could seek nomination to the Board in any role for which they meet the definitions provided at sections 1255.9, 1255.10, and 1255.17. Further, voluntarily assessed certified organic producers may seek nomination to the Board for the voluntarily assessed certified organic producer seat or for the certified organic producer seat for which they are geographically qualified. Once OTA has received all of the nominations, the information will be submitted to the Secretary for appointment. Nominations for the initial Board will be handled by USDA.

Regarding subsequent nominations, the Board would solicit nominations using trade press or other means it deems appropriate, and shall conduct outreach to: (1) All U.S. certified organic producers and certified organic handlers with gross organic sales in excess of \$250,000 for the previous marketing year, (2) importers of organic products that declared a transaction value greater than \$250,000 for the previous marketing year, and (3) all voluntarily assessed entities who have remitted assessments subject to section 1255.52(d) (e.g., "opted into the program"). Entities that are a combination of a certified organic producer, certified organic handler, or importer could seek nomination to the Board in any role (certified organic producer, certified organic handler, and importer) for which they meet the definitions provided at sections 1255.9, 1255.10, and 1255.17. Further, voluntarily assessed certified organic producers may seek nomination to the Board for the voluntarily assessed certified organic producer seat or for the

certified organic producer seat for which they are geographically qualified. All Board nominees would have the opportunity to provide to the Board a short background statement outlining their qualifications and desire to serve on the Board. Entities that are a combination of a certified organic producer, certified organic handler, or importer could also vote in the nomination process described below for the certified organic producer, certified organic handler, and importer nominees, provided they are geographically qualified and meet the definitions provided at 1255.9, 1255.10, and 1255.17. The producer nomination process is described below:

Certified organic producers who produce organic agricultural commodities in more than one region could seek nomination in only the region in which they are domiciled. The names of certified organic producer nominees (producer nominees) would be placed on a ballot by region. For the seven Board seats allocated by geographic region, certified organic producers must be domiciled in the region for which they seek nomination. The names of producer nominees would be placed on a ballot by region. The ballots along with any background statements would be mailed to the certified organic producers with gross organic sales in excess of \$250,000, and any voluntarily assessed certified organic producer in that region that has remitted an assessment pursuant to section 1255.52(d) for the previous marketing year for a vote. Domestic certified organic producers may vote in each region in which they produce organic products. The votes would be tabulated for each region with the nominee receiving the highest number of votes at the top of the list in descending order by vote. The top two candidates for each position would be submitted to the Secretary.

The names of the nominees for the "at-large" voluntarily assessed domestic certified organic producer seat would also be placed on a ballot. The ballots along with any background statements would be mailed to all voluntarily assessed certified organic producers for a vote. The votes would be tabulated with the nominee receiving the highest number of votes at the top of the list in descending order by vote. The top two candidates for the position would be submitted to the Secretary.

The names of the nominees for the five "at-large" domestic certified organic handler seats and the two "at-large" product processor seats would also be placed on a ballot. The ballots along with any background statements

would be mailed to all certified organic handlers with gross organic sales revenue in excess of \$250,000, and any voluntarily assessed certified organic handlers who have remitted an assessment pursuant to section 1255.52(d) for the previous marketing year for a vote. The votes would be tabulated with the nominee receiving the highest number of votes at the top of the list in descending order by vote. The top ten candidates for the handler positions and the top four candidates for the product-processor seats would be submitted to the Secretary.

The names of the nominees for the importer seat would also be placed on a ballot. The ballots along with any background statements would be mailed to importers who imported a transaction value for organic products in excess of \$250,000, and any voluntarily assessed importers who have remitted an assessment pursuant to 1255.52(d) for the previous marketing year for a vote. The votes would be tabulated with the nominee receiving the highest number of votes at the top of the list in descending order by vote. The top two candidates would be submitted to the Secretary. The names of the nominees for the "at-large" non-voting public member seat would also be placed on a ballot.

The ballots along with any background statements would be mailed to: (1) All U.S. certified organic producers and certified organic handlers with gross organic sales in excess of \$250,000 in the previous marketing year, (2) importers of organic products that declared a transaction value greater than \$250,000 for the previous marketing year, and (3) all voluntarily assessed entities who have remitted assessments subject to section 1255.52(d) (e.g., "opted into the program"). The votes would be tabulated with the nominee receiving the highest number of votes at the top of the list in descending order by vote. The top two candidates would be submitted to the Secretary.

The Board would submit nominations to the Secretary at least 6 months before the new Board term begins. The Secretary would select the members of the Board from the nominations submitted by the Board. OTA also recommended that no two board members be employed by a single corporation, company, partnership or any other legal entity. Further, OTA recommended that Board membership should strive to reflect a wealth of marketing and research experience as well as the wide variety of business attributes reflected throughout the organic supply chain (*i.e.* quantity and

type of products produced, entity size, etc.). This is to help ensure that representation on the Board is balanced.

In order to provide the Board flexibility, the Board could recommend to the Secretary modifications to its nomination procedures. Any such modifications would be implemented through rulemaking by the Secretary.

Section 1255.42 of the proposed Order would specify the term of office. With the exception of the initial Board, each Board member would serve a three-year term or until the Secretary appointed his or her successor. Each term of office would begin on January 1 and end on December 31. No member could serve more than two consecutive terms, excluding any term of office less than three year terms, and no single corporation, company, partnership or any other legal entity can be represented on the Board by an employee or owner for more than two consecutive terms. For the purpose of ensuring that no more than approximately one-third of the Board members' terms expire in any given year, the terms of the initial Board members would be staggered for two, three and four years and would be recommended to the Secretary by the proponent group.

Section 1255.43 of the proposed Order would specify criteria for the removal of members and for filling vacancies. If a Board member ceased to work for or be affiliated with a certified organic producer, certified organic handler, or importer or ceased to do business in the region he or she represented, such position would become vacant. Additionally, the Board could recommend to the Secretary that a member be removed from office if the member consistently failed or refused to perform his or her duties or engaged in dishonest acts or willful misconduct. The Secretary could remove the member if he or she finds that the Board's recommendation shows adequate cause. If a position became vacant, nominations to fill the vacancy would be conducted using the nominations process as proposed in § 1255.41 of the Order. A vacancy would not be required to be filled if the unexpired term is less than six months.

Section 1255.44 of the proposed Order would specify procedures of the Board. A majority (9) of the voting Board members would constitute a quorum. If participation by telephone or other means were permitted, members participating by such means would count towards the quorum requirements or other voting requirements as authorized under the Order. Proxy voting would not be permitted. A motion would carry if supported by 9

voting Board members, except for recommendations to change the assessment rate or to adopt a budget, both of which would require affirmation by at least two-thirds (11) of the voting Board members. If the Board has vacant positions, recommendations to change the assessment rate or to adopt a budget would have to pass by an affirmative vote of two-thirds of the voting Board members, exclusive of the vacant seats.

For example, if a 16 voting member Board had a vacancy, there would be 15 voting Board members. If the Board held a meeting, and 6 members were present and 3 participated by telephone, there would be a quorum (9) for the meeting. If the Board were voting on the upcoming year's budget, 10 members ($.66 \times 15$ members) would have to vote in favor of the budget for it to pass.

The proposed Order would also provide for the Board to take action by mail, telephone, electronic mail, facsimile, or any other electronic means when the chairperson believes it is necessary. Actions taken under these procedures would be valid only if all members and the Secretary were notified of the meeting and all members were provided the opportunity to participate and a majority of Board members voted in favor of the action (unless two-thirds vote were required under the Order). Additionally, all votes would have to be confirmed in writing and recorded in Board minutes.

The proposed Order would specify that Board members would serve without compensation. However, Board members would be reimbursed for reasonable travel expenses, as approved by the Board, incurred when performing Board business.

Section 1255.46 of the proposed Order would specify powers and duties of the Board. These are similar in promotion programs authorized under the Act. They include, among other things, to administer the Order and collect assessments; to develop bylaws and recommend regulations necessary to administer the Order; to select a chairperson and other Board officers; to create an executive committee and form other committees and subcommittees as necessary; to hire staff or contractors; to provide appropriate notice of meetings to the industry and USDA and keep minutes of such meetings; to develop programs and enter into contracts to implement programs; to submit a budget to USDA for approval 60 calendar days prior to the start of the fiscal year; to borrow funds necessary to cover startup costs of the Order; to invest Board funds appropriately; to recommend changes in the assessment rate as appropriate and within the limits of the Order; to have

its books audited by an outside certified public accountant at the end of each fiscal period and at other times as requested by the Secretary; to make public an accounting of funds received and expended; to receive, investigate and report to the Secretary complaints of violations of the Order; and to recommend amendments to the Order as appropriate. Additionally, when researching priorities for each marketing year, the Board will provide public notice using local, state, or regional entities, mail and/or other methods to solicit public input from all covered entities, and will have at least one meeting or conference call to determine the priorities for each marketing year.

Section 1255.47 of the proposed Order would specify prohibited activities that are common to all promotion programs authorized under the Act. In summary, the Board nor its employees and agents could engage in actions that would be a conflict of interest; use Board funds to lobby (influencing legislation or governmental action or policy, by local, state, national (*i.e.*, the National Organic Standards Board (see 7 U.S.C. 6518)), and foreign governments or subdivision thereof, other than recommending to the Secretary amendments to the Order); and engage in any advertising or activities that may be false, misleading or disparaging to another agricultural commodity. Such prohibitions are outlined in the *Guidelines for AMS Oversight of Commodity Research and Promotion Programs*, which provides the parameters for commodity promotion program activities and restrictions. For example, Section IX titled "Policy on Review and Approval of Promotional and Educational Materials" states that AMS will disapprove advertising that is deemed disparaging to another commodity. It defines "disparaging" as depicting other commodities in a negative or unpleasant light via either overt or subjective video, photography, or statements (excluding those that are strictly comparative).

iii. Expenses and Assessments

Pursuant to sections 516 and 517 of the Act, sections 1255.50 through 1255.54 of the proposed Order detail requirements regarding the Board's budget and expenses, financial statements, assessments, and exemption from assessments. Proposed section 1255.50 states that at least 60 calendar days before the start of the fiscal period, and as necessary during the year, the Board would submit a budget to USDA covering its projected expenses. The budget must include a summary of anticipated revenue and expenses for

each program along with a breakdown of staff and administrative expenses. Except for the initial budget, the Board's budgets should include comparative data for at least one preceding fiscal period.

The proponents have proposed that no less than 25 percent of the funds shall be allocated to research; 25 percent of the funds shall be allocated to information; 25 percent of funds shall be allocated to promotion; and 25 percent of the funds shall remain discretionary. Further, in response to stakeholder feedback obtained from partial proposals, OTA revised its description of the funds allocated to research to include the requirement that a majority of such funds be allocated to agricultural research; of the funds allocated to information, a majority shall be allocated to producer information; and the regional organic producer Board members would establish priorities, including regional considerations, for investments in agricultural research. Any funds allocated in a specific area that was not spent during the current fiscal year would carry over to the next fiscal year in the same category.

Each budget, except for the initial budget, would include staff and administrative expense breakdowns, with comparative data for at least one preceding fiscal year. Each budget would provide adequate funds to cover the Board's anticipated expenses as well as to provide for a reserve as stated in the Order. Any amendment or addition to an approved budget would be approved by USDA, including shifting of funds from one program, plan or project to another. Shifts of funds that do not result in an increase to the Board's approved budget would not have to have prior approval from USDA. For example, if the Board's approved budget provided for \$1 million in research projects and \$500,000 in consumer advertising, a shift of \$50,000 from research to consumer advertising would require USDA approval. However, a shift within the \$1 million research line item would not require prior USDA approval. USDA did modify the regulatory text at section 1255.50 to clarify that only shifts in funds within a program, as stated in the example above, did not need USDA approval. Any other amendment or shift in funds to different programs must be approved prior to use of the funds.

The Board would be authorized to incur reasonable expenses for its maintenance and functioning. During its first year of operation, the Board could borrow funds for startup costs and capital outlay. Any borrowed funds

would be subject to the same fiscal, budget and audit controls as other funds of the Board.

The Board could also accept voluntary contributions. Any contributions received by the Board would be free from encumbrances by the donor and the Board would retain control over use of the funds. The Board may also receive other funds provided through USDA or other sources. For example, the Board could receive Federal grant funds, subject to approval by the Secretary, for a specific research project. The Board would also be required to reimburse USDA for costs incurred by USDA in overseeing the Order's operations, including all costs associated with referenda.

The Board would be limited to spending no more than 15 percent of its available funds for administration, maintenance, and the functioning of the Board, in accordance with the Act. This limitation would begin three fiscal years after the Board's first meeting. Reimbursements to USDA would not be considered administrative costs. As an example, if the Board received \$30 million in assessments during fiscal year 5, and had available \$1 million in reserve funds, the Board's available funds would be \$31 million. In this scenario, the Board would be limited to spending no more than \$4.65 million ($0.15 \times \31 million) on administrative costs. Additionally, no program, plan or project shall expend on administrative costs more than 15 percent of the total funds allocated for that specific program, plan or project.

The Board could also maintain a monetary reserve and carry over excess funds from one fiscal period to the next. However, such reserve funds could not exceed one fiscal year's budgeted expenses. For example, if the Board's budgeted expenses for a fiscal year were \$30 million, it could carry over no more than \$30 million in reserve. With approval of the Secretary, reserve funds could be used to pay expenses.

The Board could invest its revenue collected under the Order in the following: (1) Obligations of the United States or any agency of the United States; (2) General obligations of any State or any political subdivision of a State; (3) Interest bearing accounts or certificates of deposit of financial institutions that are members of the Federal Reserve; (4) Obligations fully guaranteed as to principal interest by the United States; and (5) Other investments as authorized by the Secretary.

Section 1255.51 states that the Board would be required to submit to USDA financial statements on a quarterly

basis, or at any other time as requested by the Secretary. Financial statements must include, at a minimum, a balance sheet, income statement, and expense budget that shows expenditures during the specified period, year-to-date and unexpended budget. Financial statements would be submitted to USDA within 30 calendar days after the time period to which it applies. The Board would also submit an annual financial statement within 90 calendar days after the fiscal year to which it applies.

Assessments

Under section 1255.52, the Board's programs and expenses would be funded through assessments on certified organic producers, certified organic handlers, and importers of organic products in the U.S. market. The proposed Order would provide for an initial assessment rate of one-tenth of one percent of net organic sales for domestic producers and handlers with gross annual organic sales greater than \$250,000 in the previous marketing year. Per the proposed definition at section 1255.21, net organic sales would be equal to total gross sales in certified organic products minus (a) the cost of certified organic ingredients, feed, and inputs used in the production of certified products and (b) the cost of any non-organic agricultural ingredients used in the production of certified products. The proposed Order would provide for an initial assessment rate of one-tenth of one percent of transaction value for importers with transaction value greater than \$250,000 in the previous marketing year.

To facilitate audience understanding of the method of assessment being proposed, OTA provided a sample self-assessment worksheet which outlines the process for calculating cost deductions, net organic sales, and subsequent assessments to be paid to the Board. The worksheet is accessible as a "Related Document" on www.regulations.gov as well as on the AMS Web site. AMS is seeking public comments on the proposed assessment approach, particularly on the calculations described below and any tools that would be helpful to minimize the burden on producers, handlers and importers.

Assessments—Organic Producers

Organic producers would first calculate their net organic sales by taking their total gross organic sales and subtracting the cost of any certified organic ingredients, feed, and agricultural input costs. Examples of organic input costs that may be deducted from gross sales include

fertilizer, lime, and soil conditioners; agricultural chemicals and other organic materials for pest control; seeds, plants, vines and trees; livestock purchased or leased; and organic feed purchased for livestock and poultry. Once the producer has calculated their net organic sales, he/she would multiply this by one-tenth of one percent (*i.e.*, 0.001) to determine the assessment that would be paid to the organic R&P program. For example, an organic dairy producer would take their bulk organic milk sales and subtract the cost of organic feed, hay and any other agricultural input costs to obtain their net organic milk sales. The producer did not use any non-organic agricultural ingredients that need to be subtracted. Finally, the producer would multiply their net organic milk sales by one-tenth of one percent to determine the assessment owed.

Assessments—Organic Handlers

Organic handlers would also first need to calculate their net organic sales for all certified organic products. For processed products, handlers would take the total gross sales in certified products and subtract the cost of certified organic ingredients and the cost of any non-organic agricultural ingredients used in its products. For example, if Company A was processing and selling a certified “organic” blended orange juice per 7 CFR 205.301, they would take their total gross organic sales and first subtract the cost of certified organic ingredients (*e.g.*, cost of organic oranges and organic mangoes). Assuming the product does not include any non-organic agricultural ingredients per 7 CFR 205.606 of the National List, the handler would not have any non-organic agricultural ingredients to subtract from gross organic sales. In this case, the calculation for net organic sales is simply the total gross organic juice sales minus the cost of organic oranges and organic mangoes. By deducting the cost of organic ingredients purchased from producers, assessments will only be paid on the value added to the organic commodity as it moves through the supply chain.

If Company B was processing and selling the same certified “organic” juice, but in this case used a non-organic agricultural ingredient to improve color (*e.g.*, carrot juice color as provided for by 7 CFR 205.606), then the handler would take the total gross organic sales of the “organic” juice and subtract the cost of organic oranges and mangoes and the cost of the carrot juice color to determine their net organic sales. The non-organic carrot juice color is subtracted to ensure only the value

added for organic content of a product is assessed for the organic R&P program. In both examples, the handler would then multiply their net organic juice sales by one-tenth of one percent to determine the assessment owed.

Handlers of “made with organic” products would use a similar approach with an additional step to determine their assessment. “Made with organic” products are certified and must contain at least 70 certified organic ingredient content, but can use non-organic agricultural ingredients as part of product composition per the requirements at 7 CFR 205.301(c). Understanding that section 7412(1)(E)(ii) of the Act specified that the scope of an “agricultural commodity” as limited to products that are “certified to be sold or labeled as “organic” or “100 percent organic”, this proposal would assess only the value added of the certified organic ingredient content of “made with organic” products rather than the entire certified product.

For example, Company C has a line of “made with organic” granola bars. The granola bar is composed of 70 certified “organic” oats and grains, but uses non-organic sugar and non-organic raisins. Under this proposal, Company C would first take its gross organic sales of the granola bar and subtract the cost of organic ingredients (oats and grains) and the cost of the non-organic agricultural ingredients (sugar and raisins) to obtain net organic sales. Because the granola bar is a “made with organic” product, the handler would have the additional step of multiplying the net organic sales by the percent organic ingredient content (*i.e.*, 70 or the share of organic ingredients subject to assessment under the Act). After applying the percent organic ingredient content to net organic sales, the handler would multiply their adjusted net organic sales by one-tenth of one percent to determine the assessment owed.

Assessments—Importers

The proponent group proposed a similar approach for importers calculating assessments. In its proposal, OTA states that importers would pay one-tenth of one percent of net organic sales minus the cost of organic ingredients. Their proposal also stated that the assessment would occur when the importer took custody of the certified organic goods. Importer assessments would be collected through Customs. If Customs does not collect the assessment from an importer, then the importer would be responsible for paying the assessment directly to the

Board within 90 calendar days after the end of the marketing year.

As previously discussed, OTA’s proposal to assess importers using this approach would be challenging to implement. Since importers engage in a variety of roles (*e.g.* as a wholesaler that has purchased the product from abroad, but has yet not sold it in the U.S., or as a customs broker that is paid a fee to transact customs business on behalf of others but does not take ownership of the product), it is difficult to always know the gross organic sales and thus, net organic sales. An importer can, however, report on the transaction value (the price actually paid from the buyer to the seller for the merchandise) for the imported merchandise (19 CFR 152.103). Therefore, AMS is proposing that domestic importers (§ 1255.17) use transaction value (“Entered Value” on CBP Form 7501) to determine assessments owed under the proposed Order.

For example, Importer A is importing two organic products: Certified organic bananas and coffee. The transaction value shown on the CBP Form 7501 for these products is \$200,000 and \$400,000 respectively. Importer A would add the transaction value for all organic commodities (\$200,000 plus \$400,000) to obtain a total transaction value (\$600,000) for all organic products. Importer A would then multiply the total transaction value by one-tenth of one percent to determine the assessment owed.

As another example, Importer B is importing processed products: Organic chocolate bars and “made with organic” granola bars (*i.e.*, 70 organic ingredient content). The transaction value shown on the CBP Form 7501 for these products is \$600,000 and \$400,000 respectively. In this case, Importer B would need to reduce the transaction value for the granola bars to assess only the organic ingredient content. This is obtained by multiplying the transaction value (\$400,000) by 0.70 to determine the adjusted transaction value for granola bars (\$280,000). Importer B would then add the granola bar transaction value (\$280,000) to the chocolate transaction value (\$600,000) to obtain a total transaction value (\$880,000) for the purposes of calculating its organic assessment. Importer B would multiply the total transaction value by one-tenth of one percent to determine the assessment owed.

Assessment Review and Collection

Two years after the Order becomes effective and periodically thereafter, the Board would review the assessment rate

and, if appropriate, recommend a change in the rate. At least two-thirds of the Board members would have to favor a change in the assessment rate. Any change in the assessment rate would be subject to rulemaking by the Secretary.

Assessments would be collected by the Board on a quarterly or yearly basis. Importers and domestic producers and handlers would be required to pay their assessments owed to the Board no later than 90 days following the marketing year in which the organic product was imported, produced or handled. If a certified organic producer, certified organic handler or importer fails to pay the assessment within 90 calendar days of the date it is due, the Board may impose a late payment charge and interest. The late payment charge and rate of interest would be prescribed in the Order's regulations issued by the Secretary.

Certified organic producers and handlers with gross organic sales of \$250,000 or less in the prior marketing year may choose to participate in the Order as voluntarily assessed entities by remitting one-tenth of one percent of net organic sales. Similarly, importers of organic products whose transaction value is \$250,000 or less may elect to participate in the Order by paying assessment on one-tenth of one percent of the transaction value of organic products. All payments must be received no later than 90 days after the end of the year in which the product was produced, handled or imported.

In summary, AMS is seeking public comments on the proposed assessment approach, particularly on the calculations and any additional examples or tools that could be provided to assist producers, handlers and importers should this program be implemented.

Exemptions

De Minimis

The Order would provide for three exemptions from assessment. The first exemption is for entities at a de minimis level. Certified organic producers, certified organic handlers and importers of organic products whose gross organic sales and transaction value was \$250,000 or less during the prior fiscal year would be exempt from paying assessment. Domestic producers, handlers and importers would apply to the Board for an exemption prior to the start of the new fiscal year. This would be an annual exemption; entities would have to reapply each year. They would

have to certify that they had gross sales or transaction value from sales of organic products that were \$250,000 or less in the previous fiscal year. They would submit to the Board past shipment or import data to support the exemption request. The Board would then issue, if deemed appropriate, a certificate of exemption to the eligible producer, handler or importer.

Once approved, domestic producers, handlers and importers would not have to pay assessments to the Board for the applicable fiscal year. Any assessments of approved importers collected by Customs would be refunded by the Board within 60 calendar days after receipt of such assessments by the Board. No interest would be paid on the assessments collected by Customs.

Producers, handlers and importers who did not apply to the Board for an exemption and had gross revenue or transaction value of \$250,000 or less in organic product sales during the prior fiscal year would receive a refund from the Board for the applicable assessments within 90 calendar days after the end of the current fiscal year. Board staff would determine the assessments paid and issue refunds accordingly. No interest would be paid on the assessments collected by the Board.

The Board could recommend additional procedures to administer the exemption as appropriate. Any procedures would be implemented through rulemaking by the Secretary.

USDA considers several factors when evaluating the merits of a proposed de minimis quantity. These factors include an estimate of the total quantity (or value) of the respective agricultural commodity covered under the proposed commodity promotion program order (value assessed and value exempt); free rider implications; the impact of program requirements on small businesses; and available funding to support a viable program under the order. USDA reviews these factors in light of all available data and information to determine whether a proposed exemption threshold is de minimis in quantity when viewed in the context of an effective and functioning commodity promotion program.

The Organic Industry Survey, which was carried out by the Nutrition Business Journal (NBJ) on behalf of OTA, reported 2014 retail sales of all organic commodities at \$39.1 billion. The survey included responses from manufacturers, producers, ranchers, and retailers of organic products. Results were supplemented with data from the

Natural Foods Merchandiser's annual industry survey, the analytic consulting firms SPINS and the IRI Group, and with information from public financial statements and media reports. The proponent group estimated the revenue that would be earned by the program through assessments of certified organic producers, certified organic handlers, and importers. They assumed a retail price markup of 40 percent over the price at the handler level.⁵³ Applying the assumed 40 percent markup to the total organic retail sales figure, as reported in the Organic Industry Survey, results in an estimate of combined organic sales of producers, handlers and importers equal to \$27.9 billion.

In its proposal for a research and promotion program, the proponent group initially stated that it expected the program to generate \$30 million through assessments. In discussions with AMS, the proponent group adjusted the estimated revenue of the program to be \$28.1 million. AMS used a similar method to that of the proponent group to calculate the potential assessment income of the program; however, the estimates by AMS are lower than those of the proponent group. One reason for this is that while OTA used 2014 data to estimate producer assessment income and 2015 data to estimate assessment income of importers and handlers, AMS used 2014 data only for consistency in estimating potential assessment income at producer, handler and importer levels. Secondly, AMS has access to more detailed reports by the U.S. Customs and Border Protection than what is publicly accessible through the GATS database. These detailed reports allowed AMS to deduct importers whose organic shipment sales values were no more than \$250,000, and who would be exempt from assessment.

As previously mentioned, this proposal proposes a de minimis level of \$250,000 in annual gross sales of organic products for domestic producers and handlers and in annual transaction value for importers of organic products. AMS conducted analysis on this and other levels for de minimis including \$500,000 and \$750,000. Table 7 shows potential assessment revenue from producers, importers and handlers at different exemption levels. Again, this analysis uses data for 2014, which is the year for which most recent and complete data is available from multiple sources.

⁵³ OTA cited a 2012 study by the United States Agency for International Development (USAID)

titled U.S. Specialty Foods End-Market Analysis for the 40 percent retail markup assumption.

TABLE 7—POTENTIAL ASSESSMENT REVENUE AT EXEMPTION LEVELS

	250,000	500,000	750,000
Producers ¹	3,502,602,536	3,153,346,208	2,923,278,884
Handlers ²	20,656,445,878	19,943,407,378	19,375,473,888
Importers ³	1,184,783,076	1,139,594,905	1,100,966,481
Total	25,343,831,491	24,236,348,490	23,399,719,252
Assessment revenue	25,343,831	24,236,348	23,399,719

³ U.S. Customs and Border Protection; Global Agricultural Trade Statistic, FAS.

Assessment revenue that would be collected at each of the de minimis exemption levels would be approximately \$23.4 million at \$750,000, \$24.2 million at \$500,000, and \$25.3 million at \$250,000. At the proposed exemption level of \$250,000, about 14 percent of the assessment revenue would come from producers, 81 percent would come from handlers, and 5 percent would be from importers. Producer assessable sales was calculated by subtracting estimated input costs from total sales in organic products at revenue levels of \$250,000, \$500,000, and \$750,000. No expense data exists for handlers, so input costs have not been deducted from total sales at the handler level. This means that handler assessable sales is likely lower than

what is reported in the table above; however, all assumptions made in estimating potential assessment revenue have been made to generate the most conservative figure. Specifically, the assumption at the beginning of this analysis that assumes a retail markup in price of 40 percent ultimately results in lower total sales revenue for handlers than if the analysis assumed a lower retail price markup.⁵⁴ Secondly, retail sales of organic commodities increased nearly 11 percent between 2014 and 2015, according to findings in OTA 2016 Industry Survey. Data released in the NASS 2015 Certified Organic survey in September 2016 show that producer value of certified organic agricultural products sold in 2015 increased 13 percent from 2014 to almost \$6.2

billion. From the growth in sales from 2014, which is the year for which data was analyzed to estimate assessment revenue, and the restrained assumption of a 40 percent retail markup over handler prices, AMS believes that the proposed program has the potential to collect at least \$25.3 million in assessment revenue at an exemption level of \$250,000 in annual sales.

While Table 7 shows the potential revenues generated from producers, importers and handlers that would be subject to assessment, Table 8 shows the portions of sales value and entities at the producer, importer and handler levels that would be exempt from assessment at each exemption level.

TABLE 8—PORTION OF VALUE AND ENTITIES EXEMPT FROM ASSESSMENT AT EXEMPTION LEVELS

	Producers ¹		Handlers ²		Importers ³		Total	
	Value %	Entities %	Value %	Entities %	Value %	Entities %	Value %	Entities %

³ U.S. Customs and Border Protection; Global Agricultural Trade Statistics, FAS.

At the proposed exemption level of \$250,000 in gross annual revenue, 12 percent of certified organic sales value from producers would be exempt, and 76 percent of producers would be exempt. For handlers, 3 percent of certified organic sales value and 40 percent of entities would be exempt. Of total importers of organic products, 4 percent of organic sales value would be exempt, and 85 percent of entities would be exempt. For comparison, the portion of entities and sales value that would be exempt under de minimis levels of \$500,000 and \$750,000 were also evaluated. At exemption levels of gross annual sales revenue in excess of

\$250,000, \$500,000, and \$750,000, the total values of exempt sales would be 5 percent, 9 percent and 12 percent, respectively. Most research and promotion programs with de minimis thresholds in place exempt between 3 and 11 percent of total assessable quantity. The portion of total sales value that would be exempt at any of the three exemption levels evaluated in Table 8 all within or just barely outside this range. The proposed de minimis amount relative to total sales value is comparable to those of the majority of research and promotion programs overseen by AMS.

In the field of economics, a free rider is an entity who benefits from a service without having to pay for it. The free rider problem occurs in many different scenarios, including in research and promotion programs. In this case, the “free riders” would be those entities that do not pay assessments into the program, but benefit from the program’s existence. Ideally, the de minimis level excludes entities for whom the compliance cost of collecting the assessment would outweigh the amount of the assessment itself that would be due to the Board from these entities.

Based on the same data used to generate the figures in Tables 7 and 8,

⁵⁴ USAID, U.S. Specialty Foods End-Market Analysis, 2012.

AMS estimates that the average assessment that would be collected from a producer, handler, or importer whose gross organic sales or transaction value was less than or equal to \$250,000 would amount to \$94 per entity annually. This means that at the de minimis level of \$250,000, as proposed by the proponent, the average amount in assessments that the Board would not collect from exempt entities would be \$94 apiece. AMS was unable to determine the cost of compliance on a single case basis to compare with the potential assessment revenue per entity with less than or equal to \$250,000 in gross annual sales or transaction value. AMS did, however, find that the annual

compliance costs of other Boards with generic promotion programs ranges between about 0.5 and 3 percent of the Boards' total revenue. Applying these proportions to the estimated total revenue (\$25.3 million) of the proposed Order would result in annual compliance costs ranging between \$126,719 and \$760,315. Compliance costs vary depending on the complexity of each case, and a single case could require staff, auditor, AMS, and USDA Office of General Counsel time and expenses, as well as associated court fees. Based on these estimates, AMS seeks comments on whether the costs of enforcing compliance among smaller entities (those with less than or equal to

\$250,000 in gross annual sales or transaction value) would outweigh the value in assessments the Board would collect from those entities.

Another potential instance of free riders is importers of organic products without HTS codes. Importers of organic products that are not among those currently in the HTS system would have the responsibility to report to the Board any assessments on transaction value in excess of \$250,000 annually. There are currently 38 HTS codes representative of imported organic agricultural products. These codes and their product descriptions are listed in the table below.

HTS code	HTS description
0409000005	NATURAL HONEY, CERTIFIED FOR ORGANIC
0703200005	GARLIC, FRESH WHOLE BULBS, CERTIFIED ORGANIC

In general, AMS seeks comments on the proposed de minimis level and its effect on the proposed program.

Exports

The second exemption under the proposed Order would be for exports, or sales of certified organic commodities by domestic producers and handlers to locations outside of the United States. The Board would develop procedures

for approval by USDA for refunding assessments that may be inadvertently paid on such sales and establish any necessary safeguards as appropriate. Safeguard procedures would be implemented by the Secretary through rulemaking. If the Board determined that exports should be assessed, it would make that recommendation to the Secretary. Any such action would be

implemented by USDA through notice and comment rulemaking.

Dual-Covered Commodities

The third exemption from assessment under the proposed Order would be for dual-covered commodities. Should this proposed rule become final, the regulatory language currently exempting organic commodities from assessment by generic commodity promotion

programs created under the various commodity promotion laws would no longer be in effect. AMS would conduct rulemaking to implement such a change. Such commodities would then become “dual-covered commodities”, and persons producing, handling and importing them would need to elect to pay assessments to the commodity-specific program (e.g., highbush blueberries, beef, dairy, almonds, etc.), or the organic commodity promotion program. Certified organic producers, handlers and importers of dual-covered commodities would apply to the Secretary, on a form provided by the Board, for an assessment exemption prior to the start of the marketing year. This would be an annual exemption and certified organic producers, certified organic handlers and importers would need to reapply each year to perpetuate their exemption. Such entities would be required to certify that they have remitted an assessment for the dual-covered commodity pursuant to a commodity promotion law. Upon receipt of an application for exemption, the Secretary would determine whether an exemption may be granted. The Secretary may request documentation providing proof of the remittance of the assessment for the dual-covered commodity. The Secretary would issue, if deemed appropriate, a certificate of exemption to the eligible certified organic producer, handler or importer. It is the responsibility of any entity granted an exemption to retain a copy of the certificate of exemption.

Assessment Scenarios

Based on the proposed definitions, assessment provisions and exemptions described thus far, AMS developed the following scenarios to aid public understanding of how a proposed Order would be implemented. AMS invites public comments on this aspect of the proposed Order and the following scenarios.

Scenario 1—Jane Smith’s Organic Strawberry Farm

Jane Smith is a certified organic producer, producing only organic strawberries on her farm and has gross organic sales of \$500,000 for the previous marketing year. To determine whether she is required to pay assessments and to who, Jane needs to answer the following questions: (1) Whether she is an “assessed entity” under the proposed Order; (2) whether she produces a commodity subject to assessment under another agricultural commodity promotion order; and (3) if she does, whether she is subject to assessment under that agricultural

commodity promotion order. For question 1, she is considered an “assessed entity” because she is a certified organic producer with gross organic sales in excess of \$250,000 for the previous marketing year. Further, because she is above the \$250,000 de minimis exemption threshold, she cannot claim a de minimis exemption and, thus, would be subject to the proposed Order. For question 2, she does not produce a commodity subject to another agricultural commodity promotion program as strawberries do not have such a program in place. As a result, she does not need to address question 3. As a producer with gross organic sales above \$250,000 for the previous marketing year, she would be required to remit assessments under the proposed Order.

Scenario 2—Jane Smith’s Organic Blackberry Farm

Jane Smith is a certified organic producer, producing only organic blackberries on her farm and has gross organic sales of \$100,000 for the previous marketing year. To determine whether she is required to pay assessments and to who, Jane first needs to answer question 1 about whether she is an “assessed entity” under the proposed Order. While she is a certified organic producer, she does not have gross organic sales in excess of \$250,000 for the previous marketing year. Therefore, she could either (a) apply for exemption from paying assessments under the proposed de minimis provision at proposed section 1255.53 or (b) opt into the proposed Order as a “voluntarily assessed entity” per proposed section 1255.38 and pay assessments on her \$100,000 gross organic sales for the previous marketing year. In this scenario, questions 2 and 3 do not apply because there is currently no blackberry promotion program in place.

Scenario 3—Jane Smith’s Organic Blueberry Farm (A “Dual-Covered Commodity”)

Jane Smith is a certified organic producer, producing only organic blueberries on her farm and has gross organic sales of \$500,000 for the previous marketing year. These sales equate to approximately 147,000 pounds of organic blueberries (assuming an organic price of \$3.40 per pound).⁵⁵ To determine whether she is required to pay assessments and to who, Jane needs to answer the same questions: (1) Whether she is an “assessed entity”; (2)

whether she produces a commodity subject to assessment under another agricultural commodity promotion order; and (3) if she does, whether she is subject to assessment under the other promotion order.

For question 1, she is considered an “assessed entity” because she is a certified organic producer with gross organic sales in excess of \$250,000 for the previous marketing year and she cannot claim the de minimis exemption. For question 2, unlike the strawberry example in Scenario 1, she does produce a commodity subject to assessment under another commodity promotion order, the Blueberry Promotion, Research and Information Order (7 CFR part 1218) (Blueberry Order). For question 3, she is a “producer” per section 1218.16 of the Blueberry Order and would be subject to assessment per section 1218.52 which states that the funds for the order are paid from assessments on producers and importers. Further, because she produces about 147,000 pounds of blueberries for the previous marketing year, she is above the 2,000 pound per year de minimis exemption for the Blueberry Order (section 1218.53) and, therefore would be subject to assessment. Given that Jane meets the criteria to be assessed under both the proposed Order and the existing Blueberry Order, she can decide which program she would like to pay into, remit assessments to that program and file for an exemption with USDA for the other one.

Scenario 4—Jane Smith’s Mixed Berry Farm (A “Split Operation”)

Jane Smith is a berry producer, producing both organic and conventional blueberries and organic strawberries. This can be considered a “split operation” because she produces both organic and conventional products. Jane has a total of \$500,000 in blueberry sales for the previous marketing year, of which \$300,000 is from organic blueberries (about 80,000 pounds at \$3.40 per pound) and \$200,000 is from conventional blueberries (about 103,000 pounds at \$1.95 per pound). Organic strawberry sales are \$300,000 for the previous marketing year.

To determine whether she is required to pay assessments and to who, Jane needs to answer the same questions: (1) Whether she is an “assessed entity” under the proposed Order; (2) whether she produces a commodity subject to assessment under another commodity promotion order; and (3) if she does, whether she is subject to pay assessments to it. Jane’s total gross organic sales are \$600,000 (the \$300,000

⁵⁵ Price derived from data published in the NASS 2014 Organic Production Survey (09/17/2015).

in organic blueberries plus the \$300,000 in organic strawberries). For question 1, she is considered an “assessed entity” because she is a certified organic producer with gross organic sales in excess of \$250,000 for the previous marketing year. Further, because she is above the \$250,000 de minimis exemption threshold, she cannot claim a de minimis exemption and, thus, would be subject to the proposed Order.

For question 2, Jane does produce a commodity subject to assessment under another commodity promotion order, the Blueberry Order. For question 3, she is a “producer” per section 1218.16 of the Blueberry Order and would be subject to assessment per section 1218.52. She produces in excess of the 2,000 pound per year de minimis exemption for the Blueberry Order (section 1218.53) and, therefore, could not claim an exemption from the Blueberry Order.

Under this scenario, Jane is clearly required to pay the assessment on the 103,000 pounds of conventional blueberries; this assessment is owed under the Blueberry Order regardless of the proposed Order. For the organic portion of her split operation, she has a total of \$600,000 in gross organic sales. Jane can either: (a) Pay assessments on the \$300,000 in organic blueberries (*i.e.*, about 80,000 pounds) under the Blueberry Order and pay assessments on the \$300,000 in organic strawberry sales under the proposed Order or (b) pay assessments on the \$600,000 in gross organic sales under the proposed Order. In either case, Jane must file for exemptions from the respective program that she is not paying into but would otherwise be subject to assessment under.

If the scenario were slightly different and, instead of \$300,000 in organic strawberry sales, Jane’s organic strawberry sales are \$100,000, the decision point would remain the same. Jane can either: (a) Pay assessments on the \$300,000 in organic blueberries (*i.e.*, about 80,000 pounds) under the Blueberry Order and pay assessments on the \$100,000 in organic strawberry sales under the proposed Order or (b) pay assessments on the \$400,000 in gross organic sales under the proposed Order. While \$100,000 in organic strawberry sales is less than the \$250,000 de minimis threshold for the proposed Order, entities cannot opt into a program for the purpose of becoming exempt under the other program’s de minimis exemption. In general, unless an entity for a “dual-covered commodity” would be considered de minimis under both the proposed Order and the commodity promotion program,

that entity must pay assessments under one or both programs.

Scenario 5—Joe Smith’s Beef Operation (Another “Dual-Covered Commodity”)

Joe Smith is a certified organic producer, producing only organic beef on his operation and has gross organic sales of \$100,000 for the previous marketing year. To determine whether he is required to pay assessments and to who, Joe first needs to answer question 1 about whether he is an “assessed entity” under the proposed Order. While he is a certified organic producer, he does not have gross organic sales in excess of \$250,000 for the previous marketing year. For question 2, he does produce a commodity subject to assessment under another commodity promotion order, the Beef Promotion and Research Order (7 CFR part 1260) (Beef Order). For question 3, he is a “producer” per section 1260.116 of Beef Order and would be subject to assessment per section 1260.172 which states that the funds for the order are paid from assessments on producers at a rate of one dollar per head of cattle. There is no de minimis exemption under the Beef Order. While \$100,000 in organic beef sales is less than the \$250,000 de minimis threshold for the proposed Order, Joe cannot claim he is exempt from the Beef Order because he is planning to pay into the proposed Order only to then claim he is also exempt from the proposed Order. Under this scenario, Joe could either (a) pay his assessments into the Beef Order or (b) pay assessments on the \$100,000 in organic beef sales to the proposed Order.

While these scenarios focus on agricultural producers, the examples above could be utilized with organic handlers and importers. In the case of importers, the entity would need to look at transaction value rather than gross organic sales. However, as previously noted in the case of “dual-covered commodities”, one must determine in any scenario whether the entity is “covered” under an applicable commodity promotion order (which can include producers, handlers, first handlers, processors, importers, exporters, feeders, and seed stock producers, depending upon the order). Only “covered” entities are entitled to make a choice between paying into a proposed organic Order and the commodity specific promotion order. For example, an organic blueberry handler would not have the ability to elect to pay into the blueberry program instead of the organic program, as blueberry handlers are not “covered” by the blueberry program and are,

therefore, not assessed. In this instance, the organic blueberry handler would need to pay into the organic program if it had gross organic sales in excess of \$250,000 for the previous marketing year or, if less than \$250,000 in gross organic sales, chose to participate as a “voluntarily assessed entity”.

Assessment Offset

AMS is inviting public comment on the proposed provision to provide for an assessment offset for those entities subject to the Order that also pay a state promotion assessment. Section 1255.54 states that the Board, with approval of the Secretary, can credit an organic producer or handler up to 25 percent of the amount to be remitted to the Board pursuant to section 1255.52 to offset collection and compliance costs relating to such assessments and for fees paid to Qualified State Commodity Boards required by State law. The proponent group proposed the level of the offset at 25 percent. The offset would only be for monies that go to research and promotion programs and not for dues or quality specifications. AMS is specifically interested in comments regarding the proposed offset for collection and compliance costs and how this would be implemented.

Under this proposal, organic producers and handlers who have an obligation to pay into a state commodity promotion program would be able to offset part of their assessment obligation. A Qualified State Commodity Board is defined as a State program, authorized by State law or State government agency that receives mandatory contributions and conducts promotion, research and/or information. These state programs do not need to be specifically for organic research and promotion. For example, if there is an Idaho state potato research and promotion program, an Idaho organic potato producer could hypothetically be required to pay a \$30 assessment annually to the state program. Under this proposed Order, that same producer also may be obligated under section 1255.52 to pay \$100 to the federal organic research and promotion program. In this scenario, the producer would be allowed to offset 25 percent or \$25 of the \$100 owed under the federal program, and thus pay \$75 to the federal program and \$30 to the state program. It should be noted that the producer would not be able to offset the total amount of the state obligation; rather, only up to 25 percent of what he or she owed under the federal program.

It is important that stakeholders be aware that USDA does not control state or regional commodity promotion

programs. Furthermore, USDA does not address such programs in Federal regulations to maintain a clear separation of jurisdictions, authorities, and powers. However, USDA acknowledges that some state and regional commodity promotion programs work in concert with Federal programs. As such, USDA will encourage the boards/committees/councils that oversee the Federal commodity promotion programs to remind entities that request a Federal organic assessment exemption that there may be state and regional commodity promotion program assessments that are not exempted as part of a Federal program exemption.

iv. Promotion, Research and Information

Pursuant to section 516 of the Act, sections 1255.60 through 1255.62 of the proposed Order would detail requirements regarding promotion, research and information programs, plans and projects authorized under the Order. The Board would develop and submit to the Secretary for approval programs, plans and projects regarding promotion, research, information and other activities including consumer and industry information and advertising (designed to, among other things, build markets and develop new products, including new uses of existing organic products, new organic products or improved technology in the production, processing and packaging of organic products). No program, plan or project would be implemented prior to USDA approval. The Board would be required to evaluate each plan and program to ensure that it contributes to an effective and coordinated research, promotion and information program. Such activities that are found not to contribute to an effective program would be terminated.

As stated in section 1255.61, at least once every five years, the Board would fund an independent evaluation of the effectiveness of the Order and programs conducted by the Board. The Board would submit to USDA, and make public, the results of this periodic evaluation. Finally, section 1255.62 states that any patents, copyrights, trademarks, inventions, product formulations and publications developed through the use of funds received by the Board would be the property of the U.S. Government, as represented by the Board. These along with any rents, royalties and the like from their use would be considered income subject to the same fiscal, budget, and audit controls as other funds of the Board, and could be licensed with approval of the Secretary.

This provision of the proponent's proposal was modified to ensure its compliance with AMS policy for all research and promotion programs.

v. Reports, Books, and Records

Pursuant to section 515 of the Act, sections 1255.70 through 1255.72 specify the reporting and recordkeeping requirements under the proposed Order as well as requirements regarding confidentiality of information.

Section 1255.70 states that organic producers, handlers and importers would be required to submit periodically to the Board certain information as the Board may request. Specifically, organic producers and handlers would submit a report that would include, but not be limited to, the entity's name, address, and telephone number and the value of net organic sales of its organic products. Organic producers and handlers would submit this report at the same time they remit their assessments to the Board (no later than 90 days following the end of the year in which the organic product was produced or handled).

Likewise, importers would be required to submit a report to the Board that would include, but not be limited to, the importer's name, address, and telephone number; the transaction value of imported organic products; and the country/countries of export. Importers would submit this report at the same time they remit their assessments. Importers who paid their assessments through Customs would not have to submit such reports to the Board because Customs would collect this information upon entry.

Under section 1255.71, certified organic producers, certified organic handlers, and importers of organic products, including those who were exempt, would be required to maintain books and records needed to carry out the provisions of the proposed program, including for verification of any required reports. Such books and records must be made available during normal business hours for inspection by the Board's or USDA's employees or agents. Certified organic producers, certified organic handlers, and importers of organic products would be required to maintain such books and records for two years beyond the applicable fiscal year to which they apply.

Under section 1255.72, all information obtained from persons subject to the Order as a result of proposed recordkeeping and reporting requirements would be kept confidential by all persons, including all current and former employees of the

Board, all current and former officers and employees of contracting and subcontracting agencies or agreeing parties having access to such information. This information would not be available to Board members or certified organic producers, certified organic handlers, and importers. Only those persons with a specific need for the information would have access to it and for the sole purpose of administering the proposed program. Such information could only be disclosed if the Secretary considered it relevant, and the information was revealed in a judicial proceeding or administrative hearing brought at the direction or at the request of the Secretary or to which the Secretary or any officer of the United States is a party. Other exceptions for disclosure of confidential information would include the issuance of general statements based on reports or on information relating to a number of persons subject to the proposed Order, if the statements did not identify the information furnished by any person, or the publication, by direction of the Secretary, of the name of any person violating the proposed Order and a statement of the particular provisions of the Order violated.

vi. Miscellaneous Provisions

Referenda

Pursuant to section 518 of the Act, § 1255.81(a) of the proposed Order specifies that the program would not go into effect unless it is approved by a majority of assessed entities voting in the referendum. For example, if 10,000 organic producers, handlers, and importers voted in a referendum, 5,001 would have to vote in favor of the Order for it to pass in the referendum. It is proposed that a single assessed entity may cast one vote in the referendum. A single entity is recognized by its individual tax identification number. This is a modification from the proponent's proposal, which recommended that a single assessed entity could cast one vote for each organic certificate held.

USDA made this modification to ensure consistency with other research and promotion programs under USDA oversight. Because organic certifying agents who certify producers and handlers vary as to the number of organic certificates issued to an entity upon certification, it would be difficult to ensure equity in the number of votes across entities. For example, a certified organic producer of blueberries and beef may receive one certificate from Certifying Agent A covering both the crops and livestock component of their

operation. However, if the producer was certified by Certifying Agent B, they may receive two certificates—one for crops and one for livestock. The USDA organic regulations do not specify the number of certificates to be provided, only that the entity has met the requirements to be certified organic. Therefore, this modification to the proposed Order is intended to ensure that each entity is represented appropriately in any referendum.

The proposed Order states that each ballot request by an importer would have to include an affidavit attesting to that importer's participation in the organic industry, and a voluntarily assessed entity in an initial referendum would have to include in a ballot request a commitment to be assessed for the majority of years until the next continuance referendum. This is a modification from the proponent's proposal, which stated that voluntarily assessed entities voting in an initial referendum would have to commit to be assessed for all of the next seven years (until the next continuance referendum). Upon review, AMS determined that requiring voluntarily assessed entities who vote in the initial referendum to pay into the program every year thereafter until the next referendum would not align with how the same type of entities would be treated that began paying assessments after the initial referendum.

Accordingly, AMS is proposing that, at initial referendum, voluntarily assessed entities would need to commit to pay in for a majority of years until the next referendum, consistent with how voluntarily assessed entities would be treated in subsequent referenda. The proposed Order also states that bloc voting would be prohibited.

Section 1255.81(b) of the proposed Order specifies criteria for subsequent referenda. Under the Order, a referendum would be held to ascertain whether the program should continue, be amended, or be terminated. This section specifies that a referendum would be held every seven years, which is in accordance with the Act. The Order would continue if favored by a majority of the assessed entities voting.

Additionally, a referendum shall be conducted by the Secretary if requested by 10 percent or more of all assessed entities. As in the initial referendum, each importer ballot request would include an affidavit attesting to that importer's participation in the organic industry, and a voluntarily assessed entity would have to include in a ballot request a commitment to be assessed for the majority of the next seven years (until the next continuance

referendum). It also states that bloc voting would be prohibited.

All assessed entities in good standing would be eligible to vote in a subsequent referendum. It states that to be in good standing:

(1) A dual-covered entity would have to demonstrate that it has paid into the proposed program for a majority of the years since the most recent referendum; or

(2) A voluntarily assessed entity would have to demonstrate that it has paid into the proposed program for a majority of the years since the most recent referendum; or

(3) An entity would have to demonstrate that it attained its organic certification since the most recent referendum; or

(4) An assessed entity that did not meet any of the above descriptions would have to demonstrate that it has paid into the proposed program every year since the most recent referendum.

For example, given these provisions and assuming that an organic R&P program passed its initial referendum and was implemented in 2017, a subsequent referendum would need to be held by 2024. Both dual-covered entities and voluntarily assessed entities who voted in the initial referendum would need to pay assessments into the organic program for at least four of the seven years leading up to 2024 in order to vote in the 2024 referendum. If a dual-covered entity decided to start paying into the organic program (rather than the commodity specific program) in 2020 (*i.e.*, between 2017 and 2024), then that entity would have to show that it paid assessments for all four of the remaining years leading up to 2024. This would equally apply for voluntarily assessed entities who join in between the initial and any subsequent referendum.

In other cases, a dual-covered commodity or voluntarily assessed entity could pay assessments for 2018, 2019, 2020, and 2022 (*i.e.*, staggered/not continuous) and would be eligible to vote in a 2024 referendum since they paid for a majority of years since the initial referendum. While not addressed in the proponent's proposal, AMS expects that nominees for Board positions would be active program participants (*i.e.* paying assessments) during the years for which they may be selected to serve on the Board. AMS seeks comments on this issue and on the proposal for entities to pay in for a majority of years to vote in referenda.

Section 1255.80 and sections 1255.82 through 1255.88 describe the rights of the Secretary; authorize the Secretary to suspend or terminate the Order when deemed appropriate; prescribe

proceedings after termination; address personal liability, separability, and amendments; and provide OMB control numbers. These provisions are common to all research and promotion programs authorized under the Act. It is noted that section 1255.87, regarding amendments, states that any changes to the assessment rate proposed by the Board would be subject to referendum but that any other amendments to this subpart may be proposed by the Board. Additionally, a list of all amendments made since the last referendum would be sent to all assessed entities in advance of each referendum.

IV. Executive Order 12866 and Executive Order 13563

Executive Orders 12866 and 13563 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). Executive Order 13563 emphasizes the importance of quantifying both costs and benefits, of reducing costs, of harmonizing rules, and of promoting flexibility. This rule is not a significant regulatory action under section 3(f) of Executive Order 12866, Regulatory Planning and Review, as supplemented by Executive Order 13563. The Office of Management and Budget designated this action "not significant" and therefore, has not reviewed this proposed rule.

V. Initial Regulatory Flexibility Act Analysis

In accordance with the Regulatory Flexibility Act (RFA) (5 U.S.C. 601–612), AMS is required to examine the impact of the proposed rule on small entities. Accordingly, AMS has considered the economic impact of this action on small entities.

The purpose of the RFA is to fit regulatory actions to the scale of businesses subject to such actions so that small businesses will not be disproportionately burdened. The Small Business Administration defines, in 13 CFR part 121, small agricultural producers as those having annual receipts of no more than \$750,000 and small agricultural support services firms (handlers and importers) as those having annual receipts of no more than \$7.5 million.

In 2014, there were a total of 19,466 certified organic operations in the U.S.

and its territories.⁵⁶ This total includes both certified organic producers and certified organic handlers. The number of operations that were certified solely as organic handlers, according to NOP, totaled 8,327 entities. The remaining 11,139 certified organic entities include operations that are certified only as producers and operations that are certified as both producers and handlers. Producers of certified organic commodities are required to be certified as organic handlers if they sell, process, or package agricultural products, except such term shall not include the sale, transportation, or delivery of crops or livestock by the producer thereof to a handler.

Data from the NASS 2014 Organic Survey show that about 91 percent of certified organic producers had 2014 organic sales value of \$750,000 or less.⁵⁷ Applying this proportion to the 11,139 certified organic producers referenced earlier results in 10,126 producing entities being considered small.

There is no one catch-all definition by the SBA of what constitutes a small handler of agricultural products. Therefore, to maintain consistency with other federal programs and marketing orders, AMS defines a small handler as one which has no more than \$7.5 million in annual receipts as defined by the SBA under subsector 115 of the North American Industry Classification System (NAICS), "Support Activities for Agriculture and Forestry".⁵⁸ According to the 2012 County Business Patterns and 2012 Economic Census released June 22, 2015, about 95 percent of firms classified under subsector 115 of NAICS had less than \$7.5 million in annual receipts and would be considered small. Applying this proportion to the number of certified organic handlers results in an estimated 7,895 handler operations out of 8,327 being considered small under the SBA definition.

According to data from Customs, there were 2,135 importers of organic products with HTS codes in 2014. Of these, about 98 percent had annual sales revenue of less than \$7.5 million in 2014. Adding the 2,135 number of organic importers to the 19,466 combined number of certified organic producers and handlers results in a total

of 21,601 operations with sales of certified organic products in the U.S. Of this total, 20,121 entities, or 93 percent, would be considered to be small under the SBA definitions.

This rule proposes an industry-funded research, promotion, and information program for organic products. Organic products include food items, such as fruits, vegetables, dairy, meat, poultry, breads, grains, snack foods, condiments, beverages, and packaged and prepared foods, and non-food items, such as fiber for linen and clothing, supplements, personal care products, pet food, household products, and flowers. The purpose of this program would be to: (1) Develop and finance an effective and coordinated program of research, promotion, industry information, and consumer education regarding organic commodities; and (2) maintain and expand existing markets for organic commodities. The program would be financed by an assessment on certified organic domestic producers and handlers and importers. The proposed program would be implemented under Act and would be administered by a board of mandatorily and voluntarily assessed industry members selected by the Secretary. Under the proposed Order, certified producers and handlers with gross sales in excess of \$250,000 for the previous marketing year of organic agricultural commodities would pay one-tenth of one percent of net organic sales (total gross sales in organic products minus (a) the cost of certified organic ingredients and agricultural inputs used in the production of certified products and (b) the cost of any non-organic agricultural ingredients used in the production of organic products). Entities importing greater than \$250,000 in transaction value of organic products for the previous marketing year would pay one-tenth of one percent of the transaction value of organic products reported to U.S. Customs. An initial referendum will be held among mandatorily and voluntarily assessed entities (*i.e.* domestic producers, handlers, and importers) to determine whether they favor implementation of the program prior to it going into effect.

The proposed program is expected to grow markets for organic products by increasing the number of certified organic farmers, increasing the amount of organic acreage, conducting research into viable pest management tools, and educating consumers on the meaning of the USDA organic label. The revenue generated by the assessment is expected to finance these activities to help increase the supply of organic

commodities. According to the proponent group, the organic industry cannot keep pace with consumer demand for organic products. To solve this issue, the proposed program would use its assessment revenue to expand the supply of certified organic commodities through the aforementioned activities. While the benefits of the proposed program are difficult to quantify, the benefits are expected to outweigh the costs.

In its overview of the organic industry, OTA stated that it had partnered with the GRO Organic Core Committee to facilitate preliminary discussions among stakeholders to determine whether there is a need for an organic promotion and research order. As part of its outreach, OTA and the GRO Organic Core Committee held six webinars, three panel debates, and 20 town hall meetings in 2012 and 2013. In the spring and summer of 2014, OTA and the GRO Organic Core Committee engaged in direct outreach to all organic certificate holders across the U.S. The proponents mailed brochures and postcards with information on the emerging framework for an organic research and promotion order to 17,500 organic producers and handlers. OTA and the GRO Organic Core Committee conducted two rounds of surveys by mail and telephone to gauge support of the program. Of the survey respondents, twice as many certified operators supported the establishment of an organic research and promotion order than were opposed, according to the proponent. The survey respondents represented 11 percent of crop certificate holders, 13 percent of livestock certificate holders, and 8 percent of handling certificate holders. OTA also received feedback indicating that there was disagreement among industry producer members as to whether covered certified producers should be assessed, or only those whose gross organic sales exceeds \$250,000. In an effort to gather metrics on this particular issue of concern to the industry, OTA reached out to 2,000 certified organic producers who indicated that they fell below \$250,000 in gross organic sales with a combination of phone and mail surveys. OTA received responses from roughly 1,200 of those surveyed, 13 percent of which favored the removal of the \$250,000 threshold. Consequently, the proponents rejected the proposal to assess all certified producers.

In lieu of a research and promotion program, the proponents considered a voluntary trade association promotion program to be overseen by OTA, a federal marketing order, and

⁵⁶ NOP Organic Integrity database. Available at: <https://apps.ams.usda.gov/integrity/>.

⁵⁷ National Agricultural Statistics Service, 2014 Organic Survey, U.S. Department of Agriculture (September 2015), p. 1, available at <http://usda.mannlib.cornell.edu/usda/current/OrganicProduction/OrganicProduction-09-17-2015.pdf>.

⁵⁸ U.S. Small Business Administration, "Table of Small Business Size Standards Matched to North American Industry Classification System Codes", February 26, 2016.

encouraging each organic crop to create its own research and promotion program. The proponents concluded that a research and promotion program that would encompass all organic products would best meet the needs of the organic industry in an administratively efficient manner with all benefiting parties paying their fair share.

Establishment of this program would impose an additional reporting and recordkeeping burden on importers and domestic producers and handlers of organic products. Importers and domestic certified organic producers and handlers interested in serving on the Board would be asked to submit a nomination form to the Board indicating their desire to serve or to nominate another industry member to serve on the Board. Interested persons could also submit a background statement outlining qualifications to serve on the Board. Except for the initial Board nominations, importers and domestic certified organic producers and handlers would have the opportunity to cast a ballot and vote for candidates to serve on the Board. Nominees would also have to submit a background information form to the Secretary to ensure they are qualified to serve on the Board.

Additionally, importers whose annual transaction value does not exceed \$250,000, and domestic producers and handlers whose gross organic sales do not exceed \$250,000 could submit a request to the Board for an exemption from paying assessments on this value. An entity whose commodity is currently represented under a different commodity promotion program or marketing order could submit to the Board its election of the program into which it will pay assessments. Mandatorily and voluntarily assessed entities would be asked to submit either an "Organic Import Report" or an "Organic Production and Handling Report" that would accompany their assessments paid to the Board and report the net organic sales and/or transaction value for organic products during the applicable period. Entities granted an exemption from assessments from the Board would not be required to submit these reports.

Finally, domestic producers, handlers, and importers who wanted to participate in a referendum to vote on whether the Order should become effective would have to complete a registration form for submission to the Secretary. These forms are being submitted to OMB for approval under OMB Control No. 0581–NEW. Specific burdens for the forms are detailed later

in this document in the section titled PAPERWORK REDUCTION ACT. As with all Federal promotion programs, reports and forms are periodically reviewed to reduce information requirements and duplication by industry and public sector agencies. USDA has not identified any relevant Federal rules that duplicate, overlap, or conflict with this rule.

AMS is committed to complying with the E-Government Act, to promote the use of the Internet and other information technologies to provide increased opportunities for citizen access to Government information and services, and for other purposes.

While AMS has performed this initial RFA analysis regarding the impact of the proposed rule on small entities, in order to have as much data as possible for a more comprehensive analysis, we invite comments concerning potential effects. AMS is also requesting comments regarding the number and size of entities covered under the proposed Order.

VI. Executive Order 13175

This rule has been reviewed in accordance with the requirements of Executive Order 13175, Consultation and Coordination with Indian Tribal Governments. The review reveals that this regulation would not have substantial and direct effects on Tribal governments and would not have significant Tribal implications.

VII. Civil Rights Impact Analysis

Consideration has been given to the potential civil rights implications of this proposed rule on affected parties to ensure that no person or group shall be discriminated against on the basis of race, color, national origin, gender, religion, age, disability, sexual orientation, marital or family status, political beliefs, parental status or protected genetic information. Although detailed demographic information is not available on the importers and domestic certified organic producers and handlers who would be subject to the program, broad consideration was given to the employees of such entities and those individuals who wish to use information collected under this mandatory program. This proposed rule does not require affected entities to relocate or alter their operations in ways that could adversely affect such persons or groups. Moreover, the program would not exclude from participation any persons or groups, deny any persons or groups the benefits of the program, or subject any persons or groups to discrimination.

VIII. Paperwork Reduction Act

In accordance with the Paperwork Reduction Act of 1995 (44 U.S.C. Chapter 35), AMS announces its intention to request an approval of a new information collection and recordkeeping requirements for the proposed organic program.

Title: Organic Research, Promotion, and Information Order.

OMB Number: 0581–NEW.

Expiration Date of Approval: 3 years from approval date.

Type of Request: New information collection for research and promotion program.

Abstract: The information collection requirements in the request are essential to carry out the intent of the Act. The information collection concerns a proposal received by USDA for a national research and promotion program for the organic industry. The program would be financed by assessments levied upon domestic certified organic producers, certified organic handlers, and importers of organic products, and would be administered by a board of industry members selected by the Secretary. The program would provide for an assessment exemption for: (a) Certified organic producers and certified organic handlers with gross organic sales of \$250,000 or less for the previous marketing year, (b) importers of organic products declaring a transaction value equal to \$250,000 or less for the previous marketing year, (c) shipments of certified organic commodities by domestic certified organic producers and certified organic handlers to locations outside of the United States, and (d) producers, handlers, and importers of dual-covered commodities (e.g., highbush blueberries, beef, dairy, almonds, etc.) who elect to pay assessments under other applicable commodity promotion programs. A referendum would be held among assessed domestic certified organic producer, certified organic handler entities, and importers to determine whether they favor implementation of the program prior to it going into effect. The purpose of the program would be to promote organic goods, educate the public, and support market and agricultural research.

In summary, the information collection requirements under the program concern Board nominations, the collection of assessments, and referenda. Regarding assessments, domestic certified organic producers, certified organic handlers, and importers would submit an "entity registration statement and application

for exemption from assessment” form for the purpose of registering with the Board and, if desired, to apply for an exemption from paying assessments. The application for exemption portion of the form would need to be submitted to the board annually. Persons producing, handling and importing dual-covered commodities that opt to remit assessments to existing commodity promotion programs would annually submit a “Dual-Covered Commodity Application for Exemption From Assessments” form to the Secretary. Mandatorily and voluntarily assessed entities would also be asked to submit either an “Organic Import Report” or an “Organic Production and Handling Report” that would accompany their assessments paid to the Board and report the net organic sales and/or transaction value for organic products during the applicable period. Entities granted an exemption from assessments from the Board would not be required to submit these reports.

For Board nominations, importers and domestic certified organic producers and handlers interested in serving on the Board would be asked to submit a “Nomination Form” to the Board indicating their desire to serve or to nominate another industry member to serve on the Board. Interested persons could also submit a background statement outlining qualifications to serve on the Board. Except for the initial Board nominations, importers and domestic certified organic producers and handlers would have the opportunity to submit a “Nomination Ballot” to the Board where they would vote for candidates to serve on the Board. Nominees would also have to submit a background information form, “AD-755,” to the Secretary to ensure they are qualified to serve on the Board.

There would also be an additional burden on importers and domestic certified organic producers and handlers voting in referenda. The referendum ballot, which represents the information collection requirement relating to referenda, is addressed in a proposed rule on referendum procedures which is published separately in this issue of the **Federal Register**. The following estimates are based on an assumption that there is no participation by voluntarily assessed entities. Per the Initial Regulatory Flexibility Analysis, of the 11,139 producers, 8,327 handlers, and 2,135 importers, it is estimated that about 2,691 producers, 5,015 handlers, and 326 importers would pay assessments under the Order and thus be eligible to vote in the referendum.

Information collection requirements that are included in this proposal include:

(1) Organic Production & Handling Report

Estimate of Burden: Public reporting burden for this collection of information is estimated to average 3 hours per certified organic producer or certified organic handler.

Respondents: Domestic certified organic producers and certified organic handlers.

Estimated Number of Respondents: 7,706.

Estimated Number of Responses per Respondent: 4.

Estimated Total Annual Burden on Respondents: 92,472 hours.

(2) Organic Importer Report

Estimate of Burden: Public reporting burden for this collection of information is estimated to average 3 hour per importer.

Respondents: Importers.

Estimated Number of Respondents: 326.

Estimated Number of Responses per Respondent: 4.

Estimated Total Annual Burden on Respondents: 3,912 hours.

(3) Entity Registration Statement and Application for Exemption From Assessment

Estimate of Burden: Public recordkeeping burden for this collection of information is estimated to average 0.8782 hours per application.

Respondents: Domestic producers, handlers, and importers.

Estimated Number of Respondents: 21,601.

Estimated Number of Responses per Respondent: 1.

Estimated Total Annual Burden on Respondents: 18,970 hours.

(4) Dual-Covered Commodity Application for Exemption From Assessments

Estimate of Burden: Public reporting burden for this collection of information is estimated to average 1 hour per importer or domestic producer or handler reporting on organic products produced or imported. Upon approval of an application, such entities would receive exemption certification.

Respondents: Domestic producers, handlers, and importers.

Estimated Number of Respondents: 1,021.

Estimated Number of Responses per Respondent: 1.

Estimated Total Annual Burden on Respondents: 1,021 hours.

(5) Nomination Form

Estimate of Burden: Public recordkeeping burden for this collection of information is estimated to average 0.25 hours per application.

Respondents: Domestic producers, handlers, and importers.

Estimated Number of Respondents: 275.

Estimated Number of Responses per Respondent: 0.33.

Estimated Total Annual Burden on Respondents: 22.69 hours.

(6) Nomination Ballot

Estimate of Burden: Public recordkeeping burden for this collection of information is estimated to average 0.25 hours per application.

Respondents: Domestic producers, handlers, and importers.

Estimated Number of Respondents: 8,032.

Estimated Number of Responses per Respondent: 0.33.

Estimated Total Annual Burden on Respondents: 662.64 hours.

(7) Background Information Form AD-755 (OMB Form No. 0505-0001)

Estimate of Burden: Public reporting for this collection of information is estimated to average 0.5 hours per response for each Board nominee.

Respondents: Domestic producers, handlers, and importers.

Estimated Number of Respondents: 32 (32 for initial nominations to the Board, 0 for the second year, 5 for the third year, and up to 6 annually thereafter).

Estimated Number of Responses per Respondent: 1 every 3 years.

Estimated Total Annual Burden on Respondents: 16 hours for the initial nominations to the Board, 0 hours for the second year of operation, and up to 6 hours annually thereafter.

(8) Background Statement

Estimate of Burden: Public recordkeeping burden for this collection of information is estimated to average 0.25 hours per application.

Respondents: Domestic producers, handlers, and importers.

Estimated Number of Respondents: 275.

Estimated Number of Responses per Respondent: 1.

Estimated Total Annual Burden on Respondents: 68.75 hours.

(9) A Requirement To Maintain Records Sufficient To Verify Reports Submitted Under the Order

Estimate of Burden: Public recordkeeping burden for keeping this information is estimated to average 1 hour per recordkeeper maintaining such records.

Recordkeepers: Domestic producers and handlers (19,466), importers (2,135).

Estimated Number of Recordkeepers: 21,601.

Estimated Total Recordkeeping Hours: 21,601 hours.

As noted above, under the proposed program, domestic certified organic producers, certified organic handlers, and importers would be required to pay assessments to and file reports with the Board. While the proposed Order would impose certain recordkeeping requirements on certified organic producers, certified organic handlers, and importers, information required under the proposed Order could be compiled from records currently maintained. Such records shall be retained for at least 5 years beyond the fiscal year of their applicability.

An estimated 21,601 respondents would provide information to the Board (19,466 domestic certified organic producers and handlers, and 2,135 importers). Data for the list of certified organic producers and handlers was obtained from the 2014 NASS Organic Survey and the "2014 Annual Count of USDA-NOP Certified Organic Operations" report from the Organic Integrity Database.⁵⁹ Data to establish the list of importers of organic products in 2014 was obtained from the USDA AMS International Trade Data System/ Automated Commercial Environment (ITDS/ACE).⁶⁰ The estimated cost of providing the information to the Board by respondents would be \$4,989,011.35. This total has been estimated by adding the cost of the hours required for producer and handling reporting (135,638.17 hours multiplied by \$34.89, the mean hourly earnings of certified producers and handlers) and importer reporting (8,490.92 hours multiplied by \$30.22, the average mean hourly earnings of importers). Data for computation of the hourly rate for producers and handlers (Occupation Code 11-9013: Farmers, Ranchers, and other Agricultural Managers) and importers (Occupation Code 13-1020: Buyers and Purchasing Agents) was obtained from the U.S. Department of Labor's Bureau of Labor Statistics.

The proposed Order's provisions have been carefully reviewed, and every effort has been made to minimize any unnecessary recordkeeping costs or requirements, including efforts to utilize information already submitted under

other programs administered by USDA and other state programs.

The proposed forms would require the minimum information necessary to effectively carry out the requirements of the program, and their use is necessary to fulfill the intent of the Act. Such information can be supplied without data processing equipment or outside technical expertise. In addition, there are no additional training requirements for individuals filling out reports and remitting assessments to the Board. The forms would be simple, easy to understand, and place as small a burden as possible on the person required to file the information.

Collecting information monthly would likely coincide with normal industry business practices. The timing and frequency of collecting information are intended to meet the needs of the industry while minimizing the amount of work necessary to fill out the required reports. The requirement to keep records for five years is consistent with OFPA section 6511(d)(1) requirements for the production and handling or agricultural products sold or labeled as organically produced. In addition, the information to be included on these forms is not available from other sources because such information relates specifically to individual domestic certified organic producers, certified organic handlers and importers who are subject to the provisions of the Act. Therefore, there is no practical method for collecting the required information without the use of these forms.

Request for Public Comment Under the Paperwork Reduction Act

Comments are invited on: (a) Whether the proposed collection of information is necessary for the proper performance of functions of the proposed Order and USDA's oversight of the proposed Order, including whether the information would have practical utility; (b) the accuracy of USDA's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used; (c) the accuracy of USDA's estimate of the principal production areas in the United States for organic commodities; (d) the accuracy of USDA's estimate of the number of domestic certified organic producers, handlers, and importers of organic products that would be covered under the program; (e) ways to enhance the quality, utility, and clarity of the information to be collected; and (f) ways to minimize the burden of the collection of information on those who are to respond, including the use of appropriate automated, electronic,

mechanical, or other technological collection techniques or other forms of information technology.

Comments concerning the information collection requirements contained in this action should reference OMB No. 0581-NEW. In addition, the docket number, date, and page number of this issue of the **Federal Register** also should be referenced. Comments should be sent to the same addresses referenced in the **ADDRESSES** section of this rule.

OMB is required to make a decision concerning the collection of information contained in this rule between 30 and 60 days after publication. Therefore, a comment to OMB is best assured of having its full effect if OMB receives it within 30 days of publication.

USDA made modifications to the proponent's proposal to conform to other similar national research and promotion programs implemented under the Act.

While the proposal set forth below has not received the approval of USDA, it is determined that this proposed Order is consistent with and would effectuate the purposes of the Act.

As previously mentioned, for the proposed Order to become effective, it must be approved by a majority of domestic certified organic producers, handlers, and importers voting in the referendum.

Referendum procedures will be published separately in this issue of the **Federal Register**.

A 60-day comment period is provided to allow interested persons to respond to this proposal. All written comments received in response to this rule by the date specified will be considered prior to finalizing this action.

List of Subjects in 7 CFR Part 1255

Administrative practice and procedure, Advertising, Consumer information, Marketing agreements, Organic, Promotion, Reporting and recordkeeping requirements.

■ For the reasons set forth in the preamble, it is proposed that Title 7, Chapter XI of the Code of Federal Regulations be amended by adding part 1255 to read as follows:

PART 1255—ORGANIC RESEARCH, PROMOTION AND INFORMATION ORDER

Subpart A—Organic Research, Promotion, and Information Order

Subpart B—[Reserved]

Authority: 7 U.S.C. 7411–7425; 7 U.S.C. 7401.

Subpart A—Organic Research, Promotion and Information Order

Definitions

§ 1255.1 Act.

Act means the Commodity Promotion, Research and Information Act of 1996 (7 U.S.C. 7411–7425), and any amendments thereto.

§ 1255.2 Agricultural inputs.

Agricultural inputs means all substances or materials used in the production or handling of organic agricultural products (e.g. fertilizer, lime, soil conditioners, agricultural chemicals, beneficial insects, other approved materials for pest control, seed, plants, vines, trees, feed purchased for livestock, etc.).

§ 1255.3 Agricultural product.

Agricultural product. Any agricultural commodity or product, whether raw or processed, including any commodity or product derived from livestock, that is marketed in the United States for human or livestock consumption.

§ 1255.4 Assessed entity.

Assessed entity means any certified organic producer or certified organic handler that has gross organic sales in excess of \$250,000 for the previous marketing year, any importer with a transaction value greater than \$250,000 in organic products for the previous marketing year, and any voluntarily assessed entity.

§ 1255.5 Board.

Board means the Organic Research and Promotion Board established pursuant to § 1255.40, or such other name as recommended by the Board and approved by the Secretary.

§ 1255.6 Certificate of exemption.

Certificate of exemption means a certificate issued by the Board, pursuant to § 1255.53, to a certified organic producer, certified organic handler or importer that:

(a) Has gross organic sales less than or equal to \$250,000 for the previous marketing year,

(b) Has imported a transaction value less than or equal to \$250,000 in organic products during the previous marketing year, or

(c) Entity that produces, handles or imports dual-covered commodities. Certificates of exemptions issued to entities that opt to pay into dual-covered commodity research and

promotion programs or marketing orders are issued by the Secretary.

§ 1255.7 Certification or certified.

Certification or certified. A determination made by a USDA-accredited certifying agent that a production or handling operation is in compliance with the Organic Foods Production Act of 1990 (7 U.S.C. 6501–6522) and the regulations in 7 CFR part 205 or to an authorized international standard, and any amendments thereto, and which is documented by a certificate of organic operation.

§ 1255.8 Certified operation.

Certified operation. A crop or livestock production operation, wild-crop harvesting or handling operation, or portion of such operation that is certified by a USDA-accredited certifying agent as utilizing a system of organic production or handling as described by the Organic Foods Production Act of 1990 (7 U.S.C. 6501–6522) and the regulations in 7 CFR part 205.

§ 1255.9 Certified organic handler.

Certified organic handler means a person who handles certified organic products in accordance with the definition specified in 7 CFR 205.100, the requirements specified in 7 CFR 205.270 through 7 CFR 205.272, and all other applicable requirements of part 205 and receives, sells, consigns, delivers, or transports certified organic products into the current of commerce in the United States, the District of Columbia, the Commonwealth of Puerto Rico, or any territory or possession of the United States.

§ 1255.10 Certified organic producer.

Certified organic producer means a person who produces certified organic products in accordance with the definition specified in 7 CFR 205.100, the requirements specified in 7 CFR 205.202 through 7 CFR 205.207 or 7 CFR 205.236 through 7 CFR 205.240, and all other applicable requirements of part 205.

§ 1255.11 Conflict of interest.

Conflict of interest means a situation in which a member or employee of the Board has a direct or indirect financial interest in a person who performs a service for, or enters into a contract with, the Board for anything of economic value.

§ 1255.12 Customs or CBP.

Customs or CBP means the U.S. Customs and Border Protection, an agency of the U.S. Department of Homeland Security.

§ 1255.13 Department.

Department means the U.S. Department of Agriculture, or any officer or employee of the Department to whom authority has heretofore been delegated, or to whom authority may hereafter be delegated, to act in the Secretary's stead.

§ 1255.14 Dual-covered commodity.

Dual-covered commodity means an agricultural commodity that is produced on a certified organic farm and is covered under this part and any other agricultural commodity promotion order issued under a commodity promotion law.

§ 1255.15 Fiscal year and marketing year.

Fiscal year and marketing year means the 12-month period ending on December 31 or such other period as recommended by the Board and approved by the Secretary.

§ 1255.16 Gross organic sales.

Gross organic sales means the total amount the person received for all organic products during the fiscal year without subtracting any costs or expenses.

§ 1255.17 Importer.

Importer means any person who imports certified organic products from outside the United States for sale in the United States as a principal or as an agent, broker, or consignee of any person who produces organic products outside the United States for sale in the United States, and who is listed in the import records as the importer of record for such organic products. Organic importers can be identified through organic certificates, import certificates, HTS codes, or any other demonstration that they meet the definition above.

§ 1255.18 Information.

Information means information and programs for consumers, the organic industry, and producers. This includes educational activities; and information and programs designed to enhance and broaden the understanding of the use and attributes of organic products, increase organic production, support the transition of acres and farms to organic production in the United States, provide technical assistance, maintain and expand existing markets, engage in crisis management, and develop new markets and marketing strategies. These include:

(a) Consumer education, advertising and information, which means any effort taken to provide information to, and broaden the understanding of, the general public regarding organic products; and

(b) Industry information, which means information and programs that would enhance the image of the organic industry, maintain and expand existing markets, engage in crisis management, and develop new markets and marketing strategies; and

(c) Producer information, which means information related to agronomic and animal husbandry practices and certification requirements, and information supporting the sustainable transition of acres, farms and ranches to organic production in the United States, long-term system management, increasing organic production, direct and local marketing opportunities, export opportunities, and organic research.

§ 1255.19 Ingredient.

Ingredient means any substance used in the preparation of an agricultural product that is still present in the final commercial product as consumed.

§ 1255.20 National Organic Program.

"National Organic Program" means the program authorized by the Organic Foods Production Act of 1990 (OFPA) (7 U.S.C. 6501–6522) for the purpose of implementing its provisions.

§ 1255.21 Net organic sales.

Net organic sales means total gross sales in organic products minus (a) the cost of certified organic ingredients, feed, and agricultural inputs used in the production of certified products and (b) the cost of any non-organic agricultural ingredients used in the production of certified products.

§ 1255.22 Order.

Order means an order issued by the Secretary under section 514 of the Act that provides for a program of generic promotion, research, education and information regarding organic products authorized under the Act.

§ 1255.23 Organic.

Organic means a labeling term that refers to an agricultural product produced in accordance with the Organic Foods Production Act of 1990 (OFPA) (7 U.S.C. 6501–6522) and the regulations in 7 CFR part 205.

§ 1255.24 Organic products.

Organic products means products produced and certified under the authority of the Organic Foods Production Act of 1990 (7 U.S.C. 6501–6522) and the regulations in 7 CFR part 205 or to an authorized international standard, and any amendments thereto.

§ 1255.25 Organic Trade Association.

Organic Trade Association (OTA) means a membership business association who, in collaboration with the GRO Organic Core Committee, petitioned USDA for the Organic Research, Promotion, and Information Order. OTA is a membership-based trade organization representing growers, processors, certifiers, farmers associations, distributors, importers, exporters, consultants, retailers, and others involved in the organic sector. The GRO Organic Core Committee is a subset of OTA's larger Organic Research and Promotion Program Steering Committee.

§ 1255.26 Part and subpart.

Part means the Organic Research, Promotion, and Information Order and all rules, regulations, and supplemental orders issued pursuant to the Act and the Order. The Order shall be a *subpart* of such part.

§ 1255.27 Person.

Person means any individual, group of individuals, partnership, corporation, association, cooperative, or any other legal entity.

§ 1255.28 Product processor.

Product processor means a certified organic handler who cooks, bakes, heats, dries, mixes, grinds, churns, separates, extracts, cuts, ferments, eviscerates, preserves, dehydrates, freezes, or otherwise manufactures organic products, and includes the packaging, canning, jarring, or otherwise enclosing organic food in a container.

§ 1255.29 Programs, plans and projects.

Programs, plans and projects means those research, promotion, and information programs, plans or projects established pursuant to the Order.

§ 1255.30 Promotion.

Promotion means any action, including paid advertising and the dissemination of information, utilizing public relations or other means, to enhance and broaden the understanding of the use and attributes of organic products for the purpose of maintaining and expanding markets for the organic industry.

§ 1255.31 Qualified State Commodity Board.

Qualified State Commodity Board means, for purposes of § 1255.54 governing assessment offsets, an existing or future producer or handler governed entity—

(a) That is authorized by State law or a State government agency;

(b) That is organized and operating within a State;

(c) That is not federally administered; and

(d) That receives mandatory contributions and conducts promotion, research, and/or information programs.

§ 1255.32 Research.

Research includes both agricultural and other research.

(a) Agricultural research includes any type of investigation, study, evaluation or analysis (including related education, extension, and outreach activities) designed to improve organic farm production systems and practices, productivity, expand organic farming opportunities, and enhance sustainability for farms, farm families and their communities; enhance plant and animal breeding and varietal development for organic systems and improve the availability of other production inputs; optimize natural resource conservation, biodiversity, ecosystem services, and other environmental outcomes of organic agriculture, and advance organic farm and food safety objectives.

(b) Other research includes any type of investigation, study, evaluation or analysis (including related education, extension, and outreach activities) designed to enhance or increase the consumption, image, desirability, use, marketability, or production of organic products; or to do studies on nutrition, market data, processing, environmental and human health benefits, quality of organic products, including research directed to organic product characteristics and product development, including new uses of existing organic products, new organic products or improved technology in the production, processing and packaging of organic products.

§ 1255.33 Secretary.

Secretary means the Secretary of Agriculture of the United States, or any other officer or employee of the Department to whom authority has been delegated, or to whom authority may hereafter be delegated, to act in the Secretary's stead.

§ 1255.34 State.

State means any of the 50 States of the United States, the District of Columbia, the Commonwealth of Puerto Rico, or any territory or possession of the United States.

§ 1255.35 Suspend.

Suspend means to issue a rule under 5 U.S.C. 553 to temporarily prevent the operation of an order or part thereof

during a particular period of time specified in the rule.

§ 1255.36 Terminate.

Terminate means to issue a rule under 5 U.S.C. 553 to cancel permanently the operation of an order or part thereof beginning on a date certain specified in the rule.

§ 1255.37 United States.

United States means collectively the 50 States, the District of Columbia, the Commonwealth of Puerto Rico and the territories and possessions of the United States.

§ 1255.38 Voluntarily assessed entity.

Voluntarily assessed entity means any covered person with gross organic sales or transaction value of \$250,000 or less for the previous marketing year and thus not subject to assessment under this part, but elects to participate in the Order by remitting an assessment pursuant to § 1255.52.

Organic Research and Promotion Board

§ 1255.40 Establishment and membership.

(a) *Establishment of the Board.* There is hereby established an Organic Research and Promotion Board to administer the terms and provisions of this Order. Seats on the Board shall be apportioned as set forth in paragraph (b) of this section. There shall be no alternate Board members.

(b) The Board shall be composed of 17 members and shall be established as follows:

(1) Two members shall be certified organic producers (assessed mandatorily or voluntarily) from Region 1, which consists of the states of Alaska, California, and Hawaii;

(2) One member shall be a certified organic producer (assessed mandatorily or voluntarily) from Region 2, which consists of the states of Oregon and Washington;

(3) One member shall be a certified organic producer (assessed mandatorily or voluntarily) from Region 3, which consists of the states of Arizona, Colorado, Idaho, Kansas, Montana, Nebraska, Nevada, New Mexico, North Dakota, Oklahoma, South Dakota, Texas, Utah, and Wyoming;

(4) One member shall be a certified organic producer (assessed mandatorily or voluntarily) from Region 4, which consists of the states of Iowa, Minnesota, and Wisconsin;

(5) One member shall be a certified organic producer (assessed mandatorily or voluntarily) from Region 5, which consists of the states of Alabama, Arkansas, Delaware, Florida, Georgia, Illinois, Indiana, Kentucky, Louisiana,

Maryland, Michigan, Mississippi, Missouri, New Jersey, North Carolina, Ohio, Pennsylvania, South Carolina, Tennessee, Virginia, and West Virginia;

(6) One member shall be a certified organic producer (assessed mandatorily or voluntarily) from Region 6, which consists of the states of Connecticut, Maine, Massachusetts, New Hampshire, New York, Rhode Island, Vermont, Washington DC, Puerto Rico, and U.S. Virgin Islands, and all other parts of the United States not listed in paragraphs (b)(1), (b)(2), (b)(3), (b)(4), (b)(5) and (b)(6) of this section;

(7) One member shall be a voluntarily assessed certified organic producer at large, who shall have gross organic sales of \$250,000 or less;

(8) Five members shall be certified organic handlers at large (assessed mandatorily or voluntarily);

(9) Two members shall be product processors (assessed mandatorily or voluntarily);

(10) One member shall be an importer (assessed mandatorily or voluntarily); and

(11) One member shall be an at-large public member, who shall be a non-voting member.

(c) At least once in every five-year period, but not more frequently than once in every three-year period, the Board will review the participation rate of voluntarily assessed entities. The review will be conducted using the Board's annual assessment receipts. If warranted, the Board will recommend to the Secretary that the membership or size of the Board be adjusted to reflect changes in the number of participating voluntarily assessed entities. Any changes in Board composition shall be implemented by the Secretary through rulemaking.

(d) At least once in every five-year period, but not more frequently than once in every 3-year period, the Board must review, based on a 3-year average, the geographical distribution of production of organic agricultural commodities in the United States with respect to the certified organic producer Board member seats; and the value of organic agricultural commodities imported into the United States with respect to the importer seat(s). The review will be conducted using the NOP's list of certified organic operations and, if available, other reliable reports from the industry. If warranted, the Board will recommend to the Secretary that the membership or size of the Board be adjusted to reflect changes in geographical distribution of production of organic agricultural commodities in the United States, and the value of organic agricultural commodities

imported into the United States. Any changes in Board composition shall be implemented by the Secretary through rulemaking.

§ 1255.41 Nominations and appointments.

(a) Nominees must be certified organic producers, certified organic handlers, or importers who are mandatorily or voluntarily assessed, except for the voluntarily assessed entity (who must be a voluntarily assessed certified organic producer) and the non-voting at-large public member.

(1) All Board nominees (mandatorily and voluntarily assessed) may provide a short background statement outlining their qualifications to serve on the Board.

(2) Reserved.

(b) Nominations for the initial Board will be handled by the Department and OTA. The nomination process shall be publicized, using trade press or other means deemed appropriate, and shall conduct outreach to all known certified organic producers, certified organic handlers, and importers of organic products, as well as the non-voting at-large public member. Voluntarily assessed producers may seek nomination to the Board for the voluntarily assessed certified organic producer seat or for the seat for which they are geographically qualified. Entities that are a combination of a certified organic producer, certified organic handler, or importer could seek nomination to the Board in any role (certified organic producer, certified organic handler, and importer) for which they meet the definitions provided at §§ 1255.9, 1255.10, and 1255.17. OTA may use local, state, or regional entities, mail or other methods to solicit potential nominees. The Secretary shall select the initial members of the Board from the nominations submitted.

(c) For subsequent nominations, the Board would solicit nominations using trade press or other means it deems appropriate, and shall conduct outreach to:

(1) All known U.S. certified organic producers and certified organic handlers with gross organic sales in excess of \$250,000 in the previous marketing year,

(2) Importers of organic products declaring a transaction value greater than \$250,000 for the previous marketing year, and

(3) All voluntarily assessed entities who have remitted assessments subject to § 1255.52(d). Provided they are geographically qualified, entities that are a combination of a certified organic producer, certified organic handler, or

importer could seek nomination to the Board in any role (certified organic producer, certified organic handler, and importer) for which they meet the definitions provided at §§ 1255.9, 1255.10, and 1255.17. Entities that are a combination of a certified organic producer, certified organic handler, or importer could also vote in the nomination process described below for the certified organic producer, certified organic handler, and importer nominees, provided they are geographically qualified and meet the definitions provided at §§ 1255.9, 1255.10, and 1255.17.

(d) Subsequent certified organic producer nominations (for all geographic regions and the seat designated for a voluntarily assessed certified organic producer) shall be conducted as follows:

(1) For the Board seats allocated by geographic region, certified organic producers must be domiciled in the region for which they seek nomination. Nominees must specify for which region they are seeking nomination. The names of nominees shall be placed on a ballot by region. The ballots along with any background statements shall be mailed to all certified organic producers who are domiciled in that particular region with gross organic sales in excess of \$250,000 during the previous marketing year, and any certified organic producer in that region that has remitted a voluntary assessment pursuant to § 1255.52(d) during the previous marketing year and is currently paying into the program. Certified organic producers may vote in each region in which they produce organic products. The votes shall be tabulated for each region and the nominees shall be listed in descending order by number of votes received. The top two candidates for each position shall be submitted to the Secretary at least six months before the new Board term begins; and

(2) Voluntarily assessed certified organic producers may seek nomination to the Board for the voluntarily assessed certified organic producer seat or for the certified organic producer seat for which they are geographically qualified. For the Board seat allocated to a voluntarily assessed certified organic producer, the names of nominees shall be placed on a ballot. The ballot along with any background statements shall be mailed to all voluntarily assessed certified organic producers. The votes shall be tabulated and the nominees shall be listed in descending order by number of votes received. The top two candidates for this position shall be submitted to the Secretary at least six

months before the new Board term begins.

(e) Subsequent certified organic handler and product processor at large nominations shall be conducted as follows:

(1) The names of the nominees for the five “at-large” domestic certified organic handler seats and the two “at-large” product processor seats shall be placed on a ballot. The ballots along with any background statements would be mailed to all certified organic handlers with gross organic sales in excess of \$250,000, and any voluntarily assessed certified organic handlers who have remitted an assessment pursuant to § 1255.52(d) for the previous marketing year for a vote.

(2) The votes would be tabulated with the nominee receiving the highest number of votes at the top of the list in descending order by vote. The top ten candidates for the certified organic handler positions and the top four candidates for the product processor positions would be submitted to the Secretary.

(f) Subsequent importer nominations shall be conducted as follows:

(1) The names of the nominees for the importer seat shall be placed on a ballot. The ballots along with any background statements shall be mailed to importers who imported a transaction value for organic products in excess of \$250,000, and any voluntarily assessed importers who have remitted an assessment pursuant to § 1255.52(d) for the previous marketing year for a vote.

(2) The votes would be tabulated with the nominee receiving the highest number of votes at the top of the list in descending order by vote. The top two candidates for each position would be submitted to the Secretary.

(g) Subsequent non-voting at-large public member nominations shall be conducted as follows:

(1) The names of the nominees for “at-large” non-voting public member seat would also be placed on a ballot. The ballots along with the background statements would be mailed to:

(i) All U.S. certified organic producers and certified organic handlers with gross organic sales in excess of \$250,000 in the previous marketing year,

(ii) Importers of organic products that declared a transaction value greater than \$250,000 for the previous marketing year, and

(iii) All voluntarily assessed entities who have remitted assessments subject to section 1255.52(d) (e.g. “opted into the program”).

(2) The votes would be tabulated with the nominee receiving the highest number of votes at the top of the list in

descending order by vote. The top two candidates would be submitted to the Secretary.

(h) Any person nominated to serve on the Board shall file with the Board at the time of the nomination a background questionnaire.

(i) From the nominations made pursuant to this section, the Secretary shall appoint the members of the Board on the basis of representation provided in § 1255.40.

(j) No two members of the Board shall be employed by a single corporation, company, partnership or any other legal entity.

(k) The Board shall recommend to the Secretary nominees for the at-large public member, and the Secretary shall appoint from those recommendations.

(l) The Board may recommend to the Secretary modifications to its nomination procedures as it deems appropriate. Any such modifications shall be implemented through rulemaking by the Secretary.

(m) The Board shall strive for diversity in its membership.

§ 1255.42 Term of office.

(a) With the exception of the initial Board, each Board member shall serve for a term of three years or until the Secretary selects his or her successor. Each term of office shall begin on January 1 and end on December 31. No member may serve more than two full consecutive three-year terms, except as provided in paragraph (b) of this section.

(b) For the initial Board, the terms of the Board members shall be staggered for two, three and four years as follows, so that the terms of approximately one-third of the Board members expire in any given year:

(1) 2-year term—Region #2 certified organic producer, Region #6 certified organic producer, 1 voluntarily assessed certified organic producer, 1 certified organic handler, and 1 product-processor.

(2) 3-year term—Region #1 certified organic producer, Region #4 certified organic producer, 1 at-large public member, 2 certified organic handlers, and 1 product-processor.

(3) 4-year term—Region #1 certified organic producer, Region #3 certified organic producer, Region #5 certified organic producer, 1 importer, and 2 certified organic handlers.

All subsequent terms shall be three-year terms.

(c) No single corporation, company, partnership or any other legal entity can be represented on the Board by an employee or owner for more than two consecutive terms.

§ 1255.43 Removal and vacancies.

(a) The Board may recommend to the Secretary that a member be removed from office if the member consistently fails or refuses to perform his or her duties properly or engages in dishonest acts or willful misconduct. If the Secretary determines that any person appointed under this subpart consistently fails or refuses to perform his or her duties properly or engages in acts of dishonesty or willful misconduct, the Secretary may remove the person from office. If a person loses or surrenders his or her valid organic certificate, the Secretary may remove the person from office. A person appointed under this subpart may be removed by the Secretary if the Secretary determines that the person's continued service would be detrimental to the purposes of the Act.

(b) If a member resigns, is removed from office, or dies, or if any member of the Board ceases to work for or be affiliated with a certified organic producer, certified organic handler or importer, or if a certified organic producer representing regional producers, or if a voluntarily assessed entity no longer chooses to be assessed, such position shall become vacant.

(c) If a position becomes vacant, nominations to fill the vacancy will be conducted using the nominations process set forth in this Order or the Board may recommend to the Secretary that he or she appoint a successor from the most recent list of nominations for the position.

(d) A vacancy will not be required to be filled if the unexpired term is less than six months.

§ 1255.44 Procedure.

(a) A majority of the voting Board members (9) shall constitute a quorum.

(b) Each voting member of the Board shall be entitled to one vote on any matter put to the Board and the motion will carry only if supported by a majority of Board members, except for recommendations to change the assessment rate or to adopt a budget, both of which require affirmation by two-thirds of the total number of voting Board members (11).

(c) At an assembled meeting, all votes shall be cast in person, or as otherwise determined by the Board in bylaws.

(d) In lieu of voting at an assembled meeting and when in the opinion of the chairperson of the Board such action is considered necessary, the Board may take action only if supported by a majority of members (unless two-thirds is required under the Order) by mail, telephone, electronic mail, facsimile, or any other means of communication. In

that event, all members must be notified and provided the opportunity to vote. Any action so taken shall have the same force and effect as though such action had been taken at an assembled meeting. All votes shall be recorded in Board minutes.

(e) There shall be no proxy voting.

(f) The Board must give members and the Secretary timely notice of all Board, executive and committee meetings.

§ 1255.45 Reimbursement and attendance.

Board members shall serve without compensation, but shall be reimbursed for reasonable travel expenses, as approved by the Board, which they incur when performing Board business.

§ 1255.46 Powers and duties.

(a) The Board shall have the following powers and duties:

(1) To administer this subpart in accordance with its terms and conditions and to collect assessments;

(2) To develop and recommend to the Secretary for approval such bylaws as may be necessary for the functioning of the Board, and such rules and regulations as may be necessary to administer the Order, including activities authorized to be carried out under the Order;

(3) To meet not less than annually, organize, and select from among the members of the Board a chairperson, vice chairperson, secretary/treasurer, other officers, and committees and subcommittees, as the Board determines appropriate;

(4) To employ or contract with persons, other than the Board members, as the Board considers necessary to assist the Board in carrying out its duties, and to determine the compensation and specify the duties of the persons;

(5) To provide notice of all Board meetings through a press release or other means and to give the Secretary the same notice of Board meetings (including committee, subcommittee, and the like) as is given to members so that the Secretary's representative(s) may attend such meetings, and to keep and report minutes of each meeting of the Board to the Secretary;

(6) To develop and submit programs, plans and projects to the Secretary for the Secretary's approval, and enter into contracts or agreements related to such programs, plans and projects, which must be approved by the Secretary before becoming effective, for the development and carrying out of programs, plans or projects of promotion, research, and information. The payment of costs for such activities shall be from funds collected pursuant

to this Order. Each contract or agreement shall provide that:

(i) The contractor or agreeing party shall develop and submit to the Board a program, plan or project together with a budget or budgets that shall show the estimated cost to be incurred for such program, plan or project;

(ii) The contractor or agreeing party shall keep accurate records of all its transactions and make periodic reports to the Board of activities conducted, submit accounting for funds received and expended, and make such other reports as the Secretary or the Board may require;

(iii) The Secretary may audit the records of the contracting or agreeing party periodically; and

(iv) Any subcontractor who enters into a contract with a Board contractor and who receives or otherwise uses funds allocated by the Board shall be subject to the same provisions as the contractor.

(7) To prepare and submit for the approval of the Secretary fiscal year budgets in accordance with § 1255.50;

(8) To borrow funds necessary for startup expenses of the Order during the first year of operation by the Board;

(9) To invest assessments collected and other funds received pursuant to the Order and use earnings from invested assessments to pay for activities carried out pursuant to the Order;

(10) To recommend changes to the assessment rates as provided in this part;

(11) To cause its books to be audited by an independent auditor at the end of each fiscal year and at such other times as the Secretary may request, and to submit a report of the audit directly to the Secretary;

(12) To periodically prepare and make public reports of program activities and, at least once each fiscal year, to make public an accounting of funds received and expended;

(13) To maintain such minutes, books and records and prepare and submit such reports and records from time to time to the Secretary as the Secretary may prescribe; to make appropriate accounting with respect to the receipt and disbursement of all funds entrusted to it; and to keep records that accurately reflect the actions and transactions of the Board;

(14) To act as an intermediary between the Secretary and any organic industry participant;

(15) To receive, investigate, and report to the Secretary complaints of violations of the Order; and

(16) To recommend to the Secretary such amendments to the Order as the Board considers appropriate.

(b) When researching priorities for each marketing year the Board will provide public notice using local, state, or regional entities, mail and/or other methods to solicit public input from all covered entities and will have at least one meeting or conference call to determine the priorities for each marketing year.

§ 1255.47 Prohibited activities.

The Board may not engage in, and shall prohibit the employees and agents of the Board from engaging in:

(a) Any action that would be a conflict of interest;

(b) Using funds collected by the Board under the Order to undertake any action for the purpose of influencing legislation or governmental action or policy, by local, state, national, and foreign governments or subdivision thereof (including the National Organic Standards Board), other than recommending to the Secretary amendments to the Order; and

(c) Any promotion that is false, misleading or disparaging to another agricultural commodity.

Expenses and Assessments

§ 1255.50 Budget and expenses.

(a) At least 60 calendar days prior to the beginning of each fiscal year, and as may be necessary thereafter, the Board shall prepare and submit to the Department a budget for the fiscal year covering its anticipated expenses and disbursements in administering this part. The budget for research, promotion or information may not be implemented prior to approval by the Secretary. Each such budget shall include:

(1) A statement of objectives and strategy for each program, plan or project;

(2) A summary of anticipated revenue, with comparative data for at least one preceding fiscal year, which shall not include the initial budget;

(3) A summary of proposed expenditures for each program, plan or project. This shall include the following allocation of expenditures, clearly designated within the following buckets:

(i) The funds shall be allocated as follows: no less than 25 percent of the funds shall be allocated to research; 25 percent of the funds shall be allocated to information; 25 percent of the funds shall be allocated to promotion; and 25 percent of the funds shall remain discretionary; and

(ii) Of the funds allocated to research, a majority shall be allocated to agricultural research; and

(iii) Of the funds allocated to information, a majority shall be allocated to producer information; and

(iv) Regional certified organic producer Board members shall establish priorities, including regional considerations, for investments in agricultural research; and

(v) Any expenditures designated for the categories set forth in (i), (ii), and (iii) of this section that are not spent in a fiscal year shall carry over for the same category for the following fiscal year.

(4) Staff and administrative expense breakdowns, with comparative data for at least one preceding fiscal year, except for the initial budget.

(b) Each budget shall provide adequate funds to defray its proposed expenditures and to provide for a reserve as set forth in this Order.

(c) Subject to this section, any amendment or addition to an approved budget must be approved by the Department, including shifting funds from one program, plan or project to another. Shifts of funds that do not result in an increase in the Board's approved budget and are consistent with governing bylaws need not have prior approval by the Department.

(d) The Board is authorized to incur such expenses, including provision for a reserve, as the Secretary finds reasonable and likely to be incurred by the Board for its maintenance and functioning, and to enable it to exercise its powers and perform its duties in accordance with the provisions of this subpart. Such expenses shall be paid from funds received by the Board.

(e) With approval of the Department, the Board may borrow money for the payment of startup expenses subject to the same fiscal, budget, and audit controls as other funds of the Board. Any funds borrowed shall be expended only for startup costs and capital outlays and are limited to the first year of operation by the Board.

(f) The Board may accept voluntary contributions. Such contributions shall be free from any encumbrance by the donor and the Board shall retain complete control of their use. The Board may receive funds from outside sources with approval of the Secretary for specific authorized projects.

(g) The Board may also receive other funds provided through the Department or from other sources, with the approval of the Secretary, for authorized activities.

(h) The Board shall reimburse the Secretary for all expenses incurred by

the Secretary in the implementation, administration, enforcement and supervision of the Order, including all referendum costs in connection with the Order.

(i) For fiscal years beginning three years after the date of the establishment of the Board, the Board may not expend for administration, maintenance, and the functioning of the Board an amount that is greater than 15 percent of the assessment and other income received by and available to the Board for the fiscal year. For purposes of this limitation, reimbursements to the Secretary shall not be considered administrative costs.

(j) Any program, plan or project receiving funds under this section shall not expend for administration an amount that is greater than 15 percent of the total funds allocated to the program, plan or project.

(k) The Board may establish an operating monetary reserve and may carry over to subsequent fiscal years excess funds in any reserve so established: *Provided*, that, the funds in the reserve do not exceed one fiscal year's budget of expenses. Subject to approval by the Secretary, such reserve funds may be used to defray any expenses authorized under this subpart.

(l) Pending disbursement of assessments and all other revenue under a budget approved by the Secretary, the Board may invest assessments and all other revenues collected under this part in:

(1) Obligations of the United States or any agency of the United States;

(2) General obligations of any State or any political subdivision of a State;

(3) Interest bearing accounts or certificates of deposit of financial institutions that are members of the Federal Reserve System;

(4) Obligations fully guaranteed as to principal interest by the United States; or

(5) Other investments as authorized by the Secretary.

§ 1255.51 Financial statements.

(a) The Board shall prepare and submit financial statements to the Department on a quarterly basis, or at any other time as requested by the Secretary. Each such financial statement shall include, but not be limited to, a balance sheet, income statement, and expense budget. The expense budget shall show expenditures during the time period covered by the report, year-to-date expenditures, and the unexpended budget.

(b) Each financial statement shall be submitted to the Department within 30

calendar days after the end of the time period to which it applies.

(c) The Board shall submit to the Department an annual financial statement within 90 calendar days after the end of the fiscal year to which it applies.

§ 1255.52 Assessments.

(a) The Board's programs and expenses shall be paid by assessments on assessed entities, other income of the Board, and other funds available to the Board.

(b) Subject to the offset specified in § 1255.54 each certified organic producer or certified organic handler with gross organic sales of greater than \$250,000 during the previous marketing year shall pay one-tenth of one percent of net organic sales to the Board. Each certified organic producer and certified organic handler shall remit to the Board the amount due no later than 90 days following the end of the marketing year in which the organic product was produced or handled and submit any necessary reports to the Board pursuant to § 1255.70. Quarterly payments may be accepted.

(c) Importers with greater than \$250,000 in transaction value of organic products imported during the prior marketing year shall remit an assessment of one-tenth of one percent of the transaction value of organic products to Customs at the time of entry into the United States and shall be remitted by Customs to the Board. If Customs does not collect an assessment from an organic importer, the importer is responsible for paying the assessment directly to the Board within 90 calendar days after the end of the year in which the organic products were imported and submit any necessary reports to the Board pursuant to § 1255.70. Quarterly payments may be accepted. Such importers that have \$250,000 or less in transaction value of organic products during the marketing year shall automatically receive a refund from the Board for the applicable assessments. The Board shall refund such importers their assessments as collected by Customs no later than 90 calendar days after the end of the marketing year. No interest shall be paid on the assessments collected by Customs or the Board.

(d) *Voluntary assessment.* (1) Certified organic producers and certified organic handlers with gross organic sales of \$250,000 or less in the prior marketing year may elect to participate in the Order as a voluntarily assessed entity by remitting an assessment of one-tenth of one percent of net organic sales. The certified organic producer and certified organic handler shall remit to the Board

the amount due no later than 90 days following the end of the marketing year in which the organic product was produced or handled and submit any necessary reports to the Board pursuant to § 1255.70. Quarterly payments may be accepted.

(2) Importers declaring \$250,000 or less in transaction value of organic products imported during the prior marketing year may elect to participate in the Order as a voluntarily assessed entity by remitting an assessment of one-tenth of one percent of the transaction value of organic products prior to the start of the marketing year. Quarterly payments may be accepted. If Customs does not collect an assessment from an importer, the importer is responsible for paying the assessment directly to the Board within 90 calendar days after the end of the year in which the organic products were imported. The importer would also submit any necessary reports to the Board pursuant to § 1255.70.

(e) If an entity is a combination of a certified organic producer, certified organic handler and/or an organic importer, such entity's combined gross organic sales and transaction value of organic products declared to Customs during the previous marketing year shall count towards the \$250,000 threshold.

(f) At least 24 months after the Order becomes effective and periodically thereafter, the Board shall review and may recommend to the Secretary, upon an affirmative vote of at least two-thirds of the voting members of the Board, a change in the assessment rate. A change in the assessment rate is subject to referendum.

(g) When a certified organic producer, certified organic handler or importer fails to pay the assessment within 90 calendar days of the date it is due, the Board may impose a late payment charge and interest. The late payment charge and rate of interest shall be prescribed in regulations issued by the Secretary. All late assessments shall be subject to the specified late payment charge and interest. Persons failing to remit total assessments due in a timely manner may also be subject to actions under federal debt collection procedures.

(h) The Board may accept advance payment of assessments from any certified organic producer, certified organic handler, or organic importer that will be credited toward any amount for which that person may become liable. The Board may not pay interest on any advance payment.

(i) If the Board is not in place by the date the first assessments are to be collected, the Secretary shall receive

assessments and shall pay such assessments and any interest earned to the Board when it is formed.

§ 1255.53 Exemption from assessment.

(a) *Certified organic producers, certified organic handlers, and importers.* (1) Certified organic producers and certified organic handlers with gross organic sales of \$250,000 or less in the prior marketing year may apply to the Board, on a form provided by the Board, for a certificate of exemption prior to the start of the marketing year. This is an annual exemption and certified organic producers and certified organic handlers must reapply each year. Upon receipt of an application for exemption, the Board shall determine whether an exemption may be granted. The Board will issue, if deemed appropriate, a certificate of exemption to the eligible certified organic producer or certified organic handler. It is the responsibility of any entity granted an exemption to retain a copy of the certificate of exemption.

(2) Importers declaring \$250,000 or less in transaction value of organic products imported during the prior marketing year may apply to the Board, on a form provided by the Board, for a certificate of exemption prior to the start of the marketing year. This is an annual exemption and importers must reapply each year. Upon receipt of an application for exemption, the Board shall determine whether an exemption may be granted. The Board will issue, if deemed appropriate, a certificate of exemption to the eligible importer. It is the responsibility of any entity granted an exemption to retain a copy of the certificate of exemption.

(b) *Exporters.* Shipments of certified organic commodities by domestic producers and handlers to locations outside of the United States are exempt from assessment. The Board shall establish procedures for approval by the Secretary for refunding assessments that may be inadvertently paid on such sales and establish any necessary safeguards as appropriate. Safeguard procedures would be implemented by the Secretary through rulemaking. If the Board determined that exports should be assessed, it would make that recommendation to the Secretary. Any such action would be implemented by USDA through rulemaking.

(c) *Dual-covered commodities.* Certified organic producers; certified organic handlers, and importers of dual-covered commodities may apply to the Secretary, on a form provided by the Board, for a certificate of exemption any time initially, and annually thereafter prior to the January 1 start of the

marketing year. The exemption for dual-covered commodities is effective for one marketing year. Entities granted an exemption must reapply each year. Eligible applicants shall certify that they have remitted any and all assessments due for the dual-covered commodity pursuant to the provisions of an agricultural commodity promotion order issued under a commodity promotion law. Within 30 days of receipt of an application for exemption, the Secretary shall determine whether an exemption may be granted. The Secretary may request documentation providing proof of the remittance of the assessment for the dual-covered commodity. If all requirements have been met, the Secretary will issue a certificate of exemption to the eligible certified organic producer, certified organic handler, or importer effective for the marketing year. If the application is denied, the Secretary will notify the applicant, in writing, within 30 days of application. Such notification must detail the justification for the denial. Applicants notified of denial may reapply for an exemption for the forthcoming marketing year, so long as the reapplication is received prior to the beginning of such marketing year. It is the responsibility of any entity granted an exemption to retain a copy of the certificate of exemption.

§ 1255.54 Assessment offset.

The Board may, with the approval of the Secretary, authorize a credit to a certified organic producer and certified organic handlers of up to 25 percent of the amount to be remitted to the Board pursuant to § 1255.52 of this subpart to offset collection and compliance costs relating to such assessments and for fees paid to Qualified State Commodity Boards required by State law. This offset is available only for those monies that go to research and promotion, and not for dues or quality specifications.

Promotion, Research and Information

§ 1255.60 Programs, plans and projects.

(a) The Board shall develop and submit to the Secretary for approval programs, plans and projects authorized by this subpart. Such programs, plans and projects shall provide for promotion, research, information and other activities including consumer and industry information and advertising.

(b) No program, plan or project shall be implemented prior to its approval by the Secretary. Once a program, plan or project is so approved, the Board shall take appropriate steps to implement it.

(c) The Board must evaluate each program, plan and project authorized under this subpart to ensure that it

contributes to an effective and coordinated program of research, promotion, and information. The Board must submit the evaluations to the Secretary. If the Board finds that a program, plan or project does not contribute to an effective program of promotion, research, or information, then the Board shall terminate such program, plan or project.

§ 1255.61 Independent evaluation.

At least once every five years, the Board shall authorize and fund from funds otherwise available to the Board, an independent evaluation of the effectiveness of all generic promotion, research and information activities undertaken under the Order. The Board shall submit to the Secretary, and make available to the public, the results of each periodic independent evaluation conducted under this section.

§ 1255.62 Patents, copyrights, trademarks, inventions, product formulations, and publications.

Any patents, copyrights, trademarks, inventions, product formulations, and publications developed through the use of funds received by the Board under this subpart shall become part of the U.S. Government, as represented by the Board, and shall along with any rents, royalties, residual payments, or other income from the rental, sales, leasing, franchising, or other uses of such patents, copyrights, trademarks, inventions, publications, or product formulations, inure to the benefit of the Board, shall be considered income subject to the same fiscal, budget, and audit controls as other funds of the Board, and may be licensed subject to approval by the Secretary. Upon termination of this subpart, section 1255.83 shall apply to determine disposition of such property.

Reports, Books, and Records

§ 1255.70 Reports.

(a) Certified organic producers, certified organic handlers and importers will be required to provide periodically to the Board such information as the Board, with the approval of the Secretary, may require. Such information may include, but not be limited to:

(1) For certified organic producers and certified organic handlers:

(i) The name, address and telephone number of the certified organic producer and/or certified organic handler and

(ii) The value of net organic sales of the organic products.

(2) For importers:

(i) The name, address and telephone number of the importer;

(ii) The transaction value of the organic products imported by type; and
 (iii) The country/countries of export.

(b) For certified organic producers and certified organic handlers, such information shall be reported to the Board no later than 90 days following the end of the year in which the organic product was produced or handled and shall accompany the collected payment of assessments as specified in § 1255.52. Quarterly payments may be accepted.

(c) Importers who paid their assessments through Customs would not have to submit such reports to the Board because Customs would collect this information upon entry. For importers who pay their assessments directly to the Board, such information shall accompany the payment of collected assessments within 90 calendar days after the end of the year in which the organic product was imported specified in § 1255.52. Quarterly payments may be accepted.

§ 1255.71 Books and records.

Each certified organic producer, certified organic handler and importer shall maintain any books and records necessary to carry out the provisions of this subpart and regulations issued thereunder, including such records as are necessary to verify any required reports. Such books and records must be made available during normal business hours for inspection by the Board's or Secretary's employees or agents. Certified organic producers, certified organic handlers and importers must maintain the books and records for two years beyond the fiscal year to which they apply.

§ 1255.72 Confidential treatment.

All information obtained from books, records, or reports under the Act, this subpart and the regulations issued thereunder shall be kept confidential by all persons, including all employees and former employees of the Board, all officers and employees and former officers and employees of contracting and subcontracting agencies or agreeing parties having access to such information. Such information shall not be available to Board members or certified organic producers, certified organic handlers and importers. Only those persons having a specific need for such information solely to effectively administer the provisions of this subpart shall have access to such information. Only such information so obtained as the Secretary deems relevant shall be disclosed by them, and then only in a judicial proceeding or administrative hearing brought at the direction, or at the request, of the Secretary, or to which

the Secretary or any officer of the United States is a party, and involving this subpart. Nothing in this section shall be deemed to prohibit:

(a) The issuance of general statements based upon the reports of the number of persons subject to this subpart or statistical data collected therefrom, which statements do not identify the information furnished by any person; and

(b) The publication, by direction of the Secretary, of the name of any person who has been adjudged to have violated this part, together with a statement of the particular provisions of this part violated by such person.

Miscellaneous

§ 1255.80 Right of the Secretary.

All fiscal matters, programs, plans or projects, contracts, rules or regulations, reports, or other substantive actions proposed and prepared by the Board shall be submitted to the Secretary for approval.

§ 1255.81 Referenda.

(a) *Initial referendum.* The Order shall not become effective unless the Order is approved by a majority of assessed entities voting in the referendum. A single assessed entity may cast one vote in the referendum. All currently certified domestic entities in the list that is maintained by the National Organic Program will be mailed a ballot. Importers of products with organic HTS codes from the last year will also be mailed a ballot. Requests for ballots shall include an affidavit attesting to (a) an importer's participation in the organic industry, and (b) a voluntarily assessed entity's commitment to be assessed for the majority of years until the next referendum. Bloc voting shall be prohibited.

(b) *Subsequent referenda.* (1) Every seven years, the Department shall hold a referendum to determine whether assessed entities favor the continuation, suspension, or termination of the Order. The Order shall continue if it is favored by a majority of the assessed entities voting. The Department will also conduct a referendum if 10 percent or more of all assessed entities request the Department to hold a referendum. Each ballot request shall include an affidavit attesting to:

(i) An importer's participation in the organic industry, and

(ii) A voluntarily assessed entity's commitment to be assessed for the majority of the next seven years. Bloc voting shall be prohibited.

(2) All assessed entities in good standing shall be eligible to vote in a

subsequent referendum. To be in good standing:

(i) A dual-covered entity must demonstrate that it has paid into the organic research and promotion program for a majority of the years since the most recent referendum; or

(ii) A voluntarily assessed entity must have paid into the organic research and promotion program for a majority of the years since the most recent referendum; or

(iii) An entity must have attained its organic certification since the most recent referendum and have paid into the organic research and promotion program for every year since entering the program; or

(iv) An assessed entity that does not meet any of the above descriptions must demonstrate that it has paid into the organic research and promotion program every year since the most recent referendum.

§ 1255.82 Suspension or termination.

(a) The Secretary shall suspend or terminate this part or subpart or a provision thereof, if the Secretary finds that this part or subpart or a provision thereof obstructs or does not tend to effectuate the purposes of the Act, or if the Secretary determines that this subpart or a provision thereof is not favored by persons voting in a referendum conducted pursuant to the Act.

(b) The Secretary shall suspend or terminate this subpart at the end of the fiscal year whenever the Secretary determines that its suspension or termination is favored by a majority of assessed entities voting in the referendum.

(c) If, as a result of a referendum the Secretary determines that this subpart is not approved, the Secretary shall:

(1) Not later than one hundred and eighty (180) calendar days after making the determination, suspend or terminate, as the case may be, the collection of assessments under this subpart.

(2) As soon as practical, suspend or terminate, as the case may be, activities under this subpart in an orderly manner.

§ 1255.83 Proceedings after termination.

(a) Upon termination of this subpart, the Board shall recommend to the Secretary up to five of its members to serve as trustees for the purpose of liquidating the Board's affairs. Such persons, upon designation by the Secretary, shall become trustees of all of the funds and property then in the possession or under control of the Board, including claims for any funds

unpaid or property not delivered, or any other existing claim at the time of such termination.

(b) The said trustees shall:

(1) Continue in such capacity until discharged by the Secretary;

(2) Carry out the obligations of the Board under any contracts or agreements entered into pursuant to the Order;

(3) From time to time account for all receipts and disbursements and deliver all property on hand, together with all books and records of the Board and trustees, to such person or persons as the Secretary directs; and

(4) Upon request of the Secretary execute such assignments or other instruments necessary or appropriate to vest in such persons title and right to all of the funds, property, and claims vested in the Board or the trustees pursuant to the Order.

(c) Any person to whom funds, property, or claims have been transferred or delivered pursuant to the Order shall be subject to the same obligations imposed upon the Board and upon the trustees.

(d) Any residual funds not required to defray the necessary expenses of liquidation shall be turned over to the Secretary to be disposed of, to the extent practical, to one or more organic organizations in the United States whose mission is generic organic

promotion, research, and information programs.

§ 1255.84 Effect of termination or amendment.

Unless otherwise expressly provided by the Secretary, the termination of this subpart or of any regulation issued pursuant thereto, or the issuance of any amendment to either thereof, shall not:

(a) Affect or waive any right, duty, obligation, or liability which shall have arisen or which may thereafter arise in connection with any provision of this subpart or any regulation issued thereunder;

(b) Release or extinguish any violation of this subpart or any regulation issued thereunder; or

(c) Affect or impair any rights or remedies of the United States, or of the Secretary or of any other person, with respect to any such violation.

§ 1255.85 Personal liability.

No member or employee of the Board shall be held personally responsible, either individually or jointly with others, in any way whatsoever, to any person for errors in judgment, mistakes, or other acts, either of commission or omission, as such member or employee, except for acts of dishonesty or willful misconduct.

§ 1255.86 Separability.

If any provision of this subpart is declared invalid or the applicability of

it to any person or circumstances is held invalid, the validity of the remainder of this subpart, or the applicability thereof to other persons or circumstances shall not be affected thereby.

§ 1255.87 Amendments.

Any changes to the assessment rate may be proposed by the Board and will be subject to a referendum. Any other amendments to this subpart may be proposed by the Board. A list of all amendments made since the last referendum will be sent to all assessed entities in advance of each subsequent referendum.

§ 1255.88 OMB control numbers.

The control numbers assigned to the information collection requirements by the Office of Management and Budget pursuant to the Paperwork Reduction Act of 1995, 44 U.S.C. Chapter 35, are OMB control number 0505-0001 (Board nominee background statement) and OMB control number 0581-NEW.

Subpart B—[Reserved]

Dated: January 9, 2017.

Part IV

Architectural and Transportation Barriers Compliance Board

36 CFR Parts 1193 and 1194

Information and Communication Technology (ICT) Standards and
Guidelines; Final Rule

ARCHITECTURAL AND TRANSPORTATION BARRIERS COMPLIANCE BOARD

36 CFR Parts 1193 and 1194

RIN 3014-AA37

Information and Communication Technology (ICT) Standards and Guidelines

AGENCY: Architectural and Transportation Barriers Compliance Board.

ACTION: Final rule.

SUMMARY: We, the Architectural and Transportation Barriers Compliance Board (Access Board or Board), are revising and updating, in a single rulemaking, our standards for electronic and information technology developed, procured, maintained, or used by Federal agencies covered by section 508 of the Rehabilitation Act of 1973, as well as our guidelines for telecommunications equipment and customer premises equipment covered by Section 255 of the Communications Act of 1934. The revisions and updates to the section 508-based standards and section 255-based guidelines are intended to ensure that information and communication technology covered by the respective statutes is accessible to and usable by individuals with disabilities.

DATES: This final rule is effective March 20, 2017. However, compliance with the section 508-based standards is not required until January 18, 2018. Compliance with the section 255-based guidelines is not required until the guidelines are adopted by the Federal Communications Commission. The incorporation by reference of certain publications listed in the final rule is approved by the Director of the Federal Register as of March 20, 2017.

FOR FURTHER INFORMATION CONTACT: Timothy Creagan, Access Board, 1331 F Street NW., Suite 1000, Washington, DC 20004-1111. Telephone: (202) 272-0016 (voice) or (202) 272-0074 (TTY). Or Bruce Bailey, Access Board, 1331 F Street NW., Suite 1000, Washington, DC 20004-1111. Telephone: (202) 272-0024 (voice) or (202) 272-0070 (TTY) Email addresses: 508@access-board.gov.

SUPPLEMENTARY INFORMATION:

I. Executive Summary

A. Purpose and Legal Authority

In this final rule, the Access Board is updating its existing Electronic and Information Technology Accessibility Standards under section 508 of the Rehabilitation Act of 1973, (“508

Standards”), as well as our Telecommunications Act Accessibility Guidelines under Section 255 of the Communications Act of 1934 (“255 Guidelines”). Given the passage of nearly two decades since their issuance, the existing 508 Standards and 255 Guidelines are in need of a “refresh” in several important respects. This final rule is intended to, among other things, address advances in information and communication technology that have occurred since the guidelines and standards were issued in 1998 and 2000 respectively, harmonize with accessibility standards developed by standards organizations worldwide in recent years, and ensure consistency with the Board’s regulations that have been promulgated since the late 1990s. The Revised 508 Standards and 255 Guidelines support the access needs of individuals with disabilities, while also taking into account the costs of providing accessible information and communication technology to Federal agencies, as well as manufacturers of telecommunications equipment and customer premises equipment.

The final rule also reflects a significantly revamped organizational structure relative to the existing standards and guidelines. In sum, the final rule eliminates 36 CFR part 1193 (which formerly housed the existing 255 Guidelines) and substantially revises 36 CFR 1194 by replacing the existing 508 Standards with two regulatory provisions—§§ 1194.1 and 1194.2—that direct readers to the four appendices accompanying part 1194, which, in turn, set forth the scoping and technical requirements for the Revised 508 Standards and 255 Guidelines. Appendix A provides general application and scoping for Section 508, while Appendix B does likewise for Section 255. Appendix C contains seven separate chapters setting forth the functional performance criteria and technical accessibility standards that apply to both 508-covered and 255-covered ICT. These chapters are, generally speaking, broken down by functional area (e.g., functional performance criteria, hardware, software, support documentation and services). Lastly, Appendix D republishes the existing 508 Standards, which, as discussed below, may be needed to evaluate Section 508-covered existing (legacy) ICT under the safe harbor provision.

In this preamble, the Board refers to provisions in the Revised 508 Standards and 255 Guidelines by their new section numbers under this final rule: E101–E103 (508 Chapter 1: Application and Administration); E201–E208 (508

Chapter 2: Scoping Requirements); C101–C103 (255 Chapter 1: Application and Administration); C201–C206 (255 Chapter 2: Scoping Requirements); 301–302 (Chapter 3: Functional Performance Criteria); 401–415 (Chapter 4: Hardware); 501–504 (Chapter 5: Software); 601–603 (Support Documentation and Services); and 701–702 (Chapter 7: Referenced Standards).

Additionally, the term “information and communication technology” (ICT) is used widely throughout this preamble. Unless otherwise noted, it is intended to broadly encompass electronic and information technology covered by Section 508, as well as telecommunications products, interconnected Voice over Internet Protocol (VoIP) products, and Customer Premises Equipment (CPE) covered by Section 255. Examples of ICT include computers, information kiosks and transaction machines, telecommunications equipment, multifunction office machines, software, Web sites, and electronic documents.

1. Legal Authority for the Revised 508 Standards

Section 508 of the Rehabilitation Act of 1973 (hereafter, “Section 508”), as amended, mandates that Federal agencies “develop, procure, maintain, or use” ICT in a manner that ensures Federal employees with disabilities have comparable access to, and use of, such information and data relative to other Federal employees, unless doing so would impose an undue burden. 29 U.S.C. 794d. Section 508 also requires Federal agencies to ensure that members of the public with disabilities have comparable access to publicly-available information and services unless doing so would impose an undue burden on the agency. *Id.* In accordance with section 508(a)(2)(A), the Access Board must publish standards that define electronic and information technology along with the technical and functional performance criteria necessary for accessibility, and periodically review and amend the standards as appropriate. When the Board revises its existing 508 Standards (whether to keep up with technological changes or otherwise), Section 508 mandates that, within six months, both the Federal Acquisition Regulatory Council (FAR Council) and Federal agencies incorporate these revised standards into their respective acquisition regulations and procurement policies and directives. Thus, with respect to procurement-related matters, the Access Board’s 508 Standards are not self-enforcing; rather, these standards take legal effect when adopted by the FAR Council.

2. Legal Authority for 255 Guidelines

Section 255 of the Communications Act (hereafter, “Section 255”), requires telecommunications equipment and services to be accessible to, and usable by, individuals with disabilities, where readily achievable. 47 U.S.C. 255. “Readily achievable” is defined in the statute as “easily accomplishable and able to be carried out without much difficulty or expense.” *Id.* In determining whether an access feature is readily achievable, the Federal Communications Commission (FCC), which has exclusive implementation and enforcement authority under Section 255, has directed telecommunications equipment manufacturers and service providers to weigh the nature and cost of that feature against the individual company’s overall financial resources, taking into account such factors as the type, size, and nature of its business operation. Section 255 tasks the Access Board, in conjunction with the FCC, with the development of guidelines for the accessibility of telecommunications equipment and customer premises equipment, as well as their periodic review and update. The FCC, however, has exclusive authority under Section 255 to issue implementing regulations and carry out enforcement activities. Moreover, when issuing implementing regulations, the FCC is not bound to adopt the Access Board’s guidelines as its own or to use them as minimum requirements.

B. Summary of Key Provisions

The Revised 508 Standards and 255 Guidelines replace the current product-based regulatory approach with an approach based on ICT functions. The revised technical requirements, which are organized along the lines of ICT functionality, provide requirements to ensure that covered hardware, software, electronic content, and support documentation and services are accessible to people with disabilities. In addition, the revised requirements include functional performance criteria, which are outcome-based provisions that apply in two limited instances: When the technical requirements do not address one or more features of ICT or when evaluation of an alternative design or technology is needed under equivalent facilitation.

Some of the key provisions and updates reflected in the Revised 508 Standards and 255 Guidelines (relative to the existing standards and guidelines) include:

1. New Regulatory Approach and Format

Technological advances over the past two decades have resulted in the widespread use of multifunction devices that called into question the ongoing utility of the product-by-product approach used in the Board’s existing 508 Standards and 255 Guidelines. Consequently, one of the primary purposes of the final rule is to replace the current product-based approach with requirements based on functionality, and, thereby, ensure that accessibility for people with disabilities keeps pace with advances in ICT. To ensure that compliance under both laws, to the maximum extent possible, can be measured against a common set of technical requirements, the implementing regulations have been consolidated into a single part: 36 CFR part 1194. The two sections in this part (§§ 1194.1 and 1194.2), in turn, direct readers to the four separate appendices (Appendices A–D) that set forth the scoping and technical requirements under Sections 508 and 255, respectively. As discussed below, this is a new organizational format for the 508 Standards and 255 Guidelines that mirrors the formatting of other standards and guidelines issued by the Access Board over the past decade.

The new organizational format in the Revised 508 Standards and 255 Guidelines—which sets forth scoping and technical requirements in four appendices—is modeled after the regulatory approach first used Access Board’s 2004 Americans with Disabilities Act (ADA) and Architectural Barriers Act (ABA) Accessibility Guidelines. Appendix A applies only to Section 508-covered ICT and consists of 508 Chapter 1, which sets forth general application and administration provisions, while 508 Chapter 2 contains scoping requirements (which, in turn, prescribe which ICT—and, in some cases, how many—must comply with the technical specifications). Appendix B, which applies to 255-covered ICT only, is organized similarly with 255 Chapter 1 setting forth general application and administration provisions and 255 Chapter 2 containing scoping requirements. Appendix C sets forth technical specifications that apply equally to ICT covered under Sections 508 or 255. Appendix C includes five chapters, each of which (with the exception of the final chapter) address a separate ICT functional area. These chapters are: Chapter 3: Functional Performance Criteria; Chapter 4: Hardware; Chapter 5: Software; Chapter 6: Support Documentation and Services;

and Chapter 7: Referenced Standards. Lastly, in Appendix D, the existing 508 Standards are republished in full (albeit with a revised section numbering system) for reference when evaluating Section 508-covered existing (legacy) ICT under the “safe harbor” provision. See discussion *infra* Section IV.B (Summary of Comments and Responses on Other Aspects of the Proposed Rule—508 Chapter 2: Scoping Requirements—E202 General Exceptions).

2. Broad Application of Web Content Accessibility Guidelines 2.0

The Revised 508 Standards and 255 Guidelines incorporate by reference the Web Content Accessibility Guidelines (WCAG) 2.0, a globally-recognized and technologically-neutral set of accessibility guidelines for Web content. For Section 508-covered ICT, all covered Web and non-Web content and software—including, for example, Web sites, intranets, word processing documents, portable document format documents, and project management software—is required, with a few specific exceptions, to conform to WCAG 2.0’s Level A and Level AA Success Criteria and Conformance Requirements. By applying a single set of requirements to Web sites, electronic documents, and software, the revised requirements adapt the existing 508 Standards to reflect the newer multifunction technologies (e.g., smartphones that have telecommunications functions, video cameras, and computer-like data processing capabilities) and address the accessibility challenges that these technologies pose for individuals with disabilities. For Section 255-covered ICT, electronic content and software that is integral to the use of telecommunications and customer premise equipment is required to conform to WCAG 2.0’s Level A and Level AA Success Criteria and Conformance Requirements. There are several exceptions related to non-Web documents and software.

3. Harmonization With International Standards

From the outset, one of the Access Board’s primary goals in this rulemaking has been to increase harmonization with international standards relating to ICT accessibility that have been developed worldwide over the past decade. Some of these standards (such as WCAG 2.0) are incorporated by reference in the Revised 508 Standards and 255 Guidelines. For other standards (such as EN 301 549, which is the European accessibility

standard for public ICT procurement), harmonization comes in the form of ensuring that the relevant accessibility specifications in such standard and the final rule can both be met simultaneously without conflict. Harmonization with international standards and guidelines creates a larger marketplace for accessibility solutions, thereby attracting more offerings and increasing the likelihood of commercial availability of accessible ICT options.

4. Delineation of Covered Electronic "Content"

The Revised 508 Standards specify that all types of public-facing content, as well as nine categories of non-public-facing content that communicate agency official business, have to be accessible, with "content" encompassing all forms of electronic information and data. The existing standards require Federal agencies to make electronic information and data accessible, but do not delineate clearly the scope of covered information and data. As a result, document accessibility has been inconsistent across Federal agencies. By focusing on public-facing content and certain types of agency official communications that are not public facing, the revised requirements bring needed clarity to the scope of electronic content covered by the 508 Standards and, thereby, help Federal agencies make electronic content accessible more consistently.

5. Expanded Interoperability Requirements

The existing standards require ICT to be compatible with assistive technology—that is, hardware or software that increases or maintains functional capabilities of individuals with disabilities (e.g., screen magnifiers or refreshable braille displays). However, in the past the existing requirement resulted in ambiguity of application. For example, some agencies interpreted the provisions of existing 36 CFR 1194.21 (which addresses software applications and operating systems) as applicable to assistive technology itself. The ensuing confusion led, in some cases, to unnecessary delay in procurements intended to provide reasonable accommodations to employees under Section 501, creating a hardship for both agencies and their employees with disabilities. The final rule provides more specificity about how operating systems, software development toolkits, and software applications should interact with assistive technology. The final rule also specifically exempts assistive technology from the interoperability provisions. The Board expects the final

rule to improve software interoperability with assistive technology, allowing users better access to the functionalities that ICT products provide.

6. Extended Compliance Date and Incorporation of Safe Harbor Provision for Section 508-Covered Legacy ICT

Federal agencies will have one year from publication of this final rule to comply with the Revised 508 Standards. This extended period for compliance is responsive to some agencies' concerns about the time it will take them to make ICT compliant with the Revised 508 Standards. In addition, the Revised 508 Standards include a "safe harbor" provision for existing (i.e., legacy) ICT. Under this safe harbor, unaltered, existing ICT (including content) that complies with the existing 508 Standards need not be modified or upgraded to conform to the Revised 508 Standards. This safe harbor applies on an element-by-element basis in that each component or portion of existing ICT is assessed separately. Corresponding definitions have also been added for "existing ICT" and "alteration." By incorporating a safe harbor for legacy ICT into the Revised 508 Standards provision, the Board is being responsive to agencies' concerns about the potential resources required to remediate existing ICT, including agency Web sites or other public-facing legacy documents. Notably, the extended compliance date and safe harbor provision apply only to Section 508-covered ICT; these provisions do not apply to telecommunications equipment and customer premises equipment covered by Section 255. Since compliance with the Revised 255 Guidelines is not required unless and until they are adopted by the FCC, matters addressed in these two provisions fall within the commission's province.

C. Summary of Final Regulatory Impact Analysis

Consistent with the obligation under Executive Orders 12866 and 13563 that Federal agencies promulgate regulations only upon a reasoned determination that benefits justify costs, the final rule has been evaluated from a benefit-cost perspective in a final regulatory impact analysis (Final RIA) prepared by the Board's consulting economic firm. The focus of the Final RIA is to define and, where possible, quantify and monetize the potential incremental benefits and costs of the Revised 508 Standards and 255 Guidelines. We summarize its methodology and results below. A complete copy of this regulatory

assessment is available on the Access Board's Web site (<https://www.access-board.gov/>), and also on the Federal Government's online rulemaking portal (<https://www.regulations.gov/>).

To estimate likely incremental compliance costs attributable to the final rule, the Final RIA estimates, quantifies, and monetizes costs in the following broad areas: (1) Costs to Federal agencies and contractors related to policy development, employee training, development of accessible ICT, evaluation of ICT, and creation of accessible electronic documents; (2) costs to Federal agencies of ensuring that speech-output enabled hardware with closed functionality has braille instructions (e.g., small braille label or sign) indicating how to initiate the speech mode of operation; and (3) costs to manufacturers of telecommunications equipment and customer premises equipment of ensuring that their respective Web sites and electronic support documentation conform to accessibility standards, including WCAG 2.0.

On the benefits side, the Final RIA estimates likely incremental benefits by monetizing the value of three categories of benefits expected to accrue from the Revised 508 Standards: (a) Increased productivity of Federal employees with certain disabilities who are expected to benefit from improved ICT accessibility; (b) time saved by members of the public with certain disabilities when using more accessible Federal Web sites; and (c) reduced phone calls to Federal agencies as members of the public with certain disabilities shift their inquiries and transactions online due to improved accessibility of Federal Web sites. The Final RIA, for analytical purposes, defines the beneficiary population as persons with vision, hearing, speech, learning, and intellectual disabilities, as well as those with manipulation, reach, or strength limitations. The Final RIA does not formally quantify or monetize benefits accruing from the Revised 255 Guidelines due to insufficient data and methodological constraints.

Table 1 below summarizes the results from the Final RIA with respect to the likely monetized benefits and costs, on an annualized basis, from the Revised 508 Standards and 255 Guidelines. All monetized benefits and costs are incremental to the applicable baseline, and were estimated for a 10-year time horizon (starting in 2018 since the final rule requires Federal agencies to comply one year after its publication) and converted to annualized values using discount rates of 7 and 3 percent. Three scenarios of incremental benefits and costs are presented using alternative

parameters that are assumptions-based. These scenarios include: A low net benefit scenario (using parameters which results in lower benefits and

higher costs), an expected scenario (consisting of expected values for assumed parameters), and a high net benefit scenario (using parameters

which results in higher benefits and lower costs).

TABLE 1—ANNUALIZED VALUE OF MONETIZED BENEFITS AND COSTS UNDER THE FINAL RULE, 2018–2027
[In 2017 dollars]

Type of benefits or costs	Scenario	7% Discount rate (in millions)	3% Discount rate (in millions)
Monetized incremental benefits to Federal agencies and members of the public with certain disabilities (under Revised 508 Standards).	Low Net Benefit Scenario	\$32.0	\$34.0
	Expected Scenario	72.4	77.0
	High Net Benefit Scenario	187.4	199.0
Monetized incremental costs to Federal agencies (under Revised 508 Standards)	Low Net Benefit Scenario	276.2	287.4
	Expected Scenario	172.8	181.1
	High Net Benefit Scenario	111.5	117.2
Monetized incremental costs to telecommunications equipment and CPE manufacturers (under Revised 255 Guidelines).	Low Net Benefit Scenario	9.5	9.6
	Expected Scenario	9.5	9.6
	High Net Benefit Scenario	9.5	9.6

While the Final RIA monetizes likely incremental benefits and costs attributable to the final rule, this represents only part of the regulatory picture. Today, though ICT is now woven into the very fabric of everyday life, millions of Americans with disabilities often find themselves unable to use—or use effectively—computers, mobile devices, Federal agency Web sites, or electronic content. The Board's existing standards and guidelines are greatly in need of a “refresh” to keep up with technological changes over the past fifteen years. The Board expects this final rule to be a major step toward ensuring that ICT is more accessible to and usable by individuals with disabilities—both in the Federal workplace and society generally. Indeed, much—if not most—of the significant benefits expected to accrue from the final rule are difficult, if not impossible, to quantify, including: Greater social equality, human dignity, and fairness. Each of these values is explicitly recognized by Executive Order 13563 as important qualitative considerations in regulatory analyses.

Moreover, American companies that manufacture telecommunications equipment and ICT-related products will likely derive significant benefits from the Access Board's concerted efforts to harmonize the accessibility requirements in the Revised 508 Standards and 255 Guidelines with voluntary consensus standards. Given the relative lack of existing national and globally-recognized standards for accessibility of mobile technologies, telecommunications equipment manufacturers will, we believe, greatly benefit from harmonization of the Revised 255 Guidelines with consensus standards. Similar benefits will likely accrue more generally to manufacturers of all ICT-related products as a result of harmonization.

It is also equally important to note that some potentially substantial incremental costs arising from the final rule are not evaluated in the Final RIA, either because such costs could not be quantified or monetized (due to lack of data or for other methodological reasons) or are inherently qualitative. For example, due to lack of information, the Final RIA does not assess the cost impact of new or revised requirements in the Revised 255 Guidelines on computer and telecommunications equipment manufacturers. A more in-depth discussion of the Final RIA can be found in Section V.A (Regulatory Process Matters—Final Regulatory Impact Analysis).

II. Rulemaking History

A. Existing 508 Standards and 255 Guidelines (1998–2000)

The Access Board issued the existing 255 Guidelines for telecommunications equipment and customer premises equipment in 1998. Telecommunications Act Accessibility Guidelines, 63 FR 5608 (Feb. 3, 1998) (codified at 36 CFR part 1193). Two years later, in 2000, the Board published the existing 508 Standards. Electronic and Information Technology Accessibility Standards, 65 FR 80499 (Dec. 21, 2000) (codified at 36 CFR part 1194). In this preamble, all citations to 36 CFR part 1193 refer to the existing 255 Guidelines in force since 1998, while all citations to 36 CFR part 1194 refer to the existing 508 Standards in force since 2000.

The existing 508 Standards require Federal agencies to ensure that persons with disabilities—namely, Federal employees with disabilities and members of the public with disabilities—have comparable access to, and use of, electronic and information technology (regardless of the type of medium) absent a showing of undue

burden. 36 CFR part 1194. Among other things, these standards: Define key terms (such as “electronic and information technology” and “undue burden”); establish technical requirements and functional performance criteria for covered electronic and information technologies; require agencies to document undue burden determinations when procuring covered products; and mandate accessibility of support documentation and services. Generally speaking, the existing 508 Standards take a product-based regulatory approach in that technical requirements for electronic and information technology are grouped by product type: Software applications and operating systems; Web-based intranet and Internet information and applications; telecommunications products; self-contained, closed products; and desktop and portable computers.

The existing 255 Guidelines require manufacturers of telecommunications equipment and customer premises equipment to ensure that new and substantially upgraded existing equipment is accessible to, and usable by, individuals with disabilities when readily achievable. 36 CFR part 1193. The existing guidelines, as with the 508 Standards, define key terms (such as “telecommunications equipment” and “readily achievable”) and establish technical requirements for covered equipment, software, and support documentation. These guidelines also require manufacturers of covered equipment to consider inclusion of individuals with disabilities in their respective processes for product design, testing, trials, or market research.

B. TEITAC Advisory Committee (2006–2008)

In the years following our initial promulgation of the existing 508

Standards and 255 Guidelines, technology has continued to evolve at a rapid pace. Pursuant to our statutory mandate, the Access Board deemed it necessary and appropriate to review and update the existing 508 Standards and 255 Guidelines in order to make them consistent with one another and reflective of technological changes. In 2006, the Board formed the Telecommunications and Electronic and Information Technology Advisory Committee (hereafter, “TEITAC Advisory Committee”) to assist in the process of revising and updating the existing 508 Standards and 255 Guidelines. *See* Notice of Establishment, 71 FR 38324 (July 6, 2006). The TEITAC Advisory Committee’s 41 members comprised a broad cross-section of stakeholders representing industry, disability groups, and Government agencies. This Advisory Committee also included international representatives from the European Commission, Canada, Australia, and Japan. The TEITAC Advisory Committee recognized the importance of standardization across markets worldwide and coordinated its work with standard-setting bodies in the U.S. and abroad, such as the World Wide Web Consortium (W3C®), and with the European Commission. The TEITAC Advisory Committee addressed a range of issues, including new or convergent technologies, market forces, and international harmonization.

In April 2008, the TEITAC Advisory Committee issued its final report to the Access Board (hereafter, “TEITAC Report”). *See* Advisory Committee Report, U.S. Access Board (Apr. 2008), <http://www.access-board.gov/teitac-report> (last accessed Aug. 23, 2016). This TEITAC Report provided a set of recommended updates to the existing 508 Standards and 255 Guidelines, which, the committee noted, were intended to balance two competing considerations: The need for clear and specific standards that facilitate compliance, and the recognition that static standards “consisting of design specification[s] and fixed checklists” would tend to “stifle innovation” and “delay the availability of technology advancements to people with disabilities.” *Id.* at Section 1. To address these considerations, the TEITAC Advisory Committee recommended that the Access Board jettison its existing product-based regulatory approach in favor of technical requirements to achieve accessibility based on ICT functions or features. *Id.* The Committee also noted the importance of harmonizing with international

standards to both spur development of accessible ICT products and reduce manufacturers’ costs in the global market. *Id.* at Sections 4 & 4.3. To that end, the Committee worked to harmonize its recommendations with the then-draft WCAG 2.0. *Id.* at Sections 4.3 & 8.2. All told, the TEITAC Report provided a comprehensive recommended set of technical requirements applicable to a broad range of ICT functions and features, including: Closed functionality; hardware with and without speech output; user interfaces; electronic content; processing and display of captions and audio description; RTT; authoring tools; and, product support documentation and services.

C. First Advance Notice of Proposed Rulemaking (2010)

1. General

Following publication of the TEITAC Report, the Access Board worked to develop a proposed rule that would “refresh” the existing its existing 508 Standards and 255 Guidelines. In March 2010, we issued an Advance Notice of Proposed Rulemaking (2010 ANPRM) inviting public comment on an initial set of draft revisions to the standards and guidelines. *See* Advance Notice of Proposed Rulemaking, 75 FR 13457 (proposed Mar. 22, 2010); *see also* Draft Information and Communication Technology (ICT) Standards and Guidelines, U.S. Access Board, <https://www.access-board.gov/guidelines-and-standards/communications-and-it/about-the-ict-refresh/background/draft-rule-2010> (last accessed Aug. 23, 2016).

In sum, the 2010 ANPRM proposed a set of accessibility requirements that largely tracked the TEITAC Report’s recommendations. While the majority of the proposed requirements in the draft rule were not substantively changed from the existing 508 Standards and 255 Guidelines, there were some notable proposed substantive revisions. Two of the most significant were the proposals to require that Federal agencies make electronic content of specified official communications accessible, and to harmonize with WCAG 2.0 by restating the Level AA Success Criteria and Conformance Requirements in regulatory (mandatory) terms in the draft rule. Additionally, the 2010 ANPRM—in keeping with the TEITAC Report—also sought to substantially update the structure and organization of the existing regulations. In the draft rule, the proposed standards and guidelines shared a common set of functional performance criteria (Chapter 2) and technical design criteria

(Chapters 3–10), but had separate introductory chapters (Chapters 1 and 2), which outlined the respective scoping, application, and definitions for the revised 508 Standards and 255 Guidelines.

2. Public Hearings and Comments

The Access Board held two public hearings on the 2010 ANPRM—March 2010 (San Diego, CA) and July 2010 (Washington, DC). We also received 384 written comments during the comment period. Comments came from industry, Federal and state governments, foreign and domestic companies specializing in information technology, disability advocacy groups, manufacturers of hardware and software, trade associations, institutions of higher education, research and trade organizations, accessibility consultants, assistive technology industry and related organizations, and individuals.

In general, commenters agreed with our approach to addressing the accessibility of ICT through functionality rather than discrete product types. Commenters also expressed strong support for our efforts to update the existing 508 Standards and 255 Guidelines, as well as our decision to follow the TEITAC Advisory Committee’s recommendation to require harmonization with WCAG 2.0. However, many commenters expressed concern that the 2010 ANPRM was not user-friendly, *e.g.*, that it was too long (at close to 100 pages), organized in a confusing manner, and suffered from some internal inconsistencies. For example, commenters noted confusion by virtue of the fact that some chapters focused on functional features of accessibility while others addressed specific types of technology, or that the meaning of “ICT” seemed to vary depending on the context of the specific chapter. Other commenters opined that deviations from WCAG 2.0 phrasing in the draft rule created ambiguities, particularly for those well familiar with WCAG 2.0.

D. Second Advance Notice of Proposed Rulemaking (2011 ANPRM)

1. General

By the following year, in 2011, the Access Board was poised to invite public comment on a revised version of the draft rule. The Board acknowledged that, based on comments to the 2010 ANPRM, the draft rule needed to be reorganized and made more concise. More importantly, we needed to obtain further comment on major issues and harmonize with the European Commission’s ICT standardization

efforts that were already underway at that time. Consequently, the Board issued a second Advance Notice of Proposed Rulemaking (2011 ANPRM). See Advance Notice of Proposed Rulemaking, 76 FR 76640 (proposed Dec. 8, 2011); Draft Updated Standards and Guidelines (2011), U.S. Access Board, <https://www.access-board.gov/guidelines-and-standards/communications-and-it/about-the-ict-refresh/draft-rule-2011>.

In the 2011 ANPRM, the Access Board substantially revamped the structure and organization of the draft rule. To address comments criticizing the length and organization of the 2010 ANPRM as unwieldy, the revised draft rule consolidated and streamlined provisions into six chapters (from ten), consolidated advisories, and reduced the page count from close to 100 to less than 50. We also made revisions to improve the clarity of various proposed provisions and ensure a consistent organizational structure throughout this draft rule. See, e.g., U.S. Access Board, Information and Communication Technology Standards and Guidelines; Proposed Rule (NPRM), 80 FR 10880, 10884–93 (Feb. 27, 2015) (providing detailed comparison of 2010 and 2011 ANPRMs). Additionally, to address commenters' collective concern that rephrasing of WCAG 2.0 requirements introduced ambiguities, the revised draft rule proposed to apply WCAG 2.0's requirements through incorporation by reference rather than restating its requirements in the technical provisions for Web and non-Web content, documents, and user applications.

In issuing the 2011 ANPRM, the Access Board also took notice of the standardization work going on in Europe at the time, stating:

[T]he Board is interested in harmonizing with standards efforts around the world in a timely way. Accordingly, the Board is now releasing this second Advance Notice of Proposed Rulemaking (2011 ANPRM) to seek further comment on specific questions and to harmonize with contemporaneous standardization efforts underway by the European Commission.

2011 ANPRM, 76 FR at 76642.

2. Public Hearings and Comments

Hearings were held in January 2012 in Washington, DC and in March 2012 in San Diego, CA. Additionally, 91 written comments were received in response to the 2011 ANPRM. Comments came from industry, Federal and state governments, foreign and domestic companies specializing in information technology, disability advocacy groups, manufacturers of hardware and

software, trade associations and trade organizations, institutions of higher education and research, accessibility consultants, assistive technology industry and related organizations, and individual stakeholders who did not identify with any of these groups.

In general, commenters continued to agree with our approach to address ICT accessibility by focusing on features, rather than discrete product types. Commenters supported the conciseness of the proposed provisions in the 2011 ANPRM, and asked for further streamlining where possible. Commenters also generally voiced strong support for the Board's decision to incorporate by reference WCAG 2.0 and apply it to all types of covered ICT; several commenters did, however, question the propriety of applying WCAG 2.0 to non-Web ICT.

E. Notice of Proposed Rulemaking (2015 NPRM)

1. General

In 2015, the Access Board formally commenced the rulemaking process by issuing a notice of proposed rulemaking to update the existing 508 Standards and 255 Guidelines. See Notice of Proposed Rulemaking; Information and Communication Technology Standards and Guidelines, 80 FR 10879 (proposed Feb. 27, 2015) (hereinafter, NPRM). This proposed rule—while making editorial changes and other updates in response to comments on the 2011 ANPRM—retained the same overall structure and approach to referencing WCAG 2.0.

2. Hearings and Comments

Hearings were held on March 5, 2015 in San Diego, CA, on March 11, 2015 in Washington, DC, and April 29, 2015 in Salt Lake City, UT. Additionally, 137 written comments were received in response to the NPRM. Comments came from industry, Federal and state governments, disability advocacy groups, manufacturers of hardware and software, trade associations and trade organizations, institutions of higher education and research, and individuals who did not identify with any of these groups.

Overall, we received about 160 comments in response to the NPRM, including written comments and oral testimony from witnesses at the three public hearings. These commenters represented, when excluding multiple submissions, about 140 different entities or individuals. By general category, these NPRM commenters can be broken down as follows: Individuals (59); disability advocacy organizations (59); ICT companies (10); accessible ICT

services providers (11); trade associations representing ITC and telecommunications companies (11); individuals or groups identifying themselves as ICT subject matter experts (13); academicians (6); state or local governmental agencies (7); standards development organizations (3); international disability advocacy organizations (9); and, anonymous (4).

In general, commenters spoke positively about the proposed rule, and noted that it was much improved from earlier iterations in the 2010 and 2011 ANPRMs. By a wide margin, the single most commented-upon aspect of the proposed rule (and the issue on which commenters expressed the greatest unanimity) was timing. Characterizing refresh of the 508 Standards and 255 Guidelines as “long overdue,” these commenters urged the Access Board to issue its final rule as expeditiously as possible. On substantive matters, a large number of commenters addressed some aspect of the requirements for electronic content, with the bulk of these comments relating to Section 508-covered content. Another technical area receiving sizeable comment was our proposal that, under both Sections 508 and 255, WCAG 2.0 and PDF/UA–1 serve as the referenced technical standards for accessibility of electronic content, hardware, software, and support documentation and services. Additionally, real-time text (RTT) was a subject of great interest to NPRM commenters, with most commenters representing disability advocacy organizations and academicians supporting the Board's RTT proposal, while ITC manufacturers and trade groups expressed opposition. Further, the issue of harmonization with EN 301 549 received considerable comment. In general, ITC industry-related commenters urged the Board to harmonize more closely with this European specification. Disability advocacy organizations and consumer-related commenters, on the other hand, viewed the proposed rule and EN 301 549 as well harmonized already and expressed concern that further harmonization would be improvident because, in their view, EN 301 549 set forth weaker accessibility requirements in some areas.

Lastly, the Board received multiple comments from individuals or entities addressing various types of electromagnetic sensitivities. These commenters requested that the final rule require accommodations for people with electromagnetic intolerances, so that they might use Federal buildings and Federally-funded facilities. The Board acknowledges the challenges faced by

individuals with electromagnetic sensitivities, and notes that electromagnetic sensitivities may be considered a disability under the ADA if the sensitivity so severely impairs the neurological, respiratory, or other functions of an individual that it substantially limits one or more of the individual's major life activities. However, most of the accommodations suggested by these commenters are beyond the scope of this rulemaking or our statutory jurisdiction. Moreover, none of our prior rulemaking notices (*i.e.*, 2010 ANPRM, 2011 ANPRM, and NPRM) proposed technical specifications relating to electromagnetic sensitivities. Thus, were the Board to address electromagnetic sensitivity issues posed by ITC, this complex area would require thorough research and notice-and-comment rulemaking before being addressed through rulemaking.

F. Harmonization With European Activities

1. History

While the Access Board was in the process of updating its existing 508 Standards and 255 Guidelines, a similar process began in Europe to create the first European set of ICT accessibility standards. As a result of the 2005 EU–US Economic Initiative, the Access Board and the European Commission began to work closely on the issue of Information and Communication Technology standards. *See, e.g.*, European Comm., Implementation of the Economic Initiative of the June 2005 EU–US Summit: Joint EU–US Work Programme (Nov. 2005), available at http://trade.ec.europa.eu/doclib/docs/2006/june/tradoc_127643.pdf.

In 2005, the European Commission issued Mandate 376, which sought the assistance of several private European standards organizations in the development of European accessibility guidelines for public ICT procurements. *See* European Comm., M 376—Standardisation Mandate to CEN, CENELEC, and ETSI in Support of

European Accessibility Requirements for Public Procurement of Products and Services in the ICT Domain (Dec. 7, 2005), available at http://www.etsi.org/WebSite/document/aboutETSI/EC_Mandates/m376en.pdf. Specifically, Mandate 376 requested that the three European standards setting bodies—European Committee for Standardization (CEN), European Committee for Electrotechnical Standardization (CENELEC) and the European Telecommunications Standards Institute (ETSI)—perform two main tasks: Development of a set of functional European accessibility requirements for public procurement of ICT products and services; and creation of an electronic toolkit for use by public procurers.

In early 2014, the three European standardization organizations completed their development process by formally adopting and publishing the first European set of specifications on e-accessibility for public ICT procurements, EN 301 549. *See* ETSI/CEN/CENELEC, EN 301 549 V1.1.1 (2014–02), Accessibility Requirements Suitable for Public Procurement of ICT Products and Services in Europe (Feb. 2014), available at http://www.etsi.org/deliver/etsi_en/301500_301599/301549/01.01.01_60/en_301549v010101p.pdf.¹ The functional accessibility requirements specified in EN 301 549 are “closely harmonized” with the then-current draft revisions Section 508 Standards (*i.e.*, the 2011 ANPRM). Accessible ICT Procurement Toolkit—Frequently Asked Questions, Mandate 376, <http://mandate376.standards.eu/frequently-asked-questions#difference> (last accessed Aug. 23, 2016). Unlike the 508 Standards, however, EN 301 549—by its own terms—establishes only non-binding, voluntary accessibility requirements for public ICT procurements. *Id.*

In October 2016, the European Parliament and Council of the European Union issued Directive 2016/2102, which generally requires EU member states to “ensure that public sector

bodies take the necessary measures to make their Web sites and mobile applications more accessible [to persons with disabilities] by making them perceivable, operable, understandable and robust.” Directive 2016/2102 on the Accessibility of the Web sites and Mobile Applications of Public Sector Bodies, Article 4 (Oct. 26, 2016), available at <http://eur-lex.europa.eu/legal-content/EN/TXT/HTML/?uri=CELEX:32016L2102&from=EN>. Directive 2016/2102 further provides that, as a general matter, EN 301 549 V1.1.2 (2015–04) serves as the relevant accessibility standard absent future adoption of technical standards or publication of references to harmonized standards by the European Commission. *Id.* at Article 6. EN 301 549 is thus now available to government officials in EU member states who may use it as technical specifications or award criteria in public procurements of ICT products and services.

2. Comparison of Final Rule With EN 301 549

In the final rule, the Board has made multiple changes that are similar to EN 301 549. Both the final rule and EN 301 549 address the functions of technology, rather than categories of technologies. Similarly, both offer technical requirements and functional performance criteria for accessible ICT. For example, our use of the phrase “information and communication technology” (ICT) in the final rule, as a replacement of the existing term “electronic and information technology,” originates in the common usage of ICT throughout Europe and the rest of the world. Moreover, both documents are organized in similar ways, in that they both have initial scoping and definitions chapters, followed by separate chapters containing technical requirements and functional performance criteria.

Organizationally, the documents differ in several respects. These general differences are outlined in Table 2 below:

TABLE 2—FORMAT DIFFERENCES BETWEEN THE FINAL RULE AND EN 301 549

Differences	EN 301 549 V1.1.2 (2015–04)	Final Rule
Number of chapters	13	6
Note: EN 301 549 breaks out several sections as separate chapters which are combined in the Board's final rule.	Chapter 2—References	Chapter 1—Application and Administration.
	Chapter 3—Definitions and Abbreviations	Chapter 2—Scoping Requirements.
	Chapter 1— Scope	

¹ Subsequently, in 2015, the three European standards bodies issued an updated version of EN 301 549, which contained minor editorial changes only relative to the 2014 version. *See* ETSI/CEN/

CENELEC, EN 301 549 V1.1.2 (2015–04), Accessibility Requirements Suitable for Public Procurement of ICT Products and Services in Europe (Apr. 2015), available at <http://>

www.etsi.org/deliver/etsi_en/301500_301599/301549/01.01.02_60/en_301549v010102p.pdf.

TABLE 2—FORMATTING DIFFERENCES BETWEEN THE FINAL RULE AND EN 301 549—Continued

Differences	EN 301 549 V1.1.2 (2015–04)	Final Rule
	Chapter 9—Web (lists each WCAG 2.0 Level AA success criteria). Chapter 10—non-Web Documents (lists each success criteria in WCAG 2.0 Level AA using non-Web phrasing as needed. “Empty clause” is used for the four problematic success criteria, to align sub-provision numbering with other chapters.). Chapter 4—Functional Performance Chapter 5—Generic requirements (e.g., closed functionality, biometrics, operable parts). Chapter 6—ICT with two-way voice communications. Chapter 7—ICT with video capabilities Chapter 8—Hardware Chapter 11—Software Chapter 12—Documentation and support services. Chapter 13—ICT providing relay or emergency services. Annex A (informative)—WCAG 2.0 Annex B (informative)—Relationships between requirements and functional performance statements. Annex C (normative)—Determination of compliance. Section 8.3.2 Clear floor or ground space Section 8.3.2.1 Change in level Section 8.3.2.2 Clear floor or ground space	We use incorporation by reference to include the WCAG 2.0 Level AA success criteria. For non-Web documents, we are explicit with the word substitution necessary, and provide an exception for the four problematic success criteria. Chapter 3—Functional Performance Criteria. Chapter 4—Hardware Chapter 5—Software Chapter 6—Support Documentation and Services No comparable chapter. No comparable chapter. We are using incorporation by reference, and not reprinting the entire standard. No comparable chapter. Similar comparisons are found in the TEITAC Report. Not within the scope of Section 508 or Section 255, Section 508 compliance is determined by each Federal agency. Not within the scope of Section 508 or Section 255. Most similar to “303 Changes in Level” and “305 Clear Floor or Ground Space” from the 2010 ADA Standards for Accessible Design.
Unique chapters		
	Section 6.2 Real-time text (RTT) functionality 6.5 Video communication	412.5 Real-Time Text Functionality is reserved. 412.7 Video Communication. Their 6.5 is a prescriptive standard while our 412.7 is a performance standard.
Differing treatment of similar concepts		

III. Major Issues

A. 508 Standards: Covered Electronic Content

The NPRM delineated specific types of electronic content that Federal agencies would need to make accessible consistent with the technical requirements of the proposed rule. As explained in the NPRM, the Board proposed these provisions to further clarify the requirement in the existing 508 Standards that Federal agencies make electronic information and data accessible to employees and members of the public. NPRM, 80 FR 10880, 10893 (Feb. 27, 2015). The Board noted confusion over what type of content was covered under the broad language of the existing 508 Standards, and the difficulty that Federal agencies displayed in effectively meeting their obligations to provide accessible electronic content. *Id.*

The NPRM specifically proposed that two discrete groups of content be covered by the refresh of the 508 Standards. First, in proposed E205.2, the Board proposed that all public-facing content comply with applicable technical requirements for accessibility. Public-facing content refers to electronic information and data that a Federal agency makes available directly to the general public. NPRM, 80 FR at 10893. The requirement to make accessible public-facing content is discussed below in Section IV.B. (Summary of Comments and Responses on Other Aspects of the Proposed Rule—508 Chapter 2: Scoping Requirements—E205.4) of this preamble. Second, in proposed E205.3, the Board proposed that non-public-facing electronic content covered by the 508 Standards be limited to the following eight categories of official agency communications: (1) Emergency notifications; (2) initial or final decisions adjudicating an administrative

claim or proceeding; (3) internal or external program or policy announcements; (4) notices of benefits, program eligibility, employment opportunity, or personnel action; (5) formal acknowledgements of receipt; (6) survey questionnaires; (7) templates and forms; and (8) educational and training materials.

We sought comment in the NPRM on whether the proposed eight categories of non-public-facing content were sufficiently clear, and whether they provided sufficient accessibility without unnecessarily burdening agencies. *Id.* at 10894. The Board further requested comment on whether a ninth category for “widely disseminated” electronic content should be included in the final rule. *Id.*

Nine commenters responded to the proposed provision regarding non-public-facing electronic content (proposed E205.3). Commenters included two Federal agencies, one

state/local agency, one disability advocacy organization, one accessible ICT services provider, two ICT subject matter experts, and two individuals.

In general, commenters agreed with the proposed approach requiring that only certain categories of non-public-facing content be made accessible, and most commenters found the categories to be sufficiently clear. One commenter, a state/local agency, objected to the Access Board's statement in the preamble of the NPRM that only "final electronic documents that are ready for distribution" would be subject to accessibility requirements under proposed E205.3, and indicated that documents in all stages of preparation should be covered. NPRM, 80 FR at 10894. Another commenter, an ICT subject matter expert, requested clarification of the internal and external program and policy announcements category and suggested including an additional category for announcements sent to all employees. An accessible ICT services provider was the only commenter to object to the eight categories, finding them too confusing and too difficult to implement. That commenter preferred that the requirement for accessibility of non-public-facing content be tied to the extent of the content's distribution, and suggested that any document distributed to 50 or more individuals be made accessible.

Three other commenters responded to the NPRM's question five as to whether a "widely disseminated" category should be added. *Id.* at 10895. One Federal agency opposed inclusion of this category, asserting that it would cause confusion. One ICT subject matter expert and one Federal agency generally liked the idea of such a category, but acknowledged that definitional challenges would make it difficult to implement.

The Federal agency supporting inclusion of the "widely disseminated" category indicated that the eight proposed categories would not sufficiently encompass the internal Web pages available to employees, and suggested that the problem could be solved with the addition of a ninth category for internal Web pages. This commenter asserted that without such a category for internal Web pages, agencies would need to develop systems to categorize internal Web page content, ensure that employees with disabilities could navigate to the covered content, and find a way to create an integrated accessible experience across internal Web sites where some content is accessible and some is not.

Upon careful consideration of the comments, we have decided to retain the proposed eight categories in the final rule and have added a ninth category for intranet content, as described below. Most commenters concurred with the proposed approach providing categories for non-public-facing content, and indicated that the categories were clearly described. The Board, therefore, finds no reason to alter the eight proposed categories, and has retained them, as proposed, in the final rule. However, the Board did not intend for the use of these categories to exclude some intranet content; all intranet content is currently covered under the existing 508 Standards. 36 CFR 1194.22 (providing technical requirements for "[W]eb-based intranet . . . information and applications"). Therefore, in the final rule, the Board has added a ninth category to final E205.3, requiring that "intranet content designed as a Web page" also conform to accessibility requirements to ensure that the final rule does not inadvertently result in a reduction in accessible intranet content. The Board agrees with commenters that a "widely disseminated" standard would be difficult to define and implement in a consistent manner across agencies, and would likely cause confusion. The Board thus declines to add such a category to the final rule.

B. Application of WCAG 2.0 to Non-Web ICT

The NPRM proposed to apply WCAG 2.0 equally to both Web and non-Web documents and software. NPRM, 80 FR at 10880. A discussion of the scoping of these requirements under the Revised 508 Standards and 255 Guidelines can be found below in Section IV.B (Summary of Comments and Responses on Other Aspects of the Proposed Rule—508 Chapter 2: Scoping Requirements) and Section IV.D (Summary of Comments and Responses on Other Aspects of the Proposed Rule—255 Chapter 2: Scoping Requirements). In the NPRM preamble, we explained that applying WCAG 2.0 "outside the Web browser environment not only ensures greater accessibility for persons with disabilities, but also minimizes the incremental burden on regulated entities by simplifying compliance through incorporation of a technologically neutral consensus standard." *Id.* at 10895.

Since the establishment of the TEITAC Advisory Committee, the general consensus has been that the success criteria in WCAG 2.0 provided sufficient requirements to address the accessibility of non-Web documents and non-Web software applications. *Id.* In

the TEITAC Report and the 2010 ANPRM, the Board restated and recast each WCAG 2.0 success criterion using phrasing appropriate for non-Web documents and software. 2010 ANPRM, 75 FR at 13457.

In response to concerns raised by commenters, in the 2011 ANPRM the Board proposed to incorporate by reference WCAG 2.0 and proposed a direct reference to WCAG 2.0 for non-Web content and software, instead of rewriting each criterion. 2011 ANPRM, 76 FR at 76640. This approach stimulated the formation of an industry ad hoc working group aimed at determining the practicality of using WCAG 2.0 for this purpose. This working group analyzed each WCAG 2.0 Success Criterion to determine its suitability for application to non-Web documents and software. W3C® Web Accessibility Initiative, W3C® Working Group Note—Guidance on Applying WCAG 2.0 to Non-Web Information and Communications Technologies (Sept. 5, 2013), <https://www.w3.org/TR/wcag2ict/>.

The working group determined that of the 38 Level A and Level AA Success Criteria in WCAG 2.0, 26 do not include Web-related terminology that would cause the reader to question whether they are applicable to non-Web documents and non-Web software. *Id.* Therefore, these Success Criteria can be applied directly as written to non-Web documents and software. Of the remaining 12 Success Criteria, the working group found that 8 could be applied as written if certain Web-specific terms or phrases, *e.g.*, "Web page" are replaced with non-Web-specific terms or phrases, *e.g.*, "non-Web documents" and "non-Web software." *Id.* The remaining four Success Criteria posed problems in being applied to non-Web content because they refer to "sets of Web pages." *Id.* Applying these four criterion to non-Web documents and software would require interpretation that could inadvertently change the meaning of the requirements. *Id.* In their report, the working group concluded that circumstances in which those four Success Criteria could be applied outside the context of Web content would be "extremely rare." *Id.*

Relying on the working group's findings, in the NPRM the Board proposed to directly apply WCAG 2.0 to all non-Web documents and software. NPRM, 80 FR at 10895. Sixteen commenters responded to the proposal of applying WCAG 2.0 to non-Web content. Six commenters (five ICT companies and trade associations, and an ICT subject matter expert) strongly

advocated for returning to the previous approach of reprinting three variants of WCAG 2.0 in the 508 Standards and rewriting the requirements with non-Web specific terminology. These commenters asserted that agencies would not be able to consistently apply the WCAG 2.0 success criteria to non-Web documents without separate chapters. They were also concerned that by incorporating WCAG 2.0 by reference, conformity assessment would become a single check-off item in that agencies would not ensure compliance with each success criteria unless they were specifically laid out in the regulatory text. Ten commenters (four disability advocacy organizations, three academics, two individuals, and one ICT company) generally supported applying WCAG 2.0 to non-Web content. One of these commenters explained that referencing WCAG 2.0 as a whole is not problematic because as a single standard, one must comply with all of the provisions to comply with the standard. This commenter explained that there is much overlap between Web and non-Web content, for example an eBook is a document that also has Web components, software, and media. This incorporation of WCAG 2.0 for non-Web content as well as Web content allows the user to evaluate all content with one standard.

Based on the comments received and the findings of the working group, we have decided that agencies are better served by 508 Standards that incorporate WCAG 2.0 by reference than they would be if the final rule were to contain three different versions of WCAG 2.0 for Web content, non-Web documents, and non-Web software. The value of a single standard cannot be underestimated. We attempted to restate the WCAG 2.0 criteria in the 2010 ANPRM, and the approach was widely criticized by commenters. Therefore, in the final rule we retain the approach proposed in the NPRM of incorporating by reference WCAG 2.0 for non-Web documents and non-Web software.

To address concerns expressed by some commenters and the working group regarding the application of a few WCAG 2.0 Success Criteria to non-Web documents and non-Web software, in the final rule we have excepted non-Web documents and non-Web software from compliance with these criteria. Specifically, non-Web documents and non-Web software need not comply with WCAG 2.0 Success Criteria 2.4.1 Bypass Blocks, 2.4.5 Multiple Ways, 3.2.3 Consistent Navigation, and 3.2.4 Consistent Identification. Additionally, we added new provisions to instruct the reader when applying WCAG 2.0 to

non-Web documents and non-Web software to replace the term “Web page” with the term “document” or “software.” We added this exception and new provisions where applicable throughout the final rule text. (E205.4, E205.2.1, E207.2, E207.2.1, C203.1, C203.2.1, C205.2, 501.1, 504.2, 504.3, 504.4, and 602.3).

C. Incorporation by Reference of PDF/UA–1

The NPRM proposed to incorporate by reference (IBR) PDF/UA–1 and allow compliance with this standard as an alternative to compliance with WCAG 2.0. This proposal was in response to commenters to the 2010 and 2011 ANPRMs that asserted that PDF/UA–1 was an international accessibility standard intended for developers using PDF writing and processing software. These commenters asserted that the use of PDF/UA–1 would provide definitive terms and requirements for accessibility in PDF documents and applications that generate PDFs. The Board was persuaded by these comments and proposed to incorporate PDF/UA–1 by reference in the NPRM (proposed E102.6 and C102.6). The Board included it as an alternative to compliance with WCAG 2.0 for electronic content and support documentation for both the 508 Standards and the 255 Guidelines (proposed E205.4, C203.1, and 602.3). By including alternative compliance with PDF/UA–1, the Board intended to give agencies flexibility in meeting accessibility requirements for PDFs. This approach assumed that PDF/UA–1 was fully sufficient to meet the accessibility requirements of PDF users with disabilities.

Ten commenters addressed the proposal to allow conformance with PDF/UA–1 as an alternative to WCAG 2.0. Three commenters, two ICT companies and one accessible ICT services provider, explained that the PDF/UA–1 standard has limitations and does not include requirements for contrast, embedded videos, captioning, or other related requirements for the accessibility of multimedia. These commenters recommended requiring conformance with provisions of WCAG 2.0 in addition to compliance with PDF/UA–1, to ensure that PDF documents are fully accessible. Four commenters (one Federal agency and three ICT companies and trade associations) also noted the shortcomings of PDF/UA–1 as an alternative to WCAG 2.0 conformance and recommended removing the proposed alternative from the final rule. These commenters recommended that the Board instead indicate in an advisory that use of PDF/

UA–1 is a method of achieving conformance to WCAG 2.0. The Federal agency commenter explained that the PDF/UA–1 standard is copyrighted, expensive, and the format is not easy for subject matter experts to work with. Additionally, this commenter explained that the WCAG 2.0 guidelines are sufficient to communicate accessibility conformance. The remaining commenters (two individuals and a disability advocacy organization) recommended clarification of the application of the proposed standard to non-Web documents and asserted a preference for requiring HTML documents instead of accessible PDFs, noting that accessible PDFs are not as useful as HTML documents.

The Board is persuaded by the majority of commenters that PDF/UA–1 should not serve as a referenced accessibility standard for electronic content and support documentation in the final rule. The intent of the proposed IBR of PDF/UA–1 in the NPRM was to make conformance assessment of PDF documents easier, assuming that, in the future, PDF/UA–1 would become widely adopted. WCAG 2.0 strongly informed the development of PDF/UA–1. With the exception of the contrast requirement, PDF/UA–1 includes most accessibility requirements relevant to the PDF format, including textual equivalence for static graphical elements. However, PDF/UA–1 does not address scripting or the use of PDF files as a container for video. Therefore, the end user would still have to reference WCAG 2.0 for some requirements to ensure that a PDF file is fully accessible. Because WCAG 2.0 can be used as a sole standard for PDF compliance, and PDF/UA–1 cannot, the Board finds WCAG 2.0 to be appropriate as the sole standard for PDF files. Therefore, in the final rule, we have removed the reference to PDF/UA–1 from E205.4, C203.1, and 602.3. It is important to note, however, that even without this reference, PDF/UA–1 can still be useful to agencies conducting assessments of PDF files to ensure WCAG 2.0 conformance.

Although we have decided not to include PDF/UA–1 in the final rule as an alternate conformance standard for PDF, we have determined that PDF/UA–1 remains an appropriate standard for authoring tools. Therefore, in the final rule, we added a new provision expressly specifying that authoring tools capable of exporting PDF files must conform to PDF 1.7 (the current standard for PDF, also referred to as ISO 32000–1) and be capable of exporting PDF files that conform to PDF/UA–1 (final 504.2.2). This provision is

discussed in more detail in Section IV. (Summary of Comments and Responses on Other Aspects of the Proposed Rule).

D. Real-Time Text

The NPRM proposed to require that ICT providing real-time voice communication support real-time text (RTT) functionality and ensure the compatibility of multiline displays and features capable of text generation. (proposed 410.6). More importantly, the NPRM sought to ensure the interoperability of RTT across platforms. To accomplish this goal, the NPRM proposed to incorporate by reference specific standards for RTT interoperability in certain environments typically used in the United States (proposed E102.5, E102.8.1, C102.5, and C102.8.1). The NPRM proposed that when ICT interoperates with Voice over Internet Protocol (VoIP) products or systems using Session Initiation Protocol (SIP), the transmission of RTT must conform to the Internet Engineering Task Force's RFC 4103 standard for RTP Payload for Text Conversation. Where ICT interoperates with the Public Switched Telephone Network (PSTN), RTT would be required to conform to the Telecommunications Industry Association's TIA 825-A standard for TTY signals at the PSTN interface (also known as Baudot).

In developing the proposed rule, the Board took note of the approach to RTT in the EN 301 549 Standard. Section 6.2 of EN 301 549, entitled "Real-time text (RTT) functionality," addresses ICT with two-way voice communication. Section 6.2.3, entitled "Interoperability," lists five different standards for RTT operating in three different environments: The publicly switched telephone network; VoIP using SIP; and other ICT using RTT conforming to the IP Multimedia Sub-System (IMS) set of protocols specified in section 6.2.3(c). A sixth standard was proposed in section 6.2.3(d) for ICT operating in an unspecified environment, specifically that ICT is permitted to interoperate with "a relevant and applicable common specification for RTT exchange that is published and available."

In the preamble to the NPRM, we asked nine questions about text-based communications and the different standards the Board was considering incorporating. NPRM, 80 FR at 10880, questions 1–2, 8–13 and 36. Seven of the questions addressed RTT functionality and standards, and two of the questions sought information on costs. Seventeen commenters responded to the topic of RTT. While most of these

commenters acknowledged the importance of RTT as a replacement for outdated Text Telephone (TTY) technology, there was minor disagreement from industry trade associations about whether RTT technology was sufficiently mature for deployment to replace TTYs. Most commenters from industry, academia, and disability rights organizations agreed that RTT could be deployed, but disagreed about which standard to use for RTT operating in different systems. ICT manufacturers and ICT industry associations urged the Board not to adopt any specific standard for RTT, requesting that the final rule leave open the ability to use some future technology that may provide better functionality than existing environments. In response to the Board's questions in the NPRM, several commenters supported broad deployment of RTT at all times, both in the Federal sector and in the private marketplace; however, one ICT industry commenter questioned the need or demand for the technology. In response to our questions on cost, commenters from the ICT industry stated that RTT would not be cost-effective and would limit manufacturers flexibility. On the other hand, commenters from academia, research entities, and disability rights organizations described the benefits resulting from the implementation of RTT and the inherent cost savings in decreased use of relay services mandated under the ADA.

In April 2016, during the pendency of the Access Board's ICT rulemaking, the Federal Communications Commission (FCC) published a Notice of Proposed Rulemaking (FCC NPRM) seeking comment on proposals to replace the FCC rules requiring support for TTY technology with rules requiring support for RTT technology. *See* Transition from TTY to Real-Time Text Technology; Proposed Rule, 81 FR 33170 (proposed May 25, 2016); *see also* FCC, Transition from TTY to Real-Time Text Technology; Petition for Rulemaking to Update the Commission's Rules for Access to Support the Transition from TTY to Real-Time Text Technology, and Petition for Waiver of Rules Requiring Support of TTY Technology, Notice of Proposed Rulemaking, CG Docket No. 16–145, GN Docket No. 15–178, FCC 16–53 (released Apr. 29, 2016), available at https://apps.fcc.gov/edocs_public/attachmatch/FCC-16-53A1.pdf. As discussed above in Section I.A. (Executive Summary—Purpose and Legal Authority), the FCC is responsible for enforcing Section 255 and issuing implementing regulations; it is not

bound to adopt the Access Board's guidelines as its own or to use them as minimum requirements. As the FCC had issued a notice of its intent to regulate in this area, the Board determined that it would reserve the issue of RTT in the final rule to be addressed in a future rulemaking.

In December 2016, shortly before publication of this final rule, the FCC issued a report and order establishing rules to facilitate telecommunication service providers' transition from TTY to RTT. *See* FCC, Report and Order and Further Notice of Proposed Rulemaking, CG Docket No. 16–145; GN Docket No. 15–178, FCC 16–169 (released Dec. 16, 2016) (hereafter, "FCC RTT Order"), available at <https://www.fcc.gov/document/adoption-real-time-text-rtt-rules>. The FCC RTT Order establishes, among other things, requirements that: Facilitate telecommunications service providers' transition from TTY technology to RTT technology that permits simultaneous voice and text on the same call using the same device; achieve interoperability adhering to RFC 4103 as a safe harbor standard; provide backwards compatibility with TTYs for a specified period; and support RTT transmissions to 911 call centers and telecommunications relay centers. *Id.* The FCC RTT Order also incorporates a notice seeking input on the integration of these services into telecommunications relay services, and on the possible addition of RTT features for people with cognitive disabilities and people who are deaf-blind. *Id.* The Access Board continues to monitor these proceedings and will update the 508 Standards and 255 Guidelines as appropriate.

E. Functional Performance Criteria

1. Limited Vision and Limited Hearing

The NPRM proposed to revise the existing functional performance criteria (FPC) for users with limited vision. The NPRM proposed that where technology provides a visual mode of operation, it must provide one mode of operation that magnifies, one mode that reduces the field of vision, and one mode that allows user control of contrast. As explained in the NPRM, the proposed FPC for limited vision was a significant departure from the FPC for limited vision in the existing 508 Standards and 255 Guidelines, which focused on accommodating a specific visual acuity.² NPRM, 80 FR 10880, 10898 (Feb. 27, 2015).

² The existing 508 Standards require that technology provide at least one mode of operation and information retrieval not requiring visual acuity greater than 20/70 in both audio and enlarged print

In proposed 302.2, the Board replaced the visual acuity thresholds with requirements for magnification, reduction of field of vision, and user control of contrast to provide criteria that would address a range of limited vision disabilities. NPRM, 80 FR at 10898 (noting that commenters to the 2010 and 2011 ANPRMs recommended that the FPC include features that would address accessibility for users with limited vision). The Board took a similar approach to the FPC for limited hearing (proposed 302.5), proposing that where technology provides an auditory mode of operation, it must provide at least one mode that improves clarity, one mode that reduces background noise, and one mode that allows user control of volume. *Id.* at 10944.

We sought comment in the NPRM with respect to the proposed FPC for limited vision. *Id.* at 10913. In question 17 the Board asked whether the requirements for magnification, reduction of field of vision, and user control of contrast should be more specific. *Id.* The Board further requested that commenters provide a scientific basis for any recommended thresholds. *Id.* The Board received 11 comments on the proposed FPC for limited vision (proposed 302.2), including comments from three ICT companies, three ICT trade associations, an accessible ICT services provider, a state/local government, an ICT subject matter expert, an individual, and a coalition of disability rights organizations.

The individual commenter and the ICT subject matter expert generally concurred with proposed 302.2, but did suggest possible improvements. The individual commenter suggested adding a “control of color” criteria so that users could choose a black background with white text. The ICT subject matter expert asserted that the Board should include specific thresholds for the criteria, but did not provide suggestions for specific thresholds supported by research or data. The state/local government indicated that the proposed FPC did not adequately address the needs of people with limited vision, but did not offer specific suggestions for improving the provision.

The coalition of disability rights organizations appreciated the Board’s effort with respect to the limited vision FPC, but felt that the proposed provision missed the mark. The group

pointed out that the proposed provision assumed a lack of accessibility, and without a baseline, could result in unnecessary magnification of content that is already sufficiently large, or reduction of a field of vision that is already sufficiently small for limited vision users. The group suggested that the Board alter the provision to require one mode readable by a user with 20/40 vision acuity, one mode that is usable with a 10-degree field of vision, and one mode that provides high contrast.

The ICT companies and trade associations asserted that the proposed FPC for limited vision was too prescriptive, and was inconsistent with the level of specificity contained in the proposed FPCs for other disabilities. These commenters further noted that the FPC for limited vision imposed criteria not required by the technical requirements. In addition, the ICT companies expressed concern that mandating specific criteria in the FPC would stifle innovation. One ICT company described how certain products could provide accessibility for people with limited vision without meeting the proposed criteria. Some industry commenters noted that the proposed limited vision FPC was not technology-neutral and pointed to EN 301 549 as a more useful model. These industry commenters noted that EN 301 549 allows manufacturers the flexibility to include the limited vision accessibility features that are most applicable to a particular type of technology. EN 301 549 clause 4.2.2. ICT industry commenters further noted the benefits to manufacturers of harmonizing with international standards.

Upon consideration of the comments regarding proposed 302.2, the Board agrees that the proposed language of the limited vision FPC is too prescriptive and risks ineffective implementation in the absence of specific baselines for the proposed criteria. The Board is persuaded that the technology-neutral approach advanced throughout this refresh of the 508 Standards and 255 Guidelines is equally appropriate with respect to the FPC. The Board thus finds that harmonization with the language of EN 301 549 is a reasonable approach to the limited vision FPC, and adopts this suggestion for the language of 302.2 in the final rule. Therefore, we have revised final 302.2 to require ICT that provides a visual mode of operation also provide “at least one visual mode of operation that enables users to make better use of their limited vision.”

The proposed rule included a proposed FPC for limited hearing that

closely mirrored the structure of the proposed limited vision FPC. In proposed 302.5, the Board proposed a limited hearing FPC that would have required ICT that provides an auditory mode of operation to also provide at least one mode of operation that improves clarity, one mode that reduces background noise, and one mode that allows user control of volume. ICT industry commenters, and a coalition of disability rights organizations, responded with the same issues that they presented with respect to the proposed limited vision FPC. Specifically, they posited that the proposed limited hearing FPC would not necessarily provide a better functional experience for users with limited hearing. An accessible ICT services provider, as well as an ICT trade association and two ICT companies, noted that the requirements for reduction of background noise and improvement of clarity would be difficult to define, measure, and achieve. As with the proposed FPC for limited vision, ICT industry commenters indicated that harmonization with the language of EN 301 549 would be technology-neutral and would give manufacturers the flexibility to develop accessibility features appropriate for their specific technology. EN 301 549 clause 4.2.5.

Upon consideration of the comments, and in the interest of creating a consistent regulatory structure with respect to all of the FPC in the final rule, the Board agrees that harmonization with the international standard is appropriate for the limited hearing FPC. Therefore, in the final rule, we have revised 302.5 to require that where ICT has an audible mode of operation, it must include “at least one mode of operation that enables users to make use of limited hearing.”

2. Limited Cognitive Abilities

The existing 255 Guidelines contain a FPC that expressly addresses operability of ICT by persons with cognitive, language, and learning disabilities. 36 CFR 1993.41(i) (requiring that ICT operate in “at least one mode that minimizes the cognitive, memory, language, and learning skills required of the user.”). The existing 508 Standards do not include a comparable provision. 36 CFR 1194.31 (listing six FPC, none of which address limited cognition). During its review, the TEITAC Advisory Committee recommended eliminating this requirement citing a lack of common standards or testable metrics. NPRM, 80 FR at 10910. The TEITAC Advisory Committee suggested that the Board eliminate the limited cognition

output, working together or independently. 36 CFR 1194.31(b). The limited vision FPC in the existing 255 Guidelines is similar; it requires that the technology provide a mode that permits operation by users with visual acuity that ranges between 20/70 and 20/200, without relying on audio output. 36 CFR 1193.41(b).

FPC until more research could be done. *Id.* The Board thus did not include the provision in the 2010 and 2011 ANPRMs. *Id.* After considering comments received in response to the ANPRMs, the Board concurred that more research was needed before it could propose a meaningful FPC for limited cognitive ability. *Id.* Therefore, in the NPRM, we did not propose to include an FPC for limited cognition in the Revised 508 Standards or Revised 255 Guidelines. *Id.*

A total of 11 commenters addressed the NPRM's failure to include provisions specifically addressing ICT operability by persons with cognitive, language, or learning disabilities. These commenters included four individuals who identified themselves as either having a learning or cognitive disability, or having a family member with a learning or cognitive disability, one accessibility ICT services provider, one ICT subject matter expert, four disability advocacy organizations, and a coalition of disability rights organizations.

The overarching sentiment that the commenters expressed was that the proposed rule marginalized cognitive, language, and learning disabilities. Disability advocacy organizations, as well as individual commenters, provided general background information on the incidence of cognitive, language, and learning disabilities in the United States. They noted the significant portion of the United States population that is affected by a cognitive disability, and further noted that the incidence of cognitive disability in the United States is growing as the population ages. Individual commenters described challenges using ICT that they or their family members face as a result of their cognitive disabilities.

Five commenters (including disability advocacy organizations, an ICT subject matter expert, an accessible ICT services provider, and a coalition of disability rights organizations) criticized the Board for not including an FPC expressly directed to the needs of individuals with cognitive or learning disabilities. These commenters urged inclusion of a new provision in the final rule similar to § 1193.41(i) of the existing 255 Guidelines. Some of these commenters noted that while the Access Board's proposed revision of the 508 Standards and 255 Guidelines was silent on cognitive accessibility, the European ICT accessibility standard, EN 301 549, addresses cognitive accessibility and provides adjustable timing, error indication and suggestion, and logical focus order as examples of relevant design features for people with

cognitive disabilities. EN 301 549 clause 4.2.10.

One individual commenter suggested that the Board rewrite proposed Chapter 3 to model all FPC on the underlying accessibility principles of WCAG 2.0. W3C®, An Introduction to Understanding WCAG 2.0, (Mar. 17, 2016), <https://www.w3.org/TR/UNDERSTANDING-WCAG20/intro.html>. The commenter suggested that by eliminating references to specific disabilities, the FPC should equally address all disabilities, including cognitive disabilities.

After careful consideration of the comments, we are persuaded that the final rule should include an FPC for limited cognitive abilities. In light of the significant portion of the United States population that has cognitive, language, or learning disabilities, the Board finds that it would be inappropriate to exclude the needs of this population from the Revised 508 Standards and 255 Guidelines. U.S. Census, Sex By Age By Cognitive Difficulty, 2010–2014 American Community Survey 5-Year Estimates, http://factfinder.census.gov/faces/tableservices/jsf/pages/productview.xhtml?pid=ACS_14_5YR_B18104&prodType=table (last visited on Aug. 8, 2016) (estimating that in 2014 almost 5 percent of the civilian non-institutionalized U.S. population 5 years old and older had a cognitive disability). The existing 255 Guidelines contain an FPC for limited cognition. While evaluation of accessibility under this existing provision has posed some challenges, the Board nonetheless concludes that, given the significant population of Americans with limited cognitive, language, or learning abilities, it is important and appropriate to include an FPC addressing their accessibility needs in Chapter 3—which applies under both the Revised 508 Standards and 255 Guidelines. Moreover, in an effort to maintain a consistent regulatory structure for the FPC in the final rule, the language for this FPC in the final rule seeks to harmonize with the FPC for limited cognition in EN 301 549. Therefore, in the final rule, we have added a new section 302.9, which requires that ICT provide “features making its use by individuals with limited cognitive, language, and learning abilities simpler and easier.”

IV. Summary of Comments and Responses on Other Aspects of the Proposed Rule

Overall, we received 162 comments in response to the NPRM, including written comments submitted to the online docket (<https://>

www.regulations.gov/docket?D=ATBCB-2015-0002) and oral statements at three public hearings. In addition to comments received on the major issues discussed in the preceding section, commenters also expressed views on a variety of other matters related to the proposed rule. The Access Board's response to significant comments on these other matters are discussed below on a chapter-by-chapter basis following the organization of the final rule. Also addressed below are requirements in the final rule that have been substantively revised from the proposed rule. Provisions in the final rule that neither received significant comment nor materially changed from the proposed rule are not discussed in this preamble.

A. 508 Chapter 1: Application and Administration

Chapter 1 of the Revised 508 Standards contains a general section that defines equivalent facilitation, addresses application of referenced standards, and provides definitions of terms used in the Standards. In the final rule, the provisions expressly incorporating the ten referenced standards into the Revised 508 Standards have been relocated from proposed E102 to a new Chapter 7, which provides a centralized IBR section pursuant to regulations issued by the Office of the Federal Register (OFR) that govern incorporations by reference in the **Federal Register**. This reorganization of IBR provisions is discussed at greater length in Section IV.I (Summary of Comments and Responses on Other Aspects of the Proposed Rule—Chapter 7: Referenced Standards). We have also made minor changes to 508 Chapter 1 in response to comments to improve clarity, accuracy, and ease of use. These changes are described below.

E101.3 Conventional Industry Tolerances

The NPRM proposed this section in the interests of being explicit about dimensions. We did not receive any comments on this provision but have decided, for the purpose of clarity and consistency with the Board's other rulemakings, to add “with specific minimum or maximum end points” to E101.3 in the final rule.

E102 Referenced Standards

This section has been significantly reorganized and revised in the final rule. The general statements in the first two sentences regarding the application of referenced standards remain essentially unchanged from the proposed rule. However, the subsequent

provisions in the proposed rule that expressly IBR the ten referenced standards into the Revised 508 Standards (*i.e.*, proposed E102.2–E102.10) have been moved in the final rule to a centralized IBR section—new Chapter 7. This reorganization of IBR provisions was made to comply with OFR regulations that govern incorporations by reference. *See* 1 CFR part 51. Comments related to proposed incorporations by reference into the Revised 508 Standards are discussed below in Section IV.I (Summary of Comments and Responses on Other Aspects of the Proposed Rule—Chapter 7: Referenced Standards).

E103.4 Defined Terms

We identified seven comments regarding proposed E103.4. These commenters asked the Board to clarify the definitions of (or provide examples for) the following terms: “authoring tool,” “application,” “document,” “operable part,” “platform software,” “public facing,” and “software.” Two commenters, an ICT company and an industry trade association requested the Access Board to fully align the definition of “authoring tool” to the definition in EN 301 549.

After review of the comments, we have determined that we would be providing clearer information by including more terms, and we therefore added definitions for “document,” “non-Web document,” “non-Web software,” and “Web page” to the list of defined terms in E103.4 in the final rule. The definitions provided for these terms closely track the definitions used in WCAG 2.0 and EN 301 549. For similar reasons of completeness, we also added the terms “software tools” and “variable message signs.” Additionally, based on commenter concerns, we amended the definitions of “software” and “operable part” in the final rule. The definition of “software” clarifies the term by giving the examples of applications, non-Web software, and platform software. The definition of “operable part” now makes clear that the term applies to physical parts (hardware). Finally, the Board added definitions for “alteration” and “existing ICT,” which are new terms used in the safe harbor provision applicable to existing 508-covered ICT (E202.2). Additional discussion of these new terms appears below in section IV.C (508 Chapter 2: Scoping Requirements in the discussion of the safe harbor provision at E202.2).

In response to the requests to align the definition for “authoring tool” to EN 301 549, the Board regards the two definitions as being equivalent, but has decided to retain the definition from the

proposed rule due to editorial consideration. The main difference between the approach taken in the proposed rule and that of EN 301 549 is that the EN 301 549 definition for “authoring tools” includes three notes containing advisory guidance. Our practice is to provide advisory guidance in supplemental materials.

B. 508 Chapter 2: Scoping Requirements

508 Chapter 2 addresses application and scoping of the Revised 508 Standards, including exceptions. We have made multiple significant changes to this chapter. We added a ninth category to E205.3, official agency communications that are non-public-facing electronic covered content, and clarified the application of WCAG 2.0 to non-Web documents and software. We made corresponding changes to E205.4 and E207.2, including adding E205.4.1 and E207.3, which specify the word substitution necessary to apply WCAG 2.0 to non-Web content. These changes are discussed above in Section III.B. (Major Issues—Application of WCAG 2.0 to Non-Web ICT). In addition, we made editorial changes for consistency and clarity. These editorial changes and the responses to other comments received are discussed below.

E202 General Exceptions

In response to some agencies’ concerns regarding the time and resources that might be needed to remediate existing (legacy) ICT, the Board has incorporated a “safe harbor” provision into the Revised 508 Standards (E202.2). Under this provision, legacy ICT that complies with the existing 508 Standards and has not been altered after the compliance date (*i.e.*, one year after publication of the final rule) need not be modified or upgraded to conform to the Revised 508 Standards. However, when existing ICT is altered after the compliance, such alterations must comply with the Revised 508 Standards. Application of the safe harbor provision will allow Federal agencies to focus their ICT accessibility efforts primarily on new ICT.

This safe harbor provision applies on an “element-by-element” basis in that each component or portion of existing ICT is assessed separately. In specifying “components or portions” of existing ICT, the safe harbor provision independently exempts those aspects of ICT that comply with the existing 508 Standards from mandatory upgrade or modification after the final rule takes effect. This means, for example, that if two paragraphs of text are changed on an agency Web page, only the altered

paragraphs are required to comply with the Revised 508 Standards; the rest of the Web page can remain “as is” so long as otherwise compliant with the existing 508 Standards.

Additionally, to further clarify the specific circumstances under which existing ICT must be made to comply with the Revised 508 Standards, the Board has added definitions for “alteration” and “existing ICT” in E103.4. “Existing ICT” is defined as ICT that has been procured, maintained or used on or before the compliance date (which is one year after publication of the final rule). The Access Board has intentionally omitted the term “developed” from this definition because existing ICT that has been developed—but not yet used or procured—still presents an opportunity to incorporate requisite accessibility.

“Alteration,” in turn, is defined as a change to existing ICT that affects interoperability, the user interface, or access to information or data. In defining “alteration,” the Board seeks to distinguish between changes to existing (compliant) ICT that trigger compliance obligations under the Revised 508 Standards, and those that do not. For example, since correction of a typographical error on a Web page does not affect interoperability, user interface, or access to information and data, this type of change would not trigger compliance obligations under the Revised 508 Standards. However, changing the footer portion of an agency Web site through a content management system (CMS) would affect access to information and data (*i.e.*, the information in the footer). In that case, changes to the footer would need to conform to the Revised 508 Standards; however, other page content that was not affected by the footer revision would not need to be upgraded or modified. In another example, a typical software security patch does not affect interoperability, user interface, or access to information and data; therefore, deployment of such software security patches would not be considered “alterations” under the safe harbor provision.

The safe harbor provision is applicable only to existing ICT covered by Section 508, and does not extend to Section 255-covered telecommunications equipment or CPE. Because the FCC has exclusive authority to implement and enforce Section 255, compliance with the Revised 255 Guidelines is not required until they are adopted by the FCC through a separate rulemaking. As such, application of the revised guidelines to existing ICT

covered by Section 255 also lies within the province of the Commission.

Agencies and the public may need to refer to the existing 508 Standards to determine whether existing ICT complies with its accessibility requirements once the final rule takes effect. To that end, the existing 508 Standards have been republished as an appendix (Appendix D) to part 1194 for reference when evaluating legacy ICT under the safe harbor provision. In Appendix D, while the text and structure of each provision remains the same as in the existing 508 Standards, the numbering convention for each provision has been modified to comply with publication requirements for matter located in regulatory appendices.

The NPRM proposed five other general exceptions that apply to ICT that: Is an integral part of a national security system (proposed E202.2); is acquired by a contractor incidental to a contract (proposed E202.3); is located in maintenance spaces (proposed E202.4); would require a fundamental alteration to be accessible (E204.5); or, is not commercially available (proposed E202.6). These five exceptions closely parallel equivalent requirements in existing 508 Standards (36 CFR 1194.3(a), 1194.3(b), 1194.3(f), 1194.3(e), and 1194.2(b), respectively).

We received six comments expressing concern or requesting changes to proposed E202. Two commenters (a disability advocacy organization and an ICT subject matter expert) requested deletion of proposed E202.2, which exempts national security systems as defined by 40 U.S.C 1103(a). These commenters asserted that ICT that is part of a National Security System should be required to conform to the maximum extent possible, instead of being exempted entirely from compliance. Two commenters (a disability advocacy organization and an ICT subject matter expert) also requested that the exception for ICT acquired incidental to a contract in proposed E202.3 be removed, asserting it would discourage contractors from hiring employees with disabilities. Additionally, an individual commented that proposed E202.3 needed a major change because it has not been successful in the past in getting software manufacturers to make accessible software. This individual requested that the final rule require refunds if a future version of software failed to meet accessibility requirements. The Board also received three comments (one ICT company and two industry trade associations) seeking expansion of proposed E202.4, which exempts certain functions of ICT located in maintenance

or monitoring spaces, to include a “back office exemption” for maintenance functions and maintenance spaces.

After carefully considering the comments received, we have decided not to make any changes to these five general exceptions in proposed E202, except to shift the numbering of the provisions to accommodate the incorporation of a safe harbor provision at E202.2 that applies to legacy 508-covered ICT. The exception proposed for National Security Systems (final E202.3) is taken directly from the statute authorizing the 508 Standards (Section 508 of the Rehabilitation Act of 1973, as amended, 29 U.S.C. 794d). Additionally, the statutory definition of “information technology,” which excludes equipment that is acquired by a Federal contractor incidental to a contract, prohibits the Access Board from requiring such ICT to comply with the Revised 508 Standards and 255 Guidelines. 40 U.S.C. 11101(6), stating that “[t]he term ‘information technology’ . . . does not include any equipment acquired by a Federal contractor incidental to a Federal contract.”

E202.4 in the proposed rule (final E202.5) was a change to existing 508 Standards § 1194.3(f) in that the exception was narrowed to apply only to those status indicators and operable parts that are available from maintenance spaces. Since it is the usual case that rack-mounted equipment is operated remotely, this change makes it clear that the Revised 508 Standards do not preclude this usual business practice.

In response to the commenters’ requests seeking expansion of proposed E202.4 for a complete “back office exemption,” the Board, after careful consideration, declines to make a change. People with disabilities frequently perform “back office” IT work and the majority of these job functions can be addressed with assistive technology. The Board is sensitive to concerns raised by some commenters, that ICT will often not be accessible when there is a physical problem or failure with the equipment. We note that we did not provide a complete exception for maintenance functions in the proposed rule, as it only intended the requirements concerning the accessibility of operable parts to apply to the normal operation of ICT by end-users. In order to ensure clarity in the final rule, in addition to the edit to the definition for “operable part” mentioned above, we have revised 407.1 in the final rule to make the application of these Standards to normal operation explicit. This is discussed in further detail below in Section IV.F.

(Summary of Comments and Responses on Other Aspects of the Proposed Rule—Chapter 4: Hardware—407). In addition, we note that the exception for maintenance spaces which are frequented only by service personnel for maintenance, repair, or occasional monitoring is consistent with the ADA and ABA Accessibility Guidelines. 36 CFR part 1191 (stating that “Spaces frequented only by service personnel for maintenance, repair, or occasional monitoring of equipment shall not be required to comply with these requirements or to be on an accessible route”). Therefore, in the final rule, we have not made any changes to proposed E202.4, with the exception of its renumbering (final E202.5).

E203 Access to Functionality

The NPRM proposed to require that all ICT be accessible to and usable by individuals with disabilities, either directly or by use of assistive technology. This section was based on the existing 508 Standards (36 CFR 1194.1 and 1194.2(a)). We received ten comments regarding this proposed requirement; three individuals, a disability advocacy organization, three trade associations, and three ICT companies.

An ICT company and an ICT trade association expressed concern with the proposed requirements and requested clarification on the minimum required abilities assumed for operational functions of certain products. The specific example provided was that it would be very difficult for a person who is blind to have a job operating a large volume xerographic services machine, because that person would not be able to visually monitor the complex equipment. An ICT subject matter expert in the field of geographic information systems raised concerns and recommended that the Board expand the exceptions in proposed E203 to include rich content like maps that represent information and data visually because they do not know of any other means to convey the information and data. Another commenter raised concerns about the inability to make inherently visual representations, such as motion pictures, fully accessible to a person who is blind even when assistive technologies are used. Finally, a disability advocacy organization recommended that this provision be amended to require that people with disabilities be provided training to evaluate, install, and configure assistive technology.

The Board has reviewed the comments received and find that the commenters’ concerns requesting

clarification of the minimum required abilities for operation functions are misplaced. The 508 Standards apply to all ICT; deliberately, they do not make assumptions regarding physical, cognitive, or sensory abilities associated with performing job tasks. Presumably, a job operating a large volume copier would include the requirement to confirm by visual inspection that output hard copy was correct. The fact that there may be specific performance requirements for certain jobs is not a sufficient justification to exempt the core functions of the ICT from the Revised 508 Standards. In response to the commenter's request for an exception for ICT that cannot be adequately represented through assistive technology, the Board notes that the intent of the 508 Standards is to provide comparable access. In the Board's experience, the scope and nature of accessibility improves over time as technology advances. The Board has concluded that these issues are well addressed by the technical and functional performance requirements, and has declined to narrow the scoping or expand the available exceptions as suggested. Finally, in response to the request that the final rule require training, we find that such a requirement is outside the scope of these Standards and have declined to make this suggested change.

We have considered the commenters' suggestions regarding section E203, but as described above, found no reason to make substantive changes. We have made a few editorial changes to E203 in the final rule for clarity. The most significant of these editorial changes is in the title of E203.2, which is now "User Needs" instead of "Agency Business Needs."

E204 Functional Performance Criteria

The NPRM proposed that where the requirements in Chapters 4 and 5 do not address one or more features of ICT, the features not addressed shall conform to the functional performance criteria (FPC) in Chapter 3. Many comments were received regarding the individual FPC referenced in proposed E204. As the technical criteria are provided in Chapter 4, these comments are addressed below in Section IV.F. (Summary of Comments and Responses on Other Aspects of the Proposed Rule—Chapter 4: Hardware). Some of the concerns with the FPC for limited vision, limited hearing, and limited cognition are addressed in the Major Issues section of this preamble, at Section III.E. (Major Issues—Functional Performance Criteria).

We identified 22 comments concerned with proposed E204. Several of these comments indicated that the applicability of proposed E204.1 should be further clarified. An ICT company asserted that as written, proposed E204.1 could be interpreted as requiring the applicability of the FPC to be considered on a feature-by-feature basis. Specifically, this commenter explained that for software products that typically include a long list of "features," such a feature-by-feature evaluation would be quite onerous. Additionally, one commenter provided suggested text for inclusion in advisories in the final rule.

We concur with the commenter that proposed E204.1 could be misinterpreted. We intended for the functionality of the ICT to be considered holistically, and not on a feature-by-feature basis. The final rule revises this requirement and substitutes "functions" for "features," to avoid this confusion. The Board regards this change as editorial, as it seeks to clarify the intent of the proposed provision, and makes the text of the provision consistent with the chapter title and phrasing used elsewhere in the Revised 508 Standards. In response to the commenter's request for advisories, as described above, advisories are no longer published in the final rule; however, the Board intends to provide further guidance on the applicability of final E204.1 in its technical assistance.

E205.2 Public Facing

Three commenters raised concerns with proposed E205.2, specifically in regards to the application of this provision to social media platforms. One individual questioned whether social media constituted public-facing content under proposed E205.2. Another individual questioned whether third-party content added by members of the public to agency controlled social media sites would constitute public-facing content under proposed E205.2. The third commenter, a disability advocacy organization, recommended that agencies be precluded from using any social media platforms that are not compliant with the final rule.

In the NPRM preamble, we described public-facing content and included social media pages as an example of such content. 80 FR 10880, 10893 (Feb 27, 2015). The Board refers commenters on this topic to the discussion in the NPRM, as its position on this matter has not changed. Additionally, we note that under Section 508 of the Rehabilitation Act (as amended), agencies have responsibility for all content that they develop, procure, maintain, or use. 29 U.S.C. 794d. Agencies are therefore

responsible for third-party content added to and maintained on their sites, and will need to develop policies and practices to ensure the accessibility of that third-party content. This is consistent with other policies and practices agencies employ regarding personally identifiable information, security, obscenities, or other concerns presented by third-party content. If an agency invokes an exception and uses inaccessible ICT to provide information and data to the public, the statute requires that the agency provide the same information and data to individuals with disabilities by an alternative means. *Id.* (stating that "the Federal department or agency shall provide individuals with disabilities covered by paragraph (1) with the information and data involved by an alternative means of access that allows the individual to use the information and data"). Under current law, an agency is not prevented from using an inaccessible social media platform under a provided exception, as long as the agency provides individuals with disabilities an alternative means of accessing the same information and data. Accordingly, the Board has not made a change to this requirement.

E205.3 Agency Official Communication

In addition to the changes made to E205.3, discussed above in Section III.A. (Major Issues—508 Standards: Covered Electronic Content), a commenter expressed confusion and questioned what the difference was between a questionnaire and a survey. The Board notes it was not our intention for this item to refer to two different types of communication. Therefore, in the final rule we have amended this item from "questionnaire or survey" to "survey questionnaire."

E205.4 Accessibility Standards

The NPRM generally proposed to replace the existing technical standards for Web, software, applications, and electronic content with incorporation by reference of the Level A and Level AA Success Criteria and Conformance requirements of WCAG 2.0, which appear at proposed E205.4. There is no direct analogy in the WCAG 2.0 Success Criteria for section 1194.22(d) of the existing 508 Standards, which states: "documents shall be organized so they are readable without requiring an associated style sheet." 36 CFR 1194.22(d).

Three individual commenters expressed concern that eliminating the requirements of section 1194.22(d) of the existing 508 Standards would

significantly reduce the level of user control over customized styling (including features such as magnification, color, and contrast), which is critical to some users with low vision. Section 1194.22(d) of the existing 508 Standards requires documents to be organized so that they are readable without an associated style sheet. This enables persons with low vision to remove style sheets from Web pages so that they can change aspects of text style, such as spacing, font, color, borders, and width of reading areas. A disability advocacy organization indicated that replacing the current requirement with referenced provisions of WCAG 2.0 Levels A and AA would result in scenarios problematic for some users with low vision, such as limiting the maximum required magnification to 200 percent while permitting horizontal scrolling (WCAG Success Criteria 1.4.4). In addition, WCAG 2.0 Levels A and AA will provide for a sole fixed contrast setting instead of permitting user control over the degree of contrast (WCAG Success Criteria 1.4.3), which presents a challenge for some individuals.

We have considered commenter concerns regarding the loss of user control over customized styling, and acknowledge that some individuals who elect to use ICT without assistive technology may be affected by the loss of the requirements in section 1194.22(d) of the existing 508 Standards. However, the Board finds that the existing section 1194.22(d) requirement is detrimental to the use of assistive technology, which has well-supported the use of stylesheets for several years. All users, including users of screen reading software and other assistive technology, rely on the presence of Cascading Style Sheets (CSS) in order to format text for a variety of devices and Web browsers. In complex Web applications, CSS is also used dynamically to hide content that is not relevant to the user's current transaction and to selectively show content based on the user's choices. The need for content authors to maintain support for section 1194.22(d) had the effect of slowing the adoption of robust accessible Web content. Further, mainstream adoption of contemporary technologies (for example, ARIA or Accessible Rich Internet Applications) depends on CSS being supported. Implementation of these newer, more advanced approaches is not compatible with 1194.22(d). For these reasons, the Board declines to reintroduce the requirements of section 1194.22(d) in the Revised 508 Standards. The Board is

also not persuaded that amending the language of select WCAG 2.0 Success Criteria, such as 1.4.4 (Resize Text) is a prudent approach. Requiring, for example, 400 percent magnification might allow a select number of users with low vision to use ICT without assistive technology; however, the overall consistency of the requirements, an important goal of harmonization with international standards, would be lost.

Another individual commenter suggested that the technical requirements relating to text featured in software under proposed 502.3.6 be made applicable to text in all content generally, under E205.4. The Board is not persuaded to adopt the recommendation to apply proposed 502.3.6 to all content, including Web content. Adding such a requirement to the WCAG 2.0 criteria would create harmonization issues internationally as well as among Federal agencies. The technical requirement for "boundary of text rendered on the screen" is a detail that is readily available in client-side software, but is not always available in a Web browsing environment.

The Board carefully considered the public comments and it finds that incorporation of the WCAG 2.0 standard, without modification, adequately addresses the needs of the majority of users with low vision. The Board also notes that W3C® has formed a task force charged with investigating the issue of accessibility requirements related to low vision and with creating recommendations. Low Vision Accessibility Task Force, <http://www.w3.org/WAI/GL/low-vision-a11y-tf/>, (last visited Aug. 23, 2016). The Board is following that work and may incorporate their recommendations in future rulemaking.

Conforming Alternate Version

The NPRM proposed that a Web page could conform to WCAG 2.0 either by satisfying all success criteria under one of the levels of conformance or by providing a "conforming alternate version." Because WCAG 2.0 always permits the use of conforming alternate versions, the Access Board sought input on whether there were any concerns that the unrestricted use of conforming alternate versions of Web pages may lead to the unnecessary development of separate Web sites or unequal services for individuals with disabilities, and whether the Board should restrict the use of conforming alternate versions beyond the explicit requirements of WCAG 2.0. NPRM, 80 FR at 10897.

Eleven commenters responded to the proposed provision allowing conforming alternate versions. Seven of

the commenters (four ICT companies and trade associations, two disability advocacy organizations, and one individual) supported the approach to conforming alternate versions proposed in the NPRM. Four commenters (two individuals, one state government agency, and an ICT trade association) opposed the approach from the NPRM.

Under WCAG 2.0, in order for a non-conforming Web page to be included within the scope of conformance by using a conforming alternate version, the alternate version must: Conform at the designated level (*i.e.*, WCAG 2.0 Level AA success criteria); provide the same information and functionality in the same language; and be as up-to-date as the non-conforming content or page. In addition to these requirements, at least one of the following must be true: (1) The conforming version can be reached from the non-conforming page via an accessibility-supported mechanism; (2) the non-conforming version can only be reached from the conforming version; or (3) the non-conforming version can only be reached from a conforming page that also provides a mechanism to reach the conforming version. W3C®, Understanding WCAG 2.0: Understanding Conforming Alternate Versions, Dec. 2012, <http://www.w3.org/TR/UNDERSTANDING-WCAG20/conformance.html#uc-conforming-alt-versions-head>.

The W3C® explains that providing a conforming alternate version is intended to be a "fallback option for conformance to WCAG and the preferred method of conformance is to make all content directly accessible." *Id.* While some commenters expressed specific concern that the use of conforming alternate versions could still create separate, unequal Web sites for people with disabilities, the Access Board has concluded that when the requirements for a conforming alternate version are viewed in conjunction with the W3C®'s guidance, it is clear that they are meant to be used only in the limited circumstances where the primary Web page or content cannot be made accessible for all users, typically due to a technical or legal limitation.

In the Revised 508 Standards, the Board has decided to retain the incorporation by reference to WCAG 2.0's conforming alternate version, as proposed in the NPRM. WCAG 2.0's conforming alternate versions provision provides a much clearer standard than the vague language of the existing 508 Standards. Section 1194.22(k) of the existing 508 Standards states that "[a] text-only page, with equivalent information or functionality, shall be

provided to make a Web site comply with the provisions of this part, when compliance cannot be accomplished in any other way. The content of the text-only page shall be updated whenever the primary page changes.” While on its face, the existing 508 Standards may seem to more strictly limit the use of alternate pages, in practice it is difficult to determine when compliance cannot be accomplished in any other way, and thus, it is easy for agencies to justify the use of text-only pages. Such alternate text-only sites often are poorly maintained, lack the same information and functionality available on the non-conforming Web page, and have out-of-date content. As explained above, the WCAG 2.0 requirement for a conforming alternate version significantly exceeds the expectations for text-only pages, and would not permit these deficiencies. Therefore, the Board has concluded that agencies using the Revised 508 Standards for conforming alternate versions under WCAG 2.0 will not create Web sites that suffer from these same problems, because the requirements for conforming alternate versions under WCAG 2.0 are so rigorous.

Despite WCAG 2.0’s requirement that conforming alternate versions follow far more robust standards than the text-only pages permissible under the existing 508 Standards, some commenters have expressed concern that agencies may choose to use conforming alternate versions even in circumstances in which compliance could be achieved on the primary Web page. The Access Board expects that the stringent requirements for the use of conforming alternate versions under the Revised 508 Standards will prevent this abuse. The Board expects that an agency that decides to use a conforming alternate version of a Web page as opposed to making the main page accessible will typically do so when, as the W3C® explains, certain limited circumstances warrant or mandate their use. For example, W3C® has noted that a conforming alternate version may be necessary: (1) When a new emerging technology is used on a Web page, but the new technology cannot be designed in a way that allows assistive technologies to access all the information needed to present the content to the user (e.g., virtual reality or computer-simulated reality); (2) when it is not possible to modify some content on a Web page because the Web site owner is legally prohibited from modifying the Web content; or (3) to provide the best experience for users with certain types of disabilities by

tailoring a Web page specifically to accommodate those disabilities. *Id.*

The Access Board does not anticipate that an agency would choose to maintain a separate conforming alternate version of a Web page for people with disabilities without a compelling reason, as maintaining separate sites in most, if not all circumstances, would be expensive and overly time-consuming. The Board notes that meeting the stringent criteria for a conforming alternate version under WCAG 2.0 is, in most cases, impractical if the primary page can be made accessible. The Access Board further notes that agencies will have a disincentive to allow conforming alternate versions of Web pages to become out-of-date, as this blatant failure to meet the requirements of WCAG 2.0 for conforming alternate versions could be evidence of noncompliance under the Revised 508 Standards. If the Board finds that use of conforming alternate versions, in practice, does not provide people with disabilities a Web experience equivalent to that of people without disabilities, the Board will consider whether rulemaking is appropriate to restrict the use of conforming alternate versions.

E206 Hardware

We received one comment on this provision from a disability advocacy organization which asserted that proposed E206 did not sufficiently include mobile phones and tablets. The Board disagrees with the commenter and finds that these products are hardware, and are therefore subject to the hardware requirements in Chapter 4 of the final rule.

E207 Software

We received one comment on this provision from a disability advocacy organization that indicated that proposed E207 did not sufficiently encompass mobile applications. The Board disagrees with the commenter and finds that such mobile “apps” are software applications and are therefore subject to the software requirements in Chapter 5 of the final rule.

The W3C® has formed a task force charged with investigating and making recommendations on the issue of accessibility requirements specific to mobile content. Mobile Accessibility Task Force, <http://www.w3.org/WAI/GL/mobile-a11y-tf/> (last visited Aug. 23, 2016). The Board is following that work and may incorporate its recommendations in future rulemaking.

Additionally, the final rule contains an exception to E207.1 and E207.2 that excludes assistive technology software

that supports the accessibility services of the platform. This exclusion appeared in the proposed rule as an exception to proposed 501.1. One commenter noted that the exception might be overlooked until after assistive technology was evaluated for conformance to WCAG 2.0. In response to the commenter’s concern, in the final rule, the Board has moved this exception from chapter 5 to E207.1 and E207.2. The Board regards the relocation of this exception as an editorial clarification since we never intended for assistive technology to be reviewed against the WCAG 2.0 Success Criteria. Moving the exception from Chapter 5 to Chapter 2 makes this clear, but requires that the exception be repeated in multiple places.

C. 255 Chapter 1: Application and Administration

Chapter 1 of the Revised 255 Guidelines includes a general section, defines equivalent facilitation, addresses application of referenced standards, and provides definitions of terms used in the guidelines. Most of the comments received on 508 Chapter 1, discussed above in Section IV.A. (Summary of Comments and Responses on Other Aspects of the Proposed Rule—508 Chapter 1: Application and Administration), are also applicable to 255 Chapter 1. These are noted below with the applicable section numbers. Additionally, we have made minor changes specific to the 255 Chapter 1 in response to comments to improve clarity, accuracy, and ease of use. These changes are described below.

C101.1 Purpose

An ICT trade association raised a concern that inclusion of the phrase “and related software,” could be interpreted to go beyond the scope of Section 255 to cover software other than that essential to telecommunications functions. The Board agrees with the commenter that the inclusion of this phrase is problematic. The Communications Act defines telecommunications equipment to include “software integral to such equipment including upgrades.” 47 U.S.C. 153(45). The FCC, in its 1999 Report and Order implementing its regulations under Section 255, went on to find that customer premises equipment likewise includes software integral to the operations and functions of the equipment. FCC 99–181, adopted July 14, 1999; Released Sept. 29, 1999, pp. 41–42. The Board has concluded that the inclusion of the term “and related software” in proposed C101.1 is unnecessary and confusing, and has deleted it from the provision in the final

rule. The Board has also made changes to several definitions in the final rule, discussed below, to conform to the terminology of Section 255 and the FCC implementing regulations.

C101.3 Conventional Industry Tolerances

For the same reasons discussed above in Section IV.A. (Summary of Comments and Responses on Other Aspects of the Proposed Rule—508 Chapter 1: Application and Administration—E101.3), we have added “with specific minimum or maximum end points” to C101.3 in the final rule.

C102 Reference Standards

This section has been significantly reorganized and revised in the final rule. The general statements in the first two sentences regarding the application of referenced standards remain essentially unchanged from the proposed rule. However, the subsequent provisions in the proposed rule that expressly IBR the ten referenced standards into the Revised 255 Guidelines (*i.e.*, proposed C102.2–C102.10) have been moved in the final rule to a centralized IBR section—new Chapter 7 (Referenced Standards). This reorganization of IBR provisions was made to comply with OFR regulations that govern incorporations by reference. *See* 1 CFR part 51. Comments related to proposed incorporations by reference into the Revised 255 Guidelines are discussed below in Section IV.I (Summary of Comments and Responses on Other Aspects of the Proposed Rule—Chapter 7: Referenced Standards).

C103.4 Defined Terms

In addition to the corresponding changes made to C103.4 that were described above in the Section IV.A. (Summary of Comments and Responses on Other Aspects of the Proposed Rule—508 Chapter 1: Application and Administration—E103.4), we have made a few additional changes based on public comments that are only applicable to the Revised 255 Guidelines.

We added a definition for “manufacturer” to final C103.4, and amended the definitions for “customer premises equipment” and “telecommunications equipment” to conform to the language of Section 255 and the FCC implementing regulations.

Finally, we received comments asking why the definitions for “closed functionality” and “ICT” in proposed C103.4 included examples that were not telecommunications equipment. The

Board concurs with commenters’ concerns that the examples included with those definitions in proposed C103.4 were confusing because they were not telephony products, and thus not within the scope of the 255 Guidelines. Therefore, in the Revised 255 Guidelines the Access Board has amended the definitions for “closed functionality” and “ICT” by removing the examples.

D. 255 Chapter 2: Scoping Requirements

Chapter 2 of the Revised 255 Guidelines addresses application and scoping. Most of the comments received on 508 Chapter 2, discussed above in Section IV.B. (Summary of Comments and Responses on Other Aspects of the Proposed Rule—508 Chapter 2: Scoping), are also applicable to 255 Chapter 2. The applicable 255 Chapter paragraph numbers are referenced below. Additionally, we have made minor changes specific to the Revised 255 Chapter 2 in response to comments to improve clarity, accuracy, and ease of use. These changes are described below.

C201.5 Design, Development, and Fabrication

An ICT subject matter expert was concerned that proposed C201.5 did not include the language from existing § 1193.23(b) that directs telecommunications manufacturers to consider using people with disabilities in the design and development process. As the Board explained in the preamble of the NPRM, we did not retain this provision in the Revised 255 Guidelines because “consider” is not mandatory language and therefore is more appropriate for inclusion in advisory material providing guidance on best practices. 80 FR 10912 (Feb. 27, 2015). The Access Board is not persuaded by this commenter that the final rule should include this requirement and, as discussed above, advisory material is not included in the final rule. Therefore, this requirement has not been changed in the final rule.

C205 Software

In the final rule we have relocated an exception that excludes assistive technology software from proposed 501.1 to final C205. This relocation was necessary to avoid confusion and is described in detail above in Section IV.B. (Summary of Comments and Responses on Other Aspects of the Proposed Rule—508 Chapter 2: Scoping—E207).

E. Chapter 3: Functional Performance Criteria

Chapter 3 of the final rule contains functional performance criteria, which are outcome-based provisions that apply when applicable technical requirements (*i.e.*, Chapters 4 and 5) do not address one or more features of ICT. All sections of this chapter are referenced by scoping provisions in Revised 508 Chapter 2 and in Revised 255 Chapter 2. The functional performance criteria are also used to determine equivalent facilitation under both the Revised 508 Standards and the Revised 255 Guidelines (final E101.2 and C101.2).

We have made minor changes to Chapter 3 in response to comments to improve clarity, accuracy, and ease of use. These changes are described below. In addition, two of the provisions in the final rule, 302.2 and 302.5, have been significantly amended in response to comments and a new provision, and 302.9 has been added to the final rule. These provisions are discussed above in Section III.E. (Major Issues—Functional Performance Criteria).

New Functional Performance Criteria Recommended

We received two comments (a coalition of disability rights organizations and an academic research institution) suggesting that the Board add three new functional performance criteria (FPC) to the final rule addressing depth perception, the use of ICT without gestures, and the use of ICT without human skin contact. The purpose of these recommendations was to anticipate possible developments in technology that would require the use of functions not currently addressed in the Revised 508 Standards and 255 Guidelines. Each of these suggestions are discussed below.

The requested addition for a FPC addressing depth perception would require that one visual mode of operation be provided that does not require binocular perception of depth. This commenter did not indicate what functions of ICT would require binocular perception of depth, or where this criterion might apply, other than to suggest that at some point in the future binocular perception of depth might be required to access functions of some ICT.

Similarly, the addition of a “use of ICT without gestures” FPC was suggested by a commenter without a rationale for where the criterion might be used. The functional limitations suggested by the criterion are already addressed in the FPC for limited vision. For example, a gesture-based system

would not be usable by persons with no vision, since they would be unable to perceive where their gestures were to be located or performed without vision. Therefore, providing a mode of operation that does not require user vision would address those functional needs. The commenter did not apply this suggested FPC to any existing technology or technology known to be in development.

Finally, a commenter suggested a new FPC for the use of ICT without human skin contact. It is the Board's understanding that this suggestion is not technically feasible with modern touch screens which rely on capacitive touch. Capacitive touchscreen displays rely on the electrical properties of the human body to detect when and where on a display the user touches. Because of this, capacitive displays can be controlled with very light touches of a finger and generally cannot be used with a mechanical stylus or a gloved hand. See "What is 'capacitive touchscreen'?", <http://www.mobileburn.com/definition.jsp?term=capacitive+touchscreen> (last visited Aug. 3, 2016). While resistive, or pressure sensitive touch screens, are available for such functions as signing an ATM screen, they can only recognize one activation point at a time. This technical limitation precludes the use of resistive touch screens for common gestures used with personal devices (for example, pinch-to-zoom on a smart phone). See "Okay, but how do touch screens actually work?" at Science Line, the Shortest Distance Between You and Science, <http://scienceline.org/2012/01/okay-but-how-do-touch-screens-actually-work/>, (last visited Aug. 3, 2016). Most touch screen technology today uses capacitive touch.

After consideration, the Board declines to adopt any of the suggested FPC. No specific examples of real-world applications were provided for any of the suggested FPC. The suggested FPC would not have any close correlation to technical criteria in the final rule, and the access barriers theoretically covered by the suggested FPC are substantially addressed by the other FPC in the final rule. Additionally, the suggested FPC lack the necessary research and public input to determine the need and benefit of such additional criteria. Therefore, at this time, the Board declines to adopt the commenters' suggested functional performance criteria.

Section 301 General and 302 Functional Performance Criteria

We received a number of comments from a variety of stakeholders who sought clarification from the Board on the relationship between the FPC and

the technical requirements. This issue has been extensively discussed and commented on during the history of this rulemaking. In the 2010 ANPRM, the Board recommended that for ICT meeting the technical requirements, the FPC did not need to be considered at all. After numerous commenters opposed this approach as being too limiting, and likely to lead to the procurement of ICT that is not actually usable by individuals with disabilities, the Board proposed in the 2011 ANPRM that ICT must conform to the FPC, even when the technical criteria are met. In response to the 2011 ANPRM, commenters noted that required conformance to the FPC would be unduly burdensome and costly, and would greatly increase the time for accessible ICT procurement, without notably improving the likelihood that accessible ICT would be procured. Accordingly, in the NPRM, we proposed that the FPC need only be met when the features of the ICT are not addressed by the provisions in Chapters 4 or 5.

Fifteen general comments were received on Chapter 3. These comments encompassed a wide variety of responses to the proposed FPC. Four commenters from disability advocacy organizations praised the approach taken by the Board in the proposed rule of requiring compliance with the FPC when the technical requirements in Chapters 4 and 5 are not applicable. Two commenters, one from an ICT trade association, and one from coalition of disability rights organizations, suggested that we adopt an approach similar to that taken in EN 301 549, where the FPC are expressed using very broad and conditional language. Three commenters, one from an accessible ICT services provider, one from a state/local agency, and one ICT company, urged the Board to reinstate the proposed approach from the 2011 ANPRM and require the use of the FPC and the technical requirements for all ICT. One commenter who self-identified as an individual with a disability recommended that we revise the language of the FPC to focus only on functional limitations, and not use disability-specific terminology. All other commenters approved of the approach proposed in the NPRM of identifying specific functional limitations using disability-specific language and noted that this approach was understandable, usable, and important in providing context for accessible solutions. Along with this support, one commenter from an ICT trade association suggested that the Access Board change the approach of

describing the FPC to necessary to ensure accessibility, rather than providing more technical requirements. In the final rule, we have retained the approach proposed in the NPRM and provide disability-specific context for the functional performance criteria.

Finally, five commenters, two from disability rights organizations, two ICT companies, and an ICT trade association, requested further clarification on our proposed approach. The most specific comment came from an ICT trade association which expressed confusion about how to interpret and apply the FPC in Chapter 3 for individuals with low and limited vision in conjunction with the scoping requirement for access to "all ICT functionality" as required by proposed E203 and C201.3. This commenter requested clarification on how persons with limited or low vision were supposed to access functions on ICT such as copiers, for example, when checking copy output quality, or attempting to change paper trays. The comment also raised the concern that some functions, by their nature, such as visual inspection for copy quality, assume a certain level of ability. In response, in the final rule, we have revised the text of the provision for operable parts (final 407.1) to clarify that maintenance functions are separate and distinct from normal operations and are not covered by the provisions in Chapters 3 and 4. Only the functions of ICT used in normal operation must be made accessible. The discussion of 407.1 is found below in Section IV.F. (Summary of Other Comments and Responses on Other Aspects of the Proposed Rule—Chapter 3: Hardware). We also retained the proposed provision on status indicators (final 409.1), which requires that information on the status of ICT hardware, such as the need for maintenance, be provided visually, and by touch or sound. The discussion on 409.1 is found below in Section IV.F. (Summary of Comments and Responses on Other Aspects of the Proposed Rule—Chapter 4: Hardware—409).

After review of all of these comments, we have decided to retain the proposed approach in the final rule of requiring the FPC where the requirements in Chapters 4 and 5 do not address one or more functions of ICT. The Board has also retained the requirement that the FPC are used when evaluating an alternative design or technology under equivalent facilitation (final E101.2 and C101.2). The approach taken in the final rule reflects the longstanding, established practice in the Federal Government of the application of the FPC when technical requirements do

not sufficiently address the features of the particular ICT at issue. It also allows for balance between providing for accessible ICT while encouraging flexibility and innovation in the development of accessible ICT. We did make changes to some of the individual FPC. The major changes are discussed above in Section III.E. (Major Issues—Functional Performance Criteria); other changes are discussed below.

302.1 Without Vision

We received three comments on this section. One of the commenters was from a disability rights organization, one was from a coalition of disability rights organizations, and one was an individual who self-identified as having a disability. One commenter commended us on the functionality and usability of the FPC addressing the functional needs of users with no vision, and had no recommendations for change. The remaining two commenters, a self-identified individual with a disability and a disability rights organization, expressed concern that the requirement was too limited and could lead some agencies to provide only an audio solution, which would not provide access for individuals who are deaf-blind. These commenters recommended that the Board add language requiring the support of auxiliary aids, such as refreshable braille devices, in order to ensure that all potential users without vision could have access. In the final rule, we have declined to modify the criterion because mandating a specific solution such as a refreshable braille keyboard would restrict the development of other potential solutions and would be costly. The Board concluded that retaining the NPRM's open ended approach is the best way to maximize potential solutions for this population of users. In addition, the Revised 508 Standards work in tandem with customized solutions developed as appropriate to accommodate the needs of individuals under Sections 501 and 504 of the Rehabilitation Act. The Revised 508 Standards ensure that all functionality of ICT is accessible to and usable by individuals with disabilities either directly or by supporting the use of assistive technology (final E203).

302.3 Without Perception of Color

We received four comments on this provision. All four commenters generally approved of the proposed provision. Three of these commenters, one from an ICT trade association and two ICT companies, requested guidance on allowable alternatives to color. In response, the Board notes that the

supporting materials for the WCAG 2.0 Success Criteria contain technical assistance on the use of color. The remaining commenter, a coalition of disability rights organizations, recommended that we add the word “visual” to clarify the mode of operation. We agree with this comment and have added the word “visual” to describe the mode of operation in the final rule.

302.6 Without Speech

In response to a comment made by a coalition of disability rights organizations, the Board added the phrase where “speech is used for input, control or operation” to clarify in the final rule when this FPC is applied.

302.7 With Limited Manipulation

Three commenters (an accessible ICT services provider, a coalition of disability rights organizations, and an ICT company) requested changes to proposed 302.7. The accessible ICT services provider asserted that the provision was insufficient to address the needs of users with limited manipulation in a touch screen environment because it did not address motions that required more than one finger, such as a pinch zoom gesture, or a twisting motion that required only a single control, but might not work for individuals with some types of limited manipulation abilities. A provision in Chapter 4 addresses this concern by requiring at least one mode of operation operable with one hand that does not require tight grasping, pinching or twisting of the wrist (final 407.6). In addition, there is an exception for input controls for devices for personal use that have input controls that are audibly discernible without activation and operable by touch (final Exception 407.3). The ICT company recommended that we reference the FPC from EN 301 549 clause 4.2.7 “Usage with limited manipulation or strength.” We decline to adopt the recommendation to use the language in EN 301 549 because it combined the functions of limited manipulations with limited strength, which the Board has determined are distinct functions that should be treated separately. Finally, the coalition of disability rights groups recommended that we clarify the text of the provision to make it easier to understand. In response to this comment, we have added the phrase “simultaneous manual operations” to clarify the limitation on this FPC.

F. Chapter 4: Hardware

Chapter 4 contains requirements for hardware that transmits information or

has a user interface. Examples of such hardware include computers, information kiosks, and multi-function copy machines. Chapter 4 in the final rule has been substantially reorganized from the proposed rule in response to comments to improve clarity, accuracy and ease of use. The changes are described below.

401 General

An ICT trade association asserted that the Twenty-First Century Communications and Video Accessibility Act (CVAA) was the latest word from Congress, that the Board should avoid mandating technical requirements, and that the Board was exceeding its jurisdiction. As discussed above in Section I.A. (Executive Summary—Purpose and Legal Authority), both the 508 Standards and the 255 Guidelines are within the Board's purview, and the Board has not introduced any conflict with the CVAA.

402 Closed Functionality

ICT with closed functionality has limited functionality by design or choice, which limits or prevents a user from adding assistive technology. The NPRM proposed that ICT with closed functionality with a display screen must be capable of providing speech output (proposed 402).

We received numerous comments on this section. One commenter, a coalition of disability rights organizations, expressed confusion over the concept of closed functionality in software. Closed functionality as it relates to software is discussed at length in Section IV.G (Summary of Comments and Responses on Other Aspects of the Proposed Rule—Chapter 5: Software) of this preamble, below, and is not addressed here. The provisions in Chapter 4 only pertain to closed functionality with regard to hardware. The same commenter also recommended that the provisions related to closed functionality be separated into a standalone chapter. The Board has not accepted this recommendation. We proposed that approach in the 2010 ANPRM and it was overwhelmingly rejected by commenters who disagreed with the approach and found it awkward to use. Therefore, in the final rule we have retained the approach from the NPRM.

This commenter, and many others representing disability rights organizations and ICT companies, also expressed concern with the structure and organization of the various provisions related to ICT with closed functionality. One commenter, a disability rights organization, suggested that provisions on transactional outputs

(proposed 409) were in the wrong place and recommended that we combine the section for transactional outputs into the section on closed functionality as a subset of speech-output enabled ICT (final 402.2). Several commenters from industry (a trade association for information technology companies and a large manufacturer of business software and hardware) suggested edits to speech-output enabled ICT consistent with Section 707.5.2 of the 2010 ADA Standards.

The Board agrees that the clarity and coherence of these provisions could be improved by reorganization and has significantly revised the final rule to relocate requirements related to hardware with closed functionality to 402. We moved two exceptions that address audible output on devices with closed functionality from the proposed section on transactional outputs into the section on speech output in the final rule (proposed 409.1 Exceptions 1, 3; final 402.2 Exceptions 5, 6) and we have deleted an exception for duplicative information as unnecessary (proposed 409.1 Exception 2). Additionally, the Board has revised the provision for transactional outputs to clarify that the speech output shall be required to provide all information necessary to verify a transaction (proposed 409.1; final 402.2.2).

We also received numerous comments on technical requirements related to closed functionality. We received comments from copier manufacturers who suggested that a speech output requirement was not needed for any ICT with closed functionality that provides copying functions, because the needs of users with visual impairments were already addressed by provisions in the NPRM requiring magnification (proposed 302.2) and supporting the use of assistive technology (proposed E203). The Board disagrees with this suggestion as we have determined that it is too restrictive and has the potential of leading to a lack of access for users with visual limitations. Therefore, we have not made this recommended change in the final rule (final 302.2). If ICT is capable of attaching assistive technology, then by definition it is not considered to have closed functionality, and the provisions on speech-output for closed functionality do not apply (proposed E103; final E103; proposed C103; final C103). In addition, we have concluded that magnification alone may be insufficient to address the functional needs of users with disabilities, and the functional performance requirement for limited vision has been revised accordingly (proposed 302.2; final 302.2; and Section III.E.1. (Major

Issues—Functional Performance Criteria—Limited Vision and Limited Hearing).

Numerous commenters (disability advocacy organizations, individual commenters, and industry) recommended that the Board add a requirement to explicitly address the needs of individuals who are both deaf and blind. At the present time, the only technology that addresses these concerns is in the form of dynamic braille displays, which are prohibitively expensive, costing as much as \$3,000 to \$5,000 to produce a single line of refreshable braille, and up to \$55,000 to produce a full page of refreshable braille, and require significant modifications in order to be incorporated into existing ICT. The Board has concluded that the many examples of ICT with speech output currently available with minimal hardware requirements are sufficient and appropriate to meet the needs of this population, and accordingly no language has been added on this issue.

We received numerous comments on user control from industry, requesting that we clarify when a particular language, such as English was required (proposed 402.2.1). We have determined it is unnecessary to address the use of languages other than English because business requirements would dictate what languages would be used for interface and speech output. If the interface of the ICT was in a language other than English, then the speech output would also be in that language. Similarly, if the interface does not support multiple languages, then the speech output would not have to support multiple languages.

Several commenters (a coalition of disability rights organizations and an academic research institution), supported the requirement for stopping and resuming audio (proposed 402.2.1), stressing that such a feature is essential when audio information is lengthy. An ICT company recommended that the Board reference the provision of EN 301 549 clause 5.1.34. The Board disagrees with this recommendation because the EN provision duplicates the proposed requirement, and also includes additional notes that are confusing and could be interpreted as inconsistent with the basic requirement. The provision in the final rule is renumbered due to restructuring, but is otherwise unchanged from the proposed rule (proposed 402.2.1; final 402.2.4).

We received a significant number of comments on the proposed provision requiring braille instructions on hardware. Five commenters from industry, (three ICT trade associations

and two ICT companies), all stated that it would be difficult for global manufacturers to use braille, and suggested that the Board follow the example in EN 301 549 and require tactile indicators instead. On the other side of the issue, three commenters (a coalition of disability rights organizations, a state/local government, and an academic research institution) all supported the proposed provision, and requested that we retain it (proposed 402.2.2; final 402.2.5).

Based on the prior experience with requiring braille instructions under the ADA and ABA Accessibility Guidelines mentioned above, and the favorable response for tactile instructions, the Board has decided to retain the provision. The braille instructions need not be lengthy, so this is an appropriate requirement for copiers and similar types of ICT, in helping provide equal access to users with low vision. We have declined to follow the approach of providing tactile indicators as indicated in EN 301 549, clause 8.5 “Tactile indication of speech mode” in v.1.1.2 (2015–04) since the EN provision as written allowed for the use of braille, but also permits other unspecified tactile indicators. Instead, we have retained the approach from the NPRM, which specifies a known and predictable method of communicating tactile instructions (final 402.2.5).

Industry commenters also objected to the proposed requirement for English braille, arguing that global markets may spur the manufacture of devices for markets where English is not used as the primary language. In response to this concern, we have revised the final rule to specify the use of contracted braille instead of Grade 2 (English) braille. The Board has also modified the reference to provision 703.3.1 of the ADA and ABA Accessibility Guidelines (proposed 402.2.2; final 402.2.5). Finally, several commenters from industry (ICT trade associations and ICT companies), and a coalition of disability rights organizations asserted that personal use devices do not need braille instruction for initiating the speech mode, and noted that the physical space available on a personal use device would be insufficient to accommodate braille instructions. In response to these comments, we have added an exception from the braille requirement for personal use devices (final 402.2.5 Exception).

The NPRM included a provision requiring volume control for ICT that provides private listening (proposed 402.3.1). Commenters from both industry and disability advocacy organizations recommended that this

provision should be consistent with the provision addressing magnetic coupling (proposed 410.3). The Board agrees that the regulatory language could be strengthened to clarify the relationship between private listening and magnetic coupling. Accordingly, we have revised the provision on magnetic coupling to clarify that the requirement to provide effective magnetic coupling applies where ICT delivers output by means of an “audio transducer held up to the ear” (proposed 410.3; final 412.3).

Numerous industry commenters expressed concerns with the proposed requirement that, where ICT provides non-private listening, incremental volume control shall be provided with output amplification up to a level of at least 65 dB, and where ambient noise level of the environment is above 45 dB, a volume gain of at least 20 dB above the ambient level shall be user selectable (proposed 402.3.2). These commenters all criticized the proposed provision on technical grounds as being imprecise and incapable of determination. We were persuaded by these criticisms and have removed the requirement in the final rule.

These commenters also raised concerns with a requirement for non-private listening that requires automatic volume reset to a default level after every use, on the grounds that the proposed rule was unclear what constituted a “use” of the equipment (proposed 402.3.2). We have declined to make a change in response to this concern. Manufacturers have the ability to determine what constitutes a “use” in the context of their device. For example, a device like a walkie-talkie might reset only when turned off and on, whereas a copier machine might reset automatically after several minutes of inactivity (final 402.3.2).

The NPRM proposed in 402.4 to address the size, font, and contrast requirements for characters displayed on a screen. We received comments from a range of stakeholders (ICT trade associations and companies, two state/local, a coalition of disability rights organizations and an academic research institution). Commenters from industry objected to the size and contrast requirements as being vague and needing additional explanation. On the other hand, commenters from the state agencies, disability advocacy organizations, and academia supported the provision as being useful in providing criteria for a more accessible font style and size. The disability advocacy organizations wanted an additional requirement to specify a font size in at least one mode where ICT did not have a screen enlargement feature.

We have declined to change the provision (final 402.4). The language of the provision is derived from 707.7.2 in the ADA and ABA Accessibility Guidelines. This language has proven over time to strike a fair balance as a minimum standard that is technically feasible for a broad range of devices. While the Board agrees that a more specific contrast requirement would be beneficial, there is not yet an industry consensus standard for measuring contrast as delivered. We considered the metric for contrast as specified by WCAG 2.0 Level AA Success Criterion 1.4.3 but determined that it is inapplicable here, since it only applies to source content and is not appropriate for displays, as addressed in this provision.

In the NPRM preamble we provided variable message signs (VMS) as an example of ICT with closed functionality that would be covered by Section 402 but noted that we were not aware of any VMS technology that provides audible output. We also noted that there is one voluntary consensus standard that addresses the needs of persons with low vision. In Question 18, the Board sought comment on whether it should reference the requirements for VMS in ICC A117.1–2009 Accessible and Usable Buildings and Facilities, if there were technologies that would allow blind users to receive audible messages generated by VMS, and if VMS cannot be speech output enabled, should it at least require VMS to be accessible to people with low vision. NPRM, 80 FR 10880, 10915 (Feb 27, 2015). Several commenters, with a wide variety of backgrounds, agreed that the ICC A117.1–2009 requirements are appropriate to address the needs of many users with low vision, and that we should use those requirements even if VMS cannot be speech output enabled. The few commenters responding to our questions about technologies that might generate an audible version of VMS affirmed that the commercially available products are not sufficiently mature to justify mandating their use.

Consequently, in the final rule we now reference the ICC A117.1–2009 standard and have added an exception to 402.2 Speech Output Enabled for VMS (final 402.2 Exception 1). The Board has also added a new requirement for characters on variable message signs (final 402.5) that references the requirements for VMS in ICC A117.1–2009.

Two commenters (a coalition of disability rights organizations and an academic research institution) requested that the Board add a requirement for audio cutoff. The intention of the recommendation was to ensure privacy

for users of headsets. When users plugged their audio connectors into a standard connection port of ICT that delivers output through an external speaker that broadcasts information in public, the sound from the speakers would be cut off. The Board has declined to add a requirement for audio cutoff as it has determined that it is overly prescriptive, and the objective is already addressed in the final rule by 405, which addresses privacy of input and output for all individuals.

We received a detailed comment from an ICT company who suggested the addition of more requirements for products with closed functionality. The commenter recommended that the Board add five provisions from EN 301 549 onto the existing requirement for closed functionality (proposed 402). Two of the EN provisions, addressing privacy and spoken language, are dependent on unspecified external conditions such as privacy policies and undefined terms such as “indeterminate language” and are unenforceable. EN 301 549 clause 5.1.3.9 and clause 5.1.3.14. Accordingly, the Board has declined to add them to the final rule. The commenter also proposed that the Board adopt a formula for minimum text size as used in EN 301 549, clause 5.1.4. The Board has determined that this is unnecessary and would be redundant of the final rule’s provision addressing minimum text size (final 402.4), which we have decided is straightforward and capable of being tested. The remaining two suggested provisions also had existing parallel provisions in the final rule: a provision on audible signals (EN 301 549, clause 5.1.5) has a parallel provision in 411 of the final rule; and a provision on tactilely discernible controls and keys (EN 301 549, clause 5.1.6, clause 5.1.6.1, and clause 5.1.6.2) is addressed in the final rule provision for tactilely discernible controls and keys (final 407.3). Accordingly, we did not add any of these recommended EN provisions to the final rule.

406 Standard Connections

The NPRM proposed that where data connections used for input and output are provided, at least one of each type of connection shall conform to industry standard non-proprietary formats (proposed 406). Several industry commenters recommended that we use the exact wording from EN 301 549, which specifies the direct or indirect use of commercially available adapters (EN 301 549, clause 8.1.2). The proposed requirement closely corresponds to § 1194.26(d) of the existing 508 Standards and § 1193.51(a) of the existing 255 Guidelines; the

intent of this requirement is to support compatibility with assistive technology hardware. Because hardware used with assistive technology may require a different adapter from a commercially available one, the Board has concluded that it is important to retain the flexibility to allow for both non-proprietary and proprietary connections. For all these reasons, we have retained the phrasing used in the proposed rule (proposed 406; final 406).

407 Operable Parts

The NPRM contained a lengthy section addressing accessibility features of operable parts. We received several comments from industry (ICT trade association and an ICT company) requesting that we delete the provision requiring that keys and controls contrast visually from background surfaces, (proposed 407.2) as being imprecise and incapable of being measured. We have declined to delete this requirement because contrast on controls and keys is an important feature in providing access to the labels on the keys for persons with low vision. The language of the provision is derived from 707.7.2 in the ADA and ABA Accessibility Guidelines. The language has proven to strike a fair balance as a minimum standard and being technically feasible for a broad range of devices. While the Board would prefer to have a more specific contrast requirement, there is not yet an industry consensus standard for measuring contrast as delivered. The metric for contrast as specified by WCAG 2.0 Level AA Success Criterion 1.4.3 is inapplicable here, since it only applies to source content and is not appropriate for displays, as addressed in this provision. Accordingly, we have retained the provision without change from the proposed rule (proposed 407.2; final 407.2).

The NPRM proposed that at least one tactilely discernible control be provided for each function. Devices for personal use with input controls that were audibly discernible without activation and operable by touch were exempted from this requirement. Several commenters (a disability advocacy organization, two ICT trade organizations, and three ICT companies) recommended providing an exception for tactile discernibility for products that are discernable audibly or products that used other non-tactile methods to be discernable without vision. We have determined that these suggestions would make the exception overly broad. For example, tactile discernibility is essential for devices located in public spaces, such as an information transaction machine, where ambient

sound may interfere with an individual's ability to perceive instructions given solely in the form of audible output. Likewise, an exception that permitted a device to rely solely on gesture controls might not be accessible to individuals who are blind or who are unable to gesture. We have retained the exception proposed in the NPRM, which is limited to personal use devices that are discernable audibly without activation (proposed 407.3; final 407.3).

The NPRM proposed that input controls be tactilely discernible and operable by touch and, where provided, that key surfaces outside active areas of the display screen shall be raised above the surrounding surface. A number of commenters (an ICT company, two ICT trade associations, and a disability advocacy organization), opposed the requirement. The commenter from the disability advocacy organization stated that raised keys would be difficult to use for some individuals with disabilities and potentially decrease accessibility. Industry commenters argued that requiring raised keys would add to the cost of designing and fabricating ICT. In response to these concerns, we have deleted the requirement that key surfaces be raised above their surroundings in the final rule. The provision in the final rule now simply requires input controls to be operable by touch and tactilely discernible without activation (proposed 407.3.1; final 407.3.1).

The proposed rule required alphabetic keys, where provided, to be arranged in a QWERTY layout, with the "f" and "j" keys tactilely distinct from the other keys. The provision further required that, where an alphabetic overlay was provided on numeric keys, the overlay must conform to the ITU-T Rec. E. 161. We received a number of comments from industry (three ICT companies and two ICT trade associations) raising concerns that some culture-dependent keyboards contained slight deviations from the strict "QWERTY" arrangement. The intent of this provision is to ensure that individuals who are blind have a point of orientation when encountering an unfamiliar device that uses alphabetic key entry. We have determined that QWERTY key arrangement, commonly used by touch typists, is the best for this purpose. However, in response to comments, we changed the reference for the required keyboard layout from "QWERTY" to "QWERTY-based" keyboards, which provides enough flexibility to be applied for settings where English is not the preferred language (proposed 407.3.2; final 407.3.2).

The proposed rule also included a provision on numeric keys, in addition to the provision on alphabetic keys discussed above. One commenter objected to the language of the provisions in the proposed rule and discussed the difficulty of requiring the "f" and "j" keys to be tactually discernable when a numeric keyboard is used for alphabetic key entry. We reviewed the language of the two provisions and saw that while the proposed provision had one sentence addressing use of alphabetic keys and a second sentence addressing the use of an alphabetic overlay on a numeric keyboard for alphabetic key entry, it was confusing. To clarify this distinction, in the final rule we have moved the requirement for alphabetic overlay for numeric keys from the provision on alphabetic keys to the associated provision on numeric keys (proposed 407.3.2 and 407.3.3; final 407.3.2 and 407.3.3).

The proposed rule had a provision requiring a fixed or adjustable key repeat rate, when a keyboard had the key repeat feature. We received several comments from industry (an ICT trade association and an ICT company), suggesting that the provision was unnecessary since a comparable key repeat requirement was also proposed for software (proposed 502.4; final 502.4). The key repeat provision for hardware is found in the existing 508 Standards § 1194.23(k)(3) and we have determined that it continues to be useful for individuals with manual dexterity issues. We disagreed with the assertion by the commenters that a hardware provision for key repeat was unnecessary and could be adequately addressed solely by a provision addressing software. Accordingly, we made no change in the final rule (proposed 407.4; final 407.4).

The proposed rule included a provision related to timed responses, which proposed that a user be alerted visually, as well as by touch or sound, when a timed response was required. In addition, the user was to be provided the opportunity to request an extension of time to complete their response. We received several comments from industry (an ICT trade association and an ICT company), suggesting that the provision be deleted because a similar requirement was proposed for software (WCAG 2.0 Success Criterion 2.2.1 Timing Adjustable). The requirement for hardware to give the user the ability to extend the time for a response is found in the existing 508 Standards § 1194.22(p) and we have determined that this is an important feature for a number of users, including individuals

with manual dexterity issues, among others. We disagreed with the assertion by the commenters that a hardware provision for key repeat was unnecessary and could be adequately addressed solely by a provision addressing software. Accordingly, we made no change in the final rule (proposed 407.5; final 407).

The proposed rule had several requirements related to reach height which address how a user in a wheelchair can reach the operable parts of controls and keys of stationary ICT from a forward or side position. The NPRM was an expansion of requirements in the existing 508 Standards § 1194.25(j), which address only side approaches to stationary ICT, to include both forward and side approaches. These revisions add flexibility for users and for manufacturers and designers of ICT (proposed 407.12; final 407.8).

A commenter addressing this reach height asked whether a paper tray on a copier could be used as a reference point for the location of any controls. A paper tray is not used as a reference point in determining either the leading edge or reference plane of stationary ICT. Access to a paper tray is considered a maintenance function, so it is not addressed by the reach requirements. We have revised the language in the final rule to clarify that the operable parts requirements apply to “operable parts used in the normal operation of ICT” (proposed 407; final 407). Normal operation, such as using keys to input data or create content or operate ICT such as a multifunction copier, is different from maintenance functions, such as changing toner on a printer. Placing paper on the surface of a copier for making copies is considered normal operation. However, replacing paper in a paper tray is considered a maintenance function, not a normal daily operation, so access to a copier paper tray is not covered under this provision.

The NPRM proposed requirements for display screens on stationary ICT (proposed 408). In the preamble to the NPRM, we sought comment on whether to add a requirement that the viewing angle of display screens be adjustable. 80 FR 10880, 10919 (Feb. 27, 2015), question 23. In response to this question, eight commenters (two ICT trade association, three ICT companies, an accessible ICT services provider, a state/local agency, and an ICT subject matter expert) all recommended against adding a provision for a tilted display screen, citing concerns that the provision would be too prescriptive and would introduce maintenance and cost

issues to the upkeep of the ICT. In response to these comments, we have decided against adding such a provision to the final rule.

409 Status Indicators

The NPRM proposed that all status indicators should be visually discernible and discernible by either touch or sound. The provision contained examples of the types of controls or keys that should be discernible. A commenter (ICT company) found this approach confusing and asked whether discernibility was a feature that needed to be available all the time, or whether it only needed to be discernible when a change of status occurred. In response, the Board removed the reference to examples of types of controls and keys. We did not specify a limitation on when discernibility was required, but have determined that a single notification of a change of state is sufficient (proposed 407.6; final 409).

411 Audible Signals

The NPRM proposed that audio signaling shall not be used as the only means of conveying information, indicating and action, or prompting a response (proposed 407.8). We received comments from a coalition of disability rights organizations which strongly supported this provision. We also received a comment from an ICT company who expressed confusion as to the meaning of the term, “audio signaling.” In response to these comments, we have replaced the term “Audio Signaling” with “Audible Signals or Cues,” in the final rule. This section was elevated and renumbered from a sub-provision in the proposed rule.

412 ICT With Two-Way Communication

In the proposed rule, this section contained provisions for Real-Time Text Functionality (proposed 410.6). Those provisions are now reserved, pending the outcome of rulemaking by the Federal Communications Commission (FCC) as discussed in Section III.D (Major Issues—Real-Time Text). The majority of the remaining provisions in this section address features of two-way communication such as volume gain, minimized interference, and magnetic coupling. There were numerous comments on this section, resulting in the edits discussed below.

In the proposed rule, the Board referenced FCC regulations at 47 CFR 68.317 in anticipation of a pending rulemaking by the FCC on volume control covering all types of

communication technology that provides two-way voice communication, to facilitate hearing aid compatibility (proposed 410.2). Currently 47 CFR 68.317 only addresses volume gain for analog and digital wireline telephones. As noted by several commenters from ICT trade associations, it does not address volume gain for wireless devices (e.g., mobile phones). We have amended the provisions on volume gain to distinguish between volume gain requirements for wireline telephones and non-wireline devices. The Board will consider further updates to these requirements at such time as the FCC completes its rulemaking on this issue.

The proposed rule contained two separate provisions addressing magnetic coupling and minimizing interference (proposed 410.3 and 410.4). We received two comments, one from an ICT trade association and one from a coalition of disability rights organizations, urging that the two provisions be combined since they address related features of ICT with two-way voice common to wireless or wireline devices. The ICT trade association stated that the phrase “to the lowest extent possible” was too subjective and should be removed, leaving the citation to the referenced standard in the provisions. In the final rule, the requirements for magnetic coupling and minimizing interference have been combined into a single provision that clarifies that, where ICT delivers output by a handset or other audio transducer that is typically held to the ear, it shall reduce interference with hearing technologies and provide a means for effective magnetic wireless coupling (final 412.3).

One commenter from an ICT trade association recommended that the Board reference the European standard ETSI ES 200 381–2 in addition to ANSI C63.19–2011 to address minimized interference on wireless handsets. We have reviewed ETSI ES 200 381–2 and determined that it covers only a subset of the frequency ranges covered by ANSI C63.19–2011, because it has a smaller operating range for devices (698 MHz to 3 GHz) compared to ANSI C63.19–2011 (698 MHz to 6 GHz). If the ETSI standard were applied by this rule, manufacturers of devices currently producing products with the broader ANSI frequency ranges could potentially reduce the ranges offered by the products, thereby reducing accessibility (proposed 410.4.1; final 412.3.1).

The NPRM included a proposed requirement for digital encoding of speech (proposed 410.5). In response to

comments from industry (ICT trade associations and an ICT company), we have updated the referenced standards cited for digital encoding of speech to the current versions, ITU-T Recommendation G.722.2 and IETF RFC 6716 (also known as the Opus Codec). In addition, we have deleted the exception because the updated standards address the technical basis for the exception, and therefore it is not needed (final 412.4).

414 Audio Description Processing Technologies

In response to a comment from an ICT trade association, we have revised this provision in the final rule to clarify that the standard referenced in this section, ATSC A/53 Digital Television Standard, Part 5 (2010) only applies to ICT in the form of digital television tuners. We added a separate provision to require that ICT other than digital television tuners provide audio description processing (proposed 412; final 414).

415 User Controls for Captions and Audio Description

The NPRM proposed that ICT provide user controls for the selection of captions in at least one location that is comparable in prominence to the location of user controls for volume. It further proposed that ICT provide user controls for selection of audio description in at least one location that is comparable in prominence to the location of controls for program selection. An exception was provided for devices for personal use, which were not required to comply with the proposed provision (proposed 413).

Commenters from a coalition of disability rights organizations strongly supported this requirement but expressed concern over the exception, fearing that the language “personal use” could be interpreted so broadly as to exempt many devices from coverage. Commenters from industry objected to the language “comparable in prominence” because they found it imprecise and incapable of being tested. They asked that we either define the term or remove it. Commenters from industry also objected to the requirement to provide a physical button arguing that it would significantly impact the design of hardware devices such as remote controls.

After review of the comments, we have revised the exception to make it available when captions and audio descriptions can be enabled through system-wide platform settings. We further revised the requirement for caption selection to state that where

operable parts are provided for volume control, ICT shall also provide operable parts for caption selection. The requirement for selection of audio description was likewise revised to state that where ICT provides operable parts for program selection, it shall also provide operable parts for the selection of audio description. We have concluded that these changes will provide users of captions and audio description with comparable access to those controls, without being overly prescriptive of technological solutions (final 415).

G. Chapter 5: Software

Chapter 5 contains the technical requirements for programs, procedures, rules, and computerized code that directs the use and operation of ICT, and instruct ICT to perform a given task or function. Software includes applications (including mobile apps) and operating systems, as well as processes that transform or operate on information and data. The NPRM proposed that software with a user interface, including client-side and Web applications conform to WCAG 2.0 Level AA. We have retained this requirement in the final rule. Traditional client-side software must also conform to final 502 and 503. Software, including Web applications, that are authoring tools must conform to the requirements of final 504.

Many commenters expressed concern with the complexity of the proposed rule. They urged us to adopt WCAG 2.0, and only WCAG 2.0, as the complete and sufficient set of accessibility requirements for software. Chapter 2 of the final rule incorporates WCAG 2.0 Level AA into the software requirements, and while some of what Chapter 5 requires is parallel or redundant to WCAG 2.0 Success Criteria, Chapter 5 includes requirements that go beyond WCAG 2.0, provide additional detail, or parallels those of the existing 508 Standards. The authors of WCAG 2.0 were informed by the existing 508 Standards, but since WCAG 2.0 only addresses Web content, it has natural technical limitations with its scope. Most subject experts agree that there would be a significant accessibility gap if software were only bound to Success Criteria from WCAG 2.0, and the requirements of this chapter address that gap. Accordingly, no change was made in this approach from the proposed rule to the final rule.

A state/local agency asked why the Board was not making additional references to technology standards, and asked specifically about WAI-ARIA, ATAG 2.0, and UAAG 2.0, and EPUB3.

The Board agrees that these are all useful resources, but as discussed below, we have concluded that these additional standards are too detailed and prescriptive as compared to what is being addressed with our Revised 508 Standards and 255 Guidelines.

WAI-ARIA 1.0 (Accessible Rich Internet Applications 1.0, Mar. 20, 2014, <http://w3.org/TR/2014/REC-wai-aria-20140320>) is a completed W3C® Recommendation but WAI-ARIA 1.1 is still under development and we cannot cite it until it is formally completed. (Accessible Rich Internet Applications 1.1 Working Draft, July 21, 2016, <http://w3.org/TR/wai-aria-1.1>). It contains specifications for Web technologies like HTML5, SVG, and Ajax (short for asynchronous JavaScript and XML). WAI-ARIA can be used to create Web applications that conform to WCAG, but is not required for WCAG conformance. WAI-ARIA is a valuable specification, but the technology it addresses is too narrow for our Standards and Guidelines to require its use at this time.

Authoring Tool Accessibility Guidelines (ATAG) 2.0 is a completed W3C® Recommendation. (ATAG 2.0, Sept. 24, 2015, <http://w3.org/TR/ATAG20>). The Board relied on ATAG 2.0 in developing the requirements for authoring tools included in Revised 508 Standards and 255 Guidelines (proposed 504; final 504). Since ATAG 2.0 applies to software, many of its requirements are redundant to our requirements in 502 and 503. ATAG 2.0 is very narrowly focused on Web content and is very prescriptive. For these reasons, and because of the limited use of ATAG 2.0 in the Federal sphere, the Board has declined to reference it. We have worked to ensure that there are not any conflicts between our requirements and ATAG 2.0. Authoring tools that provide Level AA conformance to ATAG 2.0 will conform to these Standards and Guidelines.

User Agent Accessibility Guidelines (UAAG) 2.0 was published as a “working group note” and there are no plans to move it forward as a W3C® Recommendation. (UAAG 2.0, Dec. 15, 2015, <http://w3.org/TR/UAAG20>). This last step would be necessary for it to be characterized as an industry consensus standard so it is not appropriate to reference at this time. As an accessibility metric for certain types of software (*i.e.*, Web browsers, media players, document readers and other applications that render Web content), UAAG 2.0 does not have any conflicts with the requirements of these Revised 508 Standards and 255 Guidelines.

EPUB® is the distribution and interchange format standard for digital

publications and documents based on open Web standards, and EPUB 3.0.1 is the current and stable version of the EPUB standard. *See* EPUB 3.0.1, International Digital Publishing Form, <http://idpf.org/epub/301> (last visited Aug. 23, 2016). EPUB3 is an excellent file format for electronic documents and accessibility features were integrated throughout in the development of the specification. There are several popular (and accessible) platforms for reading EPUB3 content, but the software currently available for interactively editing EPUB3 content is limited. The EPUB3 format is fundamentally accessible; however, it is possible to create content that technically is in the EPUB3 file format, but not sufficiently accessible. One example would be an EPUB3 file with poor quality alternative text associated with images. WCAG 2.0 Level AA provides an appropriate rubric for assessing the accessibility of EPUB3 documents and this rule would not gain substantively from a reference to EPUB3.

501 General

As with the other chapters, Chapter 5 begins with a reference back to the scoping provisions. We heard from several commenters that people unfamiliar with standards might miss the incorporation by reference of WCAG 2.0 and that they, and others, prefer the formatting approach used by EN 301 549 where the WCAG 2.0 Success Criteria are restated as needed for each section. These commenters were concerned that the provisions of Chapter 5 were all that a software developer might pay attention to. The Board is preparing advisory material to this effect to help users of this rule avoid that oversight.

An ICT company and an ICT trade association urged the Board to modify the exception for Web applications from technical requirements in Chapter 5, which is conditional on those Web applications being fully conformant with WCAG 2.0 Level AA. These commenters urged the Board to exempt all Web applications from proposed sections 502 and 503, regardless of conformance with WCAG 2.0. They reasoned that for non-conformant Web applications, complying with these sections would not necessarily address the non-compliant aspect of the application and would introduce additional testing and compliance issues. Their position is that a conformity assessment against WCAG 2.0, perhaps using a format similar to the current Voluntary Product Accessibility Template® developed by the Information Technology Industry

Council, is complete and sufficient for a Web application, so also assessing against final sections 502 and 503 would be superfluous or even onerous. One commenter gave the example of Web software missing a single text equivalent and thus being subject to the requirements of Chapter 5.

The Board supports having a single conformance model for accessible Web applications and agrees that WCAG 2.0 Level AA is generally sufficient for assessing the accessibility of Web applications. The value of a single unified standard for the accessibility of Web content outweighs the value of additional requirements particular only to certain kinds of Web applications.

However, we have declined to extend an absolute exception from the requirements of Chapter 5 for Web applications without regard to their conformance to WCAG 2.0. The Board recognizes that in some cases, reviewing those non-conforming Web applications against 502 and 503 would not identify additional accessibility concerns. In other cases, a Web application's failing against a particular WCAG 2.0 requirement, for example Success Criteria 4.1.1 Parsing, will have accessibility issues mitigated by addressing requirements from 502 and 503. Therefore, the Board has retained the exception as only being applicable to Web applications that meet WCAG 2.0 Level AA.

In addition, we have narrowed the exception to Web applications that are not isolated from the operating system or the platform they run on. During its examination of this exception, the Board became concerned that certain Web applications that had access to platform accessibility services (and which conformed to WCAG 2.0) were not always compatible with certain assistive technology (such as screen reading software). We concluded that the Exception to 501.1 should be somewhat narrowed from that of the proposed rule, to exclude only Web applications that do not have access to platform accessibility services. This qualification is important because major developers are working hard to make the distinction between desktop and Web applications less apparent to the end-user. As this class of Web applications mature, it is reasonable to anticipate that they might gain the ability to use the accessibility features of the underlining platform they run on. Accordingly, the 501.1 Exception has been changed in the final rule to only be for those Web applications that conform to WCAG 2.0 Level AA and do not have access to platform accessibility

services (directly or through included components).

An ICT company and an ICT trade association disagreed with inclusion of Exception 2 in proposed 501.1, which proposed to exempt assistive technology from the technical requirements in Chapter 5 when assistive technology supports platform accessibility services. These commenters asserted that assistive technology software should be held to the same requirements as mainstream software, and further recommended that the Board adopt an approach similar to EN 301 549, which does not distinguish between assistive technology and other software, and imposes additional requirements on assistive technology.

The purpose of Section 508 is to provide people with disabilities comparable access to ICT. Having additional requirements for assistive technology, or even just holding assistive technology to the same technical requirements as mainstream software, can be counter-productive to that purpose. For example, requiring an on-screen keyboard that is used by a sighted switch user to also be compatible with screen reading software could impose technical challenges that would decrease its utility or pose a barrier to product development. The Board does not want the 508 Standards to create an impediment to Federal agencies procuring assistive technology they need for their employees with disabilities. However, we are aware that in order for mainstream software to work with all assistive technology, the assistive technology must use the accessibility services of the platform. We have retained this requirement as the basis on which assistive technology can obtain the exception from the requirements of Chapter 5. The exception for assistive technology was moved from Chapter 5 to Chapter 2 (final E207.1; E207.2; C205.1; and C205.2) to better ensure that assistive technology developers would not be asked for unnecessary conformity assessment reviews.

502 Interoperability With Assistive Technology

The NPRM proposed that users have control over documented accessibility features (proposed 502.2.1) and that software not disrupt documented accessibility features (proposed 5.2.2.2). An ICT company and an ICT trade association recommended adding an exception to this latter requirement for "when requested to do so by the user during the operation of the software."

We have not changed the requirement from the proposed rule. The suggested

edit is not necessary since if the user is changing the setting, then the accessibility feature could not be reasonably characterized as having been disrupted. User selection and control of accessibility features is not the same as disrupting the accessibility features. If an agency were to disable platform settings that provide accessibility (thereby violating 502.2.2) then the agency would have the responsibility under 508 for demonstrating equivalent facilitation. This is similar to causing software to be closed to the addition of assistive technology, changing the nature of the platform to be functionally indistinguishable from closed hardware, and the requirements of 402 would be applicable.

The NPRM proposed that platform developers provide accessibility services (proposed 5.2.3) and the sub-provisions listed the requirements for software running on those platforms. The Board has changed the phrasing of 502.3 in the final rule to be more consistent with other parts of the rule but the requirements are fundamentally the same as with the proposed rule. As discussed above in Section IV.A. (Summary of Comments and Responses on Other Aspects of the Proposed Rule—508 Chapter 1: Application and Administration—E103.4), in the final rule we have added a definition for “software tools” which is software used for developing software. We also made editorial changes based on input from commenters.

The sub-provisions of 502.3 come from the existing 508 Standards and other accessibility standards and specify details that the Board concluded are important for software accessibility. The authors of WCAG 2.0 included requirements from § 1194.21 of the existing 508 Standards where they could (for example, an explicit requirement for keyboard accessibility is in WCAG 2.0 but was not in WCAG 1.0), but some requirements are not applicable to all technologies and therefore are not explicit in WCAG 2.0. For example, the requirement for row and column headers of data tables to be programmatically determinable (final 502.3.3) is explicit in the existing 508 Standards, and is in WCAG 1.0, but not explicit in WCAG 2.0 because WCAG 2.0 is written to be technology neutral. The Board’s approach in the final rule is consistent with EN 301 549 and other standards for software accessibility.

The numbering of sub-provisions in 502.3 of the final rule has been changed significantly from the proposed rule. Commenters requested that programmatically determinable object

details be separated from the requirement to set or change that object information, values, text, and other details. The proposed rule had nine sub-provisions under proposed 502.3 whereas the final rule now has fourteen, but the requirements are substantially unchanged. Another commenter suggestion was to clarify that by “table” we meant “data table,” so the Board has made that explicit in the final rule.

There was a recommendation from a disability advocacy organization that the event notification provision “should be made to assure that a screen reader can retain control of the reading cursor” but did not offer a specific text change. As part of renumbering and separating the requirements, we have added a separate requirement for modification of focus cursor (final 502.3.13) which addresses this commenter’s concern. An ICT company and an ICT trade association recommended adding a requirement to this section, “Execution of Available Actions.” The proposed rule contained an equivalent requirement (the second of two sentences in proposed 502.3.7) and in the final rule it is a separately numbered provision (final 502.3.11) requiring that: “Applications shall allow assistive technology to programmatically execute available actions on objects.” This provision is intended to address scenarios such as when a person is using screen reading software and encounters a button control with four options. The person should not only hear the description of the control, but also be able to select any one of those four options through the usual keystrokes used with the screen reading software.

Section 502.4 in the final rule is unchanged from the proposed rule. It lists seven requirements from ANSI/HFES 200.2, Human Factors Engineering of Software User Interfaces. In the NPRM preamble the Board asked if the cost was excessive or if there was another authoritative standard we could use. An ICT company and an ICT trade association confirmed the resource as being unique. These two commenters and a Federal agency characterized the standard as relatively expensive and asked if the Board could instead excerpt the seven cited requirements in full. As noted in the preamble to the proposed rule, the seven cited requirements mostly predate the existing 508 Standards and are common features of operating systems. For people familiar with accessibility features, the requirements are readily apparent just from the titles cited in the final rule. Therefore, the final rule retains a reference to the ANSI/HFES 200.2 standard.

One ICT company recommended adding some additional requirements for assistive technology interoperability that parallel clauses 11.3.2.2 and 11.3.2.3 in EN 301 549. The Board declines to follow this recommendation as we have determined that 502.3 in the final rule already contains equivalent technical requirements for assistive technology interoperability, and is simpler and more practical to apply relative to the EN approach, without compromising accessibility.

503 Applications

The proposed rule included a general requirement that applications must permit users to set their preferences from platform settings for color, contrast, font type, and focus cursor (proposed 503.2). For example, a user with low vision might want the default windowing scheme to use yellow on black text with an 18 point sans-serif font. An exception to this provision exempts applications that are designed to be isolated from their underlying platform software (such as Web applications) from this requirement. We received several comments (from individuals, a disability advocacy organization, and an accessibility ICT services provider) concerning the scope of the exception. These commenters acknowledged that certain technologies (such as Adobe® Flash®) were properly exempted, but thought that the exception was otherwise overbroad by sweeping in other types of Web applications (which were unspecified). More generally, some of these commenters also suggested that the Board broaden 503.2 so that the requirement for pass-through of user preferences apply to Web content, as well as applications.

With respect to commenters’ suggestion of overbreadth, the Board declines to revise the exception to apply only to certain types of Web applications. We are aware of no discernible basis for differentiating between Web applications that do and do not warrant the exception, nor did commenters offer any such criteria. It is not technically feasible to require Web applications to use platform preferences because generally the developer of a Web application has no way of knowing what font characteristics a reader will be using for text in windows of their operating system. Applications, including Web applications, which qualify for the exception to use platform settings are still subject to the other requirements of Chapter 5, including the requirements referenced by WCAG 2.0 Level AA.

Likewise, the Board finds commenters' suggestion that the scope of proposed 502.3 be broadened to include Web content to be misplaced. Section 502.3 in the final rule, as with all of Chapter 5, addresses technical requirements for accessibility of software, not Web content. In any event, requiring Web content to meet requirements for pass-through of user preferences would face the same technical challenges as Web applications.

504 Authoring Tools

This section contains additional requirements for software used to create and edit content and documents. The major substantive change from the proposed rule is the addition of a new requirement (final 504.2.2) that authoring tools capable of creating full-featured PDFs (that is, a PDF that conforms to PDF 1.7, also known as ISO 32000-1) must also support creating PDFs conforming to PDF/UA-1. PDF/UA-1 is an extension to PDF 1.7, meaning that PDF/UA-1 is only applicable to PDFs that already conform to PDF 1.7.

Based on comments from a standards developing organization, an ICT trade association, and an ICT company, we have made some editorial changes to proposed sections 504.2, 504.3, and 504.4 for the final rule. For example, "all features and formats" in the proposed rule have been changed to "all supported features and, as applicable, to file formats" in the final rule, to clarify that the limitations of the file formats be taken into consideration.

A disability advocacy organization commented that the accessibility features should be turned on by default, but the Board has decided that would be overly prescriptive. In addition, such a requirement could interfere with automated testing of content for accessibility features. For example, it is significantly easier to identify missing alternative text (as an error) than it is to test for overuse of placeholder or default alternative text. In response to requests from commenters, the Board also plans to incorporate examples from EN 301 549 into forthcoming technical assistance materials.

The NPRM proposed that authoring tools prompt authors to create content that conforms to WCAG 2.0 Level AA, and went on to specify that the tools should provide the option for prompts during initial content creation or when the content is saved (proposed 5.4.3). Based on a commenter observation that accessibility features might best be addressed in the middle of a document workflow process, the last sentence

from proposed 504.3 has been deleted in the final rule. The Board agrees that prompts and conformance checks can be performed at any point, not just upon content creation or when saving a file.

H. Chapter 6: Support Documentation and Services

601 General

Chapter 6 contains accessibility requirements for ICT support documentation and services. This section requires support services such as help desks, call centers, training services, and automated self-service technical support systems that provide documentation addressing accessibility and compatibility features available in accessible formats. We received multiple comments on the application of the PDF/UA-1 standard to electronic support documentation under proposed 602.3. Those comments are discussed in Section III.C. (Major Issues—Incorporation by Reference of PDF/UA-1). Additionally, we received a few comments on some of the other proposed provisions of Chapter 6, which are discussed below.

602 Support Documentation

The NPRM proposed a provision addressing alternate formats for non-electronic support documentation for people who are blind or have low vision (proposed 602.4). The Board received two comments on this provision, one from a state/local agency, and another from a disability advocacy organization. Both commenters asked that we broaden the application of proposed 602.4 to clarify that alternate formats must be provided to any requester with a disability, not just individuals who are blind or have low vision. The Board concurs with this and has amended 602.4 to require alternate formats usable by "individuals with disabilities." The intent of this provision is to address the needs of individuals whose disability makes it difficult to use hardcopy materials. Examples of such disabilities include blindness, low vision, fine motor impairments, and limited cognitive, language and learning abilities.

We received an additional comment from a disability advocacy organization requesting that a notification of the availability of alternate formats be prominently displayed, and that the alternate format provided be that of the requestor's choosing. The final rule requires that support documentation be provided on request in alternate formats usable by individuals with disabilities. We do not agree that mandating a particular placement for notification of

this is necessary. In addition, the Board does not find that it is reasonable to require manufacturers and government agencies to create alternate documentation in every format requested. We anticipate that most manufacturers and agencies will provide accessible softcopy to those that need it, but manufacturers are also permitted the flexibility to instead provide non-electronic support documentation in formats such as large print and braille if they choose to do so. We have concluded that the language of the final rule adequately ensures that alternate formats of electronic support documentation will be made available to individuals who need them, without overburdening manufacturers and government agencies.

603 Support Services

Three commenters discussed the proposed provision regarding support services to include information on accessibility and compatibility features of ICT (proposed 603.2). One commenter was a self-identified individual with a learning disability, one was an accessible ICT services provider, and one was a disability advocacy organization. All three commenters suggested that the Board add language to the provision mandating continuing education for personnel who staff help desks. The Board understands the concern, but declines to add the suggested language as it is overly prescriptive. We intend to provide technical assistance after the final rule has been promulgated that will address training programs as an example of a best practice in complying with this provision. Therefore, this provision is unchanged in the final rule.

I. Chapter 7: Referenced Standards

This new chapter, which provides a centralized IBR section for standards referenced in the Revised 508 Standards or Revised 255 Guidelines, was added to the final rule to comply with OFR regulations that govern incorporations by reference into the **Federal Register**. See 1 CFR part 51. This reorganization does not alter or change in any way the underlying application of the ten referenced standards in the revised standards and guidelines. Each of these standards is still referenced and apply to the prescribed extent specified in the respective IBR provisions. Chapter 7, in effect, simply streamlines the final rule by combining the respective IBR provisions of the Revised 508 Standards and 255 Guidelines into one consolidated IBR section.

With respect to the NPRM's proposed IBR under Section 508, a number of

commenters provided input on the proposed referenced standards. Several commenters raised concerns about the specific technical application of certain standards proposed for incorporation. These comments are addressed above in the applicable parts of Section III (Major Issues) and Section IV (Summary of Comments and Responses on Other Aspects of the Proposed Rule).

In addition, several commenters suggested that the Access Board reference other, additional standards in the updated 508 Standards. While several of the suggested standards serve as useful resources, the Board has determined that their incorporation into the standards is not necessary. With the exception of EN 301 549 (which is addressed below), the Board's bases for declining the suggested reference of additional standards are discussed above in Section IV.G (Summary of Comments and Responses on Other Aspects of the Proposed Rule—Chapter 5: Software).

Of the 32 commenters mentioned above, 22 addressed the potential incorporation by reference of EN 301 549. Five commenters (three ICT companies and two ICT trade associations) suggested that the Access Board reference EN 301 549 as the sole technical standard for accessibility, or, at the very least, deem conformance with EN 301 549 as compliance with the Revised 508 Standards. These commenters made their recommendations in the interest of harmonization and, as one commenter put it, “promoting broader commercialization of accessible ICT systems.” In contrast, one commenter (an international disability advocacy organization) applauded the proposed rule as an improvement on several aspects of EN 301 549. This commenter also noted that, after publication of this final rule, EN 301 549 might well be revised to meet the higher (and, for some areas, more specific) accessibility requirements in the Revised 508 Standards.

For several important reasons, we decline to follow some commenters' suggestion that the Access Board incorporate by reference EN 301 549 into the final rule (or otherwise deem conformance with this European specification to be compliance with Section 508). In sum, EN 301 549 was not developed using a voluntary consensus process, which makes this specification unripe for incorporation by reference into Federal regulations. Moreover, even assuming that EN 301 549 was an appropriate standard for incorporation by reference, reference in the Revised 508 Standards would be

both unnecessary (*e.g.*, due to the high degree of harmonization between the Standards and the European specification) and contrary to law (*e.g.*, certain EN 301 549 provisions failing to provide sufficient accessibility under Section 508). Each of these considerations are discussed below.

First, EN 301 549 cannot be incorporated by referenced in the final rule because this European specification was not adopted through the requisite voluntary consensus standard development process. Under section 12(d) of the National Technology Transfer and Advancement Act of 1995 (codified at 15 U.S.C. 272 note) (NTTAA), Federal agencies are directed to use technical standards developed by voluntary consensus standards bodies (as opposed to government-unique standards) when carrying out their regulatory functions unless doing so would be inconsistent with applicable law or otherwise impractical. OMB Circular A-119, which provides Federal agencies with interpretive guidance on the NTTAA, specifies that standards must be developed under processes that feature five enumerated characteristics to be deemed “voluntary consensus standards” (*i.e.*, openness, balance, due process, appeals process, and consensus). *See* OMB, Circular A-119, Federal Participation in the Development and Use of Voluntary Consensus Standards and in Conformity Assessment Activities §§ 2(d)–(e) (revised Jan. 27, 2016).

EN 301 549, however, was not developed under such a process. Mandate 376, which was issued by the European Commission and tasked the European standardization bodies (*i.e.*, CEN, CENELEC, and ETSI) with development of a harmonized set of functional accessibility requirements for publicly-procured ICT, did not require use of a voluntary consensus process; instead, this mandate merely provided that CEN/CENELEC/ETSI “shall work in close cooperation with relevant stakeholders” when developing the European procurement specification that became EN 301 549. *See* European Commission, Mandate 376 § 4 (Dec. 7, 2005), available at http://www.etsi.org/WebSite/document/aboutETSI/EC_Mandates/m376en.pdf. Additionally, while there was public input during the development of EN 301 549 by various stakeholders (including ICT industry representatives and some consumer groups), it does not appear that the process was sufficiently open or balanced to satisfy the requirements of Circular A-119. *See, e.g.*, ACT NOW! EDF Position on the European Standard on Accessibility Requirements for

Public Procurement of ICT, EASPD, <http://www.easpd.eu/en/content/act-now-edf-position-european-standard-accessibility-requirements-suitable-public> (last accessed Aug. 23, 2016) (noting concern that interests of persons with disabilities were not sufficiently represented during the development of EN 301 549 due to non-voting status of disability rights organizations); VVA Europe Ltd., European Association for the Coordination of Consumers Representation in Standardisation (ANEC), *Preliminary Study on Benefits of Consumer Participation in Standardisation to All Stakeholders* 45–52 (Nov. 13, 2014), available at <http://www.anec.eu/attachments/ANEC-R&T-2014-SC-006.pdf> (noting similar concerns with respect to consumer groups). Thus, while EN 301 549 represents an important step towards a more accessible ICT environment and serves as a meaningful set of technical specifications for public procurements of ICT in the European Union, it is not a voluntary consensus standard within the meaning of Circular A-119.

Moreover, even assuming that EN 301 549 was appropriate for incorporation by reference into the Revised 508 Standards, there is already broad harmonization between EN 301 549 and the final rule. As noted in prior preamble sections summarizing key aspects of the final rule and describing its rulemaking history, the timelines for development of the Revised 508 Standards and EN 301 549 largely overlapped; consequently, there was considerable coordination amongst the Federal entities (Section 508) and private organizations (CEN/CENELEC/ETSI) working on their respective technical accessibility standards for public ICT procurements. *See* Sections I.B.3 (Executive Summary—Summary of Key Provisions—Harmonization with International Standards) & II.F (Rulemaking History—Harmonization with European Activities).

Harmonization with international standards has been a guiding principle for this rulemaking from its earliest stages. For example, TEITAC Advisory Committee included several international representatives (including, notably, the European Commission), recognized the importance of standardization across markets worldwide, and coordinated its work with standard-setting bodies in the U.S. and abroad. *See* II.B (Rulemaking History—TEITAC Advisory Committee 2006–2008) (summarizing TEITAC Advisory Committee deliberations and report). Moreover, in the 2011 ANPRM, the Access Board expressly noted the standardization work going on in

Europe at the time. *See* 76 FR at 76642, 76644–45. Indeed, one of the Access Board's primary reasons for issuing a second ANPRM in 2011 was to afford the Joint Working Group on eAccessibility³ and the European Commission an opportunity to see the Board's progress and to promote harmonization. *Id.* at 76642. Consequently, EN 301 549—which was initially finalized in 2014—was largely harmonized with the Board's 2011 ANPRM. *Compare, e.g.,* ETSI, EN 301 549 V1.1.1 (2014–02) with U.S. Access Board, 2011 ANPRM, Draft Updated ICT Standards and Guidelines, *available at* <https://www.access-board.gov/guidelines-and-standards/communications-and-it/about-the-ict-refresh/draft-rule-2011>; *see also* ETSI, EN 301 549 V1.1.2 (2015–04).

Harmonization, however, does not necessarily mean that the technical requirements for accessibility are exactly the same as between the final rule and EN 301 549. Rather, harmonization exists when the two sets of technical specifications are complimentary, in the sense that compliance with each can be achieved simultaneously without conflict. The Access Board evaluated EN 301 549 on a provision-by-provision and has determined that there are no conflicts between the technical requirements in the final rule and those specified in EN 301 549. However, we also concluded that, in some situations, EN 301 549 does not provide sufficient accessibility.⁴ This conclusion was also shared by several NPRM comments, principally European disability rights organizations. These commenters urged the Board to “stick to its proposal,” especially in relation to requirements for functional performance criteria, real-time text interoperability, and wideband audio. These commenters not only

applauded the proposed rule's high level of harmonization achieved with EN 301 549, but also expressed hope that the European specification would be revised at a future date to conform to the clearer requirements in, and higher levels of accessibility achieved by, the proposed rule.

Lastly, in any event, reference to EN 301 549 would be premature at this time because the specification is still likely to undergo revision after publication of the final rule. In December 2015, the CEN/CENELEC/ETSI Joint Working Group on eAccessibility met and concluded that “[a]t this moment there is consensus within [the Joint Working Group] on the need to revise EN 301 549 as soon as possible, with the aim to improve the document and to harmonize it with the next version of Section 508 as soon as [it] is public.” European Joint Working Group on eAccessibility, Draft Minutes 9th eAcc Meeting 7 (Dec. 10, 2015), <http://www.itu.int/en/ITU-T/jca/ahf/Documents/Doc%20219.pdf>.

For the foregoing reasons, the Access Board declines to reference EN 301 549 in the Revised 508 Standards or otherwise state that conformance with EN 301 549 equates to compliance with the final rule. The Revised 508 Standards' requirements closely track the EN 301 549 phrasing where appropriate. In places where the Revised 508 Standards diverge from EN 301 549, the Board has done so deliberately because it finds that other technical requirements provide better accessibility. The Board anticipates providing technical assistance materials on its Web site to assist product manufacturers with mapping EN 301 549 requirements to the Revised 508 Standards and vice versa.

Additionally, several NPRM commenters pointed out to the Access Board that some of the specific editions of the standards proposed for IBR in the NPRM had been supplanted by newer editions or versions. For example, commenters noted that there were newer versions of ITU–T Recommendation G.722 and TIA 1083, which were respectively referenced in proposed E102.7.1 and E102.8.2. One commenter also recommended the Opus Codec (IETF RFC 6716) as a modern industry consensus standard for digital audio compression that has merits similar to ITU–T Recommendation G.722.2. We concur with commenters and, in the final rule, the Board has updated the references in 702.7.2 to ITU–T Recommendation G.722.2, as well as the reference in 702.9.1 to TIA–1083–B. We also have added the Opus Codec as one of the referenced standards for digitally encoding speech

in 412.4 of the final rule. (Incorporation of this standard appears at 702.8.1.)

We also made several other “housekeeping”-type changes to the standards referenced in the final rule. For example, because the Access Board is not addressing Real-Time Text at this time, *see* discussion above Section III.D (Major Issues—Real-Time Text), we have deleted the RTT-related references to TIA 825–A and IETF RFC 4103. In addition, because the final rule specifies requirements for characters on variable message signs (402.5) *see* Section IV.G (Summary of Comments and Responses on Other Aspects of the Proposed Rule—Chapter 4: Hardware), we have added a reference to ICC A117.1–2009 (Accessible and Usable Buildings and Facilities) in Chapter 7. Finally, we rearranged the list of referenced standards in Chapter 7 by alphabetical order of publisher name (rather than publisher acronym), which resulted in the reordering of some standards.

Finally, two commenters (an open government non-profit organization and an accessible ICT services provider) objected to the Access Board's incorporation by reference of any voluntary consensus standard that are was not available to the public free of charge on the ground that such standards were not “reasonably available.” While the Access Board agrees that making referenced standards reasonably available to interested parties is required under both Federal administrative law and regulation, *see* 5 U.S.C 552(a); 1 CFR part 51, we strongly disagree with their contention that the standards referenced in the final rule do not collectively meet this standard. Prior to publication of the final rule, Access Board staff worked with the standards developing organizations (SDOs) to ensure that versions of the referenced standards were, to the greatest extent possible, available to the general public either without charge or at a reduced rate. *See* discussion *infra* Section V.G (Regulatory Process Matters—Availability of Materials Incorporated by Reference). As a result, nine of the ten standards incorporated by reference into the final rule will be available online free of charge, either because the standards developing organization makes the standard freely available on its Web site or a read-only copy of the standard will be made available on one or more SDO's online standards portal. *Id.* The only exception is TIA–1083–B, which is referenced in 412.3.2 and 702.9.1. In discussions with Access Board staff, the SDO (Telecommunications Industry Association) declined to make a read-only version of this standard available

³ The Joint Working Group on eAccessibility consists of the three European Standardization Organizations, CEN, CENELEC and ETSI.

⁴ For example, the final rule and EN 301 549 vary significantly in their respective levels of specificity of technical requirements for ICT with closed functionality. In EN 301 549, the requirements for software with closed functionality are a subset of the requirements for software that does not have closed functionality (*compare, e.g.,* EN 301 549 Clause 11.2.2 with EN 301 549 11.2.1) and, as such, they fail to offer technical criteria that adequately and unambiguously address closed functionality. The only affirmative requirement for such ICT in EN 301 549 is that it be operable without the use of assistive technology (Clause 5.1.2.2), which is essentially the definition of closed functionality. EN 301 549 does not require ICT with closed functionality to be speech output enabled (*cf.* Clause 5.1.3.1), which is critical for persons with limited vision. The final rule, on the other hand, affirmatively requires ICT with closed to have this critical functionality. *See* 402.2 (Speech-Output Enabled).

online. Nonetheless, TIA-1083-B is still reasonably available by purchase (*i.e.*, publisher or online standards store) or personal inspection without charge at the offices of either the Access Board or the National Archives and Records Administration. *See id.*; *see also* 702.9 (providing information on obtaining standard from publisher).

J. Revised 508 Standards: Compliance and Effective Dates

In the NPRM, the Board noted that it was considering making the Revised 508 Standards effective six months after publication in the **Federal Register**. The Board also noted it was considering deferring to the Federal Acquisition Regulatory Council (FAR Council) to establish the effective date for application of the Revised 508 Standards to new ICT contracts awarded after publication of the FAR Council's final rule, as well as existing ICT contracts with award dates that precede that final rule.

The Board received 11 comments regarding the compliance date (seven from ICT companies and trade associations, two from state/local governments, one from a Federal agency, and one from an individual). Most of the commenters supported the Board's proposal to defer to the FAR Council for establishing the compliance date for new and existing ICT contracts. However, a few of the commenters also requested more than the six-month delay suggested in the NPRM for application of the Revised 508 Standards to ICT other than procurements. These commenters asserted that a six-month delay was too short given the amount of potential remediation required for legacy technology and content, and the limited availability of resources to effect the changes.

As noted in Section IV.A (Summary of Comments and Responses on Other Aspects of the Proposed Rule—508 Chapter 2: Scoping Requirements), the Board has incorporated a safe harbor into the Revised 508 Standards (E202.2) that, generally speaking, exempts unaltered, existing (legacy) ICT from having to upgrade or modify to conform to the Revised 508 standards. The Access Board expects that the addition of this safe harbor provision in the final rule substantially addresses some agencies' concerns about the potentially high cost of remediating currently-compliant legacy Web sites and other public-facing electronic content. In addition, to allow agencies to maximize planning and resources for timely compliance with the Revised 508 Standards, the Board has extended the

compliance date for the Revised 508 Standards from six months (as proposed in the ICT NPRM) to twelve months from the date of publication of the final rule. Prior to this date, agencies must continue to comply with the existing 508 Standards. For ease of reference, the existing 508 Standards have been republished as Appendix D to 36 CFR part 1194. (Note that, while the text of each provision provided in Appendix D remains identical to the existing 508 Standards, the numbering for each has been revised to conform to CFR publication requirements.)

This one-year compliance for the Revised 508 Standards is applicable to all ICT except that which is covered by the Federal Acquisition Regulations. The Board continues to defer to the FAR Council to establish the compliance date for new and existing ICT procurements subject to the Revised 508 Standards.

While the compliance date for the Revised 508 Standards is one year from the date of publication in the **Federal Register**, the overall effective date of the rule remains 60 days from publication. On the effective date of the rule, the existing 255 Guidelines will be replaced by the Revised 255 Guidelines, which may then be considered or adopted by the FCC pursuant to Section 255. Once the final rule is effective, the FAR Council within six months will incorporate the Revised 508 Standards into the FAR and establish an effective date for application of these revised regulations to new and existing procurements.

V. Regulatory Process Matters

A. Final Regulatory Impact Analysis

Executive Orders 13563 and 12866 direct agencies to propose or adopt a regulation only upon a reasoned determination that its benefits justify its costs; tailor the regulation to impose the least burden on society, consistent with obtaining the regulatory objectives; and, in choosing among alternative regulatory approaches, select those approaches that maximize net benefits. Important goals of regulatory analyses are to (1) establish whether Federal regulation is necessary and justified to achieve a market failure or other social goal and (2) demonstrate that a range of reasonably feasible regulatory alternatives have been considered and that the most efficient and effective alternative has been selected. Executive Order 13563 also recognizes that some benefits are difficult to quantify and provides that, where appropriate and permitted by law, agencies may consider and discuss qualitatively those values that are difficult or impossible to

quantify, including equity, human dignity, fairness, and distributive impacts.

The Access Board contracted with an economic consulting firm, Econometrica, Inc. (Econometrica), to prepare a final regulatory impact analysis (FRIA) that assesses the likely benefits and costs of the Revised 508 Standards and 255 Guidelines. Expected benefits are evaluated and discussed and likely incremental costs for new or revised requirements are monetized for the projected 10-year regulatory timeframe. A complete copy of the final regulatory assessment is available on the Access Board's Web site (<https://www.access-board.gov/>), as well the Federal Government's online rulemaking portal (<https://www.regulations.gov/>).

1. Summary of Methodology, Revisions, and Overall Results

The Final RIA embodies a comprehensive benefit-cost analysis that assesses the incremental costs and benefits of the Revised 508 Standards and 255 Guidelines relative to a primary baseline. While the methodological framework and assumptions underlying the Final RIA largely mirror those used in the Preliminary RIA, the final regulatory assessment nonetheless does reflect some revisions that were aimed at incorporating more recent data, responding to public comments, or accounting for changes in scoping or technical requirements in the final rule. The Access Board believes that the resulting benefit and cost estimates in the Final RIA represent a reasonable measure of the likely effects of the final rule that can be quantified and monetized. However, some potentially significant benefits (and costs) from the Revised 508 Standards and 255 Guidelines could not be evaluated in the Final RIA due to lack of data or other methodological constraints. These unquantified benefits and costs are described qualitatively in the final regulatory assessment.

On the benefits side, the Final RIA monetizes benefits under the Revised 508 Standards attributable to, among other things, increased productivity of Federal employees who are expected to benefit from improved ICT accessibility, time savings to members of the public from more accessible Federal Web sites, and reduced call volumes to Federal agencies as individuals with disabilities shift their inquiries and transactions online due to improved online accessibility. In terms of benefit-side revisions reflected in the Final RIA, the beneficiary population has been modestly expanded. In order to evaluate

the impact of the new functional performance criteria addressed to limited cognitive abilities (section 302.9) and address public comments, the Final RIA adds individuals with learning and intellectual disabilities to the group of persons expected to experience monetizable benefits under the final rule (collectively referred to in the Final RIA as “addressable disabilities”). Additionally, in the Final RIA, estimates concerning time loss due to inaccessible Web sites—which factor into the benefits equation—were adjusted slightly downward for persons with vision-related disabilities and slightly upward for persons with other types of addressable disabilities. Assumptions relating to productivity benefits to Federal employees with vision disabilities from the Revised 508 Standards were also modestly increased. These adjustments to benefits assumptions were spurred by public comments and are supported by additional empirical research. *See* Final RIA, Section 6.

From the cost perspective, the Final RIA separately monetizes likely incremental compliance costs attributable to the Revised 508 Standards and 255 Guidelines. For Federal agencies, contractors, and vendors, estimated costs under the Revised 508 Standards include both in-house ICT (e.g., policy development, employee training, development of Web sites and electronic documents to ensure accessibility under revised standards), and procured ICT (e.g., procurement of Section 508-compliant hardware, software, services from Federal contractors and vendors). To address concerns expressed by commenters that the Preliminary RIA did not sufficiently account for the fact that, at many agencies, an ever-widening range of workers are becoming actively involved in ensuring the accessibility of electronic content, the Final RIA assumes that a larger number of Federal employees (across a wide range of job categories) will need to

receive training on the Revised 508 Standards. In addition, to address some commenters’ concerns regarding evaluation and remediation of covered ICT (particularly certain types of so-called “legacy” content), the final rule includes a “safe-harbor” provision that exempts existing ICT from modification to conform to the Revised 508 Standards so long as such ICT complies with the existing 508 Standards and is not altered after the date upon which agencies must comply with the Revised 508 Standards (one year from the date of publication of the final rule). As a result, no remediation costs are taken into account.

For manufacturers of telecommunications and customer premises equipment, projected costs under the Revised 255 Guidelines relate to ensuring that their respective support documentation and services (e.g., product support Web sites and electronic support documentation) comply with applicable accessibility requirements in WCAG 2.0. There were no material changes in the Final RIA relating to cost estimates for Section 255-covered equipment manufacturers under the revised guidelines.

The Final RIA (as with the Preliminary RIA) evaluates incremental benefits and costs of the final rule relative to separate baselines applicable to Sections 508 and 255. Baseline compliance costs to covered entities under the existing 508 Standards are derived from current spending levels for relevant ICT-related products, services, and personnel. Current spending by Federal agencies, vendors, and contractors on compliance with the existing 508 Standards is estimated to be \$1.3 billion annually. This amount represents less than 2 percent of annual ICT spending, which is estimated at \$88 billion to \$120 billion, depending on which products and services are included in the total. Baseline compliance costs for telecommunications equipment manufacturers under the existing 255

Guidelines for accessible product documentation and user support is estimated at \$106 million annually. Taken together, overall baseline compliance costs under the existing 508 Standards and 255 Guidelines are therefore assumed to be \$1.4 billion annually.

Finally, it bears noting that, in recognition of budget constraints that may initially limit any needed increases in resources for Section 508 compliance, Federal agencies are required to comply with the Revised 508 Standards one year after publication of the final rule; thus, Federal agencies are expected to incur incremental costs starting in 2018. The Final RIA also assumes that both initial costs and benefits under the Revised 508 Standards will be spread over three years, rather than the 2-year period used in the Preliminary RIA. (A similar 3-year implementation period is assumed for Section 255-related costs and benefits in recognition that software development and similar technology tasks typically take place over an extended period of time.)

Table 3 below summarizes the results from the Final RIA in terms of likely monetized benefits and costs, on an annualized basis, from the Revised 508 Standards and 255 Guidelines. All benefit and cost values are incremental to the applicable baseline, and were estimated for a 10-year time horizon starting in 2018 (since the final rule requires Federal agencies to comply one year after its publication) and converted to annualized values using discount rates of 7 and 3 percent. Three scenarios of incremental benefits and costs are presented, using alternative parameters that are assumptions made (not based on published estimates). These three scenarios include: a low net benefit scenario using parameters that result in lower benefits and higher costs; an expected scenario consisting of expected values for assumed parameters; and a high net benefit scenario using parameters that result in higher benefits and lower costs.

TABLE 3—ANNUALIZED VALUE OF MONETIZED BENEFITS AND COSTS UNDER THE REVISED 508 STANDARDS AND 255 GUIDELINES, 2018–2027
[In millions of 2017 dollars]

	Low net benefit scenario		Expected scenario		High net benefit scenario	
	7% Discount rate	3% Discount rate	7% Discount rate	3% Discount rate	7% Discount rate	3% Discount rate
Monetized Incremental Benefits						
Benefits to Federal agencies from increased productivity by Federal employees with addressable disabilities ...	\$18.2	\$19.3	\$47.7	\$50.6	\$151.8	\$160.9

TABLE 3—ANNUALIZED VALUE OF MONETIZED BENEFITS AND COSTS UNDER THE REVISED 508 STANDARDS AND 255 GUIDELINES, 2018–2027—Continued

[In millions of 2017 dollars]

	Low net benefit scenario		Expected scenario		High net benefit scenario	
	7% Discount rate	3% Discount rate	7% Discount rate	3% Discount rate	7% Discount rate	3% Discount rate
Benefits to individuals with addressable disabilities from improved Federal Web site accessibility	2.8	3.0	2.8	3.0	2.8	3.0
Benefits to Federal agencies from reduced call volumes	10.9	11.7	21.9	23.4	32.8	35.1
Total Annualized Value of Monetized Incremental Benefits	32.0	34.0	72.4	77.0	187.4	199.0
Monetized Incremental Costs						
Costs to Federal agencies, contractors, and vendors	276.2	287.4	122.8	181.1	111.5	117.2
(a) In-house	150.1	156.2	93.8	98.3	60.4	63.5
(b) Procured ICT	126.1	131.2	79.0	82.8	51.1	53.7
Costs to telecommunications equipment and CPE manufacturers for accessible Web sites and support documentation	9.5	9.6	9.5	9.6	9.5	9.6
Total Annualized Value of Monetized Incremental Costs	285.7	296.9	182.4	190.7	121.0	126.8

It is important to note that some potentially material benefits and costs from the Revised 508 Standards and 255 Guidelines are neither reflected in the table above nor monetized in the Final RIA due to lack of data or for other methodological constraints. These unquantified benefits and costs are described qualitatively below.

2. Benefits of the Final Rule

Overall, results from the Final RIA demonstrate that the Revised 508 Standards will likely have substantial monetizable benefits to Federal agencies and persons with disabilities. As shown in Table 3 above, the annualized value of monetized benefits from these revised standards is estimated to be \$72.4 million at a 7 percent discount rate over

the 10-year analysis period (sensitivity estimates of \$32 million and \$187.4 million). In calculating these monetized benefits, the Final RIA makes the following assumptions: (a) One-third of the recurring annual benefits derived from accessible ICT would be realized in the first year of implementation, two-thirds of the recurring annual benefits in the second year of implementation, and full annual benefits would start in the third year of implementation; and (b) the number of individuals with vision impairments and other addressable disabilities who visit Federal agency Web sites will increase every year, but a constant proportion of those individuals will visit such Web sites every year.

It is also important to note that the final rule is expected to generate significant benefits that could not be evaluated in the Final RIA, either because they were not quantified or monetized (due to lack of data or for other methodological reasons) or are inherently qualitative. Estimating the economic impact of a civil rights-based regulatory initiative in an area—and marketplace—as dynamic as ICT is a complex and difficult task. Some of these unquantified (or inherently unquantifiable) benefits of the Revised 508 Standards are listed in Table 4 below. The fact that these benefits were not be formally assessed in this Final RIA should not diminish their importance or value.

TABLE 4—UNQUANTIFIED BENEFITS OF THE FINAL RULE

Increased employment of individuals with disabilities.
Increased ability of individuals with disabilities to obtain information on Federal agency Web sites and conduct transactions electronically.
Greater independence for individuals with disabilities to access information and services on Federal agency Web sites without assistance.
More civic engagement by individuals with disabilities due to improved access to information and services on Federal agency Web sites.
Increased ability of individuals with disabilities to evaluate, purchase, and make full use of telecommunications products due to increased accessibility of support documentation and services.
Increased ability of individuals without disabilities to access information and conduct their business electronically when they face situational limitations (in a noisy place, in a low-bandwidth environment, or in bright sunlight).
Potential cost savings to Federal agencies due to reduced levels of in-person visits and mail correspondence.
Larger pool of ICT developers and content creators with accessibility knowledge and skills, providing more choice to Federal agencies due to use of internationally recognized, industry-driven standards).
Potential cost savings to manufacturers of telecommunications and CPE, state and local governments, and non-profit entities, as internationally harmonized standards reduce costs for ICT manufacturers and allow them to sell a single line of accessible products and services across all types of markets.

TABLE 4—UNQUANTIFIED BENEFITS OF THE FINAL RULE—Continued

Intrinsic existence value that individuals both with and without disabilities derive from the non-discrimination and equity values served by Sections 508 and 255.
 Cost savings to agencies already complying with equivalent WCAG 2.0 standards because of the availability of WCAG 2.0 support materials.

3. Costs of the Final Rule

The Final RIA shows that the Revised 508 Standards and 255 Guidelines will likely increase compliance costs substantially when first implemented, but will thereafter result in only a small percentage increase in recurring annual costs in later years. Overall, the Final RIA estimates that the total incremental cost of the Revised 508 Standards and 255 Guidelines is expected to be \$182.4 million on an annualized basis over the 10-year analysis period, based on a 7

percent discount rate with sensitivity estimates of \$285.7 million and \$121 million (*see* Table 3 above). It is assumed that, given a variety of budget constraints Federal agencies have faced in recent years, the one-time incremental costs would be incurred across the first three years of implementation.

The Final RIA does not, however, quantify and monetize all potential compliance costs arising from the final rule—due primarily to insufficient data

or for other methodological limitations. The impact of the Revised 255 Guidelines on telecommunications equipment manufacturers is, as the Final RIA notes, particularly difficult to quantify. (Information on the impact of the proposed guidelines was solicited unsuccessfully in both the 2010 and 2011 ANPRMs, as well as the 2015 NPRM.)

Some of these unquantified costs of the Revised 508 Standards and 255 Guidelines are listed in Table 5 below.

TABLE 5—UNQUANTIFIED COSTS OF THE FINAL RULE

Possible increase in Federal Government expenditures to provide accommodations if the government hires more people with addressable disabilities.
 Possible decrease in the amount or variety of electronic content produced, as government seeks to reduce Section 508 compliance costs.
 Potential costs to state and local governments and non-profit organizations that may be required to make electronic content accessible in order to do businesses with Federal agencies.
 Potential costs to ICT manufacturers of developing and producing hardware and telecommunications products that comply with the revised accessibility requirements.
 Possible increase in social costs to people with certain vision disabilities because they would have to use commercial screen magnification tools rather than turning off the style sheets (free of charge) in order to read Web pages.
 Costs of increased compliance by foreign telecommunications manufacturers shifted to U.S. end users (consumers).

In addition, incremental cost estimates in the Final RIA do not reflect other potentially influential factors that may occur over time—such as future changes in the fiscal environment and its effect on ICT budgets, the impact of recent government-wide initiatives to manage ICT more strategically, efforts to harmonize standards for a global ICT market, and trends in technological innovation.

4. Conclusion

While the Final RIA estimates that incremental costs, as assessed and monetized in the assessment, exceed the monetized benefits of the final rule, this finding represents only a piece of the regulatory story. Today, though ICT is now woven into the very fabric of everyday life, millions of Americans with disabilities often find themselves unable to use—or use effectively—computers, mobile devices, Federal agency Web sites, or electronic content. The Board expects this final rule to be a major step toward ensuring that current and future ICT is more accessible to and usable by individuals with disabilities—both in the Federal workplace and society generally. Indeed, much—if not most—of the benefits expected to accrue from the

final rule are difficult if not impossible to quantify or monetize, including: greater social equality, human dignity, and fairness. These are all values that, under Executive Order 13563,⁵ may properly be considered in the benefit-cost calculus.

Moreover, American companies that manufacture telecommunications equipment and ICT-related products would likely derive significant benefits from the harmonized accessibility standards. Given the relative lack of existing national and globally-recognized standards for accessibility of mobile technologies, telecommunications equipment manufacturers would greatly benefit from harmonization of the 255 guidelines with consensus standards. Similar benefits would likely accrue more generally to all ICT-related products as a result of harmonization. These manufacturers would earn return on investments in accessibility technology, remain competitive in the global marketplace, and achieve

economies of scale created by wider use of nationally and internationally recognized technical standards.

Accordingly, when considering all unquantified benefits and costs, the Access Board, along with its consulting economic firm (Econometrica), jointly conclude that the benefits of the Revised 508 Standards and 255 Guidelines justify its costs.

5. Potential Regulatory Alternatives

We considered two alternative approaches to updating the existing 508 Standards and 255 Guidelines:

- In the 2010 ANPRM, the Board proposed a set of requirements that were based on, but not identical to, the WCAG 2.0 standards and other voluntary consensus standards. Comments received from stakeholders and the public indicated that this approach was potentially confusing, as Federal agencies, contractors, and vendors would have to make specific compliance determinations in cases where the language used in updated 508 Standards differed from that in the referenced standard.

- The Board also considered requiring ICT to comply with the full set of functional performance criteria, which state in general terms the features

⁵ See also Office of Management and Budget, Circular A–4 (2003); Office of Management and Budget, Regulatory Impact Analysis: A Primer 3 (2011), available at http://www.whitehouse.gov/sites/default/files/omb/inforeg/regpol/circular-a-4_regulatory-impact-analysis-a-primer.pdf.

of ICT that ensure its accessibility to people with one or more of different types of disabilities. Comments from stakeholders indicated that this approach would make it difficult for ICT producers to be able to determine whether or not their products and services conformed to the updated 508 Standards.

Based on the public feedback on the two policy alternatives, we determined that the clearest and most cost-effective way to set out revised accessibility requirements was to identify and directly reference existing, voluntary consensus standards, wherever possible.

B. Regulatory Flexibility Act

The Regulatory Flexibility Act (RFA) requires Federal agencies to analyze the impact of regulatory actions on small entities, unless an agency certifies that the rule will not have a significant impact on a substantial number of small entities. 5 U.S.C. 604, 605(b). Section 604 of the RFA requires agencies to prepare and make available for public comment a final regulatory flexibility analysis describing the impact of the final rule on small entities. Because the Revised 255 Guidelines regulate non-Federal entities (*e.g.*, telecommunications equipment manufacturers), these guidelines fall within the purview of the RFA. The Revised 508 Standards, on the other hand, directly regulate only Federal entities, which are not covered by the RFA. Accordingly, the Access Board evaluates here only the impact of the Revised 255 Guidelines on small entities. The Board provides below a final regulatory flexibility analysis (Final RFA) for these final guidelines.

Objectives of, and need for, the final rule. Section 255 of the Communications Act of 1934 (47 U.S.C. 255), as amended, requires telecommunication equipment to be accessible to and usable by individuals with disabilities, where readily achievable. The Access Board is statutorily responsible for developing accessibility guidelines for telecommunications equipment and customer premises equipment (CPE). The Access Board is also required to review and update the guidelines periodically. The Federal Communications Commission (FCC), however, is solely responsible for issuing implementing regulations and enforcing Section 255. The FCC is not

bound to adopt the Access Board's guidelines as its own or to use them as minimum standards.

In 1998, the Board issued the existing 255 Guidelines (36 CFR part 1193). Since then, telecommunications technology and commercial markets have changed dramatically, along with the usage of telecommunications equipment. The Access Board is thus updating the existing 255 Guidelines to keep pace with the revolution in ICT that has occurred since the promulgation of the initial guidelines nearly twenty years ago.

The Board's Revised 255 Guidelines will provide a much-needed "refresh" of the existing 255 Guidelines, and, thereby, better support the access needs of individuals with disabilities, while also taking into account incremental compliance costs to covered manufacturers of CPE and telecommunications equipment. The revised guidelines, if adopted by the FCC, will only be applicable to new products to the extent that compliance is readily achievable; they do not require retrofitting of existing equipment or retooling. Manufacturers may consider costs and available resources when determining whether, and the extent to which, compliance is required.

Significant issues raised by public comments in response to the initial regulatory flexibility analysis. The Access Board received no public comment in response to the initial regulatory flexibility analysis provided in the NPRM.

Agency response to comments filed by the Chief Counsel for Advocacy of the Small Business Administration in response to the proposed rule. The Access Board received no comments filed by the Chief Counsel in response to the proposed rule.

Description and estimate of the number of small entities to which the final rule will apply. The Revised 255 Guidelines cover manufacturers of telecommunications equipment and CPE, as well as the manufacturers of equipment that functions as telecommunications and CPE.⁶ The

⁶ Examples of CPE include wireline and wireless telephones or computers when employed on the premises of a person to originate, route, or terminate telecommunications (*e.g.*, Internet telephony, interconnected VoIP). Only a computer with a modem or internet telephony software can function as telecommunications equipment and

Board used publicly available data from the United States Census Bureau (Census Bureau) and Small Business Administration (SBA) to estimate the number of small businesses that potentially would be affected by the revised guidelines, as well as the likely economic impact of these guidelines.

To determine the number of small businesses potentially subject to the Revised 255 Guidelines, the Board reviewed SBA's small business size standards for ICT-related industry classifications, based on the North American Industry Classification System (NAICS).⁷ The Board determined that three NAICS-based industry classifications may be subject to the Revised 255 Guidelines. These industry categories and their accompanying six-digit NAICS codes are: (a) NAICS Code 334111—Electronic and Computer Manufacturing; (b) NAICS Code 334210—Telephone Apparatus Manufacturing; and (c) NAICS Code 334220—Radio and Television Broadcasting and Wireless Communications Equipment Manufacturing. The Board then matched these three NAICS classifications with SBA size standards (based on number of employees) to determine the number of small businesses within each respective classification.

Table 6 below provides the potential number of small businesses, based on SBA size standards, for each of the three categories of telecommunications and customer premises equipment manufacturers (by NAICS code) that may be affected by the Revised 255 Guidelines.

only the modem functions are associated with telecommunications. Therefore, the requirements of the final rule apply only to the modem or internet telephony software functions and incidental functions required for turning the computer on and launching the telecommunications programs. All other functions of the computer not related to telecommunications would not be covered, such as word processing or file searching or video conferencing.

⁷ The North American Industry Classification System (NAICS) is the standard used by Federal statistical agencies to classify business establishments. The Census Bureau provides detailed NAICS information on the agency's Web site. See U.S. Census Bureau, Introduction to NAICS, <http://www.census.gov/eos/www/naics/>. SBA provides, on its Web site, small business size standards for each NAICS code. See U.S. Small Business Administration, Table of Small Business Size Standards, <https://www.sba.gov/contracting/getting-started-contractor/make-sure-you-meet-sba-size-standards/table-small-business-size-standards> (updated Feb. 26, 2016).

TABLE 6—SMALL BUSINESSES POTENTIALLY AFFECTED BY THE REVISED 255 GUIDELINES

NAICS code	Industry title	SBA small business size standard	Number of firms	Number of small firms *
334111	Electronic Computer Manufacturing	1,250 or fewer employees	382	365
334210	Telephone Apparatus Manufacturing	1,250 or fewer employees	249	231
334220	Radio and Television Broadcasting and Wireless Communications Equipment Manufacturing.	1,250 or fewer employees	748	702
Total	1,379	1,298

A few notes are in order about the foregoing estimates of the number of small firms potentially affected by the Revised 255 Guidelines. First, because all telephone equipment is covered by Section 255, all entities included in the telephone apparatus manufacturing category (334210) are necessarily subject to the guidelines. However, not all entities in the remaining two industry categories (334220 and 334111) are covered by the revised guidelines because many of these entities may manufacture only equipment that falls outside the scope of Section 255. For example, only radio and broadcasting equipment that meets the statutory definition of telecommunications (that is, “the transmission, between or among points specified by the user, of information of the user’s choosing, without change in the form or content of the information as sent and received”), is covered by the revised guidelines. Also, computers lacking modems or Internet telephony software are not covered by the revised guidelines. However, the Board lacks quantitative information to differentiate regulated from non-regulated manufacturing firms within these two NAICS categories, as well as to determine how many of the “small businesses” in each NAICS category are subject to the final guidelines. The number of small entities listed in Table 6 that may be affected by the Revised 255 Guidelines should, therefore, be considered an upper-bound estimate.

Second, the number of small firms listed under each NAICS code may include an unknown (though likely small) number of firms that modestly exceed the applicable SBA size standard. This potential over count results from a disconnect between the particular SBA size standard for these three NAICS classifications (1,250 or fewer employees) and the manner in which annual economic statistics for U.S. businesses are compiled by the Census Bureau and SBA. Specifically, the Census Bureau’s annual “Statistics of United States Businesses” (which is also used by SBA) presents firm size-

based data by various predetermined size “bands” only, the closest of which is the size band for businesses with 1,000 to 1,499 employees. Because there is no principled way to segment firms employing 1,250 or fewer persons from other firms falling within the 1,000-to-1,499 employee size band, all firms in this size band are deemed “small businesses” for purposes of this Final RFA.

Third, given that manufacturers of telecommunications equipment and CPE must comply with Section 255 only to the extent such compliance is “readily achievable” (*i.e.*, easily accomplishable and able to be carried out without much difficulty or expense), there will likely be some small firms for which compliance with the final guidelines will prove too difficult or expensive. This is not a new proposition. Under both the existing guidelines and current FCC regulations, compliance for manufacturing firms of all sizes is limited by the readily achievable limitation, though it necessarily applies with greater frequency to smaller entities. (*See* 36 CFR 1193.21; 47 CFR 6.3(g)). The Access Board also understands that many small firms in the three NAICS categories relevant to this analysis serve as partners or suppliers to larger firms that provide a full range of products and services. For these reasons, the Board assumes that many small firms identified in Table 6—particularly those with fewer than 20 employees—likely would not incur new costs under the Revised 255 Guidelines. Accordingly, the mid-point estimate for the number of small businesses that may be affected by the Revised 255 Guidelines is assumed to be small firms that meet the applicable SBA size standard and employ twenty or more workers.

Description of the projected reporting, record keeping, and other compliance requirements for small entities. As discussed above, the Revised 255 Guidelines contain many requirements that are similar to the existing guidelines. There is, however, one new accessibility requirement (final 602.3) in

the revised guidelines. Section 602.3 requires manufacturers of telecommunications equipment and CPE to make their electronic support documentation (such as Web-based self-service support and electronic manuals) accessible for users with disabilities by ensuring that such documentation conforms to all applicable Level A and Level AA Success Criteria and Conformance Requirements in WCAG 2.0. This new requirement for accessible electronic documentation would potentially impose new costs on small manufacturing firms. The Final RIA develops estimated incremental costs, heavily relying on the cost methodology used by the Department of Transportation (DOT) in the regulatory assessment of its recent final rule requiring, among other things, airlines to make their Web sites accessible to persons with disabilities.⁸ (*See* Section V.A—Regulatory Process Matters—Final Regulatory Impact Analysis).

Based on the methodology and estimates used in the Final RIA, the Board’s Final RFA assesses potential compliance costs under the Revised 255 Guidelines for small manufacturers of telecommunications equipment and CPE based on estimated (a) one-time costs to create accessible electronic support documentation and Web sites, and (b) recurring, annual maintenance costs. One-time costs are assumed to be spread equally over the first three years (*i.e.*, one-third of covered firms realizing costs in the first year, and the other two-thirds equally in years two and three), with annual maintenance costs incurred thereafter for the remainder of the 10-year regulatory horizon. Estimated compliance costs are based on firm size. For small businesses with 100 or more employees, average one-time costs are

⁸Dept. of Transportation, Nondiscrimination on the Basis of Disability in Air Travel: Accessibility of Web Sites and Automated Kiosks at U.S. Airports, 78 FR 67882 (Nov. 12, 2013); Econometrica, Inc., Final Regulatory Analysis on the Final Rule on Accessible Kiosks and Web Sites (Oct. 23, 2013), available at <https://www.regulations.gov/document?D=DOT-OST-2011-0177-0108>; see also Preliminary RIA, Sections 6.3, 8.11

assumed to be \$125,000 for bringing their respective support documentation and Web sites into compliance with the revised guidelines. For firms with fewer than 100 employees, average per-firm one-time costs under the revised guidelines are assumed to be \$25,000. Annual recurring maintenance costs are

estimated as twenty percent of one-time costs regardless of firm size.

Using these cost assumptions, the Final RFA evaluates the monetary impact of the Revised 255 Guidelines from three perspectives. The first scenario uses the upper-bound estimate for small businesses that may be

affected by the final guidelines (*i.e.*, all small firms meeting SBA size standards) to assess total one-time and annual maintenance costs across all affected industry categories. These costs, which should be considered an upper-bound estimate, are reflected below:

TABLE 7—ESTIMATED INCREMENTAL COSTS FOR SMALL FIRMS SUBJECT TO THE REVISED 255 GUIDELINES
[Scenario 1—all small firms]

Firm size	Firms meeting SBA small business size standards	Average one-time cost per firm	Total one-time costs	Average annual maintenance cost per firm	Total annual maintenance costs
100 or more employees	136	\$125,000	\$17,000,000	\$25,000	\$3,400,000
99 or fewer employees	1,162	25,000	29,050,000	5,000	5,810,000
Total	1,298	46,050,000	9,210,000

Second, to reflect the reality that compliance may not be readily achievable for the smallest firms (and, as well, the fact that such firms often serve as suppliers to larger firms and thus may not be covered by Section

255), the second scenario uses the mid-point estimate for small businesses that may be affected by the revised guidelines (*i.e.*, small firms that meet the SBA size standard and have twenty or more employees) to assess total one-

time and annual maintenance costs across all industry categories. These costs, which should be considered a mid-point estimate, are reflected below:

TABLE 8—ESTIMATED INCREMENTAL COSTS FOR SMALL FIRMS SUBJECT TO THE REVISED 255 GUIDELINES
[Scenario 2—small firms with 20 or more employees]

Firm size	Firms meeting SBA small business size standards	Average one-time cost per firm	Total one-time costs	Average annual maintenance cost per firm	Total annual maintenance costs
100 or more employees	136	\$125,000	\$17,000,000	\$25,000	\$3,400,000
20–99 employees	284	25,000	7,100,000	5,000	1,420,000
Total	420	24,100,000	4,820,000

Third, to assess the magnitude of potential compliance costs for small businesses under the Revised 255 Guidelines relative to annual receipts, the third scenario evaluates the ratio of average annualized costs per-firm to average receipts per firm for each of the three NAICS codes. Average annualized costs represent the per-firm stream of estimated one-time and recurring annual costs over the 10-year regulatory horizon at a 7 percent discount rate. Annualized costs are assumed to be

consistent across the three NAICS codes for each of the two studied small firm sizes (*i.e.*, more or less than 100 employees) because the Board does not have NAICS code-based data differentiating receipts by firm size. Annual estimated average per-firm receipts for each NAICS code, in turn, are derived from the 2012 annual dataset of the Statistics of United States Businesses (SUSB) compiled by the Census Bureau. The ratio of average per-firm annualized costs and annual per-

firm receipts is then calculated for each NAICS code and firm size, with the resulting percentage serving as a metric to evaluate the relative economic significance of compliance costs to small businesses under the Revised 255 Guidelines.

The results are presented below in two separate tables by the size (in terms of number of employees) of small firms covered by Section 255.

TABLE 9—ANNUALIZED PER-FIRM COSTS AS A PERCENTAGE OF PER-FIRM RECEIPTS FOR SMALL FIRMS WITH 100 OR MORE EMPLOYEES
[By NAICS Code]

NAICS code	Industry title	Annualized per-firm costs (7% discount rate)	Average per-firm annual receipts *	Annualized per-firm costs as percent of per-firm annual receipts
334111	Electronic Computer Manufacturing	\$34,883	\$129,699,213	0.03

TABLE 9—ANNUALIZED PER-FIRM COSTS AS A PERCENTAGE OF PER-FIRM RECEIPTS FOR SMALL FIRMS WITH 100 OR MORE EMPLOYEES—Continued
[By NAICS Code]

NAICS code	Industry title	Annualized per-firm costs (7% discount rate)	Average per-firm annual receipts *	Annualized per-firm costs as percent of per-firm annual receipts
334210	Telephone Apparatus Manufacturing	34,883	67,998,062	0.05
334220	Radio and Television Broadcasting and Wireless Communications Equipment Manufacturing.	34,883	63,164,314	0.06

* **Note:** Average per-firm annual receipts based on data from the Census Bureau's 2012 annual SUSB dataset. See U.S. Census Bureau, 2012 SUSB Annual Datasets by Establishment Industry, U.S. 6-digit NAICS, detailed employment sizes (release date June 22, 2015).⁹

TABLE 10—ANNUALIZED PER-FIRM COSTS AS A PERCENTAGE OF PER-FIRM RECEIPTS FOR SMALL FIRMS WITH 20 AND 99 EMPLOYEES
[By NAICS Code]

NAICS code	Industry title	Annualized per-firm costs (7% discount rate)	Average per-firm annual receipts *	Annualized per-firm costs as percent of per-firm annual receipts
334111	Electronic Computer Manufacturing	\$7,305	\$11,654,754	0.06
334210	Telephone Apparatus Manufacturing	7,305	10,602,855	0.07
334220	Radio and Television Broadcasting and Wireless Communications Equipment Manufacturing.	7,305	12,352,012	0.06

* **Note:** Average per-firm annual receipts based on data from the Census Bureau's 2012 annual SUSB dataset. See U.S. Census Bureau, 2012 SUSB Annual Datasets by Establishment Industry, U.S. 6-digit NAICS, detailed employment sizes (release date June 22, 2015).

The results of these annualized cost/receipt analyses demonstrate that incremental costs of the Revised 255 Guidelines for small businesses—whether larger or smaller than 100 employees—are expected to be minimal relative to firm receipts. In no case would this ratio exceed one-tenth of one percent, with values ranging from a low of 0.03% to a high of 0.07%. Accordingly, based on the foregoing analysis, the Board does not believe that the Revised 255 Guidelines are likely to have a significant economic impact on a substantial number of small entities.

Description of significant alternatives to the Revised 255 Guidelines. In the Board's view, there are no alternatives to the final guidelines that would accomplish the goal of meeting the access needs of individuals with disabilities, while taking into account compliance costs of manufacturers of

telecommunications equipment and CPE.

C. Executive Order 13132: Federalism

The final rule adheres to the fundamental Federalism principles and policy making criteria in Executive Order 13132. The Revised 508 Standards apply to the development, procurement, maintenance, or use of ICT by Federal agencies. The Revised 255 Guidelines apply to manufacturers of telecommunications equipment and customer premises equipment and require that equipment is designed, developed, and fabricated to be accessible to and usable by individuals with disabilities, if it is readily achievable to do so. As such, the Board has determined that the final rule does not have Federalism implications within the meaning of Executive Order 13132.

D. Executive Order 13609: Promoting International Regulatory Cooperation

Executive Order 13609 serves to promote international regulatory cooperation and harmonization. The Board has promoted the principles of the executive order by making concerted efforts with a number of foreign governments throughout the development of the Revised 508 Standards and 255 Guidelines. For example, the Board and the European Commission have made significant efforts to coordinate development of their respective ICT standards. This cooperation began with the 2005 EU-US Economic Initiative (http://trade.ec.europa.eu/doclib/docs/2006/june/tradoc_127643.pdf) and our participation in regular meetings with the U.S. Trade Representative's office and the European Commission in discussions on e-accessibility around

⁹ SUSB employer data is collected and produced by the U.S. Census and contains, for each NAICS code, such information as: Number of firms, employment figures, estimated annual receipts, and annual payroll. In accordance with Federal law, certain SUSB data elements are "masked" (e.g., receipts for a particular establishment size range)

when publication would disclose the identity of individual business establishments. See U.S. Census Bureau, Statistics of U.S. Businesses (SUSB)—Methodology, <http://www.census.gov/programs-surveys/susb/technical-documentation/methodology.html> (last revised June 8, 2016); see also 13 U.S.C. 9. As a result, when calculating

average per-firm annual receipts presented for each NAICS codes in Table 9 and Table 10, it was occasionally necessary to estimate missing data elements using other available, pertinent data for that NAICS code.

the Transatlantic Trade and Investment Partnership (TTIP). These cooperative efforts continued through the joint work of the Access Board and representatives from the European Commission, Canada, Australia, and Japan on the TEITAC Advisory Committee, which helped inform the requirements in the proposed 508 Standards and 255 Guidelines. In our view, the Revised 508 Standards and 255 Guidelines are the product of the Board's coordination with international regulatory partners, which will ultimately help American companies better compete globally.

E. Unfunded Mandates Reform Act

The Unfunded Mandates Reform Act does not apply to regulations that enforce constitutional rights of individuals or enforce statutory rights that prohibit discrimination on the basis of race, color, sex, national origin, age, handicap, or disability. The Revised 508 Standards are issued pursuant to the Rehabilitation Act. When Federal agencies develop, procure, maintain, or use electronic and information technology, they are required to ensure that the electronic and information technology allows Federal employees with disabilities to have access to and use of information and data that is comparable to the access enjoyed by Federal employees without disabilities, unless doing so would impose an undue burden on the agency. The statute also requires that members of the public with disabilities seeking information or services from a Federal agency have access to and use of information and data that is comparable to that provided to other members of the public unless doing so would impose an undue burden on the agency. The Revised 255 Guidelines, in turn, are issued pursuant to Section 255 of the Communications Act, which requires manufacturers of telecommunications equipment and customer premises equipment to ensure that the equipment is designed, developed, and fabricated to be accessible to and usable by individuals

with disabilities, if it is readily achievable to do so. Accordingly, an assessment of the effect of the Revised 508 Standards and 255 Guidelines on state, local, and tribal governments is not required by the Unfunded Mandates Reform Act.

F. Paperwork Reduction Act

The Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. 3501–3521) requires Federal agencies to obtain approval from the Office of Management and Budget (OMB) before requesting or requiring a “collection of information” from the public. As part of the PRA process, agencies are generally required to provide a 60-day notice in the **Federal Register** concerning each proposed collection of information to solicit, among other things, comment on the necessity of the information collection and its estimated burden. 44 U.S.C. 3506(c)(2)(A). The 255 Guidelines, in both their existing and revised form, impose PRA-covered “information collection” obligations on manufacturers of telecommunications equipment and customer premises equipment by requiring such manufacturers to ensure that their support documentation and services meet specified accessibility requirements. Accordingly, in the NPRM, the Board published a notice of proposed collection of information to accompany the proposed revisions to the existing 255 Guidelines. The Board received one responsive comment, which addressed our estimated PRA-related time burdens under the proposed guidelines. We discuss below our estimates under the Revised 255 Guidelines of the projected annual time burden (in hours) on 255-covered manufacturers to make their support documentation and services accessible.

Section C206, in conjunction with the technical provisions in Chapter 6 (Support Documentation and Services), obligates manufacturers of telecommunications equipment and customer premises equipment to

provide accessible support documentation and services, which constitute “collections of information” under the PRA. More specifically, the revised guidelines require covered manufacturers, when providing support documentation and services, to ensure accessibility for individuals with disabilities in four respects: (1) Support documentation must list, and explain how to use, accessibility and compatibility features of telecommunications products (602.2); (2) electronic support documentation must conform to WCAG 2.0 (602.3); (3) non-electronic support documentation must be provided upon request in alternate formats (e.g., braille, large print) usable by individuals with disabilities (602.4); and (4) support services (e.g., help desks, call centers) must offer information on accessibility and compatibility features, as well as ensure a contact method that accommodates the communication needs of individuals with disabilities (603.2 and 603.3).

Taken together, these four accessibility requirements in the final rule impose PRA-covered information collection obligations on Section 255-covered manufacturers that are generally similar to those under the existing 255 Guidelines (which previously received PRA approval from OMB) (OMB Control Number 3014–0010), though compliance with WCAG 2.0 is new. The Revised 255 Guidelines do establish a new information collection by requiring that covered manufacturers ensure their electronic support documentation (such as Web-based self-service support or PDF user guides) complies with specified accessibility standards (602.3).

The Board estimates the annual burden on manufacturers of telecommunications equipment and customer premises equipment for the four categories of information collections under the final rule as follows:

TABLE 11—ESTIMATED ANNUAL RECORDKEEPING AND DOCUMENTATION BURDEN

Provision in final rule	Number of respondents	Annual number of responses per respondent	Average response time (hours)	Estimated annual burden (hours)
Section 602.2	1,379	6	1.5	12,411
Section 602.3	1,379	95% of 6	300	2,358,090
Section 602.4	1,379	5% of 6	25	10,343
Section 603	1,379	65	4,137
Total	2,384,981

These estimates are based on the Access Board's experience with the current information collection requirements under the existing 255 Guidelines, as well as public comment received in response to the 2010 and 2011 ANPRMs. (While the Board received one comment to the 2015 NPRM suggesting that our assumptions about average response times were too high, for the reasons discussed below, we believe these time estimates are sound and have carried them forward to this PRA analysis.)

Highlighted below are the key assumptions used in the burden estimation calculus reflected above in Table 11:

Number of respondents. The estimated number of manufacturers of telecommunications equipment and customer premises equipment (1,384) is based on Census Bureau/NAICS data for the three ICT-related industry classifications potentially subject to the Revised 255 Guidelines. (See Section V.B (Regulatory Process Matters—Regulatory Flexibility Act)).

Number of responses annually per manufacturer. The number of annual responses for each manufacturer (6) is based on the estimated number of new products released in 2013 according to the Consumer Electronic Association.

Average response time. The Access Board estimates the average response time to comply with the accessibility requirements in Chapter 6 of the Revised 255 Guidelines as follows:

- *Section 602.2*—The estimated response time assumes that documenting the accessibility and compatibility features will take 1.5 hours for each new product.

- *Section 602.3*—The estimated response time assumes that development of accessible electronic support documentation will take 300 hours for each new product. This estimate, in turn, is based on the assumption that each product will have, on average, 200 pages of electronic documentation, and that each page will require 1.5 hours of formatting and editing to comply with WCAG 2.0. With respect to the annual number of responses for each manufacturer, it is assumed that support documentation for nearly all new products will be provided in an electronic format given current trends in the telecommunications industry. Specifically, it is estimated that 95 percent of the six new products introduced annually by each manufacturer (7,889 products) will have electronic support documentation that must conform to the accessibility

requirements for electronic support documentation in 602.3.

An NPRM commenter expressed concern that our time estimate of 1.5 hours per page to make electronic support documentation compliant with WCAG 2.0 was overly generous, stating that 10 to 20 minutes per page would be more likely. In our experience, while text-only or other less complex documents may well take, on average, only 10 to 20 minutes per page to ensure accessibility, the electronic documents at issue here—user manuals and Web-based self-service support—are typically more complex and often feature pictures, graphics, or tables interspersed with textual material. This complexity would likely make the process of ensuring compliance with applicable accessibility requirements more time intensive as compared to text-only documents. Consequently, to be conservative, we have retained the 1.5 hours per page assumption used in both the NPRM and Preliminary RIA.

- *Section 602.4*—The estimated response time assumes that development of accessible non-electronic support documentation in alternate formats (e.g., braille, large print) will take 25 hours for each new product. With respect to the annual number of responses for each manufacturer, it is assumed that support documentation for only a few new products will have support documentation in a non-electronic format in recognition of the fact that most support documentation is now posted online or otherwise provided in electronic formats. Thus, it is assumed that only 5 percent of the six new products introduced annually by each manufacturer (415 products) will have non-electronic support documentation that must conform to 602.4.

- *Section 603.1*—The estimated response time assumes that, for each new product in a given year, manufacturers will receive three 10-minute telephone calls to support centers (or emails or chat-based interactions) from individuals with disabilities seeking information on the accessibility and compatibility features of these products.

G. Availability of Materials Incorporated by Reference

Regulations issued by the Office of the Federal Register (OFR) require Federal agencies to describe in their regulatory preambles the steps taken to ensure that incorporated materials are reasonably available to interested parties, as well as summarize the contents of referenced standards. See 1 CFR part 51.

In keeping with these obligations for materials that are incorporated by reference in the Revised 508 Standards and 255 Guidelines, the Access Board provides below: (a) Information on the public availability of these ten standards (or, alternatively, how Access Board staff attempted to secure the availability of these materials to the public at no cost or reduced cost, if not already publicly available free of charge by the standards development organization); and (b) summaries of the materials to be incorporated by reference. In addition to the information provided below relating to public availability, a copy of each referenced standard is available for inspection at the Access Board's office, 1331 F Street NW., Suite 1000, Washington, DC 20004.

ATSC A/53 Part 5: 2014, Digital

Television Standard, Part 5—2014 AC-3 Audio System Characteristics (2014) (see 414.1.1, 702.2.1). The standard for digital television provides the system characteristics for advanced television systems. The document and its normative parts provide detailed specification of system parameters. Part 5 provides the audio system characteristics and normative specifications. It includes the Visually Impaired (VI) associated service, which is a complete program mix containing music, effects, dialogue and a narrative description of the picture content. Availability: Copies of this standard may be obtained from the Advanced Television Systems Committee (ATSC), 1776 K Street NW., Suite 200, Washington, DC 20006-2304. Free copies of ATSC A/53 Digital Television Standard are available online at the organization's Web site (<https://atsc.org/wp-content/uploads/2015/03/A53-Part-5-2014.pdf>).

ANSI/AIIM/ISO 14289-1-2016,

Document Management Applications—Electronic Document File Format Enhancement for Accessibility—Part 1: Use of ISO 32000-1 (2016) (PDF/UA-1) (see 504.2.2, 702.3.1). This standard (known as PDF/UA-1) defines how to represent electronic documents in the PDF format in a manner that allows the file to be accessible. This is accomplished by identifying the set of PDF components that may be used and restrictions on the form of their use. Availability: Copies of this standard may be obtained from Association for Information and Image Management (AIIM), 1100 Wayne Ave., Ste. 1100, Silver

Spring, Maryland 20910. This standard is available without cost to AIIM professional members and for a small fee (\$15.00) by other members of the public through the AIIM Web site (http://www.aiim.org/Resources/Standards/AIIM_ISO_14289-1). It is also the Board's understanding, based on discussions with the standards developer, that a free, read-only copy of the referenced portions of ANSI/HFES 200.2 would be made available on ANSI's IBR Standards Portal (<https://ibr.ansi.org/Standards/hfes.aspx>) following publication of the final rule.

ANSI/HFES 200.2, Human Factors Engineering of Software User Interfaces—Part 2: Accessibility (2008) (see 502.4, 702.4.1). This standard provides design specifications for human-system software interfaces to increase accessibility for persons with disabilities. It covers the design of accessible software for people with a wide range of physical, sensory and cognitive abilities, including those with temporary disabilities and older adults. Availability: Copies of this standard may be obtained from the Human Factors and Ergonomics Society (HFES), P.O. Box 1369, Santa Monica, CA 90406–1369. This standard is also available for purchase on the HFES Web site (<http://www.hfes.org>). In discussions with Access Board staff, an HFES senior representative noted that, consistent with the Society's standard practice of making read-only copies of standards available when incorporated by reference into Federal regulations, a free, read-only copy of the referenced portions of ANSI/HFES 200.2 would be made available on ANSI's IBR Standards Portal (<https://ibr.ansi.org/Standards/hfes.aspx>) following publication of the final rule.

ANSI/IEEE C63.19–2011 American National Standard for Methods of Measurement of Compatibility between Wireless Communications Devices and Hearing Aids (2011) (see 412.3.1, 702.5.1). This standard provides a uniform method of measurement for compatibility between hearing aids and wireless communications devices. Availability: Copies of this standard may be obtained from the Institute of Electrical and Electronics Engineers (IEEE), 10662 Los Vaqueros Circle, P.O. Box 3014, Los

Alamitos, CA 90720–1264. This standard is also available for purchase on the IEEE Web site (<http://www.ieee.org>). Additionally, a free, read-only version of ANSI/IEEE C63.19–2011 is available on the ANSI IBR Standards Portal.

ICC A117.1–2009, Accessible and Usable Buildings and Facilities (2010) (see 402.5, 702.6.1). This standard provides technical criteria for making sites, facilities, buildings, and elements accessible to and usable by people with disabilities. Availability: Copies of this standard may be obtained from ICC Publications, 4051 W. Flossmoor Road, Country Club Hills, IL 60478–5795 (<http://www.iccsafe.org>). A free, read-only version of ICC A117.1 is available online at the ICC's public access standards portal (<http://codes.iccsafe.org/app/book/toc/ICC%20Standards/ICC%20A117.1-2009/index.html>).

ITU-T Recommendation E.161, Series E: Overall Network Operation, Telephone Service, Service Operation and Human Factors—International operation—Numbering plan of the international telephone service, Arrangement of digits, letters and symbols on telephones and other devices that can be used for gaining access to a telephone network (2001) (see 407.3.3, 702.7.1). This standard defines the assignment of the basic 26 Latin letters (A to Z) to the 12-key telephone keypad. Availability: This standard may be obtained from ITU-T, Place des Nations CH–1211, Geneva 20, Switzerland. Free copies of ITU-T Recommendation E.161 are available online at the organization's Web site (<http://www.itu.int/rec/T-REC-E.161-200102-I/en>).

ITU-T Recommendation G.722.2: Series G: Transmission Systems and Media, Digital Systems and Networks, Digital terminal equipments—Coding of analogue signals by methods other than PCM, Wideband coding of speech at around 16 kbit/s using Adaptive Multi-Rate Wideband (AMR-WB) (2003) (see 412.4, 702.7.2). This standard describes the high quality Adaptive Multi-Rate Wideband (AMR-WB) encoder and decoder that is primarily intended for 7 kHz bandwidth speech signals. AMR-WB operates at a multitude of bit rates ranging from 6.6 kbit/s to 23.85 kbit/s. Availability: This standard may be obtained from the International Telecommunication

Union, Telecommunications Standardization Sector (ITU-T), Place des Nations CH–1211, Geneva 20, Switzerland. Free copies of ITU-T Recommendation G.722.2 are available online at the organization's Web site (<http://www.itu.int/rec/T-REC-G.722.2-200307-I/en>).

IETF RFC 6716, Definition of the Opus Audio Codec (2012) (see 412.4, 702.8.1). This standard establishes specifications that define the Opus interactive speech and audio codec. The Opus codec is designed to handle a wide range of interactive audio applications, including Voice over IP, videoconferencing, in-game chat, and even live, distributed music performances. This codec scales from low bitrate narrowband speech at 6 kbit/s to very high quality stereo music at 510 kbit/s. Availability: Free copies of this standard are available online at the Internet Engineering Task Force's Web site (<http://www.rfc-base.org/txt/rfc-6716.txt>).

TIA–1083–B: Telecommunications—Communications Products—Handset Magnetic Measurement Procedures and Performance Requirements (2015) (TIA–1083–B) (see 412.3.2, 702.9.1). This standard defines measurement procedures and performance requirements for the handset generated audio band magnetic noise of wireline telephones. This standard also addresses magnetic interference issues not covered by 47 CFR part 68. This standard can be used to evaluate devices with analog interfaces and digital interfaces that provide narrowband and wideband transmission. Availability: Copies of this standard, which is published by the Telecommunications Industry Association (TIA), may be obtained from the IHS Standard Store (IHS), 15 Inverness Way East, Englewood, CO 80112. This standard is also available for purchase on the IHS Markit Standards Store (<http://www.global.ihs.com>). In March 2016, Access Board staff spoke with TIA representatives to explore potential options for making TIA–1083–B readily available to the public. TIA took the position that this standard is available for sale and is, therefore, reasonably available.

WCAG 2.0, Web Content Accessibility Guidelines, W3C Recommendation (2008) (see E205.4, E205.4 Exception, E205.4.1, E207.2, E207.2 Exception 2, E207.2 Exception 3,

E207.2.1, E207.3, C203.1, C203.1 Exception, C203.1.1, C205.2, C205.2 Exception 2, C205.2 Exception 3, C205.2.1, C205.3, 408.3 Exception, 501.1 Exception, 504.2, 504.3, 504.4, 602.3, and 702.10.1). WCAG 2.0, published by the W3C Web Accessibility Initiative (W3C), specifies success criteria and requirements to make Web content more accessible to all users, including persons with disabilities. The W3C Web site also provides online technical assistance materials linked to each success criteria and technical requirement. Availability: Copies of this standard may be obtained from the W3C Web Accessibility Initiative, Massachusetts Institute of Technology, 32 Vassar Street, Room 32-G515, Cambridge, MA 02139. Free copies of WCAG 2.0, and its related technical assistance materials, are available online at W3C's Web site (<http://www.w3.org/TR/WCAG20>).

List of Subjects

36 CFR Part 1193

Civil rights, Communications, Communications equipment, Incorporation by reference, Individuals with disabilities, Reporting and recordkeeping requirements, Telecommunications.

36 CFR Part 1194

Civil rights, Communications, Communications equipment, Computer technology, Electronic products, Government employees, Government procurement, Incorporation by reference, Individuals with disabilities, Reporting and recordkeeping requirements, Telecommunications.

Approved by vote of the Access Board on September 14, 2016.

David M. Capozzi,
Executive Director.

For the reasons stated in the preamble, and under the authority of 47 U.S.C. 255(e), the Board amends 36 CFR chapter XI as follows:

PART 1193—[REMOVED]

- 1. Remove part 1193.

PART 1194—INFORMATION AND COMMUNICATION TECHNOLOGY STANDARDS AND GUIDELINES

- 2. The authority citation for part 1194 is revised to read as follows:

Authority: 29 U.S.C. 794d, 47 U.S.C. 255.

- 3. The heading for part 1194 is revised to read as set forth above.

- 4. Remove the designations of subparts A through D.

- 5. Add appendix D to part 1194 to read as follows:

Appendix D to Part 1194—Electronic and Information Technology Accessibility Standards as Originally Published on December 21, 2000

Sections D1194.6 through D1194.20

[Reserved]

Sections D1194.27 through D1194.30

[Reserved]

Sections D1194.32 through D1194.40

[Reserved]

Sections D1194.42 through D1194.50

[Reserved]

§§ 1194.1 through 1194.5 [Transferred to Appendix D to Part 1194 as Sections D1194.1 through D1194.5]

- 6. Redesignate §§ 1194.1 through 1194.5 as sections D1194.1 through D1194.5, respectively, and transfer to appendix D to part 1194.

§§ 1194.21 through 1194.26 [Transferred to Appendix D to Part 1194 as Sections D1194.21 through D1194.26]

- 7. Redesignate §§ 1194.21 through 1194.26 as sections D1194.21 through D1194.26, respectively, and transfer to appendix D to part 1194.

§ 1194.31 [Transferred to Appendix D to Part 1194 as Section D1194.31]

- 8. Redesignate § 1194.31 as section D1194.31 and transfer to appendix D to part 1194.

§ 1194.41 [Transferred to Appendix D to Part 1194 as Section D1194.41]

- 9. Redesignate § 1194.41 as section D1194.41 and transfer to appendix D to part 1194.

Appendix—Figures to Part 1194 [Transferred to Appendix D to Part 1194 as Section D1194.51]

- 10. Redesignate Appendix—Figures to Part 1194 as section D1194.51 and transfer to appendix D to part 1194, and revise its heading to read “Figures”.

- 11. Add §§ 1194.1 and 1194.2 to read as follows:

§ 1194.1 Standards for Section 508 of the Rehabilitation Act.

The standards for information and communication technology developed, procured, maintained, or used by Federal agencies covered by Section 508 of the Rehabilitation Act are set forth in Appendices A, C and D to this part.

§ 1194.2 Guidelines for Section 255 of the Communications Act.

The guidelines for telecommunications equipment and customer premises equipment covered

by Section 255 of the Communications Act are set forth in Appendices B and C to this part.

- 12. Add appendices A through C to part 1194 to read as follows:

Appendix A to Part 1194—Section 508 of the Rehabilitation Act: Application and Scoping Requirements

Table of Contents

508 Chapter 1: Application and Administration

E101 General
E102 Referenced Standards
E103 Definitions

508 Chapter 2: Scoping Requirements

E201 Application
E202 General Exceptions
E203 Access to Functionality
E204 Functional Performance Criteria
E205 Content
E206 Hardware
E207 Software
E208 Support Documentation and Services

508 Chapter 1: Application and Administration

E101 General

E101.1 *Purpose.* These Revised 508 Standards, which consist of 508 Chapters 1 and 2 (Appendix A), along with Chapters 3 through 7 (Appendix C), contain scoping and technical requirements for information and communication technology (ICT) to ensure accessibility and usability by individuals with disabilities. Compliance with these standards is mandatory for Federal agencies subject to Section 508 of the Rehabilitation Act of 1973, as amended (29 U.S.C. 794d).

E101.2 *Equivalent Facilitation.* The use of an alternative design or technology that results in substantially equivalent or greater accessibility and usability by individuals with disabilities than would be provided by conformance to one or more of the requirements in Chapters 4 and 5 of the Revised 508 Standards is permitted. The functional performance criteria in Chapter 3 shall be used to determine whether substantially equivalent or greater accessibility and usability is provided to individuals with disabilities.

E101.3 *Conventional Industry Tolerances.* Dimensions are subject to conventional industry tolerances except where dimensions are stated as a range with specific minimum or maximum end points.

E101.4 *Units of Measurement.* Measurements are stated in metric and U.S. customary units. The values stated in each system (metric and U.S. customary units) may not be exact equivalents, and each system shall be used independently of the other.

E102 Referenced Standards

E102.1 *Application.* The specific editions of the standards listed in Chapter 7 are incorporated by reference into 508 Chapter 2 (Scoping Requirements) and Chapters 3 through 6 to the prescribed extent of each such reference. Where conflicts occur between the Revised 508 Standards and the

referenced standards, these Revised 508 Standards apply.

E103 Definitions

E103.1 Terms Defined in Referenced Standards. Terms defined in referenced standards and not defined in E103.4 shall have the meaning as defined in the referenced standards.

E103.2 Undefined Terms. Any term not defined in E103.4 or in referenced standards shall be given its ordinarily accepted meaning in the sense that the context implies.

E103.3 Interchangeability. Words, terms, and phrases used in the singular include the plural and those used in the plural include the singular.

E103.4 Defined Terms. For the purpose of the Revised 508 Standards, the terms defined in E103.4 have the indicated meaning.

Agency. Any agency or department of the United States as defined in 44 U.S.C. 3502, and the United States Postal Service.

Alteration. A change to *existing ICT* that affects interoperability, the user interface, or access to information or data.

Application. Software designed to perform, or to help the user to perform, a specific task or tasks.

Assistive Technology (AT). Any item, piece of equipment, or product system, whether acquired commercially, modified, or customized, that is used to increase, maintain, or improve functional capabilities of individuals with disabilities.

Audio Description. Narration added to the soundtrack to describe important visual details that cannot be understood from the main soundtrack alone. Audio description is a means to inform individuals who are blind or who have low vision about visual content essential for comprehension. Audio description of video provides information about actions, characters, scene changes, on-screen text, and other visual content. Audio description supplements the regular audio track of a program. Audio description is usually added during existing pauses in dialogue. Audio description is also called "video description" and "descriptive narration".

Authoring Tool. Any software, or collection of software components, that can be used by authors, alone or collaboratively, to create or modify content for use by others, including other authors.

Closed Functionality. Characteristics that limit functionality or prevent a user from attaching or installing assistive technology. Examples of ICT with closed functionality are self-service machines, information kiosks, set-top boxes, fax machines, calculators, and computers that are locked down so that users may not adjust settings due to a policy such as Desktop Core Configuration.

Content. Electronic information and data, as well as the encoding that defines its structure, presentation, and interactions.

Document. Logically distinct assembly of content (such as a file, set of files, or streamed media) that: Functions as a single entity rather than a collection; is not part of software; and does not include its own software to retrieve and present content for users. Examples of documents include, but

are not limited to, letters, email messages, spreadsheets, presentations, podcasts, images, and movies.

Existing ICT. ICT that has been procured, maintained or used on or before January 18, 2018.

Hardware. A tangible device, equipment, or physical component of ICT, such as telephones, computers, multifunction copy machines, and keyboards.

Information Technology. Shall have the same meaning as the term "information technology" set forth in 40 U.S.C. 11101(6).

Information and Communication Technology (ICT). Information technology and other equipment, systems, technologies, or processes, for which the principal function is the creation, manipulation, storage, display, receipt, or transmission of electronic data and information, as well as any associated content. Examples of ICT include, but are not limited to: Computers and peripheral equipment; information kiosks and transaction machines; telecommunications equipment; customer premises equipment; multifunction office machines; software; applications; Web sites; videos; and, electronic documents.

Keyboard. A set of systematically arranged alphanumeric keys or a control that generates alphanumeric input by which a machine or device is operated. A keyboard includes tactilely discernible keys used in conjunction with the alphanumeric keys if their function maps to keys on the keyboard interfaces.

Label. Text, or a component with a text alternative, that is presented to a user to identify content. A label is presented to all users, whereas a name may be hidden and only exposed by assistive technology. In many cases, the name and the label are the same.

Menu. A set of selectable options.

Name. Text by which software can identify a component to the user. A name may be hidden and only exposed by assistive technology, whereas a label is presented to all users. In many cases, the label and the name are the same. Name is unrelated to the name attribute in HTML.

Non-Web Document. A document that is not: A Web page, embedded in a Web page, or used in the rendering or functioning of Web pages.

Non-Web Software. Software that is not: A Web page, not embedded in a Web page, and not used in the rendering or functioning of Web pages.

Operable Part. Hardware-based user controls for activating, deactivating, or adjusting ICT.

Platform Accessibility Services. Services provided by a platform enabling interoperability with assistive technology. Examples are Application Programming Interfaces (API) and the Document Object Model (DOM).

Platform Software. Software that interacts with hardware or provides services for other software. Platform software may run or host other software, and may isolate them from underlying software or hardware layers. A single software component may have both platform and non-platform aspects. Examples of platforms are: Desktop operating systems; embedded operating systems, including

mobile systems; Web browsers; plug-ins to Web browsers that render a particular media or format; and sets of components that allow other applications to execute, such as applications which support macros or scripting.

Programmatically Determinable. Ability to be determined by software from author-supplied data that is provided in a way that different user agents, including assistive technologies, can extract and present the information to users in different modalities.

Public Facing. Content made available by an agency to members of the general public. Examples include, but are not limited to, an agency Web site, blog post, or social media pages.

Real-Time Text (RTT). Communications using the transmission of text by which characters are transmitted by a terminal as they are typed. Real-time text is used for conversational purposes. Real-time text also may be used in voicemail, interactive voice response systems, and other similar application.

Revised 508 Standards. The standards for ICT developed, procured, maintained, or used by agencies subject to Section 508 of the Rehabilitation Act as set forth in 508 Chapters 1 and 2 (36 CFR part 1194, Appendix A), and Chapters 3 through 7 (36 CFR part 1194, Appendix C).

Software. Programs, procedures, rules, and related data and documentation that direct the use and operation of ICT and instruct it to perform a given task or function. Software includes, but is not limited to, applications, non-Web software, and platform software.

Software Tools. Software for which the primary function is the development of other software. Software tools usually come in the form of an Integrated Development Environment (IDE) and are a suite of related products and utilities. Examples of IDEs include Microsoft® Visual Studio®, Apple® Xcode®, and Eclipse Foundation Eclipse®.

Telecommunications. The signal transmission, between or among points specified by the user, of information of the user's choosing, without change in the form or content of the information as sent and received.

Terminal. Device or software with which the end user directly interacts and that provides the user interface. For some systems, the software that provides the user interface may reside on more than one device such as a telephone and a server.

Text. A sequence of characters that can be programmatically determined and that expresses something in human language.

TTY. Equipment that enables interactive text based communications through the transmission of frequency-shift-keying audio tones across the public switched telephone network. TTYs include devices for real-time text communications and voice and text intermixed communications. Examples of intermixed communications are voice carry over and hearing carry over. One example of a TTY is a computer with TTY emulating software and modem.

Variable Message Signs (VMS). Non-interactive electronic signs with scrolling, streaming, or paging-down capability. An example of a VMS is an electronic message

board at a transit station that displays the gate and time information associated with the next train arrival.

Voice over Internet Protocol (VoIP). A technology that provides real-time voice communications. VoIP requires a broadband connection from the user's location and customer premises equipment compatible with Internet protocol.

Web page. A non-embedded resource obtained from a single Universal Resource Identifier (URI) using HyperText Transfer Protocol (HTTP) plus any other resources that are provided for the rendering, retrieval, and presentation of content.

508 Chapter 2: Scoping Requirements

E201 Application

E201.1 *Scope.* ICT that is procured, developed, maintained, or used by agencies shall conform to the Revised 508 Standards.

E202 General Exceptions

E202.1 *General.* ICT shall be exempt from compliance with the Revised 508 Standards to the extent specified by E202.

E202.2 *Legacy ICT.* Any component or portion of existing ICT that complies with an earlier standard issued pursuant to Section 508 of the Rehabilitation Act of 1973, as amended (as republished in Appendix D), and that has not been altered on or after January 18, 2018, shall not be required to be modified to conform to the Revised 508 Standards.

E202.3 *National Security Systems.* The Revised 508 Standards do not apply to ICT operated by agencies as part of a national security system, as defined by 40 U.S.C. 11103(a).

E202.4 *Federal Contracts.* ICT acquired by a contractor incidental to a contract shall not be required to conform to the Revised 508 Standards.

E202.5 *ICT Functions Located in Maintenance or Monitoring Spaces.* Where status indicators and operable parts for ICT functions are located in spaces that are frequented only by service personnel for maintenance, repair, or occasional monitoring of equipment, such status indicators and operable parts shall not be required to conform to the Revised 508 Standards.

E202.6 *Undue Burden or Fundamental Alteration.* Where an agency determines in accordance with E202.5 that conformance to requirements in the Revised 508 Standards would impose an undue burden or would result in a fundamental alteration in the nature of the ICT, conformance shall be required only to the extent that it does not impose an undue burden, or result in a fundamental alteration in the nature of the ICT.

E202.6.1 *Basis for a Determination of Undue Burden.* In determining whether conformance to requirements in the Revised 508 Standards would impose an undue burden on the agency, the agency shall consider the extent to which conformance would impose significant difficulty or expense considering the agency resources available to the program or component for which the ICT is to be procured, developed, maintained, or used.

E202.6.2 *Required Documentation.* The responsible agency official shall document in writing the basis for determining that conformance to requirements in the Revised 508 Standards constitute an undue burden on the agency, or would result in a fundamental alteration in the nature of the ICT. The documentation shall include an explanation of why and to what extent compliance with applicable requirements would create an undue burden or result in a fundamental alteration in the nature of the ICT.

E202.6.3 *Alternative Means.* Where conformance to one or more requirements in the Revised 508 Standards imposes an undue burden or a fundamental alteration in the nature of the ICT, the agency shall provide individuals with disabilities access to and use of information and data by an alternative means that meets identified needs.

E202.7 *Best Meets.* Where ICT conforming to one or more requirements in the Revised 508 Standards is not commercially available, the agency shall procure the ICT that best meets the Revised 508 Standards consistent with the agency's business needs.

E202.7.1 *Required Documentation.* The responsible agency official shall document in writing: (a) The non-availability of conforming ICT, including a description of market research performed and which provisions cannot be met, and (b) the basis for determining that the ICT to be procured best meets the requirements in the Revised 508 Standards consistent with the agency's business needs.

E202.7.2 *Alternative Means.* Where ICT that fully conforms to the Revised 508 Standards is not commercially available, the agency shall provide individuals with disabilities access to and use of information and data by an alternative means that meets identified needs.

E203 Access to Functionality

E203.1 *General.* Agencies shall ensure that all functionality of ICT is accessible to and usable by individuals with disabilities, either directly or by supporting the use of assistive technology, and shall comply with E203. In providing access to all functionality of ICT, agencies shall ensure the following:

A. That Federal employees with disabilities have access to and use of information and data that is comparable to the access and use by Federal employees who are not individuals with disabilities; and

B. That members of the public with disabilities who are seeking information or data from a Federal agency have access to and use of information and data that is comparable to that provided to members of the public who are not individuals with disabilities.

E203.2 *User Needs.* When agencies procure, develop, maintain or use ICT they shall identify the needs of users with disabilities to determine:

A. How users with disabilities will perform the functions supported by the ICT; and

B. How the ICT will be developed, installed, configured, and maintained to support users with disabilities.

E204 Functional Performance Criteria

E204.1 *General.* Where the requirements in Chapters 4 and 5 do not address one or more functions of ICT, the functions not addressed shall conform to the Functional Performance Criteria specified in Chapter 3.

E205 Electronic Content

E205.1 *General.* Electronic content shall comply with E205.

E205.2 *Public Facing.* Electronic content that is public facing shall conform to the accessibility requirements specified in E205.4.

E205.3 *Agency Official Communication.* Electronic content that is not public facing shall conform to the accessibility requirements specified in E205.4 when such content constitutes official business and is communicated by an agency through one or more of the following:

- A. An emergency notification;
- B. An initial or final decision adjudicating an administrative claim or proceeding;
- C. An internal or external program or policy announcement;
- D. A notice of benefits, program eligibility, employment opportunity, or personnel action;
- E. A formal acknowledgement of receipt;
- F. A survey questionnaire;
- G. A template or form;
- H. Educational or training materials; or
- I. Intranet content designed as a Web page.

EXCEPTION: Records maintained by the National Archives and Records Administration (NARA) pursuant to Federal recordkeeping statutes shall not be required to conform to the Revised 508 Standards unless public facing.

E205.4 *Accessibility Standard.* Electronic content shall conform to Level A and Level AA Success Criteria and Conformance Requirements in WCAG 2.0 (incorporated by reference, *see* 702.10.1).

EXCEPTION: Non-Web documents shall not be required to conform to the following four WCAG 2.0 Success Criteria: 2.4.1 Bypass Blocks, 2.4.5 Multiple Ways, 3.2.3 Consistent Navigation, and 3.2.4 Consistent Identification.

E205.4.1 *Word Substitution when Applying WCAG to Non-Web Documents.* For non-Web documents, wherever the term "Web page" or "page" appears in WCAG 2.0 Level A and AA Success Criteria and Conformance Requirements, the term "document" shall be substituted for the terms "Web page" and "page". In addition, in Success Criterion in 1.4.2, the phrase "in a document" shall be substituted for the phrase "on a Web page".

E206 Hardware

E206.1 *General.* Where components of ICT are hardware and transmit information or have a user interface, such components shall conform to the requirements in Chapter 4.

E207 Software

E207.1 *General.* Where components of ICT are software and transmit information or have a user interface, such components shall conform to E207 and the requirements in Chapter 5.

EXCEPTION: Software that is assistive technology and that supports the

accessibility services of the platform shall not be required to conform to the requirements in Chapter 5.

E207.2 WCAG Conformance. User interface components, as well as the content of platforms and applications, shall conform to Level A and Level AA Success Criteria and Conformance Requirements in WCAG 2.0 (incorporated by reference, *see* 702.10.1).

EXCEPTIONS: 1. Software that is assistive technology and that supports the accessibility services of the platform shall not be required to conform to E207.2.

2. Non-Web software shall not be required to conform to the following four Success Criteria in WCAG 2.0: 2.4.1 Bypass Blocks; 2.4.5 Multiple Ways; 3.2.3 Consistent Navigation; and 3.2.4 Consistent Identification.

3. Non-Web software shall not be required to conform to Conformance Requirement 3 Complete Processes in WCAG 2.0.

E207.2.1 Word Substitution when Applying WCAG to Non-Web Software. For non-Web software, wherever the term “Web page” or “page” appears in WCAG 2.0 Level A and AA Success Criteria and Conformance Requirements, the term “software” shall be substituted for the terms “Web page” and “page”. In addition, in Success Criterion in 1.4.2, the phrase “in software” shall be substituted for the phrase “on a Web page.”

E207.3 Complete Processes for Non-Web Software. Where non-Web software requires multiple steps to accomplish an activity, all software related to the activity to be accomplished shall conform to WCAG 2.0 as specified in E207.2.

E208 Support Documentation and Services

E208.1 General. Where an agency provides support documentation or services for ICT, such documentation and services shall conform to the requirements in Chapter 6.

Appendix B to Part 1194—Section 255 of the Communications Act: Application and Scoping Requirements

Table of Contents

255 Chapter 1: Application and Administration

- C101 General
- C102 Referenced Standards
- C103 Definitions

255 Chapter 2: Scoping Requirements

- C201 Application
- C202 Functional Performance Criteria
- C203 Electronic Content
- C204 Hardware
- C205 Software
- C206 Support Documentation and Services

255 Chapter 1: Application and Administration

C101 General

C101.1 Purpose. These Revised 255 Guidelines, which consist of 255 Chapters 1 and 2 (Appendix B), along with Chapters 3 through 7 (Appendix C), contain scoping and technical requirements for the design, development, and fabrication of telecommunications equipment and customer premises equipment, content, and

support documentation and services, to ensure accessibility and usability by individuals with disabilities. These Revised 255 Guidelines are to be applied to the extent required by regulations issued by the Federal Communications Commission under Section 255 of the Communications Act of 1934, as amended (47 U.S.C. 255).

C101.2 Equivalent Facilitation. The use of an alternative design or technology that results in substantially equivalent or greater accessibility and usability by individuals with disabilities than would be provided by conformance to one or more of the requirements in Chapters 4 and 5 of the Revised 255 Guidelines is permitted. The functional performance criteria in Chapter 3 shall be used to determine whether substantially equivalent or greater accessibility and usability is provided to individuals with disabilities.

C101.3 Conventional Industry Tolerances. Dimensions are subject to conventional industry tolerances except where dimensions are stated as a range with specific minimum or maximum end points.

C101.4 Units of Measurement. Measurements are stated in metric and U.S. customary units. The values stated in each system (metric and U.S. customary units) may not be exact equivalents, and each system shall be used independently of the other.

C102 Referenced Standards

C102.1 Application. The specific editions of the standards listed in Chapter 7 are incorporated by reference into 255 Chapter 2 (Scoping Requirements) and Chapters 3 through 6 to the prescribed extent of each such reference. Where conflicts occur between the Revised 255 Guidelines and the referenced standards, these Revised 255 Guidelines apply.

C103 Definitions

C103.1 Terms Defined in Referenced Standards. Terms defined in referenced standards and not defined in C103.4 shall have the meaning as defined in the referenced standards.

C103.2 Undefined Terms. Any term not defined in C103.4 or in referenced standards shall be given its ordinarily accepted meaning in the sense that the context implies.

C103.3 Interchangeability. Words, terms, and phrases used in the singular include the plural and those used in the plural include the singular.

C103.4 Defined Terms. For the purpose of the Revised 255 Guidelines, the terms defined in C103.4 have the indicated meaning.

Application. Software designed to perform, or to help the user perform, a specific task or tasks.

Assistive Technology (AT). Any item, piece of equipment, or product system, whether acquired commercially, modified, or customized, that is used to increase, maintain, or improve functional capabilities of individuals with disabilities.

Audio Description. Narration added to the soundtrack to describe important visual details that cannot be understood from the

main soundtrack alone. Audio description is a means to inform individuals who are blind or who have low vision about visual content essential for comprehension. Audio description of video provides information about actions, characters, scene changes, on-screen text, and other visual content. Audio description supplements the regular audio track of a program. Audio description is usually added during existing pauses in dialogue. Audio description is also called “video description” and “descriptive narration.”

Authoring Tool. Any software, or collection of software components, that can be used by authors, alone or collaboratively, to create or modify content for use by others, including other authors.

Closed Functionality. Characteristics that limit functionality or prevent a user from attaching or installing assistive technology.

Content. Electronic information and data, as well as the encoding that defines its structure, presentation, and interactions.

Customer Premises Equipment (CPE). Equipment used on the premises of a person (other than a carrier) to originate, route, or terminate telecommunications service or interconnected VoIP service, including software integral to the operation of telecommunications function of such equipment. Examples of CPE are telephones, routers, switches, residential gateways, set-top boxes, fixed mobile convergence products, home networking adaptors and Internet access gateways which enable consumers to access communications service providers’ services and distribute them around their house via a Local Access Network (LAN).

Document. Logically distinct assembly of content (such as a file, set of files, or streamed media) that: Functions as a single entity rather than a collection; is not part of software; and does not include its own software to retrieve and present content for users. Examples of documents include, but are not limited to, letters, email messages, spreadsheets, presentations, podcasts, images, and movies.

Hardware. A tangible device, equipment, or physical component of ICT, such as telephones, computers, multifunction copy machines, and keyboards.

Information and Communication Technology (ICT). Information technology and other equipment, systems, technologies, or processes, for which the principal function is the creation, manipulation, storage, display, receipt, or transmission of electronic data and information, as well as any associated content.

Keyboard. A set of systematically arranged alphanumeric keys or a control that generates alphanumeric input by which a machine or device is operated. A keyboard includes tactilely discernible keys used in conjunction with the alphanumeric keys if their function maps to keys on the keyboard interfaces.

Label. Text, or a component with a text alternative, that is presented to a user to identify content. A label is presented to all users, whereas a name may be hidden and only exposed by assistive technology. In many cases, the name and the label are the same.

Manufacturer. A final assembler of telecommunications equipment or customer premises equipment that sells such equipment to the public or to vendors that sell to the public.

Menu. A set of selectable options.

Name. Text by which software can identify a component to the user. A name may be hidden and only exposed by assistive technology, whereas a label is presented to all users. In many cases, the label and the name are the same. Name is unrelated to the name attribute in HTML.

Non-Web Document. A document that is not: A Web page, embedded in a Web page, or used in the rendering or functioning of Web pages.

Non-Web Software. Software that is not: A Web page, not embedded in a Web page, and not used in the rendering or functioning of Web pages.

Operable Part. Hardware-based user controls for activating, deactivating, or adjusting ICT.

Platform Accessibility Services. Services provided by a platform enabling interoperability with assistive technology. Examples are Application Programming Interfaces (API) and the Document Object Model (DOM).

Platform Software. Software that interacts with hardware or provides services for other software. Platform software may run or host other software, and may isolate them from underlying software or hardware layers. A single software component may have both platform and non-platform aspects. Examples of platforms are: Desktop operating systems; embedded operating systems, including mobile systems; Web browsers; plug-ins to Web browsers that render a particular media or format; and sets of components that allow other applications to execute, such as applications which support macros or scripting.

Programmatically Determinable. Ability to be determined by software from author-supplied data that is provided in a way that different user agents, including assistive technologies, can extract and present the information to users in different modalities.

Real-Time Text (RTT). Communications using the transmission of text by which characters are transmitted by a terminal as they are typed. Real-time text is used for conversational purposes. Real-time text also may be used in voicemail, interactive voice response systems, and other similar application.

Revised 255 Guidelines. The guidelines for telecommunications equipment and customer premises equipment covered by Section 255 of the Communications Act as set forth in 255 Chapters 1 and 2 (36 CFR part 1194, Appendix B), and Chapters 3 through 7 (36 CFR part 1193, Appendix C).

Software. Programs, procedures, rules, and related data and documentation that direct the use and operation of ICT and instruct it to perform a given task or function. Software includes, but is not limited to, applications, non-Web software, and platform software.

Software Tools. Software for which the primary function is the development of other software. Software tools usually come in the form of an Integrated Development

Environment (IDE) and are a suite of related products and utilities. Examples of IDEs include Microsoft® Visual Studio®, Apple® Xcode®, and Eclipse Foundation Eclipse®.

Specialized Customer Premises Equipment. Assistive technology used by individuals with disabilities to originate, route, or terminate telecommunications or interconnected VoIP service. Examples are TTYs and amplified telephones.

Telecommunications. The signal transmission between or among points specified by the user of information and of the user's choosing without change in the form or content of the information as sent and received.

Telecommunications Equipment. Equipment, other than customer premises equipment, used by a carrier to provide telecommunications service or interconnected VoIP service and includes software integral to the operation of telecommunications function of such equipment.

Terminal. Device or software with which the end user directly interacts and that provides the user interface. For some systems, the software that provides the user interface may reside on more than one device such as a telephone and a server.

Text. A sequence of characters that can be programmatically determined and that expresses something in human language.

TTY. Equipment that enables interactive text based communications through the transmission of frequency-shift-keying audio tones across the public switched telephone network. TTYs include devices for real-time text communications and voice and text intermixed communications. Examples of intermixed communications are voice carry over and hearing carry over. One example of a TTY is a computer with TTY emulating software and modem.

Variable Message Signs (VMS). Non-interactive electronic signs with scrolling, streaming, or paging-down capability. An example of a VMS is an electronic message board at a transit station that displays the gate and time information associated with the next train arrival.

Voice over Internet Protocol (VoIP). A technology that provides real-time voice communications. VoIP requires a broadband connection from the user's location and customer premises equipment compatible with Internet protocol.

Web page. A non-embedded resource obtained from a single Universal Resource Identifier (URI) using HyperText Transfer Protocol (HTTP) plus any other resources that are provided for the rendering, retrieval, and presentation of content.

Chapter 2: Scoping Requirements

C201 Application

C201.1 Scope. Manufacturers shall comply with the requirements in the Revised 255 Guidelines applicable to telecommunications equipment and customer premises equipment (and related software integral to the operation of telecommunications functions) when newly released, upgraded, or substantially changed from an earlier version or model. Manufacturers shall also conform to the

requirements in the Revised 255 Guidelines for support documentation and services, including electronic documents and Web-based product support.

C201.2. Readily Achievable. When a manufacturer determines that conformance to one or more requirements in Chapter 4 (Hardware) or Chapter 5 (Software) would not be readily achievable, it shall ensure that the equipment or software is compatible with existing peripheral devices or specialized customer premises equipment commonly used by individuals with disabilities to the extent readily achievable.

C201.3 Access to Functionality. Manufacturers shall ensure that telecommunications equipment and customer premises equipment is accessible to and usable by individuals with disabilities by providing direct access to all telecommunications functionality. Where manufacturers can demonstrate that it is not readily achievable for such equipment to provide direct access to all functionality, the equipment shall support the use of assistive technology and specialized customer premises equipment where readily achievable.

C201.4 Prohibited Reduction of Accessibility, Usability, and Compatibility. No change shall be undertaken that decreases, or has the effect of decreasing, the net accessibility, usability, or compatibility of telecommunications equipment or customer premises equipment.

EXCEPTION: Discontinuation of a product shall not be prohibited.

C201.5 Design, Development, and Fabrication. Manufacturers shall evaluate the accessibility, usability, and interoperability of telecommunications equipment and customer premises equipment during its product design, development, and fabrication.

C202 Functional Performance Criteria

C202.1 General. Where the requirements in Chapters 4 and 5 do not address one or more functions of telecommunications or customer premises equipment, the functions not addressed shall conform to the Functional Performance Criteria specified in Chapter 3.

C203 Electronic Content

C203.1 General. Electronic content that is integral to the use of telecommunications or customer premises equipment shall conform to Level A and Level AA Success Criteria and Conformance Requirements in WCAG 2.0 (incorporated by reference, *see* 702.10.1).

EXCEPTION: Non-Web documents shall not be required to conform to the following four WCAG 2.0 Success Criteria: 2.4.1 Bypass Blocks, 2.4.5 Multiple Ways, 3.2.3 Consistent Navigation, and 3.2.4 Consistent Identification.

C203.1.1 Word Substitution when Applying WCAG to Non-Web Documents. For non-Web documents, wherever the term "Web page" or "page" appears in WCAG 2.0 Level A and AA Success Criteria and Conformance Requirements, the term "document" shall be substituted for the terms "Web page" and "page." In addition, in Success Criterion in 1.4.2, the phrase "in a

document” shall be substituted for the phrase “on a Web page.”

C204 Hardware

C204.1 *General.* Where components of telecommunications equipment and customer premises equipment are hardware, and transmit information or have a user interface, those components shall conform to applicable requirements in Chapter 4.

EXCEPTION: Components of telecommunications equipment and customer premises equipment shall not be required to conform to 402, 407.7, 407.8, 408, and 415.

C205 Software

C205.1 *General.* Where software is integral to the use of telecommunications functions of telecommunications equipment or customer premises equipment and has a user interface, such software shall conform to C205 and applicable requirements in Chapter 5.

EXCEPTION: Software that is assistive technology and that supports the accessibility services of the platform shall not be required to conform to the requirements in Chapter 5.

C205.2 *WCAG Conformance.* User interface components, as well as the content of platforms and applications shall conform to Level A and Level AA Success Criteria and Conformance Requirements in WCAG 2.0 (incorporated by reference, *see* 702.10.1).

EXCEPTIONS: 1. Software that is assistive technology and that supports the accessibility services of the platform shall not be required to conform to C205.2.

2. Non-Web software shall not be required to conform to the following four Success Criteria in WCAG 2.0: 2.4.1 Bypass Blocks; 2.4.5 Multiple Ways; 3.2.3 Consistent Navigation; and 3.2.4 Consistent Identification.

3. Non-Web software shall not be required to conform to Conformance Requirement 3 Complete Processes in WCAG 2.0.

C205.2.1 *Word Substitution when Applying WCAG to Non-Web Software.* For non-Web software, wherever the term “Web page” or “page” appears in WCAG 2.0 Level A and AA Success Criteria and Conformance Requirements, the term “software” shall be substituted for the terms “Web page” and “page.” In addition, in Success Criterion 1.4.2, the phrase “in software” shall be substituted for the phrase “on a Web page.”

C205.3 *Complete Processes for Non-Web Software.* Where non-Web software requires multiple steps to accomplish an activity, all software related to the activity to be accomplished shall conform to WCAG 2.0 as specified in C205.2.

C206 Support Documentation and Services

C206.1 *General.* Where support documentation and services are provided for telecommunications equipment and customer premises equipment, manufacturers shall ensure that such documentation and services conform to Chapter 6 and are made available upon request at no additional charge.

- 413 Closed Caption Processing Technologies
- 414 Audio Description Processing Technologies
- 415 User Controls for Captions and Audio Descriptions

Chapter 5: Software

- 501 General
- 502 Interoperability with Assistive Technology
- 503 Applications
- 504 Authoring Tools

Chapter 6: Support Documentation and Services

- 601 General
- 602 Support Documentation
- 603 Support Services

Chapter 7: Referenced Standards

- 701 General
- 702 Incorporation by Reference

Chapter 3: Functional Performance Criteria

- 301 General
 - 301.1 *Scope.* The requirements of Chapter 3 shall apply to ICT where required by 508 Chapter 2 (Scoping Requirements), 255 Chapter 2 (Scoping Requirements), and where otherwise referenced in any other chapter of the Revised 508 Standards or Revised 255 Guidelines.

302 Functional Performance Criteria

302.1 *Without Vision.* Where a visual mode of operation is provided, ICT shall provide at least one mode of operation that does not require user vision.

302.2 *With Limited Vision.* Where a visual mode of operation is provided, ICT shall provide at least one mode of operation that enables users to make use of limited vision.

302.3 *Without Perception of Color.* Where a visual mode of operation is provided, ICT shall provide at least one visual mode of operation that does not require user perception of color.

302.4 *Without Hearing.* Where an audible mode of operation is provided, ICT shall provide at least one mode of operation that does not require user hearing.

302.5 *With Limited Hearing.* Where an audible mode of operation is provided, ICT shall provide at least one mode of operation that enables users to make use of limited hearing.

302.6 *Without Speech.* Where speech is used for input, control, or operation, ICT shall provide at least one mode of operation that does not require user speech.

302.7 *With Limited Manipulation.* Where a manual mode of operation is provided, ICT shall provide at least one mode of operation that does not require fine motor control or simultaneous manual operations.

302.8 *With Limited Reach and Strength.* Where a manual mode of operation is provided, ICT shall provide at least one mode of operation that is operable with limited reach and limited strength.

302.9 *With Limited Language, Cognitive, and Learning Abilities.* ICT shall provide features making its use by individuals with limited cognitive, language, and learning abilities simpler and easier.

Chapter 4: Hardware

401 General

401.1 *Scope.* The requirements of Chapter 4 shall apply to ICT that is hardware where required by 508 Chapter 2 (Scoping Requirements), 255 Chapter 2 (Scoping Requirements), and where otherwise referenced in any other chapter of the Revised 508 Standards or Revised 255 Guidelines.

EXCEPTION: Hardware that is assistive technology shall not be required to conform to the requirements of this chapter.

402 Closed Functionality

402.1 *General.* ICT with closed functionality shall be operable without requiring the user to attach or install assistive technology other than personal headsets or other audio couplers, and shall conform to 402.

402.2 *Speech-Output Enabled.* ICT with a display screen shall be speech-output enabled for full and independent use by individuals with vision impairments.

EXCEPTIONS: 1. Variable message signs conforming to 402.5 shall not be required to be speech-output enabled.

2. Speech output shall not be required where ICT display screens only provide status indicators and those indicators conform to 409.

3. Where speech output cannot be supported due to constraints in available memory or processor capability, ICT shall be permitted to conform to 409 in lieu of 402.2.

4. Audible tones shall be permitted instead of speech output where the content of user input is not displayed as entered for security purposes, including, but not limited to, asterisks representing personal identification numbers.

5. Speech output shall not be required for: The machine location; date and time of transaction; customer account number; and the machine identifier or label.

6. Speech output shall not be required for advertisements and other similar information unless they convey information that can be used for the transaction being conducted.

402.2.1 *Information Displayed On-Screen.* Speech output shall be provided for all information displayed on-screen.

402.2.2 *Transactional Outputs.* Where transactional outputs are provided, the speech output shall audibly provide all information necessary to verify a transaction.

402.2.3 *Speech Delivery Type and Coordination.* Speech output shall be delivered through a mechanism that is readily available to all users, including, but not limited to, an industry standard connector or a telephone handset. Speech shall be recorded or digitized human, or synthesized. Speech output shall be coordinated with information displayed on the screen.

402.2.4 *User Control.* Speech output for any single function shall be automatically interrupted when a transaction is selected. Speech output shall be capable of being repeated and paused.

402.2.5 *Braille Instructions.* Where speech output is required by 402.2, braille instructions for initiating the speech mode of operation shall be provided. Braille shall be contracted and shall conform to 36 CFR part 1191, Appendix D, Section 703.3.1.

EXCEPTION: Devices for personal use shall not be required to conform to 402.2.5.

402.3 *Volume.* ICT that delivers sound, including speech output required by 402.2, shall provide volume control and output amplification conforming to 402.3.

EXCEPTION: ICT conforming to 412.2 shall not be required to conform to 402.3.

402.3.1 *Private Listening.* Where ICT provides private listening, it shall provide a mode of operation for controlling the volume. Where ICT delivers output by an audio transducer typically held up to the ear, a means for effective magnetic wireless coupling to hearing technologies shall be provided.

402.3.2 *Non-private Listening.* Where ICT provides non-private listening, incremental volume control shall be provided with output amplification up to a level of at least 65 dB. A function shall be provided to automatically reset the volume to the default level after every use.

402.4 *Characters on Display Screens.* At least one mode of characters displayed on the screen shall be in a sans serif font. Where ICT does not provide a screen enlargement feature, characters shall be 3/16 inch (4.8 mm) high minimum based on the uppercase letter "I". Characters shall contrast with their background with either light characters on a dark background or dark characters on a light background.

402.5 *Characters on Variable Message Signs.* Characters on variable message signs shall conform to section 703.7 Variable Message Signs of ICC A117.1–2009 (incorporated by reference, *see* 702.6.1).

403 Biometrics

403.1 *General.* Where provided, biometrics shall not be the only means for user identification or control.

EXCEPTION: Where at least two biometric options that use different biological characteristics are provided, ICT shall be permitted to use biometrics as the only means for user identification or control.

404 Preservation of Information Provided for Accessibility

404.1 *General.* ICT that transmits or converts information or communication shall not remove non-proprietary information provided for accessibility or shall restore it upon delivery.

405 Privacy

405.1 *General.* The same degree of privacy of input and output shall be provided to all individuals. When speech output required by 402.2 is enabled, the screen shall not blank automatically.

406 Standard Connections

406.1 *General.* Where data connections used for input and output are provided, at least one of each type of connection shall conform to industry standard non-proprietary formats.

407 Operable Parts

407.1 *General.* Where provided, operable parts used in the normal operation of ICT shall conform to 407.

407.2 *Contrast.* Where provided, keys and controls shall contrast visually from background surfaces. Characters and symbols shall contrast visually from background surfaces with either light characters or symbols on a dark background or dark characters or symbols on a light background.

407.3 *Input Controls.* At least one input control conforming to 407.3 shall be provided for each function.

EXCEPTION: Devices for personal use with input controls that are audibly discernable without activation and operable by touch shall not be required to conform to 407.3.

407.3.1 *Tactilely Discernible.* Input controls shall be operable by touch and tactilely discernible without activation.

407.3.2 *Alphabetic Keys.* Where provided, individual alphabetic keys shall be arranged in a QWERTY-based keyboard layout and the "F" and "J" keys shall be tactilely distinct from the other keys.

407.3.3 *Numeric Keys.* Where provided, numeric keys shall be arranged in a 12-key ascending or descending keypad layout. The number five key shall be tactilely distinct from the other keys. Where the ICT provides an alphabetic overlay on numeric keys, the relationships between letters and digits shall conform to ITU-T Recommendation E.161 (incorporated by reference, *see* 702.7.1).

407.4 *Key Repeat.* Where a keyboard with key repeat is provided, the delay before the key repeat feature is activated shall be fixed at, or adjustable to, 2 seconds minimum.

407.5 *Timed Response.* Where a timed response is required, the user shall be alerted visually, as well as by touch or sound, and shall be given the opportunity to indicate that more time is needed.

407.6 *Operation.* At least one mode of operation shall be operable with one hand and shall not require tight grasping, pinching, or twisting of the wrist. The force required to activate operable parts shall be 5 pounds (22.2 N) maximum.

407.7 *Tickets, Fare Cards, and Keycards.* Where tickets, fare cards, or keycards are provided, they shall have an orientation that is tactilely discernible if orientation is

important to further use of the ticket, fare card, or keycard.

407.8 *Reach Height and Depth.* At least one of each type of operable part of stationary ICT shall be at a height conforming to 407.8.2 or 407.8.3 according to its position established by the vertical reference plane specified in 407.8.1 for a side reach or a forward reach. Operable parts used with speech output required by 402.2 shall not be the only type of operable part complying with 407.8 unless that part is the only operable part of its type.

407.8.1 Vertical Reference Plane.

Operable parts shall be positioned for a side reach or a forward reach determined with respect to a vertical reference plane. The vertical reference plane shall be located in conformance to 407.8.2 or 407.8.3.

407.8.1.1 *Vertical Plane for Side Reach.* Where a side reach is provided, the vertical reference plane shall be 48 inches (1220 mm) long minimum.

407.8.1.2 *Vertical Plane for Forward Reach.* Where a forward reach is provided, the vertical reference plane shall be 30 inches (760 mm) long minimum.

407.8.2 *Side Reach.* Operable parts of ICT providing a side reach shall conform to 407.8.2.1 or 407.8.2.2. The vertical reference plane shall be centered on the operable part and placed at the leading edge of the maximum protrusion of the ICT within the length of the vertical reference plane. Where a side reach requires a reach over a portion of the ICT, the height of that portion of the ICT shall be 34 inches (865 mm) maximum.

407.8.2.1 *Unobstructed Side Reach.* Where the operable part is located 10 inches (255 mm) or less beyond the vertical reference plane, the operable part shall be 48 inches (1220 mm) high maximum and 15 inches (380 mm) high minimum above the floor.

407.8.2.2 *Obstructed Side Reach.* Where the operable part is located more than 10 inches (255 mm), but not more than 24 inches (610 mm), beyond the vertical reference plane, the height of the operable part shall be 46 inches (1170 mm) high maximum and 15 inches (380 mm) high minimum above the floor. The operable part shall not be located more than 24 inches (610 mm) beyond the vertical reference plane.

407.8.3 *Forward Reach.* Operable parts of ICT providing a forward reach shall conform to 407.8.3.1 or 407.8.3.2. The vertical reference plane shall be centered, and intersect with, the operable part. Where a forward reach allows a reach over a portion of the ICT, the height of that portion of the ICT shall be 34 inches (865 mm) maximum.

407.8.3.1 *Unobstructed Forward Reach.* Where the operable part is located at the leading edge of the maximum protrusion within the length of the vertical reference plane of the ICT, the operable part shall be 48 inches (1220 mm) high maximum and 15 inches (380 mm) high minimum above the floor.

407.8.3.2 *Obstructed Forward Reach.* Where the operable part is located beyond the leading edge of the maximum protrusion within the length of the vertical reference plane, the operable part shall conform to 407.8.3.2. The maximum allowable forward

reach to an operable part shall be 25 inches (635 mm).

407.8.3.2.1 *Operable Part Height for ICT with Obstructed Forward Reach.* The height

of the operable part shall conform to Table 407.8.3.2.1.

TABLE 407.8.3.2.1—OPERABLE PART HEIGHT FOR ICT WITH OBSTRUCTED FORWARD REACH

Reach depth	Operable part height
Less than 20 inches (510 mm)	48 inches (1220 mm) maximum.
20 inches (510 mm) to 25 inches (635 mm)	44 inches (1120 mm) maximum.

407.8.3.2.2 *Knee and Toe Space under ICT with Obstructed Forward Reach.* Knee and toe space under ICT shall be 27 inches (685 mm) high minimum, 25 inches (635 mm) deep maximum, and 30 inches (760 mm) wide minimum and shall be clear of obstructions.

EXCEPTIONS: 1. Toe space shall be permitted to provide a clear height of 9 inches (230 mm) minimum above the floor and a clear depth of 6 inches (150 mm) maximum from the vertical reference plane toward the leading edge of the ICT.

2. At a depth of 6 inches (150 mm) maximum from the vertical reference plane toward the leading edge of the ICT, space between 9 inches (230 mm) and 27 inches (685 mm) minimum above the floor shall be permitted to reduce at a rate of 1 inch (25 mm) in depth for every 6 inches (150 mm) in height.

408 Display Screens

408.1 *General.* Where provided, display screens shall conform to 408.

408.2 *Visibility.* Where stationary ICT provides one or more display screens, at least one of each type of display screen shall be visible from a point located 40 inches (1015 mm) above the floor space where the display screen is viewed.

408.3 *Flashing.* Where ICT emits lights in flashes, there shall be no more than three flashes in any one-second period.

EXCEPTION: Flashes that do not exceed the general flash and red flash thresholds defined in WCAG 2.0 (incorporated by reference, *see* 702.10.1) are not required to conform to 408.3.

409 Status Indicators

409.1 *General.* Where provided, status indicators shall be discernible visually and by touch or sound.

410 Color Coding

410.1 *General.* Where provided, color coding shall not be used as the only means of conveying information, indicating an action, prompting a response, or distinguishing a visual element.

411 Audible Signals

411.1 *General.* Where provided, audible signals or cues shall not be used as the only means of conveying information, indicating an action, or prompting a response.

412 ICT With Two-Way Voice Communication

412.1 *General.* ICT that provides two-way voice communication shall conform to 412.

412.2 *Volume Gain.* ICT that provides two-way voice communication shall conform to 412.2.1 or 412.2.2.

412.2.1 *Volume Gain for Wireline Telephones.* Volume gain conforming to 47 CFR 68.317 shall be provided on analog and digital wireline telephones.

412.2.2 *Volume Gain for Non-Wireline ICT.* A method for increasing volume shall be provided for non-wireline ICT.

412.3 *Interference Reduction and Magnetic Coupling.* Where ICT delivers output by a handset or other type of audio transducer that is typically held up to the ear, ICT shall reduce interference with hearing technologies and provide a means for effective magnetic wireless coupling in conformance with 412.3.1 or 412.3.2.

412.3.1 *Wireless Handsets.* ICT in the form of wireless handsets shall conform to ANSI/IEEE C63.19–2011 (incorporated by reference, *see* 702.5.1).

412.3.2 *Wireline Handsets.* ICT in the form of wireline handsets, including cordless handsets, shall conform to TIA–1083–B (incorporated by reference, *see* 702.9.1).

412.4 *Digital Encoding of Speech.* ICT in IP-based networks shall transmit and receive speech that is digitally encoded in the manner specified by ITU–T Recommendation G.722.2 (incorporated by reference, *see* 702.7.2) or IETF RFC 6716 (incorporated by reference, *see* 702.8.1).

412.5 *Real-Time Text Functionality.* [Reserved].

412.6 *Caller ID.* Where provided, caller identification and similar telecommunications functions shall be visible and audible.

412.7 *Video Communication.* Where ICT provides real-time video functionality, the quality of the video shall be sufficient to support communication using sign language.

413 Closed Caption Processing Technologies

413.1 *General.* Where ICT displays or processes video with synchronized audio, ICT shall provide closed caption processing technology that conforms to 413.1.1 or 413.1.2.

413.1.1 *Decoding and Display of Closed Captions.* Players and displays shall decode closed caption data and support display of captions.

413.1.2 *Pass-Through of Closed Caption Data.* Cabling and ancillary equipment shall pass through caption data.

414 Audio Description Processing Technologies

414.1 *General.* Where ICT displays or processes video with synchronized audio, ICT shall provide audio description processing technology conforming to 414.1.1 or 414.1.2.

414.1.1 *Digital Television Tuners.* Digital television tuners shall provide audio

description processing that conforms to ATSC A/53 Digital Television Standard, Part 5 (2014) (incorporated by reference, *see* 702.2.1). Digital television tuners shall provide processing of audio description when encoded as a Visually Impaired (VI) associated audio service that is provided as a complete program mix containing audio description according to the ATSC A/53 standard.

414.1.2 *Other ICT.* ICT other than digital television tuners shall provide audio description processing.

415 User Controls for Captions and Audio Descriptions

415.1 *General.* Where ICT displays video with synchronized audio, ICT shall provide user controls for closed captions and audio descriptions conforming to 415.1.

EXCEPTION: Devices for personal use shall not be required to conform to 415.1 provided that captions and audio descriptions can be enabled through system-wide platform settings.

415.1.1 *Caption Controls.* Where ICT provides operable parts for volume control, ICT shall also provide operable parts for caption selection.

415.1.2 *Audio Description Controls.* Where ICT provides operable parts for program selection, ICT shall also provide operable parts for the selection of audio description.

Chapter 5: Software

501 General

501.1 *Scope.* The requirements of Chapter 5 shall apply to software where required by 508 Chapter 2 (Scoping Requirements), 255 Chapter 2 (Scoping Requirements), and where otherwise referenced in any other chapter of the Revised 508 Standards or Revised 255 Guidelines.

EXCEPTION: Where Web applications do not have access to platform accessibility services and do not include components that have access to platform accessibility services, they shall not be required to conform to 502 or 503 provided that they conform to Level A and Level AA Success Criteria and Conformance Requirements in WCAG 2.0 (incorporated by reference, *see* 702.10.1).

502 Interoperability With Assistive Technology

502.1 *General.* Software shall interoperate with assistive technology and shall conform to 502.

EXCEPTION: ICT conforming to 402 shall not be required to conform to 502.

502.2 *Documented Accessibility Features.* Software with platform features defined in platform documentation as accessibility features shall conform to 502.2.

502.2.1 User Control of Accessibility Features. Platform software shall provide user control over platform features that are defined in the platform documentation as accessibility features.

502.2.2 No Disruption of Accessibility Features. Software shall not disrupt platform features that are defined in the platform documentation as accessibility features.

502.3 Accessibility Services. Platform software and software tools that are provided by the platform developer shall provide a documented set of accessibility services that support applications running on the platform to interoperate with assistive technology and shall conform to 502.3. Applications that are also platforms shall expose the underlying platform accessibility services or implement other documented accessibility services.

502.3.1 Object Information. The object role, state(s), properties, boundary, name, and description shall be programmatically determinable.

502.3.2 Modification of Object Information. States and properties that can be set by the user shall be capable of being set programmatically, including through assistive technology.

502.3.3 Row, Column, and Headers. If an object is in a data table, the occupied rows and columns, and any headers associated with those rows or columns, shall be programmatically determinable.

502.3.4 Values. Any current value(s), and any set or range of allowable values associated with an object, shall be programmatically determinable.

502.3.5 Modification of Values. Values that can be set by the user shall be capable of being set programmatically, including through assistive technology.

502.3.6 Label Relationships. Any relationship that a component has as a label for another component, or of being labeled by another component, shall be programmatically determinable.

502.3.7 Hierarchical Relationships. Any hierarchical (parent-child) relationship that a component has as a container for, or being contained by, another component shall be programmatically determinable.

502.3.8 Text. The content of text objects, text attributes, and the boundary of text rendered to the screen, shall be programmatically determinable.

502.3.9 Modification of Text. Text that can be set by the user shall be capable of being set programmatically, including through assistive technology.

502.3.10 List of Actions. A list of all actions that can be executed on an object shall be programmatically determinable.

502.3.11 Actions on Objects. Applications shall allow assistive technology to programmatically execute available actions on objects.

502.3.12 Focus Cursor. Applications shall expose information and mechanisms necessary to track focus, text insertion point, and selection attributes of user interface components.

502.3.13 Modification of Focus Cursor. Focus, text insertion point, and selection attributes that can be set by the user shall be capable of being set programmatically, including through the use of assistive technology.

502.3.14 Event Notification. Notification of events relevant to user interactions, including but not limited to, changes in the component's state(s), value, name, description, or boundary, shall be available to assistive technology.

502.4 Platform Accessibility Features. Platforms and platform software shall conform to the requirements in ANSI/HFES 200.2, Human Factors Engineering of Software User Interfaces—Part 2: Accessibility (2008) (incorporated by reference, *see* 702.4.1) listed below:

A. Section 9.3.3 Enable sequential entry of multiple (chorded) keystrokes;

B. Section 9.3.4 Provide adjustment of delay before key acceptance;

C. Section 9.3.5 Provide adjustment of same-key double-strike acceptance;

D. Section 10.6.7 Allow users to choose visual alternative for audio output;

E. Section 10.6.8 Synchronize audio equivalents for visual events;

F. Section 10.6.9 Provide speech output services; and

G. Section 10.7.1 Display any captions provided.

503 Applications

503.1 General. Applications shall conform to 503.

503.2 User Preferences. Applications shall permit user preferences from platform settings for color, contrast, font type, font size, and focus cursor.

EXCEPTION: Applications that are designed to be isolated from their underlying platform software, including Web applications, shall not be required to conform to 503.2.

503.3 Alternative User Interfaces. Where an application provides an alternative user interface that functions as assistive technology, the application shall use platform and other industry standard accessibility services.

503.4 User Controls for Captions and Audio Description. Where ICT displays video with synchronized audio, ICT shall provide user controls for closed captions and audio descriptions conforming to 503.4.

503.4.1 Caption Controls. Where user controls are provided for volume adjustment, ICT shall provide user controls for the selection of captions at the same menu level as the user controls for volume or program selection.

503.4.2 Audio Description Controls. Where user controls are provided for program selection, ICT shall provide user controls for the selection of audio descriptions at the same menu level as the user controls for volume or program selection.

504 Authoring Tools

504.1 General. Where an application is an authoring tool, the application shall conform to 504 to the extent that information required for accessibility is supported by the destination format.

504.2 Content Creation or Editing. Authoring tools shall provide a mode of operation to create or edit content that conforms to Level A and Level AA Success Criteria and Conformance Requirements in WCAG 2.0 (incorporated by reference, *see*

702.10.1) for all supported features and, as applicable, to file formats supported by the authoring tool. Authoring tools shall permit authors the option of overriding information required for accessibility.

EXCEPTION: Authoring tools shall not be required to conform to 504.2 when used to directly edit plain text source code.

504.2.1 Preservation of Information Provided for Accessibility in Format Conversion. Authoring tools shall, when converting content from one format to another or saving content in multiple formats, preserve the information required for accessibility to the extent that the information is supported by the destination format.

504.2.2 PDF Export. Authoring tools capable of exporting PDF files that conform to ISO 32000-1:2008 (PDF 1.7) shall also be capable of exporting PDF files that conform to ANSI/AIIM/ISO 14289-1:2016 (PDF/UA-1) (incorporated by reference, *see* 702.3.1).

504.3 Prompts. Authoring tools shall provide a mode of operation that prompts authors to create content that conforms to Level A and Level AA Success Criteria and Conformance Requirements in WCAG 2.0 (incorporated by reference, *see* 702.10.1) for supported features and, as applicable, to file formats supported by the authoring tool.

504.4 Templates. Where templates are provided, templates allowing content creation that conforms to Level A and Level AA Success Criteria and Conformance Requirements in WCAG 2.0 (incorporated by reference, *see* 702.10.1) shall be provided for a range of template uses for supported features and, as applicable, to file formats supported by the authoring tool.

Chapter 6: Support Documentation and Services

601 General

601.1 Scope. The technical requirements in Chapter 6 shall apply to ICT support documentation and services where required by 508 Chapter 2 (Scoping Requirements), 255 Chapter 2 (Scoping Requirements), and where otherwise referenced in any other chapter of the Revised 508 Standards or Revised 255 Guidelines.

602 Support Documentation

602.1 General. Documentation that supports the use of ICT shall conform to 602.

602.2 Accessibility and Compatibility Features. Documentation shall list and explain how to use the accessibility and compatibility features required by Chapters 4 and 5. Documentation shall include accessibility features that are built-in and accessibility features that provide compatibility with assistive technology.

602.3 Electronic Support Documentation. Documentation in electronic format, including Web-based self-service support, shall conform to Level A and Level AA Success Criteria and Conformance Requirements in WCAG 2.0 (incorporated by reference, *see* 702.10.1).

602.4 Alternate Formats for Non-Electronic Support Documentation. Where support documentation is only provided in non-electronic formats, alternate formats usable by individuals with disabilities shall be provided upon request.

603 Support Services

603.1 *General.* ICT support services including, but not limited to, help desks, call centers, training services, and automated self-service technical support, shall conform to 603.

603.2 *Information on Accessibility and Compatibility Features.* ICT support services shall include information on the accessibility and compatibility features required by 602.2.

603.3 *Accommodation of Communication Needs.* Support services shall be provided directly to the user or through a referral to a point of contact. Such ICT support services shall accommodate the communication needs of individuals with disabilities.

Chapter 7: Referenced Standards

701 General

701.1 *Scope.* The standards referenced in Chapter 7 shall apply to ICT where required by 508 Chapter 2 (Scoping Requirements), 255 Chapter 2 (Scoping Requirements), and where referenced in any other chapter of the Revised 508 Standards or Revised 255 Guidelines.

702 Incorporation by Reference

702.1 *Approved IBR Standards.* The Director of the Office of the Federal Register has approved these standards for incorporation by reference into this part in accordance with 5 U.S.C. 552(a) and 1 CFR part 51. Copies of the referenced standards may be inspected at the U.S. Access Board, 1331 F Street, NW., Suite 1000, Washington, DC 20004, (202) 272-0080, and may also be obtained from the sources listed below. They are also available for inspection at the National Archives and Records Administration (NARA). For information on the availability of this material at NARA, call 202-741-6030 or go to http://www.archives.gov/federal_register/code_of_federal_regulations/ibr_locations.html.

702.2 *Advanced Television Systems Committee (ATSC).* Copies of the referenced standard may be obtained from the Advanced Television Systems Committee, 1776 K Street NW., Suite 200, Washington, DC 20006-2304 (<http://www.atsc.org>).

702.2.1 *ATSC A/53 Part 5:2014, Digital Television Standard, Part 5—AC-3 Audio System Characteristics*, August 28, 2014, IBR approved for Appendix C, Section 414.1.1.

702.3 *Association for Information and Image Management (AIIM).* Copies of the referenced standard may be obtained from AIIM, 1100 Wayne Ave., Ste. 1100, Silver Spring, Maryland 20910 (http://www.aiim.org/Resources/Standards/AIIM_ISO_14289-1).

702.3.1 *ANSI/AIIM/ISO 14289-1-2016, Document Management Applications—Electronic Document File Format Enhancement for Accessibility—Part 1: Use of ISO 32000-1 (PDF/UA-1)*, ANSI-approved February 8, 2016, IBR approved for Appendix C, Section 504.2.2.

702.4 *Human Factors and Ergonomics Society (HFES).* Copies of the referenced standard may be obtained from the Human Factors and Ergonomics Society, P.O. Box 1369, Santa Monica, CA 90406-1369 (<http://www.hfes.org/Publications/ProductDetail.aspx?Id=76>).

702.4.1 *ANSI/HFES 200.2, Human Factors Engineering of Software User Interfaces—Part 2: Accessibility*, copyright 2008, IBR approved for Appendix C, Section 502.4.

702.5 *Institute of Electrical and Electronics Engineers (IEEE).* Copies of the referenced standard may be obtained from the Institute of Electrical and Electronics Engineers, 10662 Los Vaqueros Circle, P.O. Box 3014, Los Alamitos, CA 90720-1264 (<http://www.ieee.org>).

702.5.1 *ANSI/IEEE C63.19-2011, American National Standard for Methods of Measurement of Compatibility between Wireless Communications Devices and Hearing Aids*, May 27, 2011, IBR approved for Appendix C, Section 412.3.1.

702.6 *International Code Council (ICC).* Copies of the referenced standard may be obtained from ICC Publications, 4051 W. Flossmoor Road, Country Club Hills, IL 60478-5795 (<http://www.iccsafe.org>).

702.6.1 *ICC A117.1-2009, Accessible and Usable Buildings and Facilities*, approved October 20, 2010, IBR approved for Appendix C, Section 402.5.

702.7 *International Telecommunications Union Telecommunications Standardization Sector (ITU-T).* Copies of the referenced standards may be obtained from the International Telecommunication Union, Telecommunications Standardization Sector, Place des Nations CH-1211, Geneva 20, Switzerland (<http://www.itu.int/en/ITU-T>).

702.7.1 *ITU-T Recommendation E.161, Series E. Overall Network Operation, Telephone Service, Service Operation and Human Factors—International operation—Numbering plan of the international telephone service, Arrangement of digits, letters and symbols on telephones and other devices that can be used for gaining access to a telephone network*, February 2001, IBR approved for Appendix C, Section 407.3.3.

702.7.2 *ITU-T Recommendation G.722.2, Series G. Transmission Systems and Media, Digital Systems and Networks—Digital terminal equipment—Coding of analogue signals by methods other than PCM, Wideband coding of speech at around 16 kbit/s using Adaptive Multi-Rate Wideband (AMR-WB)*, July 2003, IBR approved for Appendix C, Section 412.4.

702.8 *Internet Engineering Task Force (IETF).* Copies of the referenced standard may be obtained from the Internet Engineering Task Force (<http://www.ietf.org>).

702.8.1 *IETF RFC 6716, Definition of the Opus Codec*, September 2012, J.M. Valin, Mozilla Corporation, K. Vos, Skype Technologies S.A., T. Terriberry, Mozilla Corporation, IBR approved for Appendix C, Section 412.4.

702.9 *Telecommunications Industry Association (TIA).* Copies of the referenced standard, published by the Telecommunications Industry Association, may be obtained from IHS Markit, 15 Inverness Way East, Englewood, CO 80112 (<http://global.ihs.com>).

702.9.1 *TIA-1083-B, Telecommunications—Communications Products—Handset Magnetic Measurement Procedures and Performance Requirements*, October 2015, IBR approved for Appendix C, Section 412.3.2.

702.10 *Worldwide Web Consortium (W3C).* Copies of the referenced standard may be obtained from the W3C Web Accessibility Initiative, Massachusetts Institute of Technology, 32 Vassar Street, Room 32-G515, Cambridge, MA 02139 (<http://www.w3.org/TR/WCAG20>).

702.10.1 *WCAG 2.0, Web Content Accessibility Guidelines, W3C Recommendation*, December 11, 2008, IBR approved for: Appendix A (Section 508 of the Rehabilitation Act: Application and Scoping Requirements), Sections E205.4, E205.4 Exception, E205.4.1, E207.2, E207.2 Exception 2, E207.2 Exception 3, E207.2.1, E207.3; Appendix B (Section 255 of the Communications Act: Application and Scoping Requirements), C203.1, C203.1 Exception, C203.1.1, C205.2, C205.2 Exception 2, C205.2 Exception 3, C205.2.1, C205.3; and Appendix C (Functional Performance Criteria and Technical Requirements), 408.3 Exception, 501.1 Exception, 504.2, 504.3, 504.4, and 602.3.

Part V

Social Security Administration

20 CFR Parts 404 and 416

Revisions to Rules Regarding the Evaluation of Medical Evidence; Final Rule

SOCIAL SECURITY ADMINISTRATION**20 CFR Parts 404 and 416****[Docket No. SSA–2012–0035]****RIN 0960–AH51****Revisions to Rules Regarding the Evaluation of Medical Evidence****AGENCY:** Social Security Administration.
ACTION: Final rules.

SUMMARY: We are revising our medical evidence rules. The revisions include redefining several key terms related to evidence, revising our rules about acceptable medical sources (AMS), revising how we consider and articulate our consideration of medical opinions and prior administrative medical findings, revising our rules about medical consultants (MC) and psychological consultants (PC), revising our rules about treating sources, and reorganizing our evidence regulations for ease of use. These revisions conform our rules to the requirements of the Bipartisan Budget Act of 2015 (BBA), reflect changes in the national healthcare workforce and in the manner that individuals receive medical care, and emphasize the need for objective medical evidence in disability and blindness claims. We expect that these changes will simplify our rules to make them easier to understand and apply, and allow us to continue to make accurate and consistent disability determinations and decisions.

DATES: These final rules are effective on March 27, 2017.

FOR FURTHER INFORMATION CONTACT: Dan O'Brien, Office of Disability Policy, Social Security Administration, 6401 Security Boulevard, Baltimore, Maryland 21235–6401, (410) 597–1632. For information on eligibility or filing for benefits, call our national toll-free number, 1–800–772–1213, or TTY 1–800–325–0778, or visit our Internet site, Social Security Online, at www.socialsecurity.gov.

SUPPLEMENTARY INFORMATION:**Background**

We are revising and making final the rules regarding the evaluation of medical evidence that we proposed in a notice of proposed rulemaking (NPRM) published in the **Federal Register** on September 9, 2016 (81 FR 62560). In the preamble to the NPRM, we discussed the revisions we proposed and the bases for the proposals. To the extent that we are adopting those revisions as we proposed them, we are not repeating that information here. Interested readers may refer to the preamble to the NPRM,

available at <http://www.regulations.gov> by searching for document number SSA–2012–0035–0001.

To help clarify which regulation sections we refer to in this preamble, we refer to the regulation sections in effect on the date of publication as the “current” regulation sections. We refer to the regulation sections that we proposed as the “proposed” regulation sections. We refer to the regulation sections that will be in effect as of the effective date of these final rules as the “final” regulation sections. The current, proposed, and final regulation sections refer to regulation sections in Title 20 of the Code of Federal Regulations.

Based on our adjudicative experience, legal precedents,¹ recommendations from the Administrative Conference of the United States (ACUS), and public comments we received on the NPRM, we are revising our rules to ensure that they reflect modern healthcare delivery and are easier to understand and use. We expect that these changes will help us continue to ensure a high level of accuracy in our determinations and decisions. We also are revising related rules about who can be an MC and a PC in conformity with requirements in the BBA.

The following list summarizes the differences in these final rules from what we proposed in the NPRM:

1. We revised the definitions of “signs” and “laboratory findings” to clarify that “one or more” signs, “one or more” laboratory findings, or both constitute objective medical evidence in final 404.1502 and 416.902.

2. We revised the proposed regulatory text for AMS optometrists in final 404.1502 and 416.902 to refer to the scope of practice in the State in which the optometrist practices.

3. We revised the proposed regulatory text for AMS audiologists in final 404.1502 and 416.902 to state that licensed audiologists are AMSs for impairments of hearing loss, auditory processing disorders, and balance disorders within the licensed scope of practice only.

4. We recognized physician assistants as AMSs for claims filed on or after March 27, 2017, in final 404.1502 and 416.902.

5. We revised the title and definition of the category of “evidence from nonmedical sources” in final 404.1513

and 416.913. We changed the title from “statements from nonmedical sources” as proposed to “evidence from nonmedical sources” for clarity. We revised the definition for brevity and to explain that we may receive evidence from nonmedical sources either directly from the nonmedical source or indirectly, such as from forms and our administrative records.

6. We clarified that a statement(s) about whether or not an individual has a severe impairment(s) is a statement on an issue reserved to the Commissioner in final 404.1520b(c)(3) and 416.920b(c)(3).

7. We revised final 404.1520c(a)–(b) and 416.920c(a)–(b) to clarify that, while we consider all evidence we receive, we have specific articulation requirements about how we consider medical opinions and prior administrative medical findings.

8. For claims filed on or after March 27, 2017, we are revising our rules to state that our adjudicators will articulate how they consider medical opinions from all medical sources, regardless of whether or not the medical source is an AMS, in final 404.1520c and 416.920c.

9. We revised the factors for considering medical opinions and prior administrative medical findings in final 404.1520c and 416.920c to both emphasize that there is not an inherent persuasiveness to evidence from MCs, PCs, or CE sources over an individual's own medical source(s), and vice versa, and to highlight that we continue to consider a medical source's longstanding treatment relationship with the individual.

10. We added regulatory text in final 404.1520c(d) and 416.920c(d) for claims filed on or after March 27, 2017, that there is no requirement to articulate how we considered evidence from nonmedical sources about an individual's functional abilities and limitations using the rules for considering and articulating our consideration of medical opinions found in final 404.1520c and 416.920c.

11. We clarified the section headings and introductory text in final 404.1520c, 404.1527, 416.920c, and 416.927 about the implementation process.

12. We added regulatory text in final 404.1527(f) and 416.927(f) for claims filed before March 27, 2017, about how we consider and articulate our consideration of opinions from medical sources who are not AMSs, and from nonmedical sources. We are adding our current policies found in SSR 06–03p, which explains how we consider and when we articulate our consideration of opinions from medical sources who are not AMSs and from nonmedical sources

¹ As we explained in the preamble to our NPRM, courts in most circuits typically remand claims to us for further adjudication when they find we erred by not giving controlling weight to treating source opinions; however, the Ninth Circuit uses a “credit-as-true” rule, which sometimes results in it ordering us to award benefits instead of remanding cases. 81 FR 62560, 62573.

under our current rules, into the final rules for these claims.

13. We revised the criteria for which audiologists may perform audiometric testing in sections 2.00B and 102.00B of the Listings² to be consistent with our revision to recognize licensed audiologists as AMSs. We now state that audiometric testing must be performed by, or under the direct supervision of, a licensed audiologist or otolaryngologist.

14. We did not adopt our proposal to recognize independently practicing psychologists with master's-level education as qualified to be PCs. Instead, we will continue to follow our current policies about who is qualified to be a PC, which generally require a doctorate-level education degree, in final 404.1616 and 416.1016.

15. We made a number of nonsubstantive revisions relating to the revisions listed above, as part of our effort to reorganize our regulations for ease of use, to use consistent terminology throughout our rules, to reflect revisions to regulatory text made by other rules since publication of the NPRM, and for clarity.

Because of these revisions, these final rules retain only two programmatic distinctions between AMSs and medical sources who are not AMSs in our regulations for claims filed on or after March 27, 2017. First, we need objective medical evidence from an AMS to establish the existence of a medically determinable impairment(s) at step 2 of the sequential evaluation process.³ Second, in a few instances, we need specific evidence from an AMS to establish that an individual's impairment meets a Listing.⁴

Effect on Certain Social Security Rulings (SSR)

We will also rescind the following SSRs that are otherwise inconsistent with or duplicative of these final rules:

- SSR 96–2p: Titles II and XVI: Giving Controlling Weight to Treating Source Medical Opinions.⁵
- SSR 96–5p: Titles II and XVI: Medical Source Opinions on Issues Reserved to the Commissioner.⁶
- SSR 96–6p: Titles II and XVI: Consideration of Administrative Findings of Fact by State Agency Medical and Psychological Consultants and Other Program Physicians and Psychologists at the Administrative Law

Judge and Appeals Council Levels of Administrative Review; Medical Equivalence.⁷

- SSR 06–03p: Titles II and XVI: Considering Opinions and Other Evidence from Sources Who Are Not “Acceptable Medical Sources” in Disability Claims; Considering Decisions on Disability by Other Governmental and Nongovernmental Agencies.⁸

In addition, because we will rescind SSR 96–6p, we will publish a new SSR that will discuss certain aspects of how administrative law judges (ALJ) and the Appeals Council (AC) must obtain evidence sufficient to make a finding of medical equivalence.

Public Comments

We received 383 comments on the NPRM, which are available for public viewing at <http://www.regulations.gov>. These comments were from:

- Individual citizens and claimant representatives;
 - Members of Congress;
 - Various professional organizations, such as the American Speech-Language Hearing Association (ASHA), American Psychological Association Practice Organization, American Academy of Family Physicians, American Academy of Pediatrics, American Optometric Association, and the American Association for Justice;
 - National groups representing claimant representatives, such as the National Organization of Social Security Claimants' Representatives, the National Coalition of Social Security and SSI Advocates, and the National Association of Disability Representatives;
 - Advocacy groups, such as the Consortium for Citizens with Disabilities, The Arc, the Community Legal Services of Philadelphia, and the North Carolina Coalition to End Homelessness; and
 - Organizations representing our employees and employees of State agencies, such as the National Council of Disability Determination Directors, National Association of Disability Examiners, and the Association of Administrative Law Judges.
- While we received several public comments in support of our proposed rules, we received many public comments that opposed our proposed revisions and that suggested alternative solutions to the policy changes we proposed. Among the most common concerns that the public comments raised were that:
- We should recognize additional medical sources as AMSs;

- The NPRM appeared to favor evidence from MCs, PCs, and consultative examination (CE) providers over evidence from an individual's own medical sources;

- We should continue to value or emphasize the individual's relationship with a treating source, including giving controlling weight to the medical source statements of treating sources in certain situations; and

- We should provide written analysis about medical opinions from all of an individual's own medical sources, regardless of whether the medical source is an AMS.

We carefully considered the comments. We strive to have clear and fair rules because our adjudicative process is non-adversarial.⁹ To help maintain the fairness of our rules and our administrative review process, we have made several revisions in these final rules.

We discuss below the significant comments we received. Because some of the comments were long, we have condensed, summarized, and paraphrased them. We have tried to summarize the commenters' views accurately, and to respond to the significant issues raised by the commenters that were within the scope of the NPRM.

Sections 404.1502 and 416.902—Definitions for This Subpart

Comment: We received several comments about our proposal to recognize Advanced Practice Registered Nurses (APRN) as acceptable medical sources (AMS). While most of these commenters supported our proposal, a few commenters said that APRN qualifications were not equivalent to those of physicians, who are AMSs. Another commenter asked us to specify in the regulatory text that APRNs include Nurse Practitioners (NP) to reduce confusion.

Response: We agree with the comments that supported our proposal to recognize APRNs as AMSs for purposes of our programs. Although APRNs are not physicians, including APRNs as AMSs reflects the modern primary healthcare delivery system, including how healthcare is delivered in many rural areas.¹⁰ In addition, the Institute of Medicine recommended Federal agencies recognize the advanced level of care provided by APRNs.¹¹

⁹ Current 404.900(b) and 416.1400(b).

⁷ 61 FR 34466 (July 2, 1996).

Furthermore, State licensure requirements for APRNs are rigorous. To receive APRN licensure, all States require these medical sources to be registered nurses and to have earned advanced nursing educational degrees. In addition, nearly all States require APRNs to obtain and maintain national certification by a standard advanced nursing credentialing agency,¹² and this certification requires extensive education and training.¹³ Despite minor variability in names and licensure requirements, a growing number of States are adopting the Consensus Model for APRN Regulation from the American Association of Nurse Practitioners, which defines the standards for licensure, accreditation, certification, education, and practice.¹⁴

While we appreciate the suggestion to specify in our rules that APRNs include NPs, we did not adopt it. As we stated in the preamble to the NPRM,¹⁵ APRNs include four types of medical sources: Certified Nurse Midwife, NP, Certified Registered Nurse Anesthetist, and Clinical Nurse Specialist. Although the majority of States use the APRN title, a minority of States use other similar titles, such as Advanced Practice Nurse and Advanced Registered Nurse Practitioner. We will maintain a current list of State-specific AMS titles in our subregulatory instructions to help our adjudicators identify the appropriate titles for APRNs.

Comment: Several commenters supported our proposal to include

audiologists as AMSs. One commenter also supported the addition of audiologists as providers who could perform the otologic examination in order to establish the medically determinable impairment that causes hearing loss. Another commenter asked us to recognize that audiologists' scope of practice includes impairments of balance disturbance.

Response: We agree with these commenters. We included audiologists as AMSs and allow use of licensed audiologist-performed otologic examinations under Listings 2.00 and 102.00 in these final rules.

We also revised the final regulatory text to recognize that audiologists' scope of practice generally includes evaluation, examination, and treatment of certain balance impairments that result from the audio-vestibular system. However, some impairments involving balance involve several different body systems that are outside the scope of practice for audiologists, such as those involving muscles, bones, joints, vision, nerves, heart, and blood vessels. Therefore, we revised final 404.1502 and 416.902 to state that licensed audiologists are AMSs for impairments of hearing loss, auditory processing disorders, and balance disorders within the licensed scope of practice only.

Comment: Two commenters asked us to recognize audiologists as AMSs if they did not have State licensure but did have certification from the American Board of Audiology (ABA) or a Certificate of Clinical Competence in Audiology (CCC-A) from ASHA.

Response: We did not accept this comment because our existing practice has been to rely on State professional education and licensure requirements that are largely consistent with each other when we have expanded the AMS list.¹⁶ While we appreciate the background provided by the commenter, we do not find it contained persuasive rationale about why we should be able to use evidence from these unlicensed sources to help establish the existence of hearing loss, auditory processing disorders, or balance disorders. Moreover, an audiologist without a valid State license will not qualify as a medical source under final sections 404.1502(d) and 416.902(i).

Comment: The American Optometric Association suggested that we modify our AMS definition of optometrists to refer to the scope of practice as authorized by State licensure. By simply

stating that doctors of optometry can serve as an AMS according to their State's scope of practice laws, we would not need to go through the rulemaking process to change our regulations if a State chooses to change its scope of practice laws in the future.

Response: We agree with this comment, and we revised the final regulatory text about optometrists as AMSs. Specifically, we revised the proposed regulatory text for AMS optometrists in final 404.1502 and 416.902 to read, "Licensed optometrist for impairments of visual disorders, or measurement of visual acuity and visual fields only, depending on the scope of practice in the State in which the optometrist practices."

Comment: We received comments from several commenters, including the American Association of Physician Assistants, recommending that we add physician assistants (PA) to the AMS list. These commenters supported this recommendation by stating that PAs receive extensive medical education (approximately 27 months), have at least 2,000 hours of supervised clinical practice, are recognized as primary care providers, and must pass the Physician Assistant National Certifying Examination (PANCE).

Response: We are adopting this comment and recognizing PAs as AMSs. We agree that health care delivery continues to change and that PAs have an important and growing role as primary and specialty health care providers in many different health care settings. We agree that PAs receive extensive medical education, clinical experience, and pass the rigorous PANCE. Almost all States now require PAs to have at least a masters-level education, with the master's education level set to become the universal requirement in the near future.¹⁷

Consistent with our implementation process discussed more fully in the NPRM and below, we will recognize PAs as AMSs for claims filed on or after March 27, 2017, as we are doing for APRNs and audiologists.

Comment: We received many other public comments on the criteria we should use to add AMSs and whether we should add other medical sources, such as licensed clinical social workers (LCSW), to the AMS list. Most of these commenters supported recognizing LCSWs as AMSs, and they suggested we also add a wide variety of other medical sources and nonmedical sources,

the Institute of Medicine; Institute of Medicine: The Future of Nursing: Leading Change, Advancing Health (2011), available at <http://www.nationalacademies.org/hmd/Reports/2010/The-Future-of-Nursing-Leading-Change-Advancing-Health/Report-Brief-Scope-of-Practice.aspx>.

including licensed marriage and family therapists (LMFT), registered nurses (RN), licensed professional counselors (LPC), physical therapists (PT), chiropractors, and even healthcare professionals without medical licensure.

Response: We value these comments, and we will continue to monitor licensure requirements for the medical sources the commenters suggested that we add. At this time, however, we have decided to add only APRNs, audiologists, and PAs as AMSs. Upon investigation of licensing requirements for other medical sources, we did not find a similar level of consistency or rigor in terms of education, training, certification, and scope of practice.

Many of the comments that asked us to expand the AMS list to these additional medical sources said we should recognize these medical sources as AMSs so we could begin to consider their evidence in our adjudicative process. However, as we stated in the NPRM, we currently receive from all medical sources regardless of AMS status. However, as we noted above, we need objective medical evidence from an AMS to establish that an individual has a medically determinable impairment, as required by the Social Security Act (Act).

Additionally, many comments focused upon the prevalence of these sources in the healthcare system, particularly for individuals who have mental impairments, are poor, or are experiencing homelessness. Comments that did address licensing requirements, training, and education for these medical sources did not demonstrate that they have sufficiently consistent and rigorous national licensing requirements for education, training, certification, and scope of practice that is equivalent to the current and final list of AMSs.

For RNs, licensure typically can be obtained with education at or below the bachelor's degree level.¹⁸ This is contrast to the current and new AMSs, for whom more rigorous education, training, and credentialing requirements are necessary.

For LCSWs, LPCs, LMFTs, PTs, and chiropractors, States significantly vary on titles, the required hours of experience for licensure, and the scope of practice, such as clinical and non-clinical practice. Our current and new

AMSs have licensure requirements that are more nationally consistent, which is essential for us to administer a national disability program.¹⁹

As to the comments that asked us to recognize nonmedical sources as AMSs, our rules require an AMS to be a "medical source" as defined in 404.1502 and 416.902. Therefore, we did not adopt those suggestions.

Although we will not recognize the additional suggested medical sources as AMSs at this time, we will continue to consider evidence from these medical sources under these final rules when we evaluate the severity of an individual's impairment(s) and its effect on the individual.

Comment: One commenter agreed with our proposed definition of "medical source" in proposed 404.1502 and 416.902. The commenter said including licensure and certification requirements as specified by State or Federal law would help to ensure that medical sources who provide evidence to us are qualified and practicing lawfully. Another commenter asked us to recognize an entire medical practice as a medical source instead of its individual providers because some individuals receive treatment from multiple medical sources employed by the same medical practice.

Response: We agree with the first comment, and we are adopting our proposed definition of "medical source" in these final rules. However, we did not adopt the second comment because a medical source is an individual, not an entity, under our current rules.²⁰ Although we request evidence from medical practices, an entire practice itself is not capable of evaluating, examining, or treating an individual's impairments. A medical practice would not be able to perform a consultative examination at our request, or provide a medical opinion about an individual's functional abilities or limitations. Ultimately, individual medical practitioners and not their employing entities perform these functions. For these reasons, we did not adopt the recommendation to recognize an entire medical practice as a medical source.

Comment: Several commenters opposed our proposal to remove the term "treating source" from our regulations. One commenter opposed our proposal to recognize all of the medical sources that an individual identifies as his or her medical source instead of using the term "treating

source" for AMSs as defined in our current rules.

Response: While we acknowledge the importance of the relationship between an individual and his or her own medical sources, we are adopting our proposed regulatory text in these final rules. As part of our revisions to align our rules with how individuals now receive healthcare, it is appropriate to remove the distinction between a "treating source"—who must be an AMS—and the other medical sources from whom an individual may choose to receive evaluation, examination, or treatment. This will allow us to select an individual's own medical source, regardless of AMS status, to be a preferred source to conduct a consultative examination (CE) if the medical source meets our other requirements for CE sources in final 404.1519h and 416.919h.

Comment: One commenter requested that we specify that licensed mental health care providers who are working within the scope of practice permitted by law are a type of healthcare worker, and therefore a medical source. Another commenter was concerned that the proposed regulatory definition of nonmedical source would cause confusion when a licensed mental healthcare provider works at a homeless shelter or social service agency instead of a medical practice.

Response: We agree that the definition of medical source includes licensed mental health care providers working within the scope of practice permitted by law. The definition of medical source in final 404.1502 and 416.902 is sufficiently broad to include licensed mental health care providers without the need to amend the regulatory definition. We do not consider the employer of a source to determine whether a source is a medical source. Instead, we look to whether the source meets the definition of a medical source. Part of our final definition of a "medical source" is that the source is working within the licensed scope of his or her practice. Therefore, when an individual is licensed as a healthcare worker by a State and is working within the scope of his or her practice under State or Federal law, we will consider the source to be a medical source.

Comment: Some commenters raised concern about the language in proposed sections 404.1502 and 416.902 that define "objective medical evidence" as "signs, laboratory findings, or both." The commenters indicated that the proposed language appeared to state a new requirement that would make it "extremely difficult" to establish the existence of mental impairments and

¹⁸ See Bureau of Labor Statistics Occupational Outlook Handbook: "Registered Nurses", available at <http://www.bls.gov/ooh/Healthcare/Registered-nurses.htm>, and American Nurses Association, available at <http://www.nursingworld.org/EssentiallyForYou/What-is-Nursing/Tools-You-Need/RegisteredNurseLicensing.html>.

¹⁹ For example, all physicians, optometrists, and podiatrists have doctorate degrees.

²⁰ See, for example, current 404.1513(d) and 416.913(d).

impairments related to migraine headaches. The commenters suggested that we also consider a person's diagnosis, statement of symptoms, and medical source opinions to establish the existence of an impairment. One commenter thought the exclusion of symptoms from "objective medical evidence" conflicted with our recent final rules "Revised Medical Criteria for Evaluating Mental Disorders."²¹ Those final rules include references to symptoms of mental impairments in the introductory text and criteria of the mental disorders listings.

Response: We understand the commenter's concerns that we should not disadvantage individuals with mental and headache-related impairments, and these clarifications of our current policy will not change how we establish these medically determinable impairments.

The proposed definition of objective medical evidence in proposed 404.1502(f) and 416.902(k) is consistent with our current rules. We currently define objective medical evidence as signs *and* laboratory findings.²² To clarify our current policy, we redefine objective medical evidence as signs, laboratory findings, or both to make clear that signs alone *or* laboratory findings alone are objective medical evidence.

Our current rules require objective medical evidence consisting of signs or laboratory findings to establish impairments, including mental and headache-related impairments.²³ Current 404.1508 and 416.908 states that "[a] physical or mental impairment must be established by medical evidence consisting of signs, symptoms, and laboratory findings, not only by your statement of symptoms." Thus, even under our current rules, mental and headache-related impairments must be established by objective medical evidence. These final rules merely clarify this current policy.

Another current policy that we are clarifying in the definition of "signs" in these final rules is that one or more medically demonstrable phenomena that indicate specific psychological abnormalities that can be observed, apart from your statements, such as abnormalities of behavior, mood, thought, memory, orientation, development, or perception, can be "signs" that establish a medically

determinable impairment. Additionally, psychological test results are laboratory findings that may establish medically determinable cognitive impairments.

Once we establish the existence of an impairment, we use evidence from all sources to determine the severity of the impairment and make the appropriate findings in the sequential evaluation process, such as whether an impairment meets the criteria of a Listing. This includes statements of symptoms, diagnoses, prognoses, and medical opinions.

Our recent final rules "Revised Medical Criteria for Evaluating Mental Disorders" discuss an individual's symptoms in the context of our assessments of the *severity* of a mental impairment and whether the mental impairment satisfies the listing criteria. However, we make these assessments *after* we determine that objective medical evidence establishes the existence of the mental impairment. Under our current rules, the proposed rules, and these final rules, an individual's statement of his or her symptoms cannot establish the existence of an impairment.

Sections 404.1504 and 416.904—Decisions by Other Governmental Agencies and Nongovernmental Entities

Comment: While a few commenters agreed with our proposal not to provide analysis about decisions by other governmental agencies and nongovernmental entities in our decisions and determinations, other commenters disagreed that those decisions are inherently neither valuable nor persuasive. Some commenters stated these decisions are important evidence that we should always discuss because the rules or purposes of other disability programs are similar to our programs, while other commenters said we should discuss the decisions because they may be more or less probative to our decisionmaking due to the different standards used. Some commenters suggested we provide additional training to our adjudicators about the standards used by other governmental agencies and nongovernmental entities. Other commenters asserted that the Department of Veterans Affairs (VA) 100% disability ratings and Individual Unemployability (IU) ratings are highly probative to our decisionmaking by pointing to our own research showing veterans are substantially more likely to be found disabled than the general population of applicants. A few commenters said we should adopt a VA 100% disability rating or have a rebuttable presumption that someone

with a VA disability rating is entitled to disability under the Act.

Response: While we acknowledge the commenters' concerns, we are adopting our proposal in these final rules.

As we stated in the notice of proposed rulemaking (NPRM), there are four reasons why we are not requiring our adjudicators to explain their consideration of these decisions—(1) the Act's purpose and specific eligibility requirements for disability and blindness differ significantly from the purpose and eligibility requirements of other programs; (2) the other agency or entity's decision may not be in the record or may not include any explanation of how the decision was made, or what standards applied in making the decision; (3) our adjudicators generally do not have a detailed understanding of the rules other agencies or entities apply to make their decisions; and (4) over time Federal courts have interpreted and applied our rules and Social Security Ruling (SSR) 06-03p differently in different jurisdictions.²⁴

Although we are not requiring adjudicators to provide written analysis about how they consider the decisions from other governmental agencies and nongovernmental entities, we do agree with the commenters that underlying evidence that other governmental agencies and nongovernmental entities use to support their decisions may be probative of whether an individual is disabled or blind under the Act. In sections 404.1504 and 416.904 of the proposed rules, we provided that we would consider in our determination or decision the relevant supporting evidence underlying the other governmental agency or nongovernmental entity's decision that we receive as evidence in a claim. We clarify in final 404.1504 and 416.904 that we will consider all of the supporting evidence underlying the decision from another government agency or nongovernmental entity decision that we receive as evidence in accordance with final 404.1513(a)(1)–(4) and 416.913(a)(1)–(4).

We are not adopting the suggestion that we should train our adjudicators on the various standards of other governmental agencies and nongovernmental entities that make disability or blindness decisions. Even with increased training, the actual decision reached under different standards is inherently neither valuable nor persuasive to determine whether an individual is disabled or blind under the requirements in the Act, for the

²¹ 81 FR 66137 (Sept. 26, 2016).

²² Current 404.1512(b)(1)(i) and 416.912(b)(1)(i), as defined in current 404.1528(b)–(c) and 416.928(b)–(c).

²³ See current 404.1508 and 416.908, as published on August 20, 1980 at 45 FR 55584, pp. 55586 and 55623.

²⁴ 81 FR at 62564–65.

reasons we discussed in the preamble to the NPRM.²⁵

Furthermore, while we did not rely on the research cited in a few comments to propose these rules, upon review of that research,²⁶ we disagree with the commenters' summary of it. Specifically, our researchers studied the interaction of our rules and the VA's disability standards, focusing upon VA 100% disability ratings and IU ratings. They concluded VA and SSA disability programs serve different purposes for populations that overlap. While individuals with a VA rating of 100% or IU have a slightly higher allowance rate under our programs than members of the general population, nearly one-third are denied benefits based on our rules for evaluating medical (or medical-vocational) considerations. This data also supports our conclusion that these ratings alone are neither inherently valuable nor persuasive in our disability evaluation because they give us little substantive information to consider. Fortunately, the VA and the Department of Defense (DoD) share medical records electronically with us, and our adjudicators obtain the medical evidence documenting DoD and VA treatment and evaluations to evaluate these claims.

Comment: Two commenters asked whether individuals and their representatives would need to submit evidence of a disability, blindness, or employability decision by another governmental agency or nongovernmental entity to us because our rules would state these decisions are inherently neither valuable nor persuasive to us.

Response: We appreciate the opportunity to clarify this matter. Under current and final 404.1512(a) and 416.912(a), an individual must inform us about or submit all evidence known to him or her that relates to whether or not he or she is blind or disabled. Similarly, under current 404.1740(b)(1) and 416.1540(b)(1), an appointed representative must act with reasonable promptness to help obtain the information or evidence that the individual must submit under our regulations, and forward the information or evidence to us for consideration as soon as practicable. A disability, blindness, or employability

decision by another government agency or nongovernmental entity may not relate to whether or not an individual is blind or disabled under our rules.

Nevertheless, as explained above, our adjudicators will consider the relevant supporting evidence underlying the other governmental agency or nongovernmental entity's decision. When an individual informs us about another government agency's or nongovernmental entity's decision, we will identify and consider, or will assist in developing, the supporting evidence that the other agency or entity used to make its decision. We may also use that evidence to expedite processing of claims for Wounded Warriors and for veterans with a 100% disability compensation rating, as we do under our current procedures.²⁷

Sections 404.1512 and 416.912—Responsibility for Evidence

Comment: We received one comment about the regulatory text in proposed 404.1512(a)(2) and 416.912(a)(2). The commenter asked us to revise this rule to require our adjudicators to develop evidence from the time before an individual's date last insured²⁸ through the date of our determination or decision, even when this date last insured occurs many years earlier. The commenter also suggested that proposed 404.1512(a)(2) and 416.912(a)(2) could be inconsistent with the Act's requirement in 42 U.S.C. 423(d)(5)(A) that an individual has the burden to provide us with evidence sufficient to determine that he or she is under a disability.

Response: We did not adopt this comment because the regulatory text in proposed 404.1512(a)(2) and 416.912(a)(2) is identical to the current text in 404.1513(e) and 416.913(e). We proposed this language verbatim for proposed 404.1512(a)(2) and 416.912(a)(2) as part of our effort to reorganize our rules. We did not propose any substantive revision. An individual does have the burden to prove he or she is disabled, and this regulatory text is consistent with that requirement of the Act. Our current

policies about how to develop a claim with a date last insured in the past are found in our subregulatory instructions.²⁹

Comment: A few commenters asked us increase the 10 to 20 calendar day timeframe for medical sources to respond to our initial request for evidence in proposed 404.1512(b)(1)(i) and 416.912(b)(1)(i). Some commenters suggested different periods between 20 to 30 calendar days as a more reasonable time for medical sources to respond, and they suggested that a longer timeframe would reduce our costs associated with for consultative examinations (CE). Another commenter suggested we include five additional days for mailing time.

Response: While we appreciate these comments, we did not adopt them. When we develop evidence in a claim, we make every reasonable effort to get evidence from an individual's own medical sources. Under our current rules in 404.1512(d)(1) and 416.912(d)(1), this requirement includes giving medical sources 10 to 20 calendar days to respond to our initial request for evidence before we make a follow-up attempt. After the follow-up attempt, our regulations provide for an additional 10 days, for a minimum of at least 20 to 30 days in total. In our experience, our current rules provide an adequate amount of time to submit records because most medical sources provide the requested evidence within this period. Our current rules in 404.1512(e) and 416.912(e) generally require us to wait until after this period to request a CE, and the final rules in 404.1512(b)(2) and 416.912(b)(2) retain this requirement.

With the increasing use of electronic health records and electronic records transfer, we receive an increasing amount of medical evidence the same day that we request it. We are committed to expanding our electronic transfer capacity for medical records through ongoing expansion of the use of Health Information Technology. The expanded use of Health Information Technology means that we do not have an administrative need to make the change to the rules that the commenters suggested.

Sections 404.1513 and 416.913—Categories of Evidence

Comment: One commenter disagreed with our proposal to exclude "symptoms, diagnosis, and prognosis"

²⁹ See POMS DI 25501.320 Date Last Insured (DLI) and the Established Onset Date (EOD), available at <https://secure.ssa.gov/apps10/poms.nsf/lnx/0425501320>.

²⁷ See Information for Wounded Warriors and Veterans Who Have a Compensation Rating of 100% Permanent & Total (P&T), available at <https://www.ssa.gov/people/veterans>.

²⁸ In order to be entitled to disability insurance benefits under title II of the Act, an individual must have, among other things, enough earnings in employment covered by Social Security to be insured for disability. See section 223(c)(1) of the Act, 42 U.S.C. 423(c)(1), and current 404.130 and 404.315(a). An individual's date last insured is the last date the individual is insured for purposes of establishing a period of disability or becoming entitled to disability insurance benefits, as determined under current 404.130.

²⁵ *Id.*

²⁶ Social Security Bulletin, Vol. 74, No. 3, 2014, p. 25. Veterans Who Apply for Social Security Disabled-Worker Benefits After Receiving a Department of Veterans Affairs Rating of "Total Disability" for Service-Connected Impairments: Characteristics and Outcomes. (by L. Scott Muller, Nancy Early, and Justin Ronca), available at <https://www.ssa.gov/policy/docs/ssb/v74n3/v74n3p1.pdf>.

from the definition of “medical opinion” and instead categorize these as “other medical evidence.” The commenter expressed concern that most medical sources, unless prompted to fill out a functional questionnaire, do not specifically address functional abilities and limitations in their notes; rather, medical sources normally include symptoms, diagnoses, and prognoses. This commenter indicated that as a result, unrepresented individuals would be disadvantaged because they may not know to ask medical sources to complete the functional questionnaires. The commenter also said some medical sources refuse to fill out such forms or perhaps charge extra for completing the forms, which is outside the individual’s control. This commenter asserted that without a form or letter from a medical source, we are more likely to schedule a consultative examination (CE) and to disregard the medical source’s evidence in the hearing decision.

Response: We understand the concerns expressed in these comments; however, we did not adopt the recommendation to retain “symptoms, diagnosis, and prognosis” in the definition of “medical opinions.” Diagnoses and prognoses do not describe how an individual functions. It is also not appropriate to categorize symptoms as medical opinions because they are subjective statements made by the individual, not by a medical source, about his or her condition.

As for the commenter’s concerns about the effect of these final rules on unrepresented individuals, our current practice is consistent with the Act’s requirements that we make every reasonable effort to obtain evidence from all of an individual’s medical sources.³⁰ We make every reasonable effort to develop evidence about an individual’s complete medical history from the individual’s own medical sources prior to evaluating medical evidence obtained from any other source on a consultative basis, regardless of whether the individual is represented or not.³¹ Regardless of an individual’s financial situation,

diagnoses and prognoses do not describe how an individual functions and symptoms are subjective statements made by the individual, not a medical source, about his or her impairments.

Comment: One commenter supported the clarification in the proposed rules that all medical sources, not just acceptable medical sources (AMS), can provide evidence that we will categorize as being evidence from medical sources.

Response: We appreciate this comment, and we are adopting the clarification in these final rules.

Comment: A few commenters opposed our proposed category of evidence that we called “statements from nonmedical sources” in proposed 404.1513(a)(4) and 416.913(a)(4) because they wanted us to consider evidence from unlicensed staff who are part of social service agencies and public mental health systems separately from evidence from individuals, family members, and neighbors. Another commenter stated the proposed rule would threaten the functional assessment by eliminating the need for the adjudicator to explain how he or she considers functional evidence, particularly offered by nonmedical sources. A few commenters asserted this revision would disadvantage child claimants who have functional evidence from nonmedical sources, such as educators.

Response: We want to reassure these commenters that this proposal to use one category of evidence for these nonmedical sources, which we are adopting in these final rules, will not disadvantage individuals in our programs. We proposed the single category of evidence, which we renamed in these final rules as “evidence from nonmedical sources,” to reflect that there are no policy differences in how we consider this type of evidence. We agree that evidence from nonmedical sources who are part of social service agencies and public mental health systems may be valuable, and we consider this evidence. However, this evidence is not inherently more or less valuable than evidence from any other kind of nonmedical source, such as individuals, family members, and neighbors.

Sometimes, the individual, family members, and other nonmedical sources

of evidence can provide helpful longitudinal evidence about how an impairment affects a person’s functional abilities and limitations on a daily basis. In claims for child disability, we often receive functional evidence from nonmedical sources, such as testimony, evaluations, and reports from parents, teachers, special education coordinators, counselors, early intervention team members, developmental center workers, day care center workers, social workers, and public and private social welfare agency personnel. Depending on the unique evidence in each claim, it may be appropriate for an adjudicator to provide written analysis about how he or she considered evidence from nonmedical sources, particularly in claims for child disability.

Because we consider all evidence we receive, we are not adopting the suggestion to use separate categories of evidence for different kinds of nonmedical sources or for rules about which nonmedical sources’ evidence is inherently more valuable than others’ evidence.

Our adjudicators will continue to assess an individual’s ability to function under these final rules using all evidence we receive from all sources, including nonmedical sources. Having one category of evidence instead of two for nonmedical sources will not affect our rules for assessing an individual’s functional abilities.

In response to these and other public comments, both the title and definition of this category of evidence is different from that which we proposed. We decided to simplify, shorten, and clarify that this category of evidence includes any evidence from any nonmedical source that we receive, and that we may receive it in any manner.

For example, this category of evidence includes data from our administrative records about an individual’s earnings history and information resulting from data matching with other government agencies that relates to any issue in a claim, such as birthdates and marriage history.

We list and define the categories of evidence in final 404.1513(a)(1)–(5) and 416.913(a)(1)–(5). The following chart displays the categories:

³⁰ 42 U.S.C. 423(d)(5)(B) and 1382c(a)(1)(H)(i).

³¹ See, for example, POMS DI 22505.006

Requesting Evidence—General, available at <https://secure.ssa.gov/apps10/poms.nsf/lnx/0422505006>.

Category of evidence	Source	Summary of definition
Objective medical evidence	Medical sources	Signs, laboratory findings, or both.
Medical opinion	Medical sources	A statement about what an individual can still do despite his or her impairment(s) and whether the individual has one or more impairment-related limitations or restrictions in one or more specified abilities.
Other medical evidence	Medical sources	All other evidence from medical sources that is not objective medical evidence or a medical opinion.
Evidence from nonmedical sources	Nonmedical sources	All evidence from nonmedical sources.
Prior administrative medical finding	MCs and PCs	A finding, other than the ultimate determination about whether the individual is disabled, about a medical issue made by an MC or PC at a prior administrative level in the current claim.

Sections 404.1519h and 416.9191h— Your Medical Source

Comment: Many commenters supported our proposal to broaden the preference for consultative examination (CE) sources from “treating sources” to any of an individual’s own medical sources who are otherwise qualified to perform the CE.

Response: We agree with these comments. In order to perform a CE, an individual’s medical source must be qualified, equipped and willing to perform the examination or tests for the designated payment and send in timely, complete reports. This aligns with the current requirements for all CE providers and does not significantly change our current process. If these standards are met, it is our preference to use an individual’s own medical source to perform a CE.

Sections 404.1520b and 416.920b—How We Consider Evidence

Comment: One commenter opposed proposed 404.1520b(c)(2) and 416.920b(c)(2), under which we would not provide written analysis about disability examiner findings at subsequent adjudicative levels of appeal, as we do for prior administrative medical findings.

Response: Because this is our current policy, we did not adopt this comment. At each level of the administrative process, we conduct a new review of the evidence whenever we issue a new determination or decision. While some disability examiners now make some administrative medical findings at the initial and reconsideration levels under temporary legal authority, this authority is scheduled to end pursuant to the Bipartisan Budget Act of 2015 (BBA) section 832.³²

Comment: A few commenters suggested that we continue the current practice of not giving any special significance to opinions on issues

reserved to the Commissioner instead of adopting our proposal in 404.1520b(c)(3) and 416.920b(c)(3) that we not provide any analysis about how we consider statements on issues reserved to the Commissioner. These commenters also stated that the final rule should clarify that adjudicators will consider the context of a medical source’s use of terms in our laws and regulations, such as “moderate,” “marked,” and “sedentary.” One commenter noted that the diagnostic term “intellectual disability” uses the word “disability” but is not a statement on an issue reserved to the Commissioner. These commenters cautioned against adjudicators dismissing medical opinions as issues reserved for the Commissioner simply because they use the same terms in our laws and regulations. The commenters suggested we include an example in our rules. Another commenter said we should not include “statements that you are or are not . . . able to perform regular or continuing work” as an example of a statement on an issue reserved to the Commissioner in proposed 404.1520b(c)(3) and 416.920b(c)(3) because it is probative about an individual’s residual functional capacity (RFC).³³

Response: We agree that adjudicators should consider the context of a source’s use of a term in our laws and regulations to determine if it qualifies as a statement on an issue reserved to the Commissioner or another kind of evidence, such as a medical opinion. We frequently receive documents from medical sources that contain different categories of evidence, such as a treatment note that includes a laboratory finding, a medical opinion, and a statement on an issue reserved to the Commissioner. When we receive a document from a medical source that contains multiple categories of evidence, we will consider each kind of evidence according to its applicable rules. We will not consider an entire

document to be a statement on an issue to the Commissioner simply because the document contains a statement on an issue that is reserved to the Commissioner. However, we are not revising our rules to add text about considering context or to provide examples because we intend to further clarify and provide examples, as appropriate, in our subregulatory instructions.

We are not adopting the suggestion to require adjudicators to assign weight to a statement on an issue reserved to the Commissioner. Because we are responsible for making the determination or decision about whether an individual meets the statutory definition of disability, these statements are neither valuable nor persuasive for us. Therefore, our adjudicators will continue to review all evidence and consider the context of a source’s use of terms in our regulations, but they are not required to articulate how they considered statements on an issue reserved to the Commissioner.

We are also not revising our rules to omit the phrase “statements that you are or are not . . . able to perform regular or continuing work” from final 404.1520b(c)(3) and 416.920b(c)(3). We are responsible for assessing an individual’s RFC, including how our programmatic terms apply to evidence we receive.

Comment: One commenter asked us to state that when an administrative law judge (ALJ) asks a medical expert about whether an impairment(s) medically equals an impairment(s) in the Listings, that is a medical opinion and not a statement on an issue reserved to the Commissioner.

Response: Because we are not revising this current policy in these final rules, we are not adopting the comment. When a medical expert, or any other medical source, opines about whether an individual’s impairment(s) medically equals an impairment(s) in the Listings, we consider that statement to be a statement on an issue reserved to the Commissioner under our current policy.

³² See *Modifications to the Disability Determination Procedures; Extension of Testing of Some Disability Redesign Features*, 81 FR 58544 (August 25, 2016).

³³ See current 404.1545 and 416.945.

For example, if we receive a medical report that contains a medical opinion and a statement on an issue reserved to the Commissioner, we will articulate how we considered the medical opinion according to its rules but not articulate how we considered the statement on an issue reserved to the Commissioner.

In addition, we will issue a new Social Security Ruling that will discuss certain aspects of how ALJs and the AC must obtain evidence sufficient to make a finding of medical equivalence.

Comment: One commenter opposed our terminology of a statement on an issue reserved to the Commissioner because it is “reserved for the ALJ, not the Commissioner.”

Response: We did not adopt this comment. Whenever an adjudicator at any level of our administrative process makes a disability or blindness determination or decision, he or she is acting pursuant to authority delegated by the Commissioner.³⁴ Our adjudicators do not have authority independent of the authority given to them pursuant to a lawful delegation of authority.

Sections 404.1520c and 416.920c—How We Consider and Articulate Medical Opinions and Prior Administrative Medical Findings for Claims Filed on or After March 27, 2017

Prior Administrative Medical Findings

Comment: Two commenters had concerns about our policies for considering prior administrative findings, such as the severity of an individual’s symptoms, failure to follow prescribed treatment, and drug addiction and alcoholism. The commenters stated that medical evidence should be provided solely by medical professionals and suggested that prior administrative medical findings are not made by medical sources.

Response: The three categories of evidence from medical sources and prior administrative medical findings must be made by medical sources. Prior administrative medical findings are made by medical sources who are State or Federal agency medical consultants or psychological consultants. This is our current policy in current 404.1527(e)(1) and 416.927(e)(1). Our rules in current 404.1527(e)(2) and 416.927(e)(2) require us to consider and articulate our consideration of prior administrative medical findings using the same factors we use to consider medical opinions.

Under section 221(h) of the Act, as amended by the Bipartisan Budget Act

of 2015 (BBA) section 832, we are now required to make “every reasonable effort” to ensure that a qualified physician (in cases involving a physical impairment) or a qualified psychiatrist or psychologist (in cases involving a mental impairment) has completed the medical review of the case and any applicable residual functional capacity (RFC) assessment. In final 404.1520c, 404.1527, 416.920c, and 416.927, we explain in detail how will we consider and articulate our consideration of prior administrative medical findings.

Comment: One commenter asked us to consider opinions from the Appeals Council’s (AC) Medical Support Staff (MSS) as prior administrative medical findings.

Response: Although our current policies allow adjudicators at the hearings and AC levels of review to obtain medical expert evidence, including MSS opinions at the AC, we did not adopt this comment for two reasons. First, expert medical opinions obtained at the same level of adjudication could not be a *prior* administrative medical finding. Second, medical expert evidence obtained at the hearings or AC levels does not amount to our own medical findings; instead, our adjudicators at these levels are responsible for determining whether an individual is disabled. They must consider expert medical opinions obtained at the same level under the standard for evaluating medical opinions.

Comment: A few commenters asked how our rules for considering prior administrative medical findings would apply to claims we decided previously, considering the legal principle of *res judicata*, which means an issue definitively settled by a prior determination or decision.

Response: We appreciate this comment, and we have revised the final rules to address this question. These final rules do not affect our current policies about *res judicata*. Prior administrative medical findings are evidence in the current claim. To help clarify this point, we have revised the prior administrative medical findings evidence category’s definition in final 404.1513(a)(5) and 416.913(a)(5) to specify that this is a category of evidence in the current claim.

Comment: One commenter asserted that allowing administrative law judges (ALJ) to consider prior administrative medical findings means that individuals at the hearings level do not get a new and independent review of their claims. Another commenter raised concern that requiring State agency adjudicators to provide written analysis about the

persuasiveness of the prior administrative medical findings from the initial level of review appeared to conflict with the principles of getting a new and independent review.

Response: We did not make any specific changes based on these comments. A *new* decision means that adjudicators at subsequent levels of the administrative review process (*i.e.*, reconsideration, hearing, and AC) do not need to defer to the findings or conclusions of prior adjudicators. Instead, they make new findings and conclusions. Currently, adjudicators at all levels of the administrative review process consider prior administrative medical findings as part of conducting a new and independent review when they issue a determination or decision.³⁵ Based on our experience administering our programs, we have found that our adjudicators reasonably consider prior administrative medical findings as part of the evidence in the claim and do not automatically favor or disfavor this evidence simply because the medical source is a medical consultant (MC) or a psychological consultant (PC).

Treating Source Rule

Comment: Multiple commenters asked us to retain the current treating source rule, while some commenters agreed with our proposal to eliminate it. Those who wanted us to retain the treating source rule said that evidence from a treating source has special intrinsic value due to the nature of the medical source’s relationship with the claimant. They also said that the current rules contain an appropriate inherent hierarchy to give the most weight to treating sources, then to examining sources like CE sources, and the least weight to nonexamining sources, such as MCs and PCs. One commenter said without this hierarchy, our adjudicators would have a more difficult time evaluating evidence.

One organization that represents claimant representatives noted that if we do not keep the treating source rule, the treatment relationship should be a more important factor for consideration of medical opinions and prior administrative medical findings than the factors of supportability and consistency. Another commenter disagreed with our reasons for revising the factors for considering medical opinions and prior administrative medical findings.

³⁴ See 42 U.S.C. 902(a)(7) and current 404.1503(c) and 416.903(c).

³⁵ See current 20 404.1512(b)(vii), 404.1527(e)(1)(i) and (iii), 416.912(b)(vii), and 416.927(e)(1)(i) and (iii).

The commenters who supported changing our rules agreed with our proposal to consider the supportability and consistency factors as the most important factors in assessing persuasiveness. These commenters said that this approach better reflects the actual state of health care today and allows adjudicators to focus more on the content of the evidence than on the source.

Response: While we understand the perspectives presented in these comments, we are not retaining the treating source rule in final 404.1520c and 416.920c for claims filed on or after March 27, 2017. Since we first adopted the current treating source rule in 1991, the healthcare delivery system has changed in significant ways that require us to revise our policies in order to reflect this reality. Many individuals receive health care from multiple medical sources, such as from coordinated and managed care organizations, instead of from one treating AMS.³⁶ These individuals less frequently develop a sustained relationship with one treating physician. Indeed, many of the medical sources from whom an individual may seek evaluation, examination, or treatment do not qualify to be “treating sources” as defined in current 404.1502 and 416.902 because they are not AMSs. These final rules recognize these fundamental changes in healthcare delivery and revise our rules accordingly.

Courts reviewing claims under our current rules have focused more on whether we sufficiently articulated the weight we gave treating source opinions, rather than on whether substantial evidence supports our final decision. As the Administrative Conference of the United States’ (ACUS) Final Report explains, these courts, in reviewing final agency decisions, are reweighing evidence instead of applying the substantial evidence standard of review, which is intended to be highly deferential standard to us.³⁷

In addition, our experience adjudicating claims using the treating source rule since 1991 has shown us

that the two most important factors for determining the persuasiveness of medical opinions are consistency and supportability. The extent to which a medical source’s opinion is supported by relevant objective medical evidence and the source’s supporting explanation—supportability—and the extent to which the opinion is consistent with the evidence from other medical sources and nonmedical sources in the claim—consistency—are also more objective measures that will foster the fairness and efficiency in our administrative process that these rules are designed to ensure. These same factors also form the foundation of the current treating source rule, and we believe that it is appropriate to continue to keep these factors as the most important ones we consider in our evaluation of medical opinions and prior administrative medical findings. Because we currently consider all medical opinions and opinions using these factors, we disagree that considering these factors as the most important factors will make evaluating evidence more difficult.

Furthermore, to reflect modern healthcare delivery, we will articulate in our determinations and decisions how we consider medical opinions from all of an individual’s medical sources, not just those who may qualify as “treating sources” as we do under current 404.1527(c)(2) and 416.927(c)(2).

Moreover, these final rules in 404.1520c(c)(3) and 416.920c(c)(3) retain the relationship between the medical source and the claimant as one of the factors we consider as we evaluate the persuasiveness of a medical opinion. These final rules also continue to allow an adjudicator to consider an individual’s own medical source’s medical opinion to be the most persuasive medical opinion if it is both supported by relevant objective medical evidence and the source’s explanation, and is consistent with other evidence, as described in final 404.1520c and 416.920c.

Finally, our current rules do not create an automatic hierarchy for treating sources, examining sources, then nonexamining sources to which we must mechanically adhere. For example, adjudicators can currently find a treating source’s medical opinion is not well-supported or is inconsistent with the other evidence and give it little weight, while also finding a medical opinion from an examining source, such as a consultative examiner, or nonexamining source, such a medical or psychological consultant, is supported and consistent and entitled to great weight. These final rules help eliminate

confusion about a hierarchy of medical sources and instead focus adjudication more on the persuasiveness of the content of the evidence.

Comment: Instead of ending the treating source rule, some commenters asked us to reflect modern healthcare delivery by requiring our adjudicators to provide written analysis about how they consider medical opinions from any medical source from whom an individual chooses to receive evaluation, examination, or treatment, regardless of whether the medical source is an AMS.

Response: We carefully considered these comments, and we are adopting them. We agree that our rules need to reflect modern healthcare delivery, and that is a main reason we are ending the treating source rule. We further agree that our rules should reflect that individuals’ own medical sources may not be AMSs. Therefore, these final rules state that we will consider and articulate our consideration of all medical opinions, regardless of AMS status, consistent with the standard we set forth for AMSs in proposed 404.1520c and 416.920c.

Under proposed sections 404.1520c(b)(4) and 416.920c(b)(4), we said that we would articulate how we consider the medical opinion(s) from a medical source who is not an AMS only if we found it to be well-supported and consistent with the record and more valuable and persuasive than the medical opinion(s) and prior administrative medical findings from all of the AMSs in the individual’s case record. We are not adopting proposed 404.1520c(b)(4) and 416.920c(b)(4) in these final rules in order to ensure that our rules on articulation reflect the realities of the current healthcare delivery system.

Comment: A few commenters opposed our proposal to end the treating source rule because they said the proposed rules would create arbitrary and inconsistent decisionmaking.

Response: We disagree with these comments because these final rules require our adjudicators to consider all of the factors in final 404.1520c and 416.920c for all medical opinions and, at a minimum, to articulate how they considered the supportability and consistency factors for all of a medical source’s medical opinions or prior administrative medical findings.

These final rules improve upon our current rules in several ways. For example, we will require our adjudicators to articulate how they consider medical opinions from all medical sources, regardless of AMS status, to reflect the changing nature of

³⁶ Kaiser Commission on Medicaid and the Uninsured, Improving Access to Adult Primary Care in Medicaid: Exploring the Potential Role of Nurse Practitioners and Physician Assistants, available at <http://kaiserfamilyfoundation.files.wordpress.com/2013/01/8167.pdf>; Administrative Conference of the United States, SSA Disability Benefits Programs: Assessing the Efficacy of the Treating Physician Rule, pp. 25–37 (April 3, 2013), available at http://www.acus.gov/sites/default/files/documents/Treating_Physician_Rule_Final_Report_4-3-2013_0.pdf.

³⁷ 81 FR at 62572.

healthcare delivery. Therefore, we expect these final rules will enhance the quality and consistency of our decisionmaking, and they will provide individuals with a better understanding of our determinations and decisions.

Comment: Some commenters suggested that instead of changing the treating source rule, we should provide our adjudicators with additional training about it, and increase our quality control measures, so that there are fewer appeals and remands about this issue.

Response: We agree with the comments to provide training and quality control measures to ensure policy compliance with our rules, but we are adopting our proposal to end the treating source rule for claims filed on or after March 27, 2017. The suggestion that we not end the treating source rule would neither align our policies with the current state of medical practice, nor would we expect it to result in substantially fewer appeals and remands about this issue.

To account for the changes in the way healthcare is currently delivered, we are adopting rules that focus more on the content of medical opinions and less on weighing treating relationships against each other. This approach is more consistent with current healthcare practice.

Additionally, we provide extensive training on our rules, and we will provide adjudicators with appropriate training on these final rules. In part because of our extensive training efforts, the work of our adjudicators is policy compliant and highly accurate. For example, in fiscal year 2015, the accuracy rate of our initial determinations was nearly 98 percent, and the overall rate at which the AC has agreed with hearing decisions has increased in recent years. We are committed to ensuring our disability adjudicators remain policy compliant; therefore, we will continue our existing ongoing efforts to train adjudicators on best practices for applying our policies, including the policies in these final rules.

Comment: A few commenters said that we should not adopt our proposed rules because the process of training our adjudicators and adapting our computer systems to comply with them will be difficult, time-consuming, and expensive.

Response: We are not adopting this comment. We believe that the changes we made to our rules will be beneficial to the administration of our programs because they will make our rules easier to understand and apply and will allow us to continue to make accurate and

consistent decisions, while acknowledging the changing healthcare landscape. We agree that providing comprehensive training and updating our software to reflect the revisions in these final rules are critical, and we are confident that we will be able to provide the necessary training and software changes in a timely manner. Among our existing employees are dedicated teams that provide in-house training and software enhancements for all of our regulatory revisions. We are currently training our employees and are updating our systems to be ready for when these final rules become effective. We will also undertake quality control monitoring to ensure the training and software updates are effective and working as we intend.

Comment: One commenter requested that we clarify what “consistency” means when considering medical opinions and prior administrative findings. The commenter also recommended that we consider the consistency and treatment relationship with the claimant factors equally. The commenter explained, “Given the brevity of some of these treatment relationships, medical sources may reasonably come to different conclusions about the claimant’s impairments and functioning.”

Response: While we acknowledge that determining the consistency of medical opinions may be challenging in certain claims, we did not adopt this suggestion. Our adjudicators now use the consistency factor when they consider medical opinions and medical findings from MCs and PCs. Consistent with that approach, proposed and final 404.1520c and 416.920c explain that the more consistent a medical opinion or prior administrative medical finding is with the evidence from other medical sources and nonmedical sources in the claim, the more persuasive the medical opinion or prior administrative medical finding is.

Moreover, our use of the word “consistent” in the regulations is the same as the plain language and common definition of “consistent.” This includes consideration of factors such as whether the evidence conflicts with other evidence from other medical sources and whether it contains an internal conflict with evidence from the same medical source. We acknowledge that the symptom severity of some impairments may fluctuate over time, and we will consider the evidence in the claim that may reflect on this as part of the consistency factor as well. Thus, the appropriate level of articulation will necessarily depend on the unique circumstances of each claim.

The supportability and consistency factors provide a more balanced and objective framework for considering medical opinions than focusing upon the factors of consistency and the medical source’s relationship with the individual. A medical opinion without supporting evidence, or one that is inconsistent with evidence from other sources, will not be persuasive regardless of who made the medical opinion.

Our final rules provide an appropriate framework to evaluate situations when multiple medical sources provide medical opinions that are not consistent. Our adjudicators will consider all of the factors when they determine how persuasive they find a medical opinion, and these factors are based on the current factors in our rules.

Comment: One commenter said the proposed rules did not contain sufficient guidance about when we would explain how we would consider opinions from sources who are not AMSs in claims with a filing date before the effective date of these final rules. The commenter expressed concern that more claims would be remanded if we did not include more policies from Social Security Ruling (SSR) 06–03p, which we are rescinding, into these final rules. A few other commenters asked us to retain the policies in SSR 06–03p about considering and providing written analysis about opinions from sources who are not AMSs for all claims.

Response: We agree with this comment, and we revised the final regulatory text about claims filed both before and after the effective date of these rules, March 27, 2017, to ensure we have provided clear and comprehensive guidance to our adjudicators and the public.

Under SSR 06–03p, we consider opinions from medical sources who are not AMSs and from nonmedical sources using the same factors we use to evaluate medical opinions from AMSs. We state that an adjudicator generally should explain the weight given to opinions from these sources, or otherwise ensure that the discussion of the evidence in the determination or decision allows an individual or subsequent reviewer to follow the adjudicator’s reasoning, when such opinions may have an effect on the outcome of the case. In addition, when an adjudicator determines that an opinion from one of these sources is entitled to greater weight than a medical opinion from a treating source, the adjudicator must explain the reasons in the determination or decision if the determination is less than fully

favorable under our current rules. In these final rules, we have included these policies from SSR 06–03p into final 404.1527 and 416.927 for claims filed before March 27, 2017.

In the NPRM,³⁸ we did not propose a rule that would have required our adjudicators to articulate how they considered evidence from nonmedical sources because these sections only discuss medical opinions, which come from medical sources. In response to the comment asking us to include guidance about how we will consider and provide articulation about how we considered evidence from nonmedical sources, we have made two changes. First, for claims filed before March 27, 2017, we have added a new paragraph, sections 404.1527(f) and 416.927(f), which explains how we will consider, and articulate our consideration of, opinions from medical sources who are not AMSs and from nonmedical sources. Second, we are also including regulatory text about evidence from nonmedical sources for claims filed on or after March 27, 2017. For these claims, new sections 404.1520c(d) and 416.920c(d) state that, “We are not required to articulate how we considered evidence from nonmedical sources using the requirements in” sections 404.1520c(a)–(c) and 416.920c(a)–(c) of the rules. This change clarifies our original intent.

Specifically, aside from where our regulations elsewhere may require an adjudicator to articulate how we consider evidence from nonmedical sources, such as when we evaluate symptoms,³⁹ there is no requirement for us to articulate how we considered evidence from nonmedical sources about an individual’s functional limitations and abilities using the rules in final 404.1520c and 416.920c.

Comment: We received a comment from ACUS asking us to revise the preamble and our rules to reflect that the ACUS Assembly voted to adopt two of its principal recommendations from the ACUS Final Report⁴⁰ in the ACUS Conference Recommendations.⁴¹ Another commenter asked us to disregard the ACUS Final Report and ACUS Conference Report because, he

asserted, ACUS is unfamiliar with the realities that individuals face in daily life.

Response: We value the expertise ACUS provides to help improve Federal agencies’ administrative processes, and specifically in this rulemaking process,⁴² and we appreciate ACUS’ continued interest in helping us improve the ways we administer our programs. At this time, we are adopting most of the ACUS Conference Recommendations that relate to the treating source rule in these final rules.

The first ACUS recommendation encourages us to use “notice-and-comment rulemaking to eliminate the controlling weight aspect of the treating source rule in favor of a more flexible approach based on specific regulatory factors” that are in our current rules. This recommendation also said that our adjudicators should articulate the bases for the weight given to medical opinions “in all cases.”

We base the factors we will use to evaluate medical opinions in these final rules, which are based on notice-and-comment rulemaking, on the factors in our current rules. In response to ACUS’ recommendation that our adjudicators should articulate the reasons for the weight given to medical opinions in all cases, we have revised final 404.1520c(b) and 416.920c(b) to state that we will articulate in our determination or decision how persuasive we find all of the medical opinions and all of the prior administrative medical findings in an individual’s case record. We also provide specific articulation requirements for medical opinions from all medical sources, regardless of whether the medical source is an AMS.

The second ACUS recommendation asked us to both: (1) Recognize nurse practitioners (NP), physician assistants (PA), and licensed clinical social workers (LCSW) as AMSs consistent with their respective State law-based licensure and scope of practice, and (2) issue a policy statement that clarifies the value and weight to be afforded to opinions from NPs, PAs, and LCSWs.

As stated above, we are recognizing PAs and ARNPs, which includes NPs, as AMSs in these final rules. At this time, we are not recognizing LCSWs as AMSs, for the reasons we discussed previously.

⁴² ACUS is “an independent federal agency dedicated to improving the administrative process through consensus-driven applied research, providing nonpartisan expert advice and recommendations for improvement of federal agency procedures.” About the Administrative Conference of the United States (ACUS), available at <http://www.acus.gov/about-administrative-conference-united-states-acus>.

With respect to ACUS’ recommendation that we assign an inherent value to medical opinions from these medical sources, we will explain how we considered the medical opinions from these medical sources because we are not adopting our proposal to base the articulation requirements on whether the medical source is an AMS.

Comment: One commenter asked us to retain the treating source rule for child claims because pediatricians still have important treating relationships with child claimants. Another commenter asked us to give controlling weight to teacher assessments in child claims.

Response: While we are not adopting these comments, we agree that pediatricians have a valuable role in many child claims. Final sections 404.1520c(c) and 416.920c(c) explain that we will continue to consider the medical source’s area of specialty and a medical source’s relationship with an individual, including a child, as part of our evaluation of medical opinions. However, a treating pediatrician’s relationship with a child patient is not sufficiently different from a treating doctor’s relationship with an adult patient to warrant having a separate rule for evaluating medical opinions from treating pediatricians. Because we are moving away from applying the treating source rule for all medical sources, we are not expanding the treating source rule to give controlling weight to nonmedical sources like teachers.

Comment: One commenter suggested that instead of revising our rules about treating sources, we make additional efforts to develop evidence from treating sources, such as sending them functional questionnaires and asking them for medical opinions.

Response: We did not adopt this comment because our current practice is consistent with the Act’s requirements that we make every reasonable effort to obtain evidence from all of an individual’s medical sources.⁴³

Comment: One commenter asked us to replace “consider” with “evaluate” and asserted that “consider” is a vague term.

Response: We did not adopt this comment because the use of the term “consider” is consistent with our current rules,⁴⁴ and it is easily distinguishable from the articulation requirements. Adoption of the term “evaluate” could imply a need to provide written analysis, which is not what we intend. Therefore, we have

⁴³ 42 U.S.C. 423(d)(5)(B) and 1382c(a)(1)(H)(i).

⁴¹ Conference Recommendation 2013–1, Improving Consistency in Social Security Disability Adjudications. 78 FR 41352 (July 10, 2013), also available at <https://acus.gov/recommendation/improving-consistency-social-security-disability-adjudications>.

continued to use the term “consider” in these final rules.

Comment: One commenter offered an alternative approach to ending the treating source rule. The alternative approach would continue to give controlling weight to treating physician opinions in most circumstances, significantly limit how persuasive we could find a CE source’s opinions, and limit the role of MCs and PCs to identifying when additional medical evidence is needed to adjudicate a claim.

Response: We are not adopting this suggestion because it is not consistent with section 221(h) of the Act, as amended by BBA section 832. As we noted earlier in the preamble, under section 221(h) of the Act, we are now required to make “every reasonable effort” to ensure that a qualified physician (in cases involving a physical impairment) or a qualified psychiatrist or psychologist (in cases involving a mental impairment) has completed the medical review of the case and any applicable residual functional capacity (RFC) assessment, not just identify when additional medical evidence is needed to adjudicate a claim.

Furthermore, the suggestion would not bring our rules into alignment with the modern healthcare delivery. Our rules focus on the content of the medical opinions in evidence, rather than on the source of the evidence. The commenter’s proposal would require us to adopt the opinions of either a treating physician or a consultative examiner to determine if the claimant meets our statutory definition of disability. This would confer upon these other sources the authority to make the determination or decision that we are required to make, and would be an abdication of our statutory responsibility to determine whether the person meets the statutory definition of disability.

Comment: A few commenters said we should never consider evidence from our MCs and PCs to be more persuasive than evidence from an individual’s own medical source because MCs and PCs are unqualified and misrepresent the evidence they review.

Response: We did not adopt this comment because we maintain strict requirements for who may serve as a qualified MC or PC.⁴⁵ MCs and PCs have valuable experience in our adjudicative processes, and their review of all of the evidence we receive provides them with a comprehensive perspective that other

medical sources, including an individual’s own medical sources, may not have.

Comment: One commenter said we provided no evidence to support the NPRM’s statement that individuals less frequently develop a sustained relationship with one treating physician now than when they did when we published the treating source rule in 1991.

Response: In the preamble to the NPRM, we provided a list of sources of evidence in footnote 119, which refers readers to the ACUS Final Report.⁴⁶ Examples of sources that ACUS cites in section III.A. of its Final Report include:

- Sharyn J. Potter & John B. McKinlay, *From a Relationship to Encounter: An Examination of Longitudinal and Lateral Dimensions in the Doctor-Patient Relationship*, 61 SOC. SCI. & MED. 465, 466–470 (2005). These authors described the “longitudinal changes to doctor-patient relationship in latter decades of 20th century as corporatist model of health care took hold, due largely to ‘exponential growth of managed health care in the 1980s and 1990s [that] drastically changed the roles of both physicians and patients.’ ”⁴⁷

- John W. Saultz & Waleed Albedaiwi, *Interpersonal Continuity of Care and Patient Satisfaction: A Critical Review*, 2 ANNALS OF FAM. MED. 445, 445 (Sept./Oct. 2004). This article reports that, “‘Changes in the American healthcare system during the past decade have made it increasingly difficult to establish such long-term trusting relationships between physicians and patients. Some authors have questioned whether a personal model of care is feasible, as health plans increasingly have required provider changes for economic reasons.’ ”⁴⁸

- Paul Nutting et al., *Continuity of Primary Care: To Whom Does it Matter and When?*, 1 ANNALS OF FAM. MED. 149, 154 (Nov. 2003) This article states, “‘The current organizational and financial restructuring of the health care system creates strong pressures against continuity with employers changing plans, and plans changing providers. Forced disruption in continuity of care is common, particularly for those with a managed care type of insurance.’ ”⁴⁹

⁴⁶ Administrative Conference of the United States, *SSA Disability Benefits Programs: Assessing the Efficacy of the Treating Physician Rule* (April 3, 2013), available at http://www.acus.gov/sites/default/files/documents/Treating_Physician_Rule_Final_Report_4-3-2013_0.pdf.

⁴⁷ *Id.* at 26, footnote 205.

⁴⁸ *Id.* at 26, footnote 206.

⁴⁹ *Id.* at 28, footnote 220.

There are other similar sources of evidence establishing that individuals less frequently develop a sustained relationship with one treating physician now on pages 25–28 of the ACUS Final Report, including in the footnotes.

Comment: Some commenters opined that increasing complexity in cases and voluminous files provide insufficient reasons for moving away from the treating source rule.

Response: The increasing complexity in cases and voluminous files were not reasons that we provided in support of moving away from the treating source rule. We are moving away from the treating source rule to align our policies more closely with the ways that people receive healthcare today.

Instead, the increasing complexity of cases and voluminous files were reasons we provided in support of our proposed rules about how we would articulate our consideration of medical opinions. As explained elsewhere in this preamble, we received comments raising concern with certain aspects of the proposed articulation requirements. As a result, we revised the final rules in several ways, such as to require adjudicators to articulate how they considered medical opinions from all medical sources, rather than only from AMSs, in final 404.1520c and 416.920c.

As we explained in the preamble to the NPRM,⁵⁰ it is not administratively feasible for us to articulate how we considered all of the factors for all of the medical opinions and prior administrative medical findings in all claims. As we noted earlier in the preamble, our goal in these final rules is to continue to ensure that our adjudicative process is both fair and efficient. We have an obligation to treat each claimant as an individual and to decide his or her claim fairly. We also have an obligation to all individuals to provide them with timely, accurate determinations and decisions.

Our experience since 1991 using the treating source rule shows that the articulation requirement in the current rule, which requires adjudicators to address each opinion, rather than addressing the opinions on a source-level, does not always foster those two goals. Accordingly, we believe it is appropriate to revise the articulation requirement in our current rules. We believe that the changes we have made from the NPRM address the concerns raised by the commenters, while still allowing us to ensure that our administrative process is both fair and efficient.

⁵⁰ 81 FR at 62574.

⁴⁵ See current 404.1616 and 416.1016, as revised by final 404.1616 and 416.1016 to accommodate section 221(h) of the Act, as amended by BBA section 832.

Comment: A few commenters disagreed with how we characterized some of the legal precedents we cited as in the preamble to the NPRM, such as *Black & Decker Disability Plan v. Nord*.⁵¹ These commenters asserted that *Black & Decker* reflected positively on the 1991 treating source rule regulations, and that many courts support the treating source rule's deferential standard.

Response: We included *Black & Decker* in the preamble to the NPRM⁵² because the opinion notes that, "the assumption that the opinions of a treating physician warrant greater credit than the opinions of plan consultants may make scant sense when, for example, the relationship between the claimant and the treating physician has been of short duration, or when a specialist engaged by the plan has expertise the treating physician lacks. And if a consultant engaged by a plan may have an 'incentive' to make a finding of 'not disabled,' so a treating physician, in a close case, may favor a finding of 'disabled.'" ⁵³

Although the *Black & Decker* court was referring to medical consultants contracted under ERISA plans, the concerns about short treatment relationships and lack of specialization are equally applicable in the context of disability adjudication under our rules. Notably, ACUS agrees with our interpretation of the discussions in these opinions.⁵⁴ Additionally, setting aside the Court's decision in *Black & Decker*, the other rationale we provided in the NPRM for revising our policy on how we consider treating source and other medical source opinions remains compelling.

Comment: Some commenters, including the authors of a law review article mentioned in section VI.D.5. of the NPRM preamble,⁵⁵ submitted comments stating we had inaccurately presented parts of the content of that article and their position on the treating physician rule.

Response: We appreciate the commenters' concerns and their interest in our programs and this rulemaking proceeding. We regret the mischaracterization of the authors' position in their article. We note that the other rationale discussed in the NPRM and these final rules remains compelling.

Articulation Requirements

Comment: A few commenters expressed concern with the factors that we proposed to consider when evaluating medical opinions and prior administrative medical findings. One commenter indicated that we should not elevate consistency above the other factors. Another commenter thought that the consistency factor would automatically make a longitudinal record subject to being found inconsistent. Other commenters said we should continue to use our existing factors, or first consider the factor of a longstanding treatment relationship, to evaluate the persuasiveness of medical opinions and prior administrative medical findings. Some commenters were concerned with our proposal to add "understanding our policy" and "familiarity with the record" to our list of factors because they may appear to favor evidence from our MCs and PCs over an individual's own medical sources.

Response: We agree, in part, with these comments. We are adopting our proposal to consider supportability and consistency as the two most important factors when we evaluate the persuasiveness of medical opinions and prior administrative medical findings. Our experience adjudicating claims demonstrates that these factors are more objective measures than the relationship with the claimant factor and are the same factors we look to as part of the current treating source rule. While we agree that there is no hierarchy to the remaining factors, we did not revise our rules to include this language in the regulatory text. Instead, we agree with the comments that we should revise the regulatory text to eliminate any appearance that inherently we favor evidence from MCs or PCs over evidence from an individual's own medical sources, and vice versa. Therefore, we made several revisions to the regulatory text in final 404.1520c and 416.920c.

We revised the issues within the "relationship with the claimant" factor to read: length of the treatment relationship, examining relationship, frequency of examinations, purpose of the treatment relationship, and extent of the treatment relationship. This underscores our recognition that an individual's own medical source may have a unique perspective of an individual's impairments based on the issues listed, such as a long treatment relationship. We will consider the unique evidence in each claim that tend to support or weaken how persuasive we find these issues.

Similarly, under both our current rules and the proposed rules, we may consider a medical source's familiarity with the entire record and his or her understanding of our policy. In our proposed rules, we proposed to separately list "understanding our policy" and "familiarity with the record" as individual factors instead of examples of "other factors" as in the current rules. Some commenters were concerned that this change favored our MCs and PCs, who often review all evidence in a claim and are trained in our policies. This was not our intent, and we proposed to reorganize the factors to clarify, not change, our policy on this point. Therefore, we agree with the comments that it would be best to list these issues within "other factors."

We also recognize that new evidence submitted after an MC or PC provided a prior administrative medical finding may affect how persuasive that finding is at subsequent levels of adjudication. We are adding in final 404.1520c(c)(5) and 416.920c(c)(5) that when we consider a medical source's familiarity with the other evidence in a claim, we will also consider whether new evidence we receive after the medical source made his or her medical opinion or prior administrative medical finding makes the medical opinion or prior administrative medical finding more or less persuasive.

Additionally, we recognize that evidence from a medical source who has a longstanding treatment relationship with an individual may contain some inconsistencies over time due to fluctuations in the severity of an individual's impairments. Our adjudicators will consider this possibility as part of evaluation of the consistency factor, as they do so under our current rules. We will also include this issue within our training to our adjudicators.

Comment: Some commenters were concerned that, by moving away from assigning a specific weight to opinions and prior administrative medical findings, we would add subjectivity into the decisionmaking process and said we would only require our adjudicators to think about the evidence but not provide written analysis. Other commenters suggested that by requiring articulation on only two factors—supportability and consistency—our decisions would not sufficiently inform the individual or a reviewing Federal court of the decisionmaker's reasoning, which would lead to more appeals to and remands from the courts.

Response: While we understand the concerns in these comments, we are adopting our proposal to look to the

⁵¹ 538 U.S. 822 (2003).

⁵² 81 FR 62572.

⁵³ 538 U.S. at 832.

⁵⁴ See ACUS Final Report at 43.

⁵⁵ Richard E. Levy & Robert L. Glicksman, Agency-Specific Precedents, 89 TEX. L. REV. 499, 546 (2011).

persuasiveness of medical opinions and prior administrative medical findings for claims filed on or after March 27, 2017. Our current regulations do not specify which weight, other than controlling weight in a specific situation, we should assign to medical opinions. As a result, our adjudicators have used a wide variety of terms, such as significant, great, more, little, and less. The current rules have led to adjudicative challenges and varying court interpretations, including a doctrine by some courts that supplants the judgment of our decisionmakers and credits as true a medical opinion in some cases.

By moving away from assigning a specific weight to medical opinions, we are clarifying both how we use the terms “weigh” and “weight” in final 404.1520c(a), 404.1527, 416.920c(a), and 416.927 and also clarifying that adjudicators should focus on how persuasive they find medical opinions and prior administrative medical findings in final 404.1520c and 416.920c. Our intent in these rules is to make it clear that it is never appropriate under our rules to “credit-as-true” any medical opinion.

We are also stating in final 404.1520c(b) and 416.920c(b) what minimum level of articulation we will provide in our determinations and decisions to provide sufficient rationale for a reviewing adjudicator or court. In light of the level of articulation we expect from our adjudicators, we do not believe that these final rules will result in an increase in appeals or remands from the courts.

Comment: We received various comments regarding our proposal in sections 404.1520c(b) and 416.920c(b) about when we would articulate how we considered medical opinions from medical sources who are not AMSs. A few commenters supported our proposal. However, several other commenters, including Members of Congress, expressed concern with the proposed changes. Some commenters said the changes would result in less transparency because adjudicators would have “too much individual discretion to dismiss key evidence without providing a rationale.” Other commenters said that our proposed rules would not allow reviewing courts to determine whether substantial evidence supports our decisions.

Response: We partially adopted these comments, and we appreciate the perspective of the commenters who expressed concern with the proposed rules. We are committed to having a transparent, fair, and balanced adjudicative process that ensures that

every entitled individual receives the disability benefits or payments and that every individual understands why he or she is not entitled to benefits. We agree with the majority of commenters that we should articulate how we consider medical opinions from any of an individual’s own medical sources, regardless of whether that source is an AMS.

Therefore, we revised final 404.1520c(c) and 416.920c(c) to require our adjudicators to articulate how they consider medical opinions from all medical sources, regardless of AMS status. This revision helps align our rules with current medical practice and recognizes that individuals may obtain evaluation, examination, or treatment from medical sources who are not AMSs.

To account for this change, we are not adopting proposed 404.1520c(b)(4) and 416.920c(b)(4) in these final rules, which would have stated standards about when we would articulate how we considered medical opinions from medical sources who are not AMSs. We also revised final 404.1520c(a)–(b) and 416.920c(a)–(b) to clarify that there is a difference between considering evidence and articulating how we consider evidence. We consider all evidence we receive, but we have a reasonable articulation standard for determinations and decisions that does not require written analysis about how we considered each piece of evidence.

We expect that the articulation requirements in these final rules will allow a subsequent reviewer or a reviewing court to trace the path of an adjudicator’s reasoning, and will not impede a reviewer’s ability to review a determination or decision, or a court’s ability to review our final decision.

Comment: One commenter asked for clarification about what we meant by “medical source” in proposed 404.1520c(b)(1) and 416.920c(b)(1), particularly when an entity provides us with evidence. The commenter asked if we were referring to the same health care provider, the same clinic, the same medical group, or the same hospital.

Response: Under both our current and these final rules, only an individual, not an entity, can be a medical source.

When an entity provides us with evidence from multiple medical sources, we will evaluate each medical source’s evidence separately instead of considering the evidence as coming from one source.

Comment: One commenter agreed with our proposal to require an adjudicator to discuss other relevant factors when we find two medical sources’ medical opinion(s) or prior

administrative medical finding(s) equally persuasive. Another comment asserted that the NPRM did not provide much guidance as to when medical opinions are both equally well-supported and consistent with the record.

Response: We agree with the first commenter that this requirement provides an appropriate standard about when an adjudicator has discretion to discuss the other relevant factors. Because the content of evidence, including medical opinions and prior administrative medical findings, varies with each unique claim, it would not be appropriate to set out a detailed rule for when this situation may occur. We expect that each adjudicator will use his or her discretion to determine when this situation occurs.

The final rules include sufficient guidance to adjudicators in determining when this situation exists. Under final sections 404.1520c(b)(3) and 416.920c(b)(3), the medical opinions or prior administrative medical findings must be “both equally well-supported” under sections 404.1520c(c)(1) or 416.920c(c)(1) “and consistent with the record” under sections 404.1520c(c)(2) or 416.920c(c)(2). In addition, the opinions or prior administrative medical findings must not be “exactly the same.” Under these circumstances, we will articulate how we considered the other most persuasive factors in sections 404.1520c(c)(3)–(c)(5) or 416.920c(c)(3)–(c)(5) for those medical opinions or prior administrative medical findings in the determination or decision.

Comment: One commenter thought we would no longer provide rationale about why we did not adopt a medical opinion from an individual’s doctor. A few commenters believed that the proposed rule would reduce our articulation burden and would increase inconsistency in how we evaluate individuals.

Response: While we understand some commenters were concerned about these issues, these final rules continue the requirement in current 404.1527 and 416.927 to articulate how we consider medical opinions from an individual’s own doctor. In fact, these final rules enhance the current requirements in several ways, such as requiring articulation about medical opinions from all of an individual’s medical sources, making consistency and supportability the most important factors, and clarification of the factors themselves. These improvements will increase the consistency in how we evaluate claims, and we also expect them to reduce remands.

Comment: One commenter asked us to adopt the medical opinions of highly-specialized doctors without considering the other factors.

Response: After careful consideration, we are not adopting this comment. The specialization of the medical source who provides a medical opinion or prior administrative medical finding is one of the factors we consider when we evaluate how persuasive a medical opinion or prior administrative medical finding is. Under our current rules in 404.1527(c) and 416.927(c), we consider several factors when we decide what “weight” to give to a medical opinion, and we do not consider the specialization of the medical source in isolation. Evaluating the persuasiveness of a medical opinion requires consideration of several factors and in context of all of the evidence in the claim.

Comment: One commenter asked us to add a factor for considering medical opinions that would inquire about whether the individual is indigent, because such individuals cannot afford psychotherapy.

Response: We are not adopting this comment because the factors for considering medical opinions and prior administrative medical findings relate to the persuasiveness of the evidence presented, not to the financial status of the individual. We will consider and explain how we considered medical opinions of an individual’s medical sources regardless of whether the medical evaluation, examination, or treatment occurred in a free or low cost health clinic for indigent individuals.

Comment: One commenter asked whether we intended to make two separate findings about the value and persuasiveness of medical opinions, or whether we intended to require one finding. The commenter opposed requiring two separate findings for each medical opinion because that would increase the articulation burden on our adjudicators.

Response: We appreciate the question and the opportunity to clarify that we are not requiring two separate findings. Our adjudicators need only explain how persuasive they found a medical opinion or prior administrative medical finding in their determinations or decisions. As we state in final 404.1520(c)(b) and 416.920(c)(b), “[w]e will articulate in our determination or decision how persuasive we find all of the medical opinions and all of the prior administrative medical findings in your case record.” There is no requirement that our adjudicators provide a second analysis about how valuable a medical

opinion or prior administrative medical finding is.

Comment: A few commenters said that our proposed rules about how we would articulate how we considered medical opinions, and that we would not articulate our consideration of disability examiner findings, statements on issues to the Commissioner, and decisions by other governmental agencies and nongovernmental entities, violated due process and 42 U.S.C. 405(b), which requires us to include in a determination or decision that is not fully favorable to an individual, a statement of the case, in understandable language, setting forth a discussion of the evidence, and stating the reason(s) upon which we based the determination or decision. Some of these commenters said reviewing courts would increase the number of remands because they would be unable to review our adjudicators’ rationale.

Response: Our current rules, the proposed rules, and these final rules are consistent with and further the goals of 42 U.S.C. 405(b) and the principles of due process. The statute does not require us to explain how we consider every piece of evidence we receive. Instead, section 405(b) requires us to include in a determination that is not fully favorable to an individual, a statement of the case, in understandable language, setting forth a discussion of the evidence, and stating the reason(s) upon which we based the determination or decision. The intent of the statute was not to impose a burdensome articulation requirement.⁵⁶ Rather, the intent was to remedy a prior concern that individuals were receiving notices that their claims for disability benefits had been denied without any personalized articulation of the evidence.⁵⁷

We will articulate how we considered the medical opinions from all medical sources and prior administrative medical findings in a claim. This articulation will include the supportability and consistency factors, which generally includes an assessment

of the supporting objective medical evidence and other medical evidence, and how consistent the medical opinion or prior administrative medical findings is with other evidence in the claim. Therefore, the final rules are consistent with the intent of the statute that we provide a statement of the case, setting forth a discussion of the evidence, and stating the reasons upon which we based the determination.

As to the comments that these rules do not provide due process, these final rules do not violate the Due Process Clause of the Fifth Amendment to the Constitution. The final rules do not categorize individuals based on their characteristics or deprive an individual of a protected property interest. The rules also ensure that our procedures are fair and provide individuals with appropriate procedural protections. Nothing in constitutional principles of equal protection is inconsistent with these final rules.

Comment: We received a few comments raising concern about the interactions between the proposed rules and some Federal statutes, and the interactions between the proposed rules and judicial review. A few commenters said our proposed rules were in conflict with 42 U.S.C. 405(g). One commenter said our proposed rules were in conflict with 42 U.S.C. 404(a). One commenter said our proposed rules violated the Ninth Circuit’s “credit-as-true doctrine.” Another commenter said the treating source rule provides for uniformity between Federal courts and us and minimizes delays to claimants by limiting unnecessary court reviews. A few commenters said courts would continue to defer to evidence from a claimant’s own medical sources regardless of the content of our rules.

Response: We do not agree with these comments. 42 U.S.C. 404(a) and 405(g) do not directly apply to the proposed or final regulatory sections. 42 U.S.C. 404(a) addresses how we assess underpayments and overpayments, and nothing in these final rules address these issues. Similarly, 42 U.S.C. 405(g) addresses procedures for individuals to appeal their decisions to Federal court, and these final rules do not affect these rights.

Federal courts are bound to uphold our decisions when they are supported by substantial evidence and when we have applied the appropriate legal standards in our decisions. While a court has the authority to review the validity of our regulations, the fact that some courts previously have adopted a credit as true rule does not mean that we are required to adopt such a rule in

⁵⁶ See section 305 of the Social Security Disability Amendments of 1980, Public Law 96–265, 94 Stat. 441, 457. In amending section 405(b), Congress intended for the required personalized denial notice to be “brief, informal, and not technical.” H.R. Conf. Rep. 96–944, at 58 (1980), and did not intend for it to be a voluminous document, S. Rep. 96–408 at 57 (1979).

⁵⁷ See H.R. Conf. Rep. 96–944, at 58 (1980) (noting that under the law at the time, “[t]here is no statutory provision setting a specific amount of information to explain the decision made on a claim for benefits.”); S. Rep. 96–408 at 56 (1979) (noting that under the law at the time, “[n]otices to claimants regarding the Secretary’s decision on their claim for disability benefits provides little guidance as to the causes for a denial.”)

our regulations.⁵⁸ Those courts that have adopted the credit as true rule have not done so based on any specific requirement of the Act, and the statute does not mandate that we apply such a rule.

In our view, the credit as true rule supplants the legitimate decisionmaking authority of our adjudicators, who make determinations or decisions based on authority delegated by the Commissioner. The credit as true rule is neither required by the Act nor by principles of due process. It is also inconsistent with the general rule that, when a court finds an error in an administrative agency's decision, the proper course of action in all but rare instances is to remand the case to the agency for further proceedings. Accordingly, we decline to adopt the credit as true rule here.

We expect that courts will defer to these regulations, which we adopted through notice and comment rulemaking procedures pursuant to the Commissioner's exceptionally broad rulemaking authority under the Act. The rules are essential for our administration of a massive and complex nationwide disability program where the need for efficiency is self-evident. The rules are neither arbitrary nor capricious, nor do they exceed the bounds of reasonableness. Under these circumstances, we are confident that our rules are valid.⁵⁹

Comment: A few commenters asked us to require MCs and PCs to identify what medical evidence they reviewed and disclose the amount of time spent reviewing each claimant's file to enable later decisionmakers to assess the supportability and consistency factors more effectively. These commenters also asked us to instruct our adjudicators to consider the completeness of the record at the time of review and the time spent reviewing the record when evaluating prior administrative medical findings.

Response: While we agree that the specific evidence an MC or PC reviewed is probative, we did not accept this comment because MCs and PCs are required to evaluate all of the evidence in the claim file at the time they make their medical findings under our rules. Consistent with 42 U.S.C. 405(b), our current rules also require that when we make an initial determination, our written notice will explain in simple and clear language what we have determined and the reasons for and the

effect of our determination. When we make a determination of disability that is in whole or in part unfavorable to an individual, our rules also require our written notice to "contain in understandable language a statement of the case setting forth the evidence on which our determination is based."⁶⁰ Adjudicators at subsequent levels of appeal can also determine what evidence already existed in the claim file when the MC or PC made his or her medical findings by reviewing data in the claims folder.

We also did not adopt the suggestion to measure and document MC and PC review time to help subsequent adjudicators consider supportability and consistency of their adjudicative findings because review time does not provide information about supporting evidence or consistency of the evidence.

Sections 404.1521 and 416.921—Establishing That You Have a Medically Determinable Impairment

Comment: One commenter asked us to align our requirements for establishing an impairment with the International Classification of Functioning (ICF) used by the World Health Organization.⁶¹ The ICF is a framework for describing and organizing information on functioning and disability. The commenter suggested that if we were to align our requirements for establishing an impairment with the ICF, medical sources who provide evidence to us could use a standardized language and conceptual basis for the definition and measurement of health and disability.

Response: While we are always looking for ways to improve how we adjudicate disability claims, we are not adopting the comment at this time. It is unclear how the ICF would be helpful in our adjudication of disability claims because the ICF's definition of disability differs from the requirements in the Act. The Act defines disability as "the inability to engage in substantial gainful activity by reason of any medically determinable physical or mental impairment, which can be expected to result in death or which has lasted or can be expected to last for a continuous period of not less than 12 months."⁶²

In contrast, the ICF views "disability and functioning as outcomes of interactions between *health conditions* (diseases, disorders and injuries) and

contextual factors."⁶³ Included in these contextual factors "are external *environmental factors* (for example, social attitudes, architectural characteristics, legal and social structures, as well as climate, terrain, and so forth); and internal *personal factors*, which include gender, age, coping styles, social background, education, profession, past and current experience, overall behaviour pattern, character and other factors that influence how disability is experienced by the individual."⁶⁴ Therefore, an individual could have a "disability" as contemplated by the ICF without meeting the Act's definition of disability.

Sections 404.1522 and 416.922—What We Mean by an Impairment(s) That Is Not Severe

Comment: One commenter stated that, "controlling law on the statutory interpretation of 'severe' is that it should have the 'minimalist effect' on the activities of daily living."

Response: We did not adopt this comment because we proposed to move the current definition from current 404.1521(a) and 416.921(a) into proposed 404.1522(a) and 416.922(a) as part of the effort to reorganize our regulations for ease of use, not to change the current definition. The definition of "non-severe" impairment in our regulations has been the same since 1985,⁶⁵ and it has been substantially the same since we first defined the term in 1980.⁶⁶ The U.S. Supreme Court upheld the regulatory definition in *Bowen v. Yuckert*.⁶⁷

Sections 404.1523 and 416.923—Multiple Impairments

Comment: One commenter opposed proposed 404.1523 and 416.923, which explains how we consider an individual's multiple impairments, because he said we would not consider all impairments in combination.

Response: We decided to adopt these proposed revisions as part of our effort to make our rules easier to understand and use. These sections combine content from current 404.1522, 404.1523, 416.922, and 416.923 without any substantive change in language. These current sections discuss related issues—our policies for considering claims involving multiple impairments.

⁵⁹ See 5 U.S.C. 553 and E.O. 12866, as supplemented by E.O. 13563.

⁶⁰ Current 404.904 and 416.1404.

⁶¹ See World Health Organization, International Classification of Functioning, Disability and Health (ICF), <http://www.who.int/classifications/icf/en/>.

⁶² 42 U.S.C. 423(d)(1)(A) and 1382c(a)(3)(A).

⁶³ World Health Organization, Towards a Common Language for Functioning, Disability and Health—ICF, p. 10, 2002.

⁶⁴ *Id.*

⁶⁵ See 50 FR 8726, 8728 (March 5, 1985).

⁶⁶ See 45 FR 55566, 55588 (August 20, 1980).

⁶⁷ 482 U.S. 137 (1987).

Under the final rules, as under the current rules, we will consider the combined effect of all of the individual's impairments without regard to whether any such impairment, if considered separately, would be of sufficient severity when we determine whether an individual's physical or mental impairment or impairments are of a sufficient medical severity that such impairment or impairments could be the basis of eligibility. If we do find a medically severe combination of impairments, we will consider the combined impact of the impairments throughout the disability determination process. Since our final rules require us to consider the combined effect of an individual's impairments, we are adopting the text as proposed in final 404.1523 and 416.923.

Sections 404.1527 and 416.927—Evaluating Opinion Evidence for Claims Filed Before March 27, 2017

Comment: One commenter suggested that the phrase “typical for your condition(s),” as part of the definition of “treating source” in proposed 404.1527 and 416.927, which will be applied to claims filed before March 27, 2017, should include the population of indigent individuals who cannot afford psychotherapy as frequently as those who can afford to pay for more frequent sessions.

Response: We are not adopting this comment. The definition of “treating source” in proposed 404.1527 and 416.927, including the words “typical for your condition(s),” comes from our current definition of treating source in current 404.1502 and 416.902. We will continue to apply our current rules for evaluating evidence from a treating source, including this definition, to claims filed before March 27, 2017. We moved this definition to proposed 404.1527 and 416.927 to locate together more of the rules that we will use for claims filed before March 27, 2017.

For claims filed on or after March 27, 2017, the rules for considering medical opinions will not use the term “treating source” or the phrase “typical for your condition(s).”

Sections 404.1616 and 416.1016—Medical Consultants and Psychological Consultants

Comment: Several commenters opposed our proposal to recognize master's level psychologists licensed for independent practice as psychological consultants (PC) in proposed 404.1616 and 416.1016. These commenters said we should continue to follow our current rules in 404.1616(e) and 416.1016(e) because they recognize the

most qualified licensed psychologists, who are doctorate-level clinical psychologists, to be PCs. These commenters said we should maintain a higher level of qualifications for a psychologist to be a PC than we require a psychologist to be an acceptable medical source (AMS).

Response: We agree with these commenters and are not adopting our proposal to revise the qualifications to be a PC in these final rules. Instead, we will continue to follow our current requirements about who can be a PC in final 404.1616 and 416.1016.

Our rules only authorize us to recognize a psychologist to be a PC if he or she: (1) Is licensed or certified as a psychologist at the independent practice level of psychology by the State in which he or she practices; and (2)(i) Possesses a doctorate degree in psychology from a program in clinical psychology of an educational institution accredited by an organization recognized by the Council on Post-Secondary Accreditation; or (ii) Is listed in a national register of health service providers in psychology which we deem appropriate; and (3) Possesses 2 years of supervised clinical experience as a psychologist in health service, at least 1 year of which is post-masters degree.

Comment: One commenter said our proposed use of the term “every reasonable effort,” relating to a medical consultant (MC) or PC completing the medical portion of the case review and any applicable RFC assessment, in proposed 404.1616, 404.1617, 416.1016, and 416.1017, was too broad.

Response: We did not adopt this comment because the term “every reasonable effort” as used in the NPRM and in the final rules is not new. In fact, it has appeared in section 221(h) of the Act since 1984, and Congress retained the phrase when it amended section 221(h) through the Bipartisan Budget Act of 2015 (BBA) section 832 in 2015. We have adopted the proposed procedural rules we will use to make “every reasonable effort” to have qualified physicians, psychologists, and psychiatrists review claims to final rules 404.1617 and 416.1017.

Comment: Some commenters opposed our proposal to limit MCs to only licensed physicians. The commenters stated that speech-language pathologists were uniquely qualified to assess the level of functional impairment and ability related to communication disorders. One of these commenters asked us to require that speech-language pathologists review all claims related to communication disorders at the initial and reconsideration levels as medical advisors.

Response: We agree that speech-language pathologists are highly qualified to assess level of functional impairment and ability related to communication disorders; therefore, we have retained them as AMSs. However, section 221(h) of the Act, as amended by BBA section 832, states that we must make every reasonable effort to ensure that a qualified physician (in cases involving a physical impairment) or a qualified psychologist or psychiatrist (in cases involving a mental impairment) completes the medical portion of the case review. A speech-language pathologist is not a “qualified physician” and therefore section 221(h) of the Act does not authorize us to recognize them as MCs or PCs.

To help retain the expertise of non-physician AMSs like speech-language pathologists, we created the role of a medical advisor in our subregulatory instructions.⁶⁸ These medical sources can review the evidence in the claim and provide case analysis that the adjudicative team will consider as evidence from a medical source in accordance with final 404.1513(a), 404.1520b, 404.1520c, 404.1527, 416.913(a), 416.920b, 416.920c, and 416.927, as appropriate. However, we are not adopting the suggestion to require Speech-Language Pathologist medical advisor input in every claim involving communication disorders at this time. The adjudicative team will use its professional judgment to determine whether to consult with a medical advisor(s) and how to consider medical advisor input on any case.

Comment: One commenter asked us to revise our rules to state that an MC who is a pediatrician must evaluate any child claim involving a physical impairment and cited section 1614(a)(3)(I) of the Act, which mandates that we make reasonable efforts to have a qualified pediatrician or other appropriate specialist evaluate a child's case. Another commenter asked us to allow licensed physicians such as development/behavioral pediatricians, child neurologists, and some primary care providers to act as PCs in a child claim involving a mental impairment because there is a shortage of child psychologists and psychiatrists. Another commenter opposed our rules that authorize psychiatrists to review physical impairments.

Response: While we appreciate the commenters' concerns, we did not adopt

⁶⁸ See POMS DI 24501.001 The Disability Determination Services (DDS) Disability Examiner (DE), Medical Consultant (MC), and Psychological Consultant (PC) Team, and the Role of the Medical Advisor (MA), available at <https://secure.ssa.gov/apps10/poms.nsf/lnx/0424501001>.

them because our current rules are already sufficient and consistent with the Act. Consistent with the Act's requirements in section 1614(a)(3)(I), our current rules already state that we will make reasonable efforts to ensure that a qualified pediatrician or other individual who specializes in a field of medicine appropriate to the child's impairment(s) evaluates the case of the child.⁶⁹ The Act does not require us to have only a pediatrician be an MC in child claims involving a physical impairment(s).

Section 221(h) of the Act, as amended by BBA section 832, states that when there is evidence indicating the existence of a mental impairment in a claim, we may not make an initial determination until we have made every reasonable effort to ensure that a qualified psychiatrist or psychologist has completed the medical portion of the case review and any applicable residual functional capacity (RFC) assessment. If we make every reasonable effort to obtain the services of a licensed psychiatrist or qualified psychologist to review a claim involving a mental impairment, but the professional services are not obtained, a physician who is not a psychiatrist will review the mental impairment claim.⁷⁰

Historically, we have not regulated which specialty of MC or PC must review cases involving specific impairments because each Disability Determination Service (DDS) has unique staffing considerations. Due to the continually changing nature of the medical profession, any future guidance we may issue about which medical specialties may review claims involving specific impairments would be best placed in our subregulatory instructions.

Comment: A few commenters wanted us to recognize optometrists and podiatrists as MCs. They said that BBA section 832's requirement that a licensed physician review claims involving physical impairments still authorized us to have optometrists and podiatrists as MCs.

Response: We recognize the specialized expertise that these medical sources can bring to claims, which is why we authorized them to be MCs prior to BBA section 832's effective date. However, neither optometrists nor podiatrists are qualified physicians, as is required by section 221(h) of the Act, as amended by BBA section 832. To retain access to their expertise, we created the medical advisor role in our subregulatory instructions so that DDSs

may continue to request their expert analysis on claims.

Other Comments

Comment: Several commenters opposed the proposed policy changes in the NPRM that were inconsistent with the following Social Security Rulings (SSR): 96–2p, 96–5p, and 96–6p. Therefore, those commenters opposed rescinding the same SSRs.

Response: We explained in detail above and (as appropriate) in the preamble to our proposed rules, our reasons for adopting the policies in these final rules. Because the policies we are adopting in these final rules are inconsistent with those SSRs, we are rescinding them.

Comment: Some commenters disagreed with our proposed implementation process. These commenters said it would be difficult for adjudicators to follow different rules based on the filing date of the claim. One commenter said all claims should follow the new policies on the effective date, or in the alternative, fewer of the current policies should apply to claims filed before the effective date. The commenter also said that we should apply the proposed new policies about decisions from other governmental agencies and nongovernmental entities and about statements on issues reserved to the Commissioner to all claims.

Response: We carefully considered these comments and decided to implement these final rules consistent with our proposed implementation process. We are aware that individuals who filed claims before the effective date of these final rules may have requested evidence, including medical opinions from “treating sources,” based on our current policies. We are also cognizant that some of our existing rules may have engendered reliance interests that we need to consider. We proposed to implement some of these rules differently from our usual practice in recognition of these factors, which we believe still apply. However, to help adjudicators identify which rules they should follow, we revised the titles and introductory text in final 404.1520c, 404.1527, 416.920c, and 416.927.

Comment: A commenter stated that some of the changes proposed in the NPRM were not evidence-based or supported by “current data.” The commenter also raised concern about the speed and accuracy of disability determinations that we would make under the proposed rules, although the commenter did not specify which policies were of concern.

Response: We appreciate and agree with the commenter's desire for

evidence-based policies, and for efficient, fair, and policy-compliant disability determinations. We have explained at length in the preamble the reasons and the support for the policy changes. The primary reason that we are updating our rules is to reflect the current ways in which people receive medical treatment. As we implement these final rules, we will continue our current internal procedures for monitoring the quality and quantity of determinations to ensure that adjudicators continue to apply our rules timely and accurately.

Comment: One commenter asserted that we are required to include an analysis under the Regulatory Flexibility Act because the proposals would have a significant economic impact on a substantial number of small entities, such as law firms and non-profit organizations.

Response: We did not adopt this comment because we are only required to perform a Regulatory Flexibility Act analysis if small entities will be subject to the proposed rule. The comment did not explain how these final rules may have a significant economic impact on a substantial number of small entities. “Congress ‘did not intend to require that every agency consider every indirect effect that any regulation might have on small businesses in any stratum of the national economy.’”⁷¹ Only individuals may receive disability or blindness benefits under titles II and XVI of the Act. An individual who applies for disability or blindness benefits may enter into an agreement with an individual representative to help him or her with the claim, which may include a fee for services provided.⁷² However, our current regulations do not recognize any entities as representatives.⁷³ Therefore, as authorized by the Regulatory Flexibility Act,⁷⁴ we correctly certified below that these final rules will not have a significant economic impact on a substantial number of small entities because they affect individuals only.

Comment: Several commenters stated that the proposed rules would not make our decisions more accurate or decrease the time it takes for us to adjudicate a claim. These commenters also asserted that the proposed rules would create more appeals and delays.

⁷¹ *Cement Kiln Recycling Coalition v. Environmental Protection Agency*, 255 F.3d 855, 869 (D.C. Cir. 2001) (quoting *Mid-Texas Electrical Cooperative, Inc. v. Federal Energy Regulatory Commission*, 773 F.3d 327, 343 (D.C. Cir. 1985)).

⁷² See current 404.1720 and 416.1520.

⁷³ See current 404.1705 and 416.1505.

⁷⁴ 5 U.S.C. 605(b).

⁶⁹ Current 416.903(f).

⁷⁰ Current 404.1617(c) and 416.1017(c).

Response: We disagree that these rules will make our decisions less accurate or will increase the time it takes for us to adjudicate a claim. These final rules clarify some existing policies and revise others for increased transparency and balance. As we discussed at length above, we expect that the changes we are adopting in these final rules will further the fair and timely administration of our programs. We have made a number of changes to the proposed rules to address concerns raised by commenters about aspects of the proposed rules, and to enhance our goal of ensuring that we adjudicate claims fairly, accurately, and in a timely manner.

Executive Order 12866, as Supplemented by Executive Order 13563

We consulted with the Office of Management and Budget (OMB) and determined that these final rules meet the criteria for a significant regulatory action under Executive Order 12866, as supplemented by Executive Order 13563. Therefore, OMB reviewed these final rules.

Regulatory Flexibility Act

We certify that these final rules will not have a significant economic impact on a substantial number of small entities because they affect individuals only. Therefore, a regulatory flexibility analysis is not required under the Regulatory Flexibility Act, as amended.

Paperwork Reduction Act

These final rules do not create any new or affect any existing collections and, therefore, do not require OMB approval under the Paperwork Reduction Act.

(Catalog of Federal Domestic Assistance Program Nos. 96.001, Social Security—Disability Insurance; 96.002, Social Security—Retirement Insurance; and 96.004, Social Security—Survivors Insurance)

List of Subjects

20 CFR Part 404

Administrative practice and procedure, Blind, Disability benefits, Old-Age, Survivors, and Disability Insurance, Reporting and recordkeeping requirements, Social Security.

20 CFR Part 416

Administrative practice and procedure, Reporting and recordkeeping

requirements, Supplemental Security Income (SSI).

Carolyn W. Colvin,

Acting Commissioner of Social Security.

For the reasons set out in the preamble, we are amending part 404 subparts J, P, and Q, and part 416 subparts I, J, and N as set forth below:

PART 404—FEDERAL OLD-AGE, SURVIVORS AND DISABILITY INSURANCE (1950—)

Subpart J—Determinations, Administrative Review Process, and Reopening of Determinations and Decisions

- 1. The authority citation for subpart J of part 404 continues to read as follows:

Authority: Secs. 201(j), 204(f), 205(a)–(b), (d)–(h), and (j), 221, 223(i), 225, and 702(a)(5) of the Social Security Act (42 U.S.C. 401(j), 404(f), 405(a)–(b), (d)–(h), and (j), 421, 423(i), 425, and 902(a)(5)); sec. 5, Pub. L. 97–455, 96 Stat. 2500 (42 U.S.C. 405 note); secs. 5, 6(c)–(e), and 15, Pub. L. 98–460, 98 Stat. 1802 (42 U.S.C. 421 note); sec. 202, Pub. L. 108–203, 118 Stat. 509 (42 U.S.C. 902 note).

- 2. In § 404.906(b)(2), revise the fourth sentence to read as follows:

§ 404.906 Testing modifications to the disability determination procedures.

* * * * *

(b) * * *

(2) * * * However, before an initial determination is made in any case where there is evidence which indicates the existence of a mental impairment, the decisionmaker will make every reasonable effort to ensure that a qualified psychiatrist or psychologist has completed the medical portion of the case review and any applicable residual functional capacity assessment pursuant to our existing procedures (see § 404.1617). * * *

* * * * *

- 3. In § 404.942, revise paragraph (f)(1) to read as follows:

§ 404.942 Prehearing proceedings and decisions by attorney advisors.

* * * * *

(f) * * *

(1) Authorize an attorney advisor to exercise the functions performed by an administrative law judge under §§ 404.1513a, 404.1520a, 404.1526, and 404.1546.

* * * * *

Subpart P—Determining Disability and Blindness

- 4. The authority citation for subpart P of part 404 is revised to read as follows:

Authority: Secs. 202, 205(a)–(b) and (d)–(h), 216(i), 221(a) and (h)–(j), 222(c), 223, 225, and 702(a)(5) of the Social Security Act (42 U.S.C. 402, 405(a)–(b) and (d)–(h), 416(i), 421(a) and (h)–(j), 422(c), 423, 425, and 902(a)(5)); sec. 211(b), Pub. L. 104–193, 110 Stat. 2105, 2189; sec. 202, Pub. L. 108–203, 118 Stat. 509 (42 U.S.C. 902 note).

- 5. Revise § 404.1502 to read as follows:

§ 404.1502 Definitions for this subpart.

As used in the subpart—

Acceptable medical source means a medical source who is a:

(1) Licensed physician (medical or osteopathic doctor);

(2) Licensed psychologist, which includes:

(i) A licensed or certified psychologist at the independent practice level; or

(ii) A licensed or certified school psychologist, or other licensed or certified individual with another title who performs the same function as a school psychologist in a school setting, for impairments of intellectual disability, learning disabilities, and borderline intellectual functioning only;

(3) Licensed optometrist for impairments of visual disorders, or measurement of visual acuity and visual fields only, depending on the scope of practice in the State in which the optometrist practices;

(4) Licensed podiatrist for impairments of the foot, or foot and ankle only, depending on whether the State in which the podiatrist practices permits the practice of podiatry on the foot only, or the foot and ankle;

(5) Qualified speech-language pathologist for speech or language impairments only. For this source, *qualified* means that the speech-language pathologist must be licensed by the State professional licensing agency, or be fully certified by the State education agency in the State in which he or she practices, or hold a Certificate of Clinical Competence in Speech-Language Pathology from the American Speech-Language-Hearing Association;

(6) Licensed audiologist for impairments of hearing loss, auditory processing disorders, and balance disorders within the licensed scope of practice only (with respect to claims filed (see § 404.614) on or after March 27, 2017);

(7) Licensed Advanced Practice Registered Nurse, or other licensed advanced practice nurse with another title, for impairments within his or her licensed scope of practice (only with respect to claims filed (see § 404.614) on or after March 27, 2017); or

(8) Licensed Physician Assistant for impairments within his or her licensed

scope of practice (only with respect to claims filed (see § 404.614) on or after March 27, 2017).

Commissioner means the Commissioner of Social Security or his or her authorized designee.

Laboratory findings means one or more anatomical, physiological, or psychological phenomena that can be shown by the use of medically acceptable laboratory diagnostic techniques. Diagnostic techniques include chemical tests (such as blood tests), electrophysiological studies (such as electrocardiograms and electroencephalograms), medical imaging (such as X-rays), and psychological tests.

Medical source means an individual who is licensed as a healthcare worker by a State and working within the scope of practice permitted under State or Federal law, or an individual who is certified by a State as a speech-language pathologist or a school psychologist and acting within the scope of practice permitted under State or Federal law.

Nonmedical source means a source of evidence who is not a medical source. This includes, but is not limited to:

- (1) You;
- (2) Educational personnel (for example, school teachers, counselors, early intervention team members, developmental center workers, and daycare center workers);
- (3) Public and private social welfare agency personnel; and
- (4) Family members, caregivers, friends, neighbors, employers, and clergy.

Objective medical evidence means signs, laboratory findings, or both.

Signs means one or more anatomical, physiological, or psychological abnormalities that can be observed, apart from your statements (symptoms). Signs must be shown by medically acceptable clinical diagnostic techniques. Psychiatric signs are medically demonstrable phenomena that indicate specific psychological abnormalities, e.g., abnormalities of behavior, mood, thought, memory, orientation, development, or perception, and must also be shown by observable facts that can be medically described and evaluated.

State agency means an agency of a State designated by that State to carry out the disability or blindness determination function.

Symptoms means your own description of your physical or mental impairment.

We or us means, as appropriate, either the Social Security Administration or the State agency making the disability or blindness determination.

You or your means, as appropriate, the person who applies for benefits or for a period of disability, the person for whom an application is filed, or the person who is receiving benefits based on disability or blindness.

§ 404.1503 [Amended]

- 6. In § 404.1503, remove paragraph (e).
- 7. Revise § 404.1504 to read as follows:

§ 404.1504 Decisions by other governmental agencies and nongovernmental entities.

Other governmental agencies and nongovernmental entities—such as the Department of Veterans Affairs, the Department of Defense, the Department of Labor, the Office of Personnel Management, State agencies, and private insurers—make disability, blindness, employability, Medicaid, workers' compensation, and other benefits decisions for their own programs using their own rules. Because a decision by any other governmental agency or a nongovernmental entity about whether you are disabled, blind, employable, or entitled to any benefits is based on its rules, it is not binding on us and is not our decision about whether you are disabled or blind under our rules. Therefore, in claims filed (see § 404.614) on or after March 27, 2017, we will not provide any analysis in our determination or decision about a decision made by any other governmental agency or a nongovernmental entity about whether you are disabled, blind, employable, or entitled to any benefits. However, we will consider all of the supporting evidence underlying the other governmental agency or nongovernmental entity's decision that we receive as evidence in your claim in accordance with § 404.1513(a)(1) through (4).

§ 404.1508 [Removed and reserved]

- 8. Remove and reserve § 404.1508.
- 9. Revise § 404.1512 to read as follows:

§ 404.1512 Responsibility for evidence.

(a) *Your responsibility.*

(1) *General.* In general, you have to prove to us that you are blind or disabled. You must inform us about or submit all evidence known to you that relates to whether or not you are blind or disabled (see § 404.1513). This duty is ongoing and requires you to disclose any additional related evidence about which you become aware. This duty applies at each level of the administrative review process,

including the Appeals Council level if the evidence relates to the period on or before the date of the administrative law judge hearing decision. We will consider only impairment(s) you say you have or about which we receive evidence. When you submit evidence received from another source, you must submit that evidence in its entirety, unless you previously submitted the same evidence to us or we instruct you otherwise. If we ask you, you must inform us about:

- (i) Your medical source(s);
- (ii) Your age;
- (iii) Your education and training;
- (iv) Your work experience;
- (v) Your daily activities both before and after the date you say that you became disabled;
- (vi) Your efforts to work; and
- (vii) Any other factors showing how your impairment(s) affects your ability to work. In §§ 404.1560 through 404.1569, we discuss in more detail the evidence we need when we consider vocational factors.

(2) *Completeness.* The evidence in your case record must be complete and detailed enough to allow us to make a determination or decision about whether you are disabled or blind. It must allow us to determine—

- (i) The nature and severity of your impairment(s) for any period in question;
- (ii) Whether the duration requirement described in § 404.1509 is met; and
- (iii) Your residual functional capacity to do work-related physical and mental activities, when the evaluation steps described in § 404.1520(e) or (f)(1) apply.

(b) *Our responsibility.*

(1) *Development.* Before we make a determination that you are not disabled, we will develop your complete medical history for at least the 12 months preceding the month in which you file your application unless there is a reason to believe that development of an earlier period is necessary or unless you say that your disability began less than 12 months before you filed your application. We will make every reasonable effort to help you get medical evidence from your own medical sources and entities that maintain your medical sources' evidence when you give us permission to request the reports.

(i) *Every reasonable effort* means that we will make an initial request for evidence from your medical source or entity that maintains your medical source's evidence, and, at any time between 10 and 20 calendar days after the initial request, if the evidence has not been received, we will make one

follow-up request to obtain the medical evidence necessary to make a determination. The medical source or entity that maintains your medical source's evidence will have a minimum of 10 calendar days from the date of our follow-up request to reply, unless our experience with that source indicates that a longer period is advisable in a particular case.

(ii) *Complete medical history* means the records of your medical source(s) covering at least the 12 months preceding the month in which you file your application. If you say that your disability began less than 12 months before you filed your application, we will develop your complete medical history beginning with the month you say your disability began unless we have reason to believe your disability began earlier. If applicable, we will develop your complete medical history for the 12-month period prior to the month you were last insured for disability insurance benefits (see § 404.130), the month ending the 7-year period you may have to establish your disability and you are applying for widow's or widower's benefits based on disability (see § 404.335(c)(1)), or the month you attain age 22 and you are applying for child's benefits based on disability (see § 404.350).

(2) *Obtaining a consultative examination.* We may ask you to attend one or more consultative examinations at our expense. See §§ 404.1517 through 404.1519t for the rules governing the consultative examination process. Generally, we will not request a consultative examination until we have made every reasonable effort to obtain evidence from your own medical sources. We may order a consultative examination while awaiting receipt of medical source evidence in some instances, such as when we know a source is not productive, is uncooperative, or is unable to provide certain tests or procedures. We will not evaluate this evidence until we have made every reasonable effort to obtain evidence from your medical sources.

(3) *Other work.* In order to determine under § 404.1520(g) that you are able to adjust to other work, we must provide evidence about the existence of work in the national economy that you can do (see §§ 404.1560 through 404.1569a), given your residual functional capacity (which we have already assessed, as described in § 404.1520(e)), age, education, and work experience.

■ 10. Revise § 404.1513 to read as follows:

§ 404.1513 Categories of evidence.

(a) *What we mean by evidence.* Subject to the provisions of paragraph (b), evidence is anything you or anyone else submits to us or that we obtain that relates to your claim. We consider evidence under §§ 404.1520b, 404.1520c (or under § 404.1527 for claims filed (see § 404.614) before March 27, 2017). We evaluate evidence we receive according to the rules pertaining to the relevant category of evidence. The categories of evidence are:

(1) *Objective medical evidence.* Objective medical evidence is medical signs, laboratory findings, or both, as defined in § 404.1502(f).

(2) *Medical opinion.* A medical opinion is a statement from a medical source about what you can still do despite your impairment(s) and whether you have one or more impairment-related limitations or restrictions in the following abilities:

(i) Your ability to perform physical demands of work activities, such as sitting, standing, walking, lifting, carrying, pushing, pulling, or other physical functions (including manipulative or postural functions, such as reaching, handling, stooping, or crouching);

(ii) Your ability to perform mental demands of work activities, such as understanding; remembering; maintaining concentration, persistence, or pace; carrying out instructions; or responding appropriately to supervision, co-workers, or work pressures in a work setting;

(iii) Your ability to perform other demands of work, such as seeing, hearing, or using other senses; and

(iv) Your ability to adapt to environmental conditions, such as temperature extremes or fumes. (For claims filed (see § 404.614) before March 27, 2017, see § 404.1527(a) for the definition of medical opinion.)

(3) *Other medical evidence.* Other medical evidence is evidence from a medical source that is not objective medical evidence or a medical opinion, including judgments about the nature and severity of your impairments, your medical history, clinical findings, diagnosis, treatment prescribed with response, or prognosis. (For claims filed (see § 404.614) before March 27, 2017, *other medical evidence* does not include a diagnosis, prognosis, or a statement that reflects a judgment(s) about the nature and severity of your impairment(s)).

(4) *Evidence from nonmedical sources.* Evidence from nonmedical sources is any information or statement(s) from a nonmedical source (including you) about any issue in your

claim. We may receive evidence from nonmedical sources either directly from the nonmedical source or indirectly, such as from forms we receive and our administrative records.

(5) *Prior administrative medical finding.* A prior administrative medical finding is a finding, other than the ultimate determination about whether you are disabled, about a medical issue made by our Federal and State agency medical and psychological consultants at a prior level of review (see § 404.900) in your current claim based on their review of the evidence in your case record, such as:

(i) The existence and severity of your impairment(s);

(ii) The existence and severity of your symptoms;

(iii) Statements about whether your impairment(s) meets or medically equals any listing in the Listing of Impairments in Part 404, Subpart P, Appendix 1;

(iv) Your residual functional capacity;

(v) Whether your impairment(s) meets the duration requirement; and

(vi) How failure to follow prescribed treatment (see § 404.1530) and drug addiction and alcoholism (see § 404.1535) relate to your claim.

(b) *Exceptions for privileged communications.*

(1) The privileged communications listed in paragraphs (b)(1)(i) and (b)(1)(ii) of this section are not evidence, and we will neither consider nor provide any analysis about them in your determination or decision. This exception for privileged communications applies equally whether your representative is an attorney or a non-attorney.

(i) Oral or written communications between you and your representative that are subject to the attorney-client privilege, unless you voluntarily disclose the communication to us.

(ii) Your representative's analysis of your claim, unless he or she voluntarily discloses it to us. This analysis means information that is subject to the attorney work product doctrine, but it does not include medical evidence, medical opinions, or any other factual matter that we may consider in determining whether or not you are entitled to benefits (see paragraph (b)(2) of this section).

(2) The attorney-client privilege generally protects confidential communications between an attorney and his or her client that are related to providing or obtaining legal advice. The attorney work product doctrine generally protects an attorney's analyses, theories, mental impressions, and notes. In the context of your

disability claim, neither the attorney-client privilege nor the attorney work product doctrine allow you to withhold factual information, medical opinions, or other medical evidence that we may consider in determining whether or not you are entitled to benefits. For example, if you tell your representative about the medical sources you have seen, your representative cannot refuse to disclose the identity of those medical sources to us based on the attorney-client privilege. As another example, if your representative asks a medical source to complete an opinion form related to your impairment(s), symptoms, or limitations, your representative cannot withhold the completed opinion form from us based on the attorney work product doctrine. The attorney work product doctrine would not protect the source's opinions on the completed form, regardless of whether or not your representative used the form in his or her analysis of your claim or made handwritten notes on the face of the report.

■ 11. Add § 404.1513a to read as follows:

§ 404.1513a Evidence from our Federal or State agency medical or psychological consultants.

The following rules apply to our Federal or State agency medical or psychological consultants that we consult in connection with administrative law judge hearings and Appeals Council reviews:

(a) In claims adjudicated by the State agency, a State agency medical or psychological consultant may make the determination of disability together with a State agency disability examiner or provide medical evidence to a State agency disability examiner when the disability examiner makes the initial or reconsideration determination alone (see § 404.1615(c)). The following rules apply:

(1) When a State agency medical or psychological consultant makes the determination together with a State agency disability examiner at the initial or reconsideration level of the administrative review process as provided in § 404.1615(c)(1), he or she will consider the evidence in your case record and make administrative findings about the medical issues, including, but not limited to, the existence and severity of your impairment(s), the existence and severity of your symptoms, whether your impairment(s) meets or medically equals the requirements for any impairment listed in appendix 1 to this subpart, and your residual functional capacity. These administrative medical findings are

based on the evidence in your case but are not in themselves evidence at the level of the administrative review process at which they are made. See § 404.1513(a)(5).

(2) When a State agency disability examiner makes the initial determination alone as provided in § 404.1615(c)(3), he or she may obtain medical evidence from a State agency medical or psychological consultant about one or more of the medical issues listed in paragraph (a)(1) of this section. In these cases, the State agency disability examiner will consider the medical evidence of the State agency medical or psychological consultant under §§ 404.1520b, 404.1520c, and 404.1527.

(3) When a State agency disability examiner makes a reconsideration determination alone as provided in § 404.1615(c)(3), he or she will consider prior administrative medical findings made by a State agency medical or psychological consultant at the initial level of the administrative review process, and any medical evidence provided by such consultants at the initial and reconsideration levels, about one or more of the medical issues listed in paragraph (a)(1)(i) of this section under §§ 404.1520b, 404.1520c, and 404.1527.

(b) Administrative law judges are responsible for reviewing the evidence and making administrative findings of fact and conclusions of law. They will consider prior administrative medical findings and medical evidence from our Federal or State agency medical or psychological consultants as follows:

(1) Administrative law judges are not required to adopt any prior administrative medical findings, but they must consider this evidence according to §§ 404.1520b, 404.1520c, and 404.1527, as appropriate, because our Federal or State agency medical or psychological consultants are highly qualified and experts in Social Security disability evaluation.

(2) Administrative law judges may also ask for medical evidence from expert medical sources. Administrative law judges will consider this evidence under §§ 404.1520b, 404.1520c, and 404.1527, as appropriate.

(c) When the Appeals Council makes a decision, it will consider prior administrative medical findings according to the same rules for considering prior administrative medical findings as administrative law judges follow under paragraph (b) of this section.

■ 12. Revise § 404.1518 (c) to read as follows:

§ 404.1518 If you do not appear at a consultative examination.

* * * * *

(c) *Objections by your medical source(s).* If any of your medical sources tell you that you should not take the examination or test, you should tell us at once. In many cases, we may be able to get the information we need in another way. Your medical source(s) may agree to another type of examination for the same purpose.

■ 13. Revise § 404.1519g (a) to read as follows:

§ 404.1519g Who we will select to perform a consultative examination.

(a) We will purchase a consultative examination only from a qualified medical source. The medical source may be your own medical source or another medical source. If you are a child, the medical source we choose may be a pediatrician.

* * * * *

■ 14. Revise § 404.1519h to read as follows:

§ 404.1519h Your medical source.

When, in our judgment, your medical source is qualified, equipped, and willing to perform the additional examination or test(s) for the fee schedule payment, and generally furnishes complete and timely reports, your medical source will be the preferred source for the purchased examination or test(s).

■ 15. Revise § 404.1519i to read as follows:

§ 404.1519i Other sources for consultative examinations.

We will use a different medical source than your medical source for a purchased examination or test in situations including, but not limited to, the following:

(a) Your medical source prefers not to perform such an examination or does not have the equipment to provide the specific data needed;

(b) There are conflicts or inconsistencies in your file that cannot be resolved by going back to your medical source;

(c) You prefer a source other than your medical source and have a good reason for your preference;

(d) We know from prior experience that your medical source may not be a productive source, such as when he or she has consistently failed to provide complete or timely reports; or

(e) Your medical source is not a qualified medical source as defined in § 404.1519g.

■ 16. Revise § 404.1519n(c)(6) to read as follows:

§ 404.1519n Informing the medical source of examination scheduling, report content, and signature requirements.

* * * * *

(c) * * *

(6) *A medical opinion.* Although we will ordinarily request a medical opinion as part of the consultative examination process, the absence of a medical opinion in a consultative examination report will not make the report incomplete. See § 404.1513(a)(3); and

* * * * *

■ 17. In § 404.1520a, revise the second sentence of paragraph (b)(1) and paragraph (d)(1) to read as follows:

§ 404.1520a Evaluation of mental impairments.

* * * * *

(b) * * *

(1) * * * See § 404.1521 for more information about what is needed to show a medically determinable impairment. * * *

* * * * *

(d) * * *

(1) If we rate the degrees of your limitation as “none” or “mild,” we will generally conclude that your impairment(s) is not severe, unless the evidence otherwise indicates that there is more than a minimal limitation in your ability to do basic work activities (see § 404.1522).

* * * * *

■ 18. Revise § 404.1520b to read as follows:

§ 404.1520b How we consider evidence.

After we review all of the evidence relevant to your claim, we make findings about what the evidence shows.

(a) *Complete and consistent evidence.* If all of the evidence we receive, including all medical opinion(s), is consistent and there is sufficient evidence for us to determine whether you are disabled, we will make our determination or decision based on that evidence.

(b) *Incomplete or inconsistent evidence.* In some situations, we may not be able to make our determination or decision because the evidence in your case record is insufficient or inconsistent. We consider evidence to be insufficient when it does not contain all the information we need to make our determination or decision. We consider evidence to be inconsistent when it conflicts with other evidence, contains an internal conflict, is ambiguous, or when the medical evidence does not appear to be based on medically acceptable clinical or laboratory

diagnostic techniques. If the evidence in your case record is insufficient or inconsistent, we may need to take the additional actions in paragraphs (b)(1) through (4) of this section.

(1) If any of the evidence in your case record, including any medical opinion(s) and prior administrative medical findings, is inconsistent, we will consider the relevant evidence and see if we can determine whether you are disabled based on the evidence we have.

(2) If the evidence is consistent but we have insufficient evidence to determine whether you are disabled, or if after considering the evidence we determine we cannot reach a conclusion about whether you are disabled, we will determine the best way to resolve the inconsistency or insufficiency. The action(s) we take will depend on the nature of the inconsistency or insufficiency. We will try to resolve the inconsistency or insufficiency by taking any one or more of the actions listed in paragraphs (b)(2)(i) through (b)(2)(iv) of this section. We might not take all of the actions listed below. We will consider any additional evidence we receive together with the evidence we already have.

(i) We may recontact your medical source. We may choose not to seek additional evidence or clarification from a medical source if we know from experience that the source either cannot or will not provide the necessary evidence. If we obtain medical evidence over the telephone, we will send the telephone report to the source for review, signature, and return;

(ii) We may request additional existing evidence;

(iii) We may ask you to undergo a consultative examination at our expense (see §§ 404.1517 through 404.1519t); or

(iv) We may ask you or others for more information.

(3) When there are inconsistencies in the evidence that we cannot resolve or when, despite efforts to obtain additional evidence, the evidence is insufficient to determine whether you are disabled, we will make a determination or decision based on the evidence we have.

(c) *Evidence that is inherently neither valuable nor persuasive.* Paragraphs (c)(1) through (c)(3) apply in claims filed (see § 404.614) on or after March 27, 2017. Because the evidence listed in paragraphs (c)(1) through (c)(3) of this section is inherently neither valuable nor persuasive to the issue of whether you are disabled or blind under the Act, we will not provide any analysis about how we considered such evidence in our determination or decision, even under § 404.1520c:

(1) *Decisions by other governmental agencies and nongovernmental entities.* See § 404.1504.

(2) *Disability examiner findings.*

Findings made by a State agency disability examiner made at a previous level of adjudication about a medical issue, vocational issue, or the ultimate determination about whether you are disabled.

(3) *Statements on issues reserved to the Commissioner.* The statements listed in paragraphs (c)(3)(i) through (c)(3)(viii) of this section would direct our determination or decision that you are or are not disabled or blind within the meaning of the Act, but we are responsible for making the determination or decision about whether you are disabled or blind:

(i) Statements that you are or are not disabled, blind, able to work, or able to perform regular or continuing work;

(ii) Statements about whether or not you have a severe impairment(s);

(iii) Statements about whether or not your impairment(s) meets the duration requirement (see § 404.1509);

(iv) Statements about whether or not your impairment(s) meets or medically equals any listing in the Listing of Impairments in Part 404, Subpart P, Appendix 1;

(v) Statements about what your residual functional capacity is using our programmatic terms about the functional exertional levels in Part 404, Subpart P, Appendix 2, Rule 200.00 instead of descriptions about your functional abilities and limitations (see § 404.1545);

(vi) Statements about whether or not your residual functional capacity prevents you from doing past relevant work (see § 404.1560);

(vii) Statements that you do or do not meet the requirements of a medical-vocational rule in Part 404, Subpart P, Appendix 2; and

(viii) Statements about whether or not your disability continues or ends when we conduct a continuing disability review (see § 404.1594).

■ 19. Add § 404.1520c to read as follows:

§ 404.1520c How we consider and articulate medical opinions and prior administrative medical findings for claims filed on or after March 27, 2017.

For claims filed (see § 404.614) on or after March 27, 2017, the rules in this section apply. For claims filed before March 27, 2017, the rules in § 404.1527 apply.

(a) *How we consider medical opinions and prior administrative medical findings.* We will not defer or give any specific evidentiary weight, including

controlling weight, to any medical opinion(s) or prior administrative medical finding(s), including those from your medical sources. When a medical source provides one or more medical opinions or prior administrative medical findings, we will consider those medical opinions or prior administrative medical findings from that medical source together using the factors listed in paragraphs (c)(1) through (c)(5) of this section, as appropriate. The most important factors we consider when we evaluate the persuasiveness of medical opinions and prior administrative medical findings are supportability (paragraph (c)(1) of this section) and consistency (paragraph (c)(2) of this section). We will articulate how we considered the medical opinions and prior administrative medical findings in your claim according to paragraph (b) of this section.

(b) *How we articulate our consideration of medical opinions and prior administrative medical findings.* We will articulate in our determination or decision how persuasive we find all of the medical opinions and all of the prior administrative medical findings in your case record. Our articulation requirements are as follows:

(1) *Source-level articulation.* Because many claims have voluminous case records containing many types of evidence from different sources, it is not administratively feasible for us to articulate in each determination or decision how we considered all of the factors for all of the medical opinions and prior administrative medical findings in your case record. Instead, when a medical source provides multiple medical opinion(s) or prior administrative medical finding(s), we will articulate how we considered the medical opinions or prior administrative medical findings from that medical source together in a single analysis using the factors listed in paragraphs (c)(1) through (c)(5) of this section, as appropriate. We are not required to articulate how we considered each medical opinion or prior administrative medical finding from one medical source individually.

(2) *Most important factors.* The factors of supportability (paragraph (c)(1) of this section) and consistency (paragraph (c)(2) of this section) are the most important factors we consider when we determine how persuasive we find a medical source's medical opinions or prior administrative medical findings to be. Therefore, we will explain how we considered the supportability and consistency factors for a medical source's medical opinions or prior

administrative medical findings in your determination or decision. We may, but are not required to, explain how we considered the factors in paragraphs (c)(3) through (c)(5) of this section, as appropriate, when we articulate how we consider medical opinions and prior administrative medical findings in your case record.

(3) *Equally persuasive medical opinions or prior administrative medical findings about the same issue.* When we find that two or more medical opinions or prior administrative medical findings about the same issue are both equally well-supported (paragraph (c)(1) of this section) and consistent with the record (paragraph (c)(2) of this section) but are not exactly the same, we will articulate how we considered the other most persuasive factors in paragraphs (c)(3) through (c)(5) of this section for those medical opinions or prior administrative medical findings in your determination or decision.

(c) *Factors.* We will consider the following factors when we consider the medical opinion(s) and prior administrative medical finding(s) in your case:

(1) *Supportability.* The more relevant the objective medical evidence and supporting explanations presented by a medical source are to support his or her medical opinion(s) or prior administrative medical finding(s), the more persuasive the medical opinions or prior administrative medical finding(s) will be.

(2) *Consistency.* The more consistent a medical opinion(s) or prior administrative medical finding(s) is with the evidence from other medical sources and nonmedical sources in the claim, the more persuasive the medical opinion(s) or prior administrative medical finding(s) will be.

(3) *Relationship with the claimant.* This factor combines consideration of the issues in paragraphs (c)(3)(i) through (v) of this section.

(i) *Length of the treatment relationship.* The length of time a medical source has treated you may help demonstrate whether the medical source has a longitudinal understanding of your impairment(s).

(ii) *Frequency of examinations.* The frequency of your visits with the medical source may help demonstrate whether the medical source has a longitudinal understanding of your impairment(s).

(iii) *Purpose of the treatment relationship.* The purpose for treatment you received from the medical source may help demonstrate the level of

knowledge the medical source has of your impairment(s).

(iv) *Extent of the treatment relationship.* The kinds and extent of examinations and testing the medical source has performed or ordered from specialists or independent laboratories may help demonstrate the level of knowledge the medical source has of your impairment(s).

(v) *Examining relationship.* A medical source may have a better understanding of your impairment(s) if he or she examines you than if the medical source only reviews evidence in your folder.

(4) *Specialization.* The medical opinion or prior administrative medical finding of a medical source who has received advanced education and training to become a specialist may be more persuasive about medical issues related to his or her area of specialty than the medical opinion or prior administrative medical finding of a medical source who is not a specialist in the relevant area of specialty.

(5) *Other factors.* We will consider other factors that tend to support or contradict a medical opinion or prior administrative medical finding. This includes, but is not limited to, evidence showing a medical source has familiarity with the other evidence in the claim or an understanding of our disability program's policies and evidentiary requirements. When we consider a medical source's familiarity with the other evidence in a claim, we will also consider whether new evidence we receive after the medical source made his or her medical opinion or prior administrative medical finding makes the medical opinion or prior administrative medical finding more or less persuasive.

(d) *Evidence from nonmedical sources.* We are not required to articulate how we considered evidence from nonmedical sources using the requirements in paragraphs (a)–(c) in this section.

■ 20. Revise § 404.1521 to read as follows:

§ 404.1521 Establishing that you have a medically determinable impairment(s).

If you are not doing substantial gainful activity, we will then determine whether you have a medically determinable physical or mental impairment(s) (see § 404.1520(a)(4)(ii)). Your impairment(s) must result from anatomical, physiological, or psychological abnormalities that can be shown by medically acceptable clinical and laboratory diagnostic techniques. Therefore, a physical or mental impairment must be established by objective medical evidence from an

acceptable medical source. We will not use your statement of symptoms, a diagnosis, or a medical opinion to establish the existence of an impairment(s). After we establish that you have a medically determinable impairment(s), then we determine whether your impairment(s) is severe.

■ 21. Revise § 404.1522 to read as follows:

§ 404.1522 What we mean by an impairment(s) that is not severe.

(a) *Non-severe impairment(s)*. An impairment or combination of impairments is not severe if it does not significantly limit your physical or mental ability to do basic work activities.

(b) *Basic work activities*. When we talk about basic work activities, we mean the abilities and aptitudes necessary to do most jobs. Examples of these include—

(1) Physical functions such as walking, standing, sitting, lifting, pushing, pulling, reaching, carrying, or handling;

(2) Capacities for seeing, hearing, and speaking;

(3) Understanding, carrying out, and remembering simple instructions;

(4) Use of judgment;

(5) Responding appropriately to supervision, co-workers and usual work situations; and

(6) Dealing with changes in a routine work setting.

■ 22. Revise § 404.1523 to read as follows:

§ 404.1523 Multiple impairments.

(a) *Unrelated severe impairments*. We cannot combine two or more unrelated severe impairments to meet the 12-month duration test. If you have a severe impairment(s) and then develop another unrelated severe impairment(s) but neither one is expected to last for 12 months, we cannot find you disabled, even though the two impairments in combination last for 12 months.

(b) *Concurrent impairments*. If you have two or more concurrent impairments that, when considered in combination, are severe, we must determine whether the combined effect of your impairments can be expected to continue to be severe for 12 months. If one or more of your impairments improves or is expected to improve within 12 months, so that the combined effect of your remaining impairments is no longer severe, we will find that you do not meet the 12-month duration test.

(c) *Combined effect*. In determining whether your physical or mental impairment or impairments are of a sufficient medical severity that such

impairment or impairments could be the basis of eligibility under the law, we will consider the combined effect of all of your impairments without regard to whether any such impairment, if considered separately, would be of sufficient severity. If we do find a medically severe combination of impairments, we will consider the combined impact of the impairments throughout the disability determination process. If we do not find that you have a medically severe combination of impairments, we will determine that you are not disabled (see § 404.1520).

■ 23. In § 404.1525, revise the last sentence in paragraph (c)(2) to read as follow

§ 404.1525 Listing of Impairments in appendix 1.

* * * * *

(c) * * *

(2) * * * Even if we do not include specific criteria for establishing a diagnosis or confirming the existence of your impairment, you must still show that you have a severe medically determinable impairment(s), as defined in § 404.1521.

* * * * *

■ 24. In § 404.1526, revise paragraphs (d) and (e) to read as follows:

§ 404.1526 Medical equivalence.

* * * * *

(d) *Who is a designated medical or psychological consultant?* A medical or psychological consultant designated by the Commissioner includes any medical or psychological consultant employed or engaged to make medical judgments by the Social Security Administration, the Railroad Retirement Board, or a State agency authorized to make disability determinations. See § 404.1616 of this part for the necessary qualifications for medical consultants and psychological consultants and the limitations on what medical consultants who are not physicians can evaluate.

(e) *Who is responsible for determining medical equivalence?*

(1) In cases where the State agency or other designee of the Commissioner makes the initial or reconsideration disability determination, a State agency medical or psychological consultant or other designee of the Commissioner (see § 404.1616 of this part) has the overall responsibility for determining medical equivalence.

(2) For cases in the disability hearing process or otherwise decided by a disability hearing officer, the responsibility for determining medical equivalence rests with either the disability hearing officer or, if the disability hearing officer's

reconsideration determination is changed under § 404.918 of this part, with the Associate Commissioner for Disability Policy or his or her delegate.

(3) For cases at the administrative law judge or Appeals Council level, the responsibility for deciding medical equivalence rests with the administrative law judge or Appeals Council.

■ 25. Revise § 404.1527 to read as follows:

§ 404.1527 Evaluating opinion evidence for claims filed before March 27, 2017.

For claims filed (see § 404.614) before March 27, 2017, the rules in this section apply. For claims filed on or after March 27, 2017, the rules in § 404.1520c apply.

(a) *Definitions*.

(1) *Medical opinions*. Medical opinions are statements from acceptable medical sources that reflect judgments about the nature and severity of your impairment(s), including your symptoms, diagnosis and prognosis, what you can still do despite impairment(s), and your physical or mental restrictions.

(2) *Treating source*. Treating source means your own acceptable medical source who provides you, or has provided you, with medical treatment or evaluation and who has, or has had, an ongoing treatment relationship with you. Generally, we will consider that you have an ongoing treatment relationship with an acceptable medical source when the medical evidence establishes that you see, or have seen, the source with a frequency consistent with accepted medical practice for the type of treatment and/or evaluation required for your medical condition(s). We may consider an acceptable medical source who has treated or evaluated you only a few times or only after long intervals (e.g., twice a year) to be your treating source if the nature and frequency of the treatment or evaluation is typical for your condition(s). We will not consider an acceptable medical source to be your treating source if your relationship with the source is not based on your medical need for treatment or evaluation, but solely on your need to obtain a report in support of your claim for disability. In such a case, we will consider the acceptable medical source to be a nontreating source.

(b) *How we consider medical opinions*. In determining whether you are disabled, we will always consider the medical opinions in your case record together with the rest of the relevant evidence we receive. See § 404.1520b.

(c) *How we weigh medical opinions*. Regardless of its source, we will

evaluate every medical opinion we receive. Unless we give a treating source's medical opinion controlling weight under paragraph (c)(2) of this section, we consider all of the following factors in deciding the weight we give to any medical opinion.

(1) *Examining relationship.* Generally, we give more weight to the medical opinion of a source who has examined you than to the medical opinion of a medical source who has not examined you.

(2) *Treatment relationship.* Generally, we give more weight to medical opinions from your treating sources, since these sources are likely to be the medical professionals most able to provide a detailed, longitudinal picture of your medical impairment(s) and may bring a unique perspective to the medical evidence that cannot be obtained from the objective medical findings alone or from reports of individual examinations, such as consultative examinations or brief hospitalizations. If we find that a treating source's medical opinion on the issue(s) of the nature and severity of your impairment(s) is well-supported by medically acceptable clinical and laboratory diagnostic techniques and is not inconsistent with the other substantial evidence in your case record, we will give it controlling weight. When we do not give the treating source's medical opinion controlling weight, we apply the factors listed in paragraphs (c)(2)(i) and (c)(2)(ii) of this section, as well as the factors in paragraphs (c)(3) through (c)(6) of this section in determining the weight to give the medical opinion. We will always give good reasons in our notice of determination or decision for the weight we give your treating source's medical opinion.

(i) *Length of the treatment relationship and the frequency of examination.* Generally, the longer a treating source has treated you and the more times you have been seen by a treating source, the more weight we will give to the source's medical opinion. When the treating source has seen you a number of times and long enough to have obtained a longitudinal picture of your impairment, we will give the medical source's medical opinion more weight than we would give it if it were from a nontreating source.

(ii) *Nature and extent of the treatment relationship.* Generally, the more knowledge a treating source has about your impairment(s) the more weight we will give to the source's medical opinion. We will look at the treatment the source has provided and at the kinds and extent of examinations and testing

the source has performed or ordered from specialists and independent laboratories. For example, if your ophthalmologist notices that you have complained of neck pain during your eye examinations, we will consider his or her medical opinion with respect to your neck pain, but we will give it less weight than that of another physician who has treated you for the neck pain. When the treating source has reasonable knowledge of your impairment(s), we will give the source's medical opinion more weight than we would give it if it were from a nontreating source.

(3) *Supportability.* The more a medical source presents relevant evidence to support a medical opinion, particularly medical signs and laboratory findings, the more weight we will give that medical opinion. The better an explanation a source provides for a medical opinion, the more weight we will give that medical opinion. Furthermore, because nonexamining sources have no examining or treating relationship with you, the weight we will give their medical opinions will depend on the degree to which they provide supporting explanations for their medical opinions. We will evaluate the degree to which these medical opinions consider all of the pertinent evidence in your claim, including medical opinions of treating and other examining sources.

(4) *Consistency.* Generally, the more consistent a medical opinion is with the record as a whole, the more weight we will give to that medical opinion.

(5) *Specialization.* We generally give more weight to the medical opinion of a specialist about medical issues related to his or her area of specialty than to the medical opinion of a source who is not a specialist.

(6) *Other factors.* When we consider how much weight to give to a medical opinion, we will also consider any factors you or others bring to our attention, or of which we are aware, which tend to support or contradict the medical opinion. For example, the amount of understanding of our disability programs and their evidentiary requirements that a medical source has, regardless of the source of that understanding, and the extent to which a medical source is familiar with the other information in your case record are relevant factors that we will consider in deciding the weight to give to a medical opinion.

(d) *Medical source opinions on issues reserved to the Commissioner.* Opinions on some issues, such as the examples that follow, are not medical opinions, as described in paragraph (a)(1) of this section, but are, instead, opinions on

issues reserved to the Commissioner because they are administrative findings that are dispositive of a case; *i.e.*, that would direct the determination or decision of disability.

(1) *Opinions that you are disabled.* We are responsible for making the determination or decision about whether you meet the statutory definition of disability. In so doing, we review all of the medical findings and other evidence that support a medical source's statement that you are disabled. A statement by a medical source that you are "disabled" or "unable to work" does not mean that we will determine that you are disabled.

(2) *Other opinions on issues reserved to the Commissioner.* We use medical sources, including your treating source, to provide evidence, including opinions, on the nature and severity of your impairment(s). Although we consider opinions from medical sources on issues such as whether your impairment(s) meets or equals the requirements of any impairment(s) in the Listing of Impairments in appendix 1 to this subpart, your residual functional capacity (see §§ 404.1545 and 404.1546), or the application of vocational factors, the final responsibility for deciding these issues is reserved to the Commissioner.

(3) We will not give any special significance to the source of an opinion on issues reserved to the Commissioner described in paragraphs (d)(1) and (d)(2) of this section.

(e) *Evidence from our Federal or State agency medical or psychological consultants.* The rules in § 404.1513a apply except that when an administrative law judge gives controlling weight to a treating source's medical opinion, the administrative law judge is not required to explain in the decision the weight he or she gave to the prior administrative medical findings in the claim.

(f) *Opinions from medical sources who are not acceptable medical sources and from nonmedical sources.*

(1) *Consideration.* Opinions from medical sources who are not acceptable medical sources and from nonmedical sources may reflect the source's judgment about some of the same issues addressed in medical opinions from acceptable medical sources. Although we will consider these opinions using the same factors as listed in paragraph (c)(1) through (c)(6) in this section, not every factor for weighing opinion evidence will apply in every case because the evaluation of an opinion from a medical source who is not an acceptable medical source or from a nonmedical source depends on the

particular facts in each case. Depending on the particular facts in a case, and after applying the factors for weighing opinion evidence, an opinion from a medical source who is not an acceptable medical source or from a nonmedical source may outweigh the medical opinion of an acceptable medical source, including the medical opinion of a treating source. For example, it may be appropriate to give more weight to the opinion of a medical source who is not an "acceptable medical source" if he or she has seen the individual more often than the treating source, has provided better supporting evidence and a better explanation for the opinion, and the opinion is more consistent with the evidence as a whole.

(2) *Articulation.* The adjudicator generally should explain the weight given to opinions from these sources or otherwise ensure that the discussion of the evidence in the determination or decision allows a claimant or subsequent reviewer to follow the adjudicator's reasoning, when such opinions may have an effect on the outcome of the case. In addition, when an adjudicator determines that an opinion from such a source is entitled to greater weight than a medical opinion from a treating source, the adjudicator must explain the reasons in the notice of decision in hearing cases and in the notice of determination (that is, in the personalized disability notice) at the initial and reconsideration levels, if the determination is less than fully favorable.

§ 404.1528 [Removed and Reserved]

■ 26. Remove and reserve § 404.1528.

■ 27. In § 404.1529, revise paragraph (a), the second and third sentences of paragraph (c)(1), the introductory text of paragraph (c)(3), and the third sentence of paragraph (c)(4) to read as follows:

§ 404.1529 How we evaluate symptoms, including pain.

(a) *General.* In determining whether you are disabled, we consider all your symptoms, including pain, and the extent to which your symptoms can reasonably be accepted as consistent with the objective medical evidence and other evidence. We will consider all of your statements about your symptoms, such as pain, and any description your medical sources or nonmedical sources may provide about how the symptoms affect your activities of daily living and your ability to work. However, statements about your pain or other symptoms will not alone establish that you are disabled. There must be objective medical evidence from an acceptable medical source that shows

you have a medical impairment(s) which could reasonably be expected to produce the pain or other symptoms alleged and that, when considered with all of the other evidence (including statements about the intensity and persistence of your pain or other symptoms which may reasonably be accepted as consistent with the medical signs and laboratory findings), would lead to a conclusion that you are disabled. In evaluating the intensity and persistence of your symptoms, including pain, we will consider all of the available evidence, including your medical history, the medical signs and laboratory findings, and statements about how your symptoms affect you. We will then determine the extent to which your alleged functional limitations and restrictions due to pain or other symptoms can reasonably be accepted as consistent with the medical signs and laboratory findings and other evidence to decide how your symptoms affect your ability to work.

* * * * *

(c) * * *

(1) * * * In evaluating the intensity and persistence of your symptoms, we consider all of the available evidence from your medical sources and nonmedical sources about how your symptoms affect you. We also consider the medical opinions as explained in § 404.1520c. * * *

* * * * *

(3) *Consideration of other evidence.*

Because symptoms sometimes suggest a greater severity of impairment than can be shown by objective medical evidence alone, we will carefully consider any other information you may submit about your symptoms. The information that your medical sources or nonmedical sources provide about your pain or other symptoms (e.g., what may precipitate or aggravate your symptoms, what medications, treatments or other methods you use to alleviate them, and how the symptoms may affect your pattern of daily living) is also an important indicator of the intensity and persistence of your symptoms. Because symptoms, such as pain, are subjective and difficult to quantify, any symptom-related functional limitations and restrictions that your medical sources or nonmedical sources report, which can reasonably be accepted as consistent with the objective medical evidence and other evidence, will be taken into account as explained in paragraph (c)(4) of this section in reaching a conclusion as to whether you are disabled. We will consider all of the evidence presented, including information about your prior work record, your statements about your

symptoms, evidence submitted by your medical sources, and observations by our employees and other persons.

Section 404.1520c explains in detail how we consider medical opinions and prior administrative medical findings about the nature and severity of your impairment(s) and any related symptoms, such as pain. Factors relevant to your symptoms, such as pain, which we will consider include:

* * * * *

(4) * * * We will consider whether there are any inconsistencies in the evidence and the extent to which there are any conflicts between your statements and the rest of the evidence, including your history, the signs and laboratory findings, and statements by your medical sources or other persons about how your symptoms affect you.

* * * * *

* * * * *

■ 28. Revise § 404.1530(a) to read as follows:

§ 404.1530 Need to follow prescribed treatment.

(a) *What treatment you must follow.*

In order to get benefits, you must follow treatment prescribed by your medical source(s) if this treatment is expected to restore your ability to work.

* * * * *

■ 29. Amend § 404.1579 by revising the second sentence of paragraph (b)(1) and the second sentence of paragraph (b)(4) to read as follows:

§ 404.1579 How we will determine whether your disability continues or ends.

* * * * *

(b) * * *

(1) * * * A determination that there has been a decrease in medical severity must be based on improvement in the symptoms, signs, and/or laboratory findings associated with your impairment(s). * * *

* * * * *

(4) * * * We will consider all evidence you submit and that we obtain from your medical sources and nonmedical sources. * * *

* * * * *

■ 30. Amend § 404.1594 by revising the second sentence of paragraph (b)(1), the sixth sentence in Example 1, the second sentence of paragraph (b)(6), and the fourth sentence of paragraph (c)(3)(v) to read as follows:

§ 404.1594 How we will determine whether your disability continues or ends.

* * * * *

(b) * * *

(1) * * * A determination that there has been a decrease in medical severity

must be based on improvement in the symptoms, signs, and/or laboratory findings associated with your impairment(s).

Example 1: * * * When we reviewed your claim, your medical source, who has treated you, reported that he or she had seen you regularly every 2 to 3 months for the past 2 years. * * *

* * * * *

(6) * * * We will consider all evidence you submit and that we obtain from your medical sources and nonmedical sources. * * *

* * * * *

(c) * * *

(3) * * *

(v) * * * If you are able to engage in substantial gainful activity, we will determine whether an attempt should be made to reconstruct those portions of the missing file that were relevant to our most recent favorable medical decision (e.g., work history, medical evidence, and the results of consultative examinations). * * *

* * * * *

■ 31. Amend *Appendix 1 to subpart P of part 404* as follows:

- a. Revise the second, third, and fourth sentences of 2.00B.1.a;
- b. Revise 2.00B.1.b;
- c. Revise 2.00B.1.c;
- d. Revise the fourth sentence of 7.00H;
- e. Revise the second sentence of 8.00C.3;
- f. Revise the first sentence 8.00E.3.a;
- g. Revise 12.00C.1;
- h. Revise the fourth sentence of 14.00H;
- i. Revise the second, third, and fourth sentences of 102.00B.1.a;
- j. Revise 102.00B.1.b;
- k. Revise 102.00B.1.c;
- l. Revise the fourth sentence of 107.00G;
- m. Revise the second sentence of 108.00C.3.;
- n. Revise the first sentence 108.00E.3.a;
- o. Revise 112.00.C.1;
- p. Revise the fourth sentence of 114.00H.

The revisions read as follows:

Appendix 1 to Subpart P of Part 404—

2.00 * * *

B. * * *

1. * * *

a. * * * We generally require both an otologic examination and audiometric testing to establish that you have a medically determinable impairment that causes your hearing loss. You should have this audiometric testing within 2 months of the otologic examination. Once we have evidence that you have a medically determinable impairment, we can use the results of later audiometric testing to assess

the severity of your hearing loss without another otologic examination. * * *

b. The otologic examination must be performed by a licensed physician (medical or osteopathic doctor) or audiologist. It must include your medical history, your description of how your hearing loss affects you, and the physician's or audiologist's description of the appearance of the external ears (pinnae and external ear canals), evaluation of the tympanic membranes, and assessment of any middle ear abnormalities.

c. Audiometric testing must be performed by, or under the direct supervision of, a licensed audiologist or an otolaryngologist.

Subpart Q—Determinations of Disability

■ 32. The authority citation for subpart Q of part 404 continues to read as follows:

Authority: Secs. 205(a), 221, and 702(a)(5) of the Social Security Act (42 U.S.C. 405(a), 421, and 902(a)(5)).

§ 404.1615 [Amended]

■ 33. In § 404.1615, remove paragraph (d) and redesignate paragraphs (e) through (g) as paragraphs (d) through (f).

■ 34. Revise § 404.1616 to read as follows:

§ 404.1616 Medical consultants and psychological consultants.

(a) *What is a medical consultant?* A medical consultant is a member of a team that makes disability determinations in a State agency (see § 404.1615), or who is a member of a team that makes disability determinations for us when we make disability determinations ourselves. The medical consultant completes the medical portion of the case review and any applicable residual functional capacity assessment about all physical impairment(s) in a claim.

(b) *What qualifications must a medical consultant have?* A medical consultant is a licensed physician, as defined in § 404.1502(a)(1).

(c) *What is a psychological consultant?* A psychological consultant is a member of a team that makes disability determinations in a State agency (see § 404.1615), or who is a member of a team that makes disability determinations for us when we make disability determinations ourselves. The psychological consultant completes the medical portion of the case review and any applicable residual functional capacity assessment about all mental impairment(s) in a claim. When we are unable to obtain the services of a qualified psychiatrist or psychologist despite making every reasonable effort (see § 404.1617) in a claim involving a mental impairment(s), a medical consultant will evaluate the mental impairment(s).

(d) *What qualifications must a psychological consultant have?* A psychological consultant can be either a licensed psychiatrist or psychologist. We will only consider a psychologist qualified to be a psychological consultant if he or she:

(1) Is licensed or certified as a psychologist at the independent practice level of psychology by the State in which he or she practices; and

(2)(i) Possesses a doctorate degree in psychology from a program in clinical psychology of an educational institution accredited by an organization recognized by the Council on Post-Secondary Accreditation; or

(ii) Is listed in a national register of health service providers in psychology which the Commissioner of Social Security deems appropriate; and

(3) Possesses 2 years of supervised clinical experience as a psychologist in health service, at least 1 year of which is post-masters degree.

(e) *Cases involving both physical and mental impairments.* In a case where

there is evidence of both physical and mental impairments, the medical consultant will evaluate the physical impairments in accordance with paragraph (a) of this section, and the psychological consultant will evaluate the mental impairment(s) in accordance with paragraph (c) of this section.

■ 35. In § 404.1617, revise the section heading and paragraph (a) to read as follows:

§ 404.1617 Reasonable efforts to obtain review by a physician, psychiatrist, and psychologist.

(a) When the evidence of record indicates the existence of a physical impairment, the State agency must make every reasonable effort to ensure that a medical consultant completes the medical portion of the case review and any applicable residual functional capacity assessment. When the evidence of record indicates the existence of a mental impairment, the State agency must make every reasonable effort to ensure that a psychological consultant completes the medical portion of the case review and any applicable residual functional capacity assessment. The State agency must determine if additional physicians, psychiatrists, and psychologists are needed to make the necessary reviews. When it does not have sufficient resources to make the necessary reviews, the State agency must attempt to obtain the resources needed. If the State agency is unable to obtain additional physicians, psychiatrists, and psychologists because of low salary rates or fee schedules, it should attempt to raise the State agency's levels of compensation to meet the prevailing rates for these services. If these efforts are unsuccessful, the State agency will seek assistance from us. We will assist the State agency as necessary. We will also monitor the State agency's efforts and where the State agency is unable to obtain the necessary services, we will make every reasonable effort to provide the services using Federal resources.

* * * * *

PART 416—SUPPLEMENTAL SECURITY INCOME FOR THE AGED, BLIND, AND DISABLED

Subpart I—Determining Disability and Blindness

■ 36. The authority citation for subpart I of part 416 continues to read as follows:

Authority: Secs. 221(m), 702(a)(5), 1611, 1614, 1619, 1631(a), (c), (d)(1), and (p), and 1633 of the Social Security Act (42 U.S.C. 421(m), 902(a)(5), 1382, 1382c, 1382h,

1383(a), (c), (d)(1), and (p), and 1383b); secs. 4(c) and 5, 6(c)–(e), 14(a), and 15, Pub. L. 98–460, 98 Stat. 1794, 1801, 1802, and 1808 (42 U.S.C. 421 note, 423 note, and 1382h note).

■ 37. Revise § 416.902 to read as follows:

§ 416.902 Definitions for this subpart.

As used in the subpart—

(a) *Acceptable medical source* means a medical source who is a:

(1) Licensed physician (medical or osteopathic doctor);

(2) Licensed psychologist, which includes:

(i) A licensed or certified psychologist at the independent practice level; or

(ii) A licensed or certified school psychologist, or other licensed or certified individual with another title who performs the same function as a school psychologist in a school setting, for impairments of intellectual disability, learning disabilities, and borderline intellectual functioning only;

(3) Licensed optometrist for impairments of visual disorders, or measurement of visual acuity and visual fields only, depending on the scope of practice in the State in which the optometrist practices;

(4) Licensed podiatrist for impairments of the foot, or foot and ankle only, depending on whether the State in which the podiatrist practices permits the practice of podiatry on the foot only, or the foot and ankle;

(5) Qualified speech-language pathologist for speech or language impairments only. For this source, *qualified* means that the speech-language pathologist must be licensed by the State professional licensing agency, or be fully certified by the State education agency in the State in which he or she practices, or hold a Certificate of Clinical Competence in Speech-Language Pathology from the American Speech-Language-Hearing Association;

(6) Licensed audiologist for impairments of hearing loss, auditory processing disorders, and balance disorders within the licensed scope of practice only (with respect to claims filed (see § 416.325) on or after March 27, 2017);

(7) Licensed Advanced Practice Registered Nurse, or other licensed advanced practice nurse with another title, for impairments within his or her licensed scope of practice (only with respect to claims filed (see § 416.325) on or after March 27, 2017); or

(8) Licensed Physician Assistant for impairments within his or her licensed scope of practice (only with respect to claims filed (see § 416.325) on or after March 27, 2017).

(b) *Adult* means a person who is age 18 or older.

(c) *Child* means a person who has not attained age 18.

(d) *Commissioner* means the Commissioner of Social Security or his or her authorized designee.

(e) *Disability redetermination* means a redetermination of your eligibility based on disability using the rules for new applicants appropriate to your age, except the rules pertaining to performance of substantial gainful activity. For individuals who are working and for whom a disability redetermination is required, we will apply the rules in §§ 416.260 through 416.269. In conducting a disability redetermination, we will not use the rules for determining whether disability continues set forth in § 416.994 or § 416.994a. (See § 416.987.)

(f) *Impairment(s)* means a medically determinable physical or mental impairment or a combination of medically determinable physical or mental impairments.

(g) *Laboratory findings* means one or more anatomical, physiological, or psychological phenomena that can be shown by the use of medically acceptable laboratory diagnostic techniques. Diagnostic techniques include chemical tests (such as blood tests), electrophysiological studies (such as electrocardiograms and electroencephalograms), medical imaging (such as X-rays), and psychological tests.

(h) *Marked and severe functional limitations*, when used as a phrase, means the standard of disability in the Social Security Act for children claiming SSI benefits based on disability. It is a level of severity that meets, medically equals, or functionally equals the listings. (See §§ 416.906, 416.924, and 416.926a.) The words “marked” and “severe” are also separate terms used throughout this subpart to describe measures of functional limitations; the term “marked” is also used in the listings. (See §§ 416.924 and 416.926a.) The meaning of the words “marked” and “severe” when used as part of the phrase marked and severe functional limitations is not the same as the meaning of the separate terms “marked” and “severe” used elsewhere in 404 and 416. (See §§ 416.924(c) and 416.926a(e).)

(i) *Medical source* means an individual who is licensed as a healthcare worker by a State and working within the scope of practice permitted under State or Federal law, or an individual who is certified by a State as a speech-language pathologist or a school psychologist and acting within the scope of practice permitted under State or Federal law.

(j) *Nonmedical source* means a source of evidence who is not a medical source. This includes, but is not limited to:

(1) You;

(2) Educational personnel (for example, school teachers, counselors, early intervention team members, developmental center workers, and daycare center workers);

(3) Public and private social welfare agency personnel; and

(4) Family members, caregivers, friends, neighbors, employers, and clergy.

(k) *Objective medical evidence* means signs, laboratory findings, or both.

(l) *Signs* means one or more anatomical, physiological, or psychological abnormalities that can be observed, apart from your statements (symptoms). Signs must be shown by medically acceptable clinical diagnostic techniques. Psychiatric signs are medically demonstrable phenomena that indicate specific psychological abnormalities, e.g., abnormalities of behavior, mood, thought, memory, orientation, development, or perception and must also be shown by observable facts that can be medically described and evaluated.

(m) *State agency* means an agency of a State designated by that State to carry out the disability or blindness determination function.

(n) *Symptoms* means your own description of your physical or mental impairment.

(o) *The listings* means the Listing of Impairments in appendix 1 of subpart P of part 404 of this chapter. When we refer to an impairment(s) that “meets, medically equals, or functionally equals the listings,” we mean that the impairment(s) meets or medically equals the severity of any listing in appendix 1 of subpart P of part 404 of this chapter, as explained in §§ 416.925 and 416.926, or that it functionally equals the severity of the listings, as explained in § 416.926a.

(p) *We or us* means, as appropriate, either the Social Security Administration or the State agency making the disability or blindness determination.

(q) *You, your, me, my and I* mean, as appropriate, the person who applies for benefits, the person for whom an application is filed, or the person who is receiving benefits based on disability or blindness.

■ 38. In § 416.903, remove paragraph (e), redesignate paragraph (f) as paragraph (e), and revise the newly redesignated paragraph (e) to read as follows:

§ 416.903 Who makes disability and blindness determinations.

* * * * *

(e) *Determinations for childhood impairments.* In making a determination under title XVI with respect to the disability of a child, we will make reasonable efforts to ensure that a qualified pediatrician or other individual who specializes in a field of medicine appropriate to the child's impairment(s) evaluates the case of the child.

■ 39. Revise § 416.904 to read as follows:

§ 416.904 Decisions by other governmental agencies and nongovernmental ties.

Other governmental agencies and nongovernmental entities—such as the Department of Veterans Affairs, the Department of Defense, the Department of Labor, the Office of Personnel Management, State agencies, and private insurers—make disability, blindness, employability, Medicaid, workers' compensation, and other benefits decisions for their own programs using their own rules. Because a decision by any other governmental agency or a nongovernmental entity about whether you are disabled, blind, employable, or entitled to any benefits is based on its rules, it is not binding on us and is not our decision about whether you are disabled or blind under our rules. Therefore, in claims filed (see § 416.325) on or after March 27, 2017, we will not provide any analysis in our determination or decision about a decision made by any other governmental agency or a nongovernmental entity about whether you are disabled, blind, employable, or entitled to any benefits. However, we will consider all of the supporting evidence underlying the other governmental agency or nongovernmental entity's decision that we receive as evidence in your claim in accordance with § 416.913(a)(1) through (4).

§ 416.908 [Removed and reserved].

■ 40. Remove and reserve § 416.908.

■ 41. Revise § 416.912 to read as follows:

§ 416.912 Responsibility for evidence.

(a) *Your responsibility.*

(1) *General.* In general, you have to prove to us that you are blind or disabled. You must inform us about or submit all evidence known to you that relates to whether or not you are blind or disabled (see § 416.913). This duty is ongoing and requires you to disclose any additional related evidence about

which you become aware. This duty applies at each level of the administrative review process, including the Appeals Council level if the evidence relates to the period on or before the date of the administrative law judge hearing decision. We will consider only impairment(s) you say you have or about which we receive evidence. When you submit evidence received from another source, you must submit that evidence in its entirety, unless you previously submitted the same evidence to us or we instruct you otherwise. If we ask you, you must inform us about:

- (i) Your medical source(s);
- (ii) Your age;
- (iii) Your education and training;
- (iv) Your work experience;
- (v) Your daily activities both before and after the date you say that you became disabled;
- (vi) Your efforts to work; and
- (vii) Any other factors showing how your impairment(s) affects your ability to work, or, if you are a child, your functioning. In §§ 416.960 through 416.969, we discuss in more detail the evidence we need when we consider vocational factors.

(2) *Completeness.* The evidence in your case record must be complete and detailed enough to allow us to make a determination or decision about whether you are disabled or blind. It must allow us to determine—

- (i) The nature and severity of your impairment(s) for any period in question;
- (ii) Whether the duration requirement described in § 416.909 is met; and
- (iii) Your residual functional capacity to do work-related physical and mental activities, when the evaluation steps described in §§ 416.920(e) or (f)(1) apply, or, if you are a child, how you typically function compared to children your age who do not have impairments.

(3) *Statutory blindness.* If you are applying for benefits on the basis of statutory blindness, we will require an examination by a physician skilled in diseases of the eye or by an optometrist, whichever you may select.

(b) *Our responsibility.*

(1) *Development.* Before we make a determination that you are not disabled, we will develop your complete medical history for at least the 12 months preceding the month in which you file your application unless there is a reason to believe that development of an earlier period is necessary or unless you say that your disability began less than 12 months before you filed your application. We will make every reasonable effort to help you get medical evidence from your own medical

sources and entities that maintain your medical sources' evidence when you give us permission to request the reports.

(i) *Every reasonable effort* means that we will make an initial request for evidence from your medical source or entity that maintains your medical source's evidence, and, at any time between 10 and 20 calendar days after the initial request, if the evidence has not been received, we will make one follow-up request to obtain the medical evidence necessary to make a determination. The medical source or entity that maintains your medical source's evidence will have a minimum of 10 calendar days from the date of our follow-up request to reply, unless our experience with that source indicates that a longer period is advisable in a particular case.

(ii) *Complete medical history* means the records of your medical source(s) covering at least the 12 months preceding the month in which you file your application. If you say that your disability began less than 12 months before you filed your application, we will develop your complete medical history beginning with the month you say your disability began unless we have reason to believe your disability began earlier.

(2) *Obtaining a consultative examination.* We may ask you to attend one or more consultative examinations at our expense. See §§ 416.917 through 416.919t for the rules governing the consultative examination process. Generally, we will not request a consultative examination until we have made every reasonable effort to obtain evidence from your own medical sources. We may order a consultative examination while awaiting receipt of medical source evidence in some instances, such as when we know a source is not productive, is uncooperative, or is unable to provide certain tests or procedures. We will not evaluate this evidence until we have made every reasonable effort to obtain evidence from your medical sources.

(3) *Other work.* In order to determine under § 416.920(g) that you are able to adjust to other work, we must provide evidence about the existence of work in the national economy that you can do (see §§ 416.960 through 416.969a), given your residual functional capacity (which we have already assessed, as described in § 416.920(e)), age, education, and work experience.

■ 42. Revise § 416.913 to read as follows:

§ 416.913 Categories of evidence.

(a) *What we mean by evidence.* Subject to the provisions of paragraph (b), evidence is anything you or anyone else submits to us or that we obtain that relates to your claim. We consider evidence under §§ 416.920b, 416.920c (or under § 416.927 for claims filed (see § 416.325) before March 27, 2017). We evaluate evidence we receive according to the rules pertaining to the relevant category of evidence. The categories of evidence are:

(1) *Objective medical evidence.* Objective medical evidence is medical signs, laboratory findings, or both, as defined in § 416.902(k).

(2) *Medical opinion.* A medical opinion is a statement from a medical source about what you can still do despite your impairment(s) and whether you have one or more impairment-related limitations or restrictions in the abilities listed in paragraphs (a)(2)(i)(A) through (D) and (a)(2)(ii)(A) through (F) of this section. (For claims filed (see § 416.325) before March 27, 2017, see § 416.927(a) for the definition of medical opinion.)

(i) Medical opinions in adult claims are about impairment-related limitations and restrictions in:

(A) Your ability to perform physical demands of work activities, such as sitting, standing, walking, lifting, carrying, pushing, pulling, or other physical functions (including manipulative or postural functions, such as reaching, handling, stooping, or crouching);

(B) Your ability to perform mental demands of work activities, such as understanding; remembering; maintaining concentration, persistence, or pace; carrying out instructions; or responding appropriately to supervision, co-workers, or work pressures in a work setting;

(C) Your ability to perform other demands of work, such as seeing, hearing, or using other senses; and

(D) Your ability to adapt to environmental conditions, such as temperature extremes or fumes.

(ii) Medical opinions in child claims are about impairment-related limitations and restrictions in your abilities in the six domains of functioning:

(A) Acquiring and using information (see § 416.926a(g));

(B) Attending and completing tasks (see § 416.926a(h));

(C) Interacting and relating with others (see § 416.926a(i));

(D) Moving about and manipulating objects (see § 416.926a(j));

(E) Caring for yourself (see § 416.926a(k)); and

(F) Health and physical well-being (see § 416.926a(l)).

(3) *Other medical evidence.* Other medical evidence is evidence from a medical source that is not objective medical evidence or a medical opinion, including judgments about the nature and severity of your impairments, your medical history, clinical findings, diagnosis, treatment prescribed with response, or prognosis. (For claims filed (see § 416.325) before March 27, 2017, *other medical evidence* does not include a diagnosis, prognosis, or a statement that reflects a judgment(s) about the nature and severity of your impairment(s)).

(4) *Evidence from nonmedical sources.* Evidence from nonmedical sources is any information or statement(s) from a nonmedical source (including you) about any issue in your claim. We may receive evidence from nonmedical sources either directly from the nonmedical source or indirectly, such as from forms we receive and our administrative records.

(5) *Prior administrative medical finding.* A prior administrative medical finding is a finding, other than the ultimate determination about whether you are disabled, about a medical issue made by our Federal and State agency medical and psychological consultants at a prior level of review (see § 416.1400) in your current claim based on their review of the evidence in your case record, such as:

(i) The existence and severity of your impairment(s);

(ii) The existence and severity of your symptoms;

(iii) Statements about whether your impairment(s) meets or medically equals any listing in the Listing of Impairments in Part 404, Subpart P, Appendix 1;

(iv) If you are a child, statements about whether your impairment(s) functionally equals the listings in Part 404, Subpart P, Appendix 1;

(v) If you are an adult, your residual functional capacity;

(vi) Whether your impairment(s) meets the duration requirement; and

(vii) How failure to follow prescribed treatment (see § 416.930) and drug addiction and alcoholism (see § 416.935) relate to your claim.

(b) *Exceptions for privileged communications.*

(1) The privileged communications listed in paragraphs (b)(1)(i) and (b)(1)(ii) of this section are not evidence, and we will neither consider nor provide any analysis about them in your determination or decision. This exception for privileged communications applies equally

whether your representative is an attorney or a non-attorney.

(i) Oral or written communications between you and your representative that are subject to the attorney-client privilege, unless you voluntarily disclose the communication to us.

(ii) Your representative's analysis of your claim, unless he or she voluntarily discloses it to us. This analysis means information that is subject to the attorney work product doctrine, but it does not include medical evidence, medical opinions, or any other factual matter that we may consider in determining whether or not you are entitled to benefits (see paragraph (b)(2) of this section).

(2) The attorney-client privilege generally protects confidential communications between an attorney and his or her client that are related to providing or obtaining legal advice. The attorney work product doctrine generally protects an attorney's analyses, theories, mental impressions, and notes. In the context of your disability claim, neither the attorney-client privilege nor the attorney work product doctrine allow you to withhold factual information, medical opinions, or other medical evidence that we may consider in determining whether or not you are entitled to benefits. For example, if you tell your representative about the medical sources you have seen, your representative cannot refuse to disclose the identity of those medical sources to us based on the attorney-client privilege. As another example, if your representative asks a medical source to complete an opinion form related to your impairment(s), symptoms, or limitations, your representative cannot withhold the completed opinion form from us based on the attorney work product doctrine. The attorney work product doctrine would not protect the source's opinions on the completed form, regardless of whether or not your representative used the form in his or her analysis of your claim or made handwritten notes on the face of the report.

■ 43. Add § 416.913a to read as follows:

§ 416.913a Evidence from our Federal or State agency medical or psychological consultants.

The following rules apply to our Federal or State agency medical or psychological consultants that we consult in connection with administrative law judge hearings and Appeals Council reviews:

(a) In claims adjudicated by the State agency, a State agency medical or psychological consultant may make the determination of disability together with

a State agency disability examiner or provide medical evidence to a State agency disability examiner when the disability examiner makes the initial or reconsideration determination alone (see § 416.1015(c) of this part). The following rules apply:

(1) When a State agency medical or psychological consultant makes the determination together with a State agency disability examiner at the initial or reconsideration level of the administrative review process as provided in § 416.1015(c)(1), he or she will consider the evidence in your case record and make administrative findings about the medical issues, including, but not limited to, the existence and severity of your impairment(s), the existence and severity of your symptoms, whether your impairment(s) meets or medically equals the requirements for any impairment listed in appendix 1 to this subpart, and your residual functional capacity. These administrative medical findings are based on the evidence in your case but are not in themselves evidence at the level of the administrative review process at which they are made. See § 416.913(a)(5).

(2) When a State agency disability examiner makes the initial determination alone as provided in § 416.1015(c)(3), he or she may obtain medical evidence from a State agency medical or psychological consultant about one or more of the medical issues listed in paragraph (a)(1) of this section. In these cases, the State agency disability examiner will consider the medical evidence of the State agency medical or psychological consultant under §§ 416.920b, 416.920c, and 416.927.

(3) When a State agency disability examiner makes a reconsideration determination alone as provided in § 416.1015(c)(3), he or she will consider prior administrative medical findings made by a State agency medical or psychological consultant at the initial level of the administrative review process, and any medical evidence provided by such consultants at the initial and reconsideration levels, about one or more of the medical issues listed in paragraph (a)(1)(i) of this section under §§ 416.920b, 416.920c, and 416.927.

(b) Administrative law judges are responsible for reviewing the evidence and making administrative findings of fact and conclusions of law. They will consider prior administrative medical findings and medical evidence from our Federal or State agency medical or psychological consultants as follows:

(1) Administrative law judges are not required to adopt any prior administrative medical findings, but they must consider this evidence according to §§ 416.920b, 416.920c, and 416.927, as appropriate, because our Federal or State agency medical or psychological consultants are highly qualified and experts in Social Security disability evaluation.

(2) Administrative law judges may also ask for medical evidence from expert medical sources. Administrative law judges will consider this evidence under §§ 416.920b, 416.920c, and 416.927, as appropriate.

(c) When the Appeals Council makes a decision, it will consider prior administrative medical findings according to the same rules for considering prior administrative medical findings as administrative law judges follow under paragraph (b) of this section.

■ 44. Revise § 416.918 paragraph (c) to read as follows:

§ 416.918 If you do not appear at a consultative examination.

* * * * *

(c) *Objections by your medical source(s).* If any of your medical sources tell you that you should not take the examination or test, you should tell us at once. In many cases, we may be able to get the information we need in another way. Your medical source(s) may agree to another type of examination for the same purpose.

■ 45. Revise § 416.919(a) to read as follows:

§ 416.919g Who we will select to perform a consultative examination.

(a) We will purchase a consultative examination only from a qualified medical source. The medical source may be your own medical source or another medical source. If you are a child, the medical source we choose may be a pediatrician.

* * * * *

■ 46. Revise § 416.919h to read as follows:

§ 416.919h Your medical source.

When, in our judgment, your medical source is qualified, equipped, and willing to perform the additional examination or test(s) for the fee schedule payment, and generally furnishes complete and timely reports, your medical source will be the preferred source for the purchased examination or test(s).

■ 47. Revise § 416.919i to read as follows:

§ 416.919i Other sources for consultative examinations.

We will use a different medical source than your medical source for a purchased examination or test in situations including, but not limited to, the following:

(a) Your medical source prefers not to perform such an examination or does not have the equipment to provide the specific data needed;

(b) There are conflicts or inconsistencies in your file that cannot be resolved by going back to your medical source;

(c) You prefer a source other than your medical source and have a good reason for your preference;

(d) We know from prior experience that your medical source may not be a productive source, such as when he or she has consistently failed to provide complete or timely reports; or

(e) Your medical source is not a qualified medical source as defined in § 416.919g.

■ 48. Revise § 416.919n paragraph (c)(6) to read as follows:

§ 416.919n Informing the medical source of examination scheduling, report content, and signature requirements.

* * * * *

(c) * * *

(6) A medical opinion. Although we will ordinarily request a medical opinion as part of the consultative examination process, the absence of a medical opinion in a consultative examination report will not make the report incomplete. See § 416.913(a)(3); and

* * * * *

■ 49. In § 416.920a, revise the second sentence of paragraphs (b)(1) and (d)(1) to read as follows:

§ 416.920a Evaluation of mental impairments.

* * * * *

(b) * * *

(1) * * * See § 416.921 for more information about what is needed to show a medically determinable impairment. * * *

* * * * *

(d) * * *

(1) If we rate the degrees of your limitation as “none” or “mild,” we will generally conclude that your impairment(s) is not severe, unless the evidence otherwise indicates that there is more than a minimal limitation in your ability to do basic work activities (see § 416.922).

* * * * *

■ 50. Revise § 416.920b to read as follows:

§ 416.920b How we consider evidence.

After we review all of the evidence relevant to your claim, we make findings about what the evidence shows.

(a) *Complete and consistent evidence.* If all of the evidence we receive, including all medical opinion(s), is consistent and there is sufficient evidence for us to determine whether you are disabled, we will make our determination or decision based on that evidence.

(b) *Incomplete or inconsistent evidence.* In some situations, we may not be able to make our determination or decision because the evidence in your case record is insufficient or inconsistent. We consider evidence to be insufficient when it does not contain all the information we need to make our determination or decision. We consider evidence to be inconsistent when it conflicts with other evidence, contains an internal conflict, is ambiguous, or when the medical evidence does not appear to be based on medically acceptable clinical or laboratory diagnostic techniques. If the evidence in your case record is insufficient or inconsistent, we may need to take the additional actions in paragraphs (b)(1) through (4) of this section.

(1) If any of the evidence in your case record, including any medical opinion(s) and prior administrative medical findings, is inconsistent, we will consider the relevant evidence and see if we can determine whether you are disabled based on the evidence we have.

(2) If the evidence is consistent but we have insufficient evidence to determine whether you are disabled, or if after considering the evidence we determine we cannot reach a conclusion about whether you are disabled, we will determine the best way to resolve the inconsistency or insufficiency. The action(s) we take will depend on the nature of the inconsistency or insufficiency. We will try to resolve the inconsistency or insufficiency by taking any one or more of the actions listed in paragraphs (b)(2)(i) through (b)(2)(iv) of this section. We might not take all of the actions listed below. We will consider any additional evidence we receive together with the evidence we already have.

(i) We may recontact your medical source. We may choose not to seek additional evidence or clarification from a medical source if we know from experience that the source either cannot or will not provide the necessary evidence. If we obtain medical evidence over the telephone, we will send the telephone report to the source for review, signature, and return;

(ii) We may request additional existing evidence;

(iii) We may ask you to undergo a consultative examination at our expense (see §§ 416.917 through 416.919t); or

(iv) We may ask you or others for more information.

(3) When there are inconsistencies in the evidence that we cannot resolve or when, despite efforts to obtain additional evidence, the evidence is insufficient to determine whether you are disabled, we will make a determination or decision based on the evidence we have.

(c) *Evidence that is inherently neither valuable nor persuasive.* Paragraphs (c)(1) through (c)(3) apply in claims filed (see § 416.325) on or after March 27, 2017. Because the evidence listed in paragraphs (c)(1)–(c)(3) of this section is inherently neither valuable nor persuasive to the issue of whether you are disabled or blind under the Act, we will not provide any analysis about how we considered such evidence in our determination or decision, even under § 416.920c:

(1) *Decisions by other governmental agencies and nongovernmental entities.* See § 416.904.

(2) *Disability examiner findings.*

Findings made by a State agency disability examiner made at a previous level of adjudication about a medical issue, vocational issue, or the ultimate determination about whether you are disabled.

(3) *Statements on issues reserved to the Commissioner.* The statements listed in paragraphs (c)(3)(i) through (c)(3)(ix) of this section would direct our determination or decision that you are or are not disabled or blind within the meaning of the Act, but we are responsible for making the determination or decision about whether you are disabled or blind:

(i) Statements that you are or are not disabled, blind, able to work, or able to perform regular or continuing work;

(ii) Statements about whether or not you have a severe impairment(s);

(iii) Statements about whether or not your impairment(s) meets the duration requirement (see § 416.909);

(iv) Statements about whether or not your impairment(s) meets or medically equals any listing in the Listing of Impairments in Part 404, Subpart P, Appendix 1;

(v) If you are a child, statements about whether or not your impairment(s) functionally equals the listings in Part 404 Subpart P Appendix 1 (see § 416.926a);

(vi) If you are an adult, statements about what your residual functional capacity is using our programmatic

terms about the functional exertional levels in Part 404, Subpart P, Appendix 2, Rule 200.00 instead of descriptions about your functional abilities and limitations (see § 416.945);

(vii) If you are an adult, statements about whether or not your residual functional capacity prevents you from doing past relevant work (see § 416.960);

(viii) If you are an adult, statements that you do or do not meet the requirements of a medical-vocational rule in Part 404, Subpart P, Appendix 2; and

(ix) Statements about whether or not your disability continues or ends when we conduct a continuing disability review (see § 416.994).

■ 51. Add § 416.920c to read as follows:

§ 416.920c How we consider and articulate medical opinions and prior administrative medical findings for claims filed on or after March 27, 2017.

For claims filed (see § 416.325) on or after March 27, 2017, the rules in this section apply. For claims filed before March 27, 2017, the rules in § 416.927 apply.

(a) *How we consider medical opinions and prior administrative medical findings.* We will not defer or give any specific evidentiary weight, including controlling weight, to any medical opinion(s) or prior administrative medical finding(s), including those from your medical sources. When a medical source provides one or more medical opinions or prior administrative medical findings, we will consider those medical opinions or prior administrative medical findings from that medical source together using the factors listed in paragraphs (c)(1) through (c)(5) of this section, as appropriate. The most important factors we consider when we evaluate the persuasiveness of medical opinions and prior administrative medical findings are supportability (paragraph (c)(1) of this section) and consistency (paragraph (c)(2) of this section). We will articulate how we considered the medical opinions and prior administrative medical findings in your claim according to paragraph (b) of this section.

(b) *How we articulate our consideration of medical opinions and prior administrative medical findings.* We will articulate in our determination or decision how persuasive we find all of the medical opinions and all of the prior administrative medical findings in your case record. Our articulation requirements are as follows:

(1) *Source-level articulation.* Because many claims have voluminous case records containing many types of

evidence from different sources, it is not administratively feasible for us to articulate in each determination or decision how we considered all of the factors for all of the medical opinions and prior administrative medical findings in your case record. Instead, when a medical source provides multiple medical opinion(s) or prior administrative medical finding(s), we will articulate how we considered the medical opinions or prior administrative medical findings from that medical source together in a single analysis using the factors listed in paragraphs (c)(1) through (c)(5) of this section, as appropriate. We are not required to articulate how we considered each medical opinion or prior administrative medical finding from one medical source individually.

(2) *Most important factors.* The factors of supportability (paragraph (c)(1) of this section) and consistency (paragraph (c)(2) of this section) are the most important factors we consider when we determine how persuasive we find a medical source's medical opinions or prior administrative medical findings to be. Therefore, we will explain how we considered the supportability and consistency factors for a medical source's medical opinions or prior administrative medical findings in your determination or decision. We may, but are not required to, explain how we considered the factors in paragraphs (c)(3) through (c)(5) of this section, as appropriate, when we articulate how we consider medical opinions and prior administrative medical findings in your case record.

(3) *Equally persuasive medical opinions or prior administrative medical findings about the same issue.* When we find that two or more medical opinions or prior administrative medical findings about the same issue are both equally well-supported (paragraph (c)(1) of this section) and consistent with the record (paragraph (c)(2) of this section) but are not exactly the same, we will articulate how we considered the other most persuasive factors in paragraphs (c)(3) through (c)(5) of this section for those medical opinions or prior administrative medical findings in your determination or decision.

(c) *Factors.* We will consider the following factors when we consider the medical opinion(s) and prior administrative medical finding(s) in your case:

(1) *Supportability.* The more relevant the objective medical evidence and supporting explanations presented by a medical source are to support his or her medical opinion(s) or prior

administrative medical finding(s), the more persuasive the medical opinions or prior administrative medical finding(s) will be.

(2) *Consistency.* The more consistent a medical opinion(s) or prior administrative medical finding(s) is with the evidence from other medical sources and nonmedical sources in the claim, the more persuasive the medical opinion(s) or prior administrative medical finding(s) will be.

(3) *Relationship with the claimant.* This factor combines consideration of the issues in paragraphs (c)(3)(i)–(v) of this section.

(i) *Length of the treatment relationship.* The length of time a medical source has treated you may help demonstrate whether the medical source has a longitudinal understanding of your impairment(s).

(ii) *Frequency of examinations.* The frequency of your visits with the medical source may help demonstrate whether the medical source has a longitudinal understanding of your impairment(s).

(iii) *Purpose of the treatment relationship.* The purpose for treatment you received from the medical source may help demonstrate the level of knowledge the medical source has of your impairment(s).

(iv) *Extent of the treatment relationship.* The kinds and extent of examinations and testing the medical source has performed or ordered from specialists or independent laboratories may help demonstrate the level of knowledge the medical source has of your impairment(s).

(v) *Examining relationship.* A medical source may have a better understanding of your impairment(s) if he or she examines you than if the medical source only reviews evidence in your folder.

(4) *Specialization.* The medical opinion or prior administrative medical finding of a medical source who has received advanced education and training to become a specialist may be more persuasive about medical issues related to his or her area of specialty than the medical opinion or prior administrative medical finding of a medical source who is not a specialist in the relevant area of specialty.

(5) *Other factors.* We will consider other factors that tend to support or contradict a medical opinion or prior administrative medical finding. This includes, but is not limited to, evidence showing a medical source has familiarity with the other evidence in the claim or an understanding of our disability program's policies and evidentiary requirements. When we consider a medical source's familiarity

with the other evidence in a claim, we will also consider whether new evidence we receive after the medical source made his or her medical opinion or prior administrative medical finding makes the medical opinion or prior administrative medical finding more or less persuasive.

(d) *Evidence from nonmedical sources.* We are not required to articulate how we considered evidence from nonmedical sources using the requirements in paragraphs (a) through (c) in this section.

■ 52. Revise § 416.921 to read as follows:

§ 416.921 Establishing that you have a medically determinable impairment(s).

If you are not doing substantial gainful activity, we will then determine whether you have a medically determinable physical or mental impairment(s) (see § 416.920(a)(4)(ii)). Your impairment(s) must result from anatomical, physiological, or psychological abnormalities that can be shown by medically acceptable clinical and laboratory diagnostic techniques. Therefore, a physical or mental impairment must be established by objective medical evidence from an acceptable medical source. We will not use your statement of symptoms, a diagnosis, or a medical opinion to establish the existence of an impairment(s). After we establish that you have a medically determinable impairment(s), then we determine whether your impairment(s) is severe.

■ 53. Revise § 416.922 to read as follows:

§ 416.922 What we mean by an impairment(s) that is not severe in an adult.

(a) *Non-severe impairment(s).* An impairment or combination of impairments is not severe if it does not significantly limit your physical or mental ability to do basic work activities.

(b) *Basic work activities.* When we talk about basic work activities, we mean the abilities and aptitudes necessary to do most jobs. Examples of these include—

- (1) Physical functions such as walking, standing, sitting, lifting, pushing, pulling, reaching, carrying, or handling;
- (2) Capacities for seeing, hearing, and speaking;
- (3) Understanding, carrying out, and remembering simple instructions;
- (4) Use of judgment;
- (5) Responding appropriately to supervision, co-workers and usual work situations; and

(6) Dealing with changes in a routine work setting.

■ 54. Revise § 416.923 to read as follows:

§ 416.923 Multiple impairments.

(a) *Unrelated severe impairments.* We cannot combine two or more unrelated severe impairments to meet the 12-month duration test. If you have a severe impairment(s) and then develop another unrelated severe impairment(s) but neither one is expected to last for 12 months, we cannot find you disabled, even though the two impairments in combination last for 12 months.

(b) *Concurrent impairments.* If you have two or more concurrent impairments that, when considered in combination, are severe, we must determine whether the combined effect of your impairments can be expected to continue to be severe for 12 months. If one or more of your impairments improves or is expected to improve within 12 months, so that the combined effect of your remaining impairments is no longer severe, we will find that you do not meet the 12-month duration test.

(c) *Combined effect.* In determining whether your physical or mental impairment or impairments are of a sufficient medical severity that such impairment or impairments could be the basis of eligibility under the law, we will consider the combined effect of all of your impairments without regard to whether any such impairment, if considered separately, would be of sufficient severity. If we do find a medically severe combination of impairments, we will consider the combined impact of the impairments throughout the disability determination process. If we do not find that you have a medically severe combination of impairments, we will determine that you are not disabled (see §§ 416.920 and 416.924).

■ 55. In § 416.924a, revise paragraph (a) introductory text, the last sentence of paragraph (a)(1)(i), the last sentence of (a)(1)(iii), and the section heading of paragraph (a)(2) to read as follows:

§ 416.924a Considerations in determining disability for children.

(a) *Basic considerations.* We consider all evidence in your case record (see § 416.913). The evidence in your case record may include information from medical sources (such as your pediatrician or other physician; psychologist; qualified speech-language pathologist; and physical, occupational, and rehabilitation therapists) and nonmedical sources (such as your parents, teachers, and other people who know you).

(1) * * *

(i) * * * (See § 416.920c.)

* * * * *

(iii) * * * When a medical source has accepted and relied on such information to reach a diagnosis, we may consider this information to be a sign, as defined in § 416.902(l).

(2) *Statements from nonmedical sources.* * * *

* * * * *

■ 56. Amend § 416.924b by revising the first sentence of paragraph (b)(3) to read as follows:

§ 416.924b Age as a factor of evaluation in the sequential evaluation process for children.

* * * * *

(b) * * *

(3) Notwithstanding the provisions in paragraph (b)(1) of this section, we will not compute a corrected chronological age if the medical evidence shows that your medical source has already considered your prematurity in his or her assessment of your development.

* * *

■ 57. In § 416.925, revise the last sentence in paragraph (c)(2) to read as follows:

§ 416.925 Listing of Impairments in appendix 1 of subpart P of part 404 of this chapter.

* * * * *

(c) * * *

(2) * * * Even if we do not include specific criteria for establishing a diagnosis or confirming the existence of your impairment, you must still show that you have a severe medically determinable impairment(s), as defined in §§ 416.921 and 416.924(c).

* * * * *

■ 58. In § 416.926, revise paragraphs (d) and (e) to read as follows:

§ 416.926 Medical equivalence for adults and children.

* * * * *

(d) *Who is a designated medical or psychological consultant?* A medical or psychological consultant designated by the Commissioner includes any medical or psychological consultant employed or engaged to make medical judgments by the Social Security Administration, the Railroad Retirement Board, or a State agency authorized to make disability determinations. See § 416.1016 of this part for the necessary qualifications for medical consultants and psychological consultants and the limitations on what medical consultants who are not physicians can evaluate.

(e) *Who is responsible for determining medical equivalence?*

(1) In cases where the State agency or other designee of the Commissioner makes the initial or reconsideration disability determination, a State agency medical or psychological consultant or other designee of the Commissioner (see § 416.1016 of this part) has the overall responsibility for determining medical equivalence.

(2) For cases in the disability hearing process or otherwise decided by a disability hearing officer, the responsibility for determining medical equivalence rests with either the disability hearing officer or, if the disability hearing officer's reconsideration determination is changed under § 416.1418 of this part, with the Associate Commissioner for Disability Policy or his or her delegate.

(3) For cases at the administrative law judge or Appeals Council level, the responsibility for deciding medical equivalence rests with the administrative law judge or Appeals Council.

■ 59. Amend § 416.926a by revising the second sentence of paragraph (b)(3) to read as follows:

§ 416.926a Functional equivalence for children.

* * * * *

(b) * * *

(3) * * * We will ask for information from your medical sources who can give us medical evidence, including medical opinions, about your limitations and restrictions. * * *

* * * * *

■ 60. Revise § 416.927 to read as follows:

§ 416.927 Evaluating opinion evidence for claims filed before March 27, 2017.

For claims filed (see § 416.325) before March 27, 2017, the rules in this section apply. For claims filed on or after March 27, 2017, the rules in § 416.920c apply.

(a) *Definitions.*

(1) *Medical opinions.* Medical opinions are statements from acceptable medical sources that reflect judgments about the nature and severity of your impairment(s), including your symptoms, diagnosis and prognosis, what you can still do despite impairment(s), and your physical or mental restrictions.

(2) *Treating source.* Treating source means your own acceptable medical source who provides you, or has provided you, with medical treatment or evaluation and who has, or has had, an ongoing treatment relationship with you. Generally, we will consider that you have an ongoing treatment relationship with an acceptable medical source when the medical evidence

establishes that you see, or have seen, the source with a frequency consistent with accepted medical practice for the type of treatment and/or evaluation required for your medical condition(s). We may consider an acceptable medical source who has treated or evaluated you only a few times or only after long intervals (e.g., twice a year) to be your treating source if the nature and frequency of the treatment or evaluation is typical for your condition(s). We will not consider an acceptable medical source to be your treating source if your relationship with the source is not based on your medical need for treatment or evaluation, but solely on your need to obtain a report in support of your claim for disability. In such a case, we will consider the acceptable medical source to be a nontreating source.

(b) *How we consider medical opinions.* In determining whether you are disabled, we will always consider the medical opinions in your case record together with the rest of the relevant evidence we receive. See § 416.920b.

(c) *How we weigh medical opinions.* Regardless of its source, we will evaluate every medical opinion we receive. Unless we give a treating source's medical opinion controlling weight under paragraph (c)(2) of this section, we consider all of the following factors in deciding the weight we give to any medical opinion.

(1) *Examining relationship.* Generally, we give more weight to the medical opinion of a source who has examined you than to the medical opinion of a medical source who has not examined you.

(2) *Treatment relationship.* Generally, we give more weight to medical opinions from your treating sources, since these sources are likely to be the medical professionals most able to provide a detailed, longitudinal picture of your medical impairment(s) and may bring a unique perspective to the medical evidence that cannot be obtained from the objective medical findings alone or from reports of individual examinations, such as consultative examinations or brief hospitalizations. If we find that a treating source's medical opinion on the issue(s) of the nature and severity of your impairment(s) is well-supported by medically acceptable clinical and laboratory diagnostic techniques and is not inconsistent with the other substantial evidence in your case record, we will give it controlling weight. When we do not give the treating source's medical opinion controlling weight, we apply the factors listed in paragraphs (c)(2)(i) and

(c)(2)(ii) of this section, as well as the factors in paragraphs (c)(3) through (c)(6) of this section in determining the weight to give the medical opinion. We will always give good reasons in our notice of determination or decision for the weight we give your treating source's medical opinion.

(i) *Length of the treatment relationship and the frequency of examination.* Generally, the longer a treating source has treated you and the more times you have been seen by a treating source, the more weight we will give to the source's medical opinion. When the treating source has seen you a number of times and long enough to have obtained a longitudinal picture of your impairment, we will give the medical source's medical opinion more weight than we would give it if it were from a nontreating source.

(ii) *Nature and extent of the treatment relationship.* Generally, the more knowledge a treating source has about your impairment(s) the more weight we will give to the source's medical opinion. We will look at the treatment the source has provided and at the kinds and extent of examinations and testing the source has performed or ordered from specialists and independent laboratories. For example, if your ophthalmologist notices that you have complained of neck pain during your eye examinations, we will consider his or her medical opinion with respect to your neck pain, but we will give it less weight than that of another physician who has treated you for the neck pain. When the treating source has reasonable knowledge of your impairment(s), we will give the source's medical opinion more weight than we would give it if it were from a nontreating source.

(3) *Supportability.* The more a medical source presents relevant evidence to support a medical opinion, particularly medical signs and laboratory findings, the more weight we will give that medical opinion. The better an explanation a source provides for a medical opinion, the more weight we will give that medical opinion. Furthermore, because nonexamining sources have no examining or treating relationship with you, the weight we will give their medical opinions will depend on the degree to which they provide supporting explanations for their medical opinions. We will evaluate the degree to which these medical opinions consider all of the pertinent evidence in your claim, including medical opinions of treating and other examining sources.

(4) *Consistency.* Generally, the more consistent a medical opinion is with the

record as a whole, the more weight we will give to that medical opinion.

(5) *Specialization.* We generally give more weight to the medical opinion of a specialist about medical issues related to his or her area of specialty than to the medical opinion of a source who is not a specialist.

(6) *Other factors.* When we consider how much weight to give to a medical opinion, we will also consider any factors you or others bring to our attention, or of which we are aware, which tend to support or contradict the medical opinion. For example, the amount of understanding of our disability programs and their evidentiary requirements that a medical source has, regardless of the source of that understanding, and the extent to which a medical source is familiar with the other information in your case record are relevant factors that we will consider in deciding the weight to give to a medical opinion.

(d) *Medical source opinions on issues reserved to the Commissioner.* Opinions on some issues, such as the examples that follow, are not medical opinions, as described in paragraph (a)(1) of this section, but are, instead, opinions on issues reserved to the Commissioner because they are administrative findings that are dispositive of a case; *i.e.*, that would direct the determination or decision of disability.

(1) *Opinions that you are disabled.* We are responsible for making the determination or decision about whether you meet the statutory definition of disability. In so doing, we review all of the medical findings and other evidence that support a medical source's statement that you are disabled. A statement by a medical source that you are "disabled" or "unable to work" does not mean that we will determine that you are disabled.

(2) *Other opinions on issues reserved to the Commissioner.* We use medical sources, including your treating source, to provide evidence, including opinions, on the nature and severity of your impairment(s). Although we consider opinions from medical sources on issues such as whether your impairment(s) meets or equals the requirements of any impairment(s) in the Listing of Impairments in appendix 1 to subpart P of part 404 of this chapter, your residual functional capacity (see §§ 416.945 and 416.946), or the application of vocational factors, the final responsibility for deciding these issues is reserved to the Commissioner.

(3) We will not give any special significance to the source of an opinion on issues reserved to the Commissioner

described in paragraphs (d)(1) and (d)(2) of this section.

(e) *Evidence from our Federal or State agency medical or psychological consultants.* The rules in § 416.913a apply except that when an administrative law judge gives controlling weight to a treating source's medical opinion, the administrative law judge is not required to explain in the decision the weight he or she gave to the prior administrative medical findings in the claim.

(f) *Opinions from medical sources who are not acceptable medical sources and from nonmedical sources.*

(1) *Consideration.* Opinions from medical sources who are not acceptable medical sources and from nonmedical sources may reflect the source's judgment about some of the same issues addressed in medical opinions from acceptable medical sources. Although we will consider these opinions using the same factors as listed in paragraph (c)(1) through (c)(6) in this section, not every factor for weighing opinion evidence will apply in every case because the evaluation of an opinion from a medical source who is not an acceptable medical source or from a nonmedical source depends on the particular facts in each case. Depending on the particular facts in a case, and after applying the factors for weighing opinion evidence, an opinion from a medical source who is not an acceptable medical source or from a nonmedical source may outweigh the medical opinion of an acceptable medical source, including the medical opinion of a treating source. For example, it may be appropriate to give more weight to the opinion of a medical source who is not an "acceptable medical source" if he or she has seen the individual more often than the treating source, has provided better supporting evidence and a better explanation for the opinion, and the opinion is more consistent with the evidence as a whole.

(2) *Articulation.* The adjudicator generally should explain the weight given to opinions from these sources or otherwise ensure that the discussion of the evidence in the determination or decision allows a claimant or subsequent reviewer to follow the adjudicator's reasoning, when such opinions may have an effect on the outcome of the case. In addition, when an adjudicator determines that an opinion from such a source is entitled to greater weight than a medical opinion from a treating source, the adjudicator must explain the reasons in the notice of decision in hearing cases and in the notice of determination (that is, in the personalized disability notice) at the

initial and reconsideration levels, if the determination is less than fully favorable.

§ 416.928 [Removed and Reserved]

■ 61. Remove and reserve § 416.928.

■ 62. In § 416.929, revise paragraph (a), the second and third sentences of paragraph (c)(1), the introductory text of paragraph (c)(3), and the third sentence of paragraph (c)(4) to read as follows:

§ 416.929 How we evaluate symptoms, including pain.

(a) *General.* In determining whether you are disabled, we consider all your symptoms, including pain, and the extent to which your symptoms can reasonably be accepted as consistent with the objective medical evidence and other evidence. We will consider all of your statements about your symptoms, such as pain, and any description your medical sources or nonmedical sources may provide about how the symptoms affect your activities of daily living and your ability to work (or, if you are a child, your functioning). However, statements about your pain or other symptoms will not alone establish that you are disabled. There must be objective medical evidence from an acceptable medical source that shows you have a medical impairment(s) which could reasonably be expected to produce the pain or other symptoms alleged and that, when considered with all of the other evidence (including statements about the intensity and persistence of your pain or other symptoms which may reasonably be accepted as consistent with the medical signs and laboratory findings), would lead to a conclusion that you are disabled. In evaluating the intensity and persistence of your symptoms, including pain, we will consider all of the available evidence, including your medical history, the medical signs and laboratory findings, and statements about how your symptoms affect you. We will then determine the extent to which your alleged functional limitations and restrictions due to pain or other symptoms can reasonably be accepted as consistent with the medical signs and laboratory findings and other evidence to decide how your symptoms affect your ability to work (or if you are a child, your functioning).

* * * * *

(c) * * *

(1) * * * In evaluating the intensity and persistence of your symptoms, we consider all of the available evidence from your medical sources and nonmedical sources about how your symptoms affect you. We also consider

the medical opinions as explained in § 416.920c. * * *

* * * * *

(3) *Consideration of other evidence.* Because symptoms sometimes suggest a greater severity of impairment than can be shown by objective medical evidence alone, we will carefully consider any other information you may submit about your symptoms. The information that your medical sources or nonmedical sources provide about your pain or other symptoms (e.g., what may precipitate or aggravate your symptoms, what medications, treatments or other methods you use to alleviate them, and how the symptoms may affect your pattern of daily living) is also an important indicator of the intensity and persistence of your symptoms. Because symptoms, such as pain, are subjective and difficult to quantify, any symptom-related functional limitations and restrictions that your medical sources or nonmedical sources report, which can reasonably be accepted as consistent with the objective medical evidence and other evidence, will be taken into account as explained in paragraph (c)(4) of this section in reaching a conclusion as to whether you are disabled. We will consider all of the evidence presented, including information about your prior work record, your statements about your symptoms, evidence submitted by your medical sources, and observations by our employees and other persons. If you are a child, we will also consider all of the evidence presented, including evidence submitted by your medical sources (such as physicians, psychologists, and therapists) and nonmedical sources (such as educational agencies and personnel, parents and other relatives, and social welfare agencies). Section 416.920c explains in detail how we consider medical opinions and prior administrative medical findings about the nature and severity of your impairment(s) and any related symptoms, such as pain. Factors relevant to your symptoms, such as pain, which we will consider include:

* * * * *

(4) * * * We will consider whether there are any inconsistencies in the evidence and the extent to which there are any conflicts between your statements and the rest of the evidence, including your history, the signs and laboratory findings, and statements by your medical sources or other persons about how your symptoms affect you.

* * *

* * * * *

■ 63. Revise § 416.930(a) to read as follows:

§ 416.930 Need to follow prescribed treatment.

(a) *What treatment you must follow.* In order to get benefits, you must follow treatment prescribed by your medical source(s) if this treatment is expected to restore your ability to work.

* * * * *

■ 64. Amend § 416.993 by revising the seventh and ninth sentences of paragraph (b) to read as follows:

§ 416.993 Medical evidence in continuing disability review cases.

* * * * *

(b) * * * See § 416.912(b)(1)(i) concerning what we mean by every reasonable effort. * * * See § 416.912(b)(1)(ii).

* * * * *

■ 65. Amend § 416.994 by revising the last sentence in paragraph (b)(1)(i), the sixth sentence in example 1, the second sentence of paragraph (b)(1)(vi), and the fourth sentence of (b)(2)(iv)(E) to read as follows:

§ 416.994 How we will determine whether your disability continues or ends.

* * * * *

(b) * * *

(1) * * *

(i) * * * A determination that there has been a decrease in medical severity must be based on changes (improvement) in the symptoms, signs, or laboratory findings associated with your impairment(s).

Example 1: * * * When we reviewed your claim your medical source who has treated you reported that he or she had seen you regularly every 2 to 3 months for the past 2 years. * * *

* * * * *

(vi) * * * We will consider all evidence you submit and that we obtain from your medical sources and nonmedical sources. * * *

* * * * *

(2) * * *

(iv) * * *

(E) * * * If you are able to engage in substantial gainful activity, we will determine whether an attempt should be made to reconstruct those portions of the missing file that were relevant to our most recent favorable medical decision (e.g., work history, medical evidence, and the results of consultative examinations). * * *

■ 66. Amend § 416.994a by revising the second sentence of paragraph (a)(2), the first sentence in paragraph (c)(2), the fourth sentence of paragraph (d), and paragraph (i)(1) to read as follows:

§ 416.994a How we will determine whether your disability continues or ends, and whether you are and have been receiving treatment that is medically necessary and available, disabled children.

(a) * * *

(2) * * * We will consider all evidence you submit and that we obtain from your medical and nonmedical sources. * * *

* * *

(c) * * *

(2) The terms symptoms, signs, and laboratory findings are defined in § 416.902. * * *

(d) * * * If not, we will determine whether an attempt should be made to reconstruct those portions of the missing file that were relevant to our most recent favorable determination or decision (e.g., school records, medical evidence, and the results of consultative examinations). * * *

* * *

(i) * * *

(1) *What we mean by treatment that is medically necessary.* Treatment that is medically necessary means treatment that is expected to improve or restore your functioning and that was prescribed by your medical source. If you do not have a medical source, we will decide whether there is treatment that is medically necessary that could have been prescribed by a medical source. The treatment may include (but is not limited to)—

* * *

Subpart J—Determinations of Disability

■ 67. The authority citation for subpart J of part 416 continues to read as follows:

Authority: Secs. 702(a)(5), 1614, 1631, and 1633 of the Social Security Act (42 U.S.C. 902(a)(5), 1382c, 1383, and 1383b).

§ 416.1015 [Amended]

■ 68. Revise § 416.1015 by removing paragraph (d) and redesignating paragraphs (e) through (h) as paragraphs (d) through (g).

■ 69. Revise § 416.1016 to read as follows:

§ 416.1016 Medical consultants and psychological consultants.

(a) *What is a medical consultant?* A medical consultant is a member of a team that makes disability determinations in a State agency (see § 416.1015), or who is a member of a team that makes disability determinations for us when we make disability determinations ourselves. The medical consultant completes the medical portion of the case review and

any applicable residual functional capacity assessment about all physical impairment(s) in a claim.

(b) *What qualifications must a medical consultant have?* A medical consultant is a licensed physician, as defined in § 416.902(a)(1).

(c) *What is a psychological consultant?* A psychological consultant is a member of a team that makes disability determinations in a State agency (see § 416.1015), or who is a member of a team that makes disability determinations for us when we make disability determinations ourselves. The psychological consultant completes the medical portion of the case review and any applicable residual functional capacity assessment about all mental impairment(s) in a claim. When we are unable to obtain the services of a qualified psychiatrist or psychologist despite making every reasonable effort (see § 416.1017) in a claim involving a mental impairment(s), a medical consultant will evaluate the mental impairment(s).

(d) *What qualifications must a psychological consultant have?* A psychological consultant can be either a licensed psychiatrist or psychologist. We will only consider a psychologist qualified to be a psychological consultant if he or she:

(1) Is licensed or certified as a psychologist at the independent practice level of psychology by the State in which he or she practices; and

(2)(i) Possesses a doctorate degree in psychology from a program in clinical psychology of an educational institution accredited by an organization recognized by the Council on Post-Secondary Accreditation; or

(ii) Is listed in a national register of health service providers in psychology which the Commissioner of Social Security deems appropriate; and

(3) Possesses 2 years of supervised clinical experience as a psychologist in health service, at least 1 year of which is post-masters degree.

(e) *Cases involving both physical and mental impairments.* In a case where there is evidence of both physical and mental impairments, the medical consultant will evaluate the physical impairments in accordance with paragraph (a) of this section, and the psychological consultant will evaluate the mental impairment(s) in accordance with paragraph (c) of this section.

■ 70. Revise § 416.1017(a) to read as follows:

§ 416.1017 Reasonable efforts to obtain review by a qualified psychiatrist or psychologist.

(a) When the evidence of record indicates the existence of a physical impairment, the State agency must make every reasonable effort to ensure that a medical consultant completes the medical portion of the case review and any applicable residual functional capacity assessment. When the evidence of record indicates the existence of a mental impairment, the State agency must make every reasonable effort to ensure that a psychological consultant completes the medical portion of the case review and any applicable residual functional capacity assessment. The State agency must determine if additional physicians, psychiatrists, and psychologists are needed to make the necessary reviews. When it does not have sufficient resources to make the necessary reviews, the State agency must attempt to obtain the resources needed. If the State agency is unable to obtain additional physicians, psychiatrists, and psychologists because of low salary rates or fee schedules, it should attempt to raise the State agency's levels of compensation to meet the prevailing rates for these services. If these efforts are unsuccessful, the State agency will seek assistance from us. We will assist the State agency as necessary. We will also monitor the State agency's efforts and where the State agency is unable to obtain the necessary services, we will make every reasonable effort to provide the services using Federal resources.

* * *

Subpart N—Determinations, Administrative Review Process, and Reopening of Determinations and Decisions

■ 71. The authority for subpart N continues to read as follows:

Authority: Secs. 702(a)(5), 1631, and 1633 of the Social Security Act (42 U.S.C. 902(a)(5), 1383, and 1383b); sec. 202, Pub. L. 108–203, 118 Stat. 509 (42 U.S.C. 902 note).

■ 72. In § 416.1406(b)(2), revise the fourth sentence to read as follows:

§ 416.1406 Testing modifications to the disability determination procedures.

* * *

(b) * * *

(2) * * * However, before an initial determination is made in any case where there is evidence which indicates the existence of a mental impairment, the decisionmaker will make every reasonable effort to ensure that a qualified psychiatrist or psychologist has completed the medical portion of

the case review and any applicable residual functional capacity assessment pursuant to our existing procedures (see § 416.1017). * * *

* * * * *

■ 73. In § 416.1442, revise paragraph (f)(1) to read as follows:

§ 416.1442 Prehearing proceedings and decisions by attorney advisors.

* * * * *

(f) * * *

(1) Authorize an attorney advisor to exercise the functions performed by an administrative law judge under

§§ 416.913a, 416.920a, 416.926, and 416.946.

* * * * *

BILLING CODE 4191–02–P

FEDERAL REGISTER

Vol. 82

Wednesday,

No. 11

January 18, 2017

Part VI

Department of Transportation

Federal Highway Administration

23 CFR Part 490

National Performance Management Measures; Assessing Pavement Condition for the National Highway Performance Program and Bridge Condition for the National Highway Performance Program and Assessing Performance of the National Highway System, Freight Movement on the Interstate System, and Congestion Mitigation and Air Quality Improvement Program; Final Rules

DEPARTMENT OF TRANSPORTATION**Federal Highway Administration****23 CFR Part 490**

[Docket No. FHWA–2013–0053]

RIN 2125–AF53

National Performance Management Measures; Assessing Pavement Condition for the National Highway Performance Program and Bridge Condition for the National Highway Performance Program

AGENCY: Federal Highway Administration (FHWA), Department of Transportation (DOT).

ACTION: Final rule.

SUMMARY: The purpose of this final rule is to establish measures for State departments of transportation (State DOT) to use to carry out the National Highway Performance Program (NHPP) and to assess the condition of the following: Pavements on the National Highway System (NHS) (excluding the Interstate System), bridges carrying the NHS which includes on- and off-ramps connected to the NHS, and pavements on the Interstate System. The NHPP is a core Federal-aid highway program that provides support for the condition and performance of the NHS and the construction of new facilities on the NHS. The NHPP also ensures that investments of Federal-aid funds in highway construction are directed to support progress toward the achievement of performance targets established in a State's asset management plan for the NHS. This final rule establishes regulations for the new performance aspects of the NHPP that address measures, targets, and reporting. The FHWA is in the process of creating a new public Web site to help communicate the national performance story. The Web site will likely include infographics, tables, charts, and descriptions of the performance data that State DOTs report to FHWA. The FHWA issues this final rule based on sec. 1203 of MAP–21, which identifies national transportation goals and requires the Secretary to promulgate rules to establish performance measures and standards in specified Federal-aid highway program areas.

DATES: This final rule is effective February 17, 2017. The incorporation by reference of certain publications listed in the regulation is approved by the Director of the Federal Register as of February 17, 2017.

FOR FURTHER INFORMATION CONTACT: For technical information: Francine Shaw–Whitson, Office of Infrastructure, 202–366–8028. For legal information: Anne Christenson, Office of Chief Counsel, 202–366–0740, Federal Highway Administration, 1200 New Jersey Avenue SE., Washington, DC 20590. Office hours are from 8:00 a.m. to 4:30 p.m. e.t., Monday through Friday, except Federal holidays.

SUPPLEMENTARY INFORMATION**Electronic Access and Filing**

The notice of proposed rulemaking (NPRM) was published at 80 FR 326 on January 5, 2015, and all comments received may be viewed online at <http://www.regulations.gov>. Electronic retrieval help and guidelines are available on the Web site. It is available 24 hours each day, 365 days each year. An electronic copy of this document may also be downloaded from the Office of the Federal Register's Web site at <http://www.orf.gov> and the Government Printing Office's Web site at <http://www.gpo.gov>.

I. Executive Summary**A. Incorporating the FAST Act**

On December 4, 2015, the President signed the Fixing America's Surface Transportation Act (FAST) Act (Pub. L. 114–94) into law. For the most part, the FAST Act is consistent with the new performance management elements introduced by MAP–21. For convenience and accurate historical context, this rule will refer to MAP–21 throughout the preamble to signify the fundamental changes MAP–21 made to States' authorities and responsibilities

for overseeing the implementation of performance management. For this final rule, there are two areas where the FAST Act made changes to performance management requirements.

The first change is sec. 119(e)(7), title 23, United States Code (23 U.S.C. 119(e)(7)), which relates to the requirement for a significant progress determination for NHPP targets. The FAST Act amended this provision to remove the term “2 consecutive reports.” The FHWA has incorporated this change into the final rule by removing the term “2 consecutive determinations,” which was proposed in section 490.109(f) of the NPRM, published January 5, 2015 (80 FR 326). In section 490.109(f) of the NPRM, FHWA proposed that if FHWA determines that a State DOT has not made significant progress toward achieving NHPP targets in two consecutive FHWA determinations, then that State DOT would document the actions it will take to achieve the targets in its next Biennial Performance Report. The FAST Act changed this requirement. Due to the FAST Act, the final rule requires State DOTs to take action when they do not make significant progress for each biennial determination (instead of 2 consecutive biennial determinations) made by FHWA.

The second change made by the FAST Act is removal of the term “2 consecutive reports” in 23 U.S.C. 119(f)(1)(A), which relates to triggering the penalty for Interstate pavement condition that has fallen below the minimum condition level established under this rule. In section 490.317 of the NPRM, FHWA proposed that it would determine annually whether or not a State DOT's Interstate pavement condition is below the minimum condition level. If FHWA determines that a State DOT's Interstate pavement condition is below the minimum condition level for the “most recent 2 years,” then that State DOT would be subject to the penalty under 23 U.S.C. 119(f)(1)(A). A description and example application on this penalty is available for review on the docket. Due to the FAST Act, the final rule subjects State DOTs to the penalty under 23 U.S.C. 119(f)(1)(A) if FHWA determines that its Interstate pavement condition has fallen below the minimum condition level for the most recent year (instead of most recent 2 years).

B. Purpose of the Regulatory Action

The MAP–21 (Pub. L. 112–141) transforms the Federal-aid highway program by establishing new requirements for performance

management to ensure the most efficient investment of Federal transportation funds. Performance management increases the accountability and transparency of the Federal-aid highway program and provides a framework to support improved investment decisionmaking through a focus on performance outcomes for key national transportation goals.

As part of performance management, recipients of Federal-aid highway funds will make transportation investments to achieve performance targets that make progress toward national goals. The national performance goal for bridge and pavement condition is to maintain the condition of highway infrastructure assets in a state of good repair. The purpose of this final rule is to implement MAP-21 and FAST Act performance management requirements.

Prior to MAP-21, there were no explicit requirements for State DOTs to demonstrate how their transportation program supported national performance outcomes. State DOTs were not required to measure condition or performance, establish targets, assess progress toward targets, or report on condition or performance in a nationally consistent manner that FHWA could use to assess the entire system. Without State DOTs reporting on the above factors, it is difficult for FHWA to look at the effectiveness of the Federal-aid highway program as a means to address surface transportation performance at a national level.

This final rule is one of several rulemakings that DOT has or is conducting to implement MAP-21's new performance management framework. The collective rulemakings will establish the regulations needed to more effectively evaluate and report on surface transportation performance across the Nation. This final rule will:

- Require State DOTs to maintain their bridges and pavements at or above a minimum condition level;
- Provide for greater consistency in the reporting of condition and performance;
- Require the establishment of targets that can be aggregated at the national level;
- Improve transparency by requiring consistent reporting on progress through a public reporting system;
- Require State DOTs to make significant progress toward meeting their targets; and
- Establish requirements for State DOTs that have not met or made significant progress toward meeting their targets.

State DOTs and metropolitan planning organizations (MPO) will be

expected to use the information and data generated as a result of the new regulations to inform their transportation planning and programming decisions. The new performance aspects of the Federal-aid highway program that result from this rule will provide FHWA the ability to better communicate a national performance story and to more reliably assess the impacts of Federal funding investments. The FHWA is in the process of creating a new public Web site to help communicate the national performance story. The Web site will likely include infographics, tables, charts, and descriptions of the performance data that State DOTs would be reporting to FHWA.

The FHWA is required to establish performance measures to assess performance in 12 areas¹ generalized as follows: (1) Serious injuries per vehicle miles traveled (VMT); (2) fatalities per VMT; (3) number of serious injuries; (4) number of fatalities; (5) pavement condition on the Interstate System; (6) pavement condition on the non-Interstate NHS; (7) bridge condition on the NHS; (8) traffic congestion; (9) on-road mobile source emissions; (10) freight movement on the Interstate System; (11) performance of the Interstate System; and (12) performance of the non-Interstate NHS. This rulemaking is the second of three that establish performance measures for State DOTs and MPOs to use to carry out Federal-aid highway programs and to assess performance in each of these 12 areas. This final rule establishes national measures for pavement condition on the Interstate System and non-Interstate NHS and bridge condition on the NHS (numbers 5, 6 and 7 in the above list). Other rulemakings have or will establish national measures for the remaining areas.

State DOTs will be required to establish performance targets and assess performance in 12 areas² established by MAP-21, and FHWA will assess³ their progress toward meeting targets in 10 of these areas⁴ in accordance with MAP-21 and the FAST Act. State DOTs that

¹ These areas are listed within 23 U.S.C. 150(c), which requires the Secretary to establish measures to assess performance or condition.

² These areas are listed within 23 U.S.C. 150(c), which requires the Secretary to establish measures to assess performance or condition.

³ 23 U.S.C. 148(i) and 23 U.S.C. 119(e)(7).

⁴ Serious injuries per vehicle VMT; fatalities per VMT; number of serious injuries; number of fatalities; pavement condition on the Interstate System; pavement condition on the non-Interstate NHS; bridge condition on the NHS; performance of the Interstate System; and performance of the non-Interstate NHS under MAP-21. Freight movement on the Interstate System under the FAST Act.

fail to meet or make significant progress toward meeting pavement and bridge condition performance targets in a biennial performance reporting period will be required to document the actions they will undertake to achieve their targets in their next biennial performance report.

This final rule establishes performance measures to assess pavement and bridge conditions on the Interstate System and non-Interstate NHS for the purpose of carrying out the NHPP. The four measures to assess pavement condition are: (1) Percentage of pavements on the Interstate System in Good condition; (2) percentage of pavements on the Interstate System in Poor condition; (3) percentage of pavements on the NHS (excluding the Interstate System) in Good condition; and (4) percentage of pavements on the NHS (excluding the Interstate System) in Poor condition. The two performance measures for assessing bridge condition are: (1) Percentage of NHS bridges classified as in Good condition; and (2) percentage of NHS bridges classified as in Poor condition.

This final rule also establishes the minimum level for pavement condition for the Interstate System as required by the statute and incorporates the minimum condition level for bridges carrying the NHS which includes on- and off-ramps connected to the NHS as established by the statute. In addition, this final rule establishes the process for State DOTs and MPOs to use to establish and report targets and the process that FHWA will use to assess the progress State DOTs have made in achieving targets.

Lastly, FHWA recognizes that implementation of the performance management requirements in this final rule will evolve with time for a variety of reasons such as: The introduction of new technologies that allow for the collection of more nationally consistent and/or reliable performance data; shifts in national priorities for the focus of a goal area; new federal requirements; or the emergence of improved approaches to measure condition/performance in supporting investment decisions and national goals. The FHWA is committed to performing a retrospective review of this rule after the first performance period, to assess the effectiveness of the requirements to identify any necessary changes to better support investment decisions through performance-based planning and programming and to ensure the most efficient investment of Federal transportation funds. In implementation of this rule, FHWA realizes that there are multiple ways that State DOTs and MPOs can make

decisions to achieve more efficient and cost effective investments; as part of a retrospective review, FHWA will also utilize implementation surveys to identify how agencies complying with the rule are developing their programs and selecting their projects to achieve targets.

C. Summary of the Major Provisions of the Regulatory Action in Question

This final rule retains the majority of the major provisions of the NPRM but makes significant changes by:

- Originally anticipating the rule's effective date as fall 2016, FHWA has now postponed the Baseline Performance Period Report and subsequent biennial reports by 2 years relative to those described in the NPRM (*i.e.*, from 2016 to 2018);

- Removing the requirements for State DOTs to declare and describe NHS limits in their Baseline Performance Period Report;

- Adding guidance for MPO target establishment to address situations where metropolitan planning areas extend across multiple States;

- Removing the requirement to use the Metropolitan Planning Agreement as the means to document how MPOs report their established and adjusted targets to their respective State DOTs;

- Clarifying the list of extenuating circumstances that may prevent a State DOT from making significant progress to include the sudden discontinuation of federally furnished data due to lack of Federal funding;

- Removing references to provisional American Association of State Highway and Transportation Officials (AASHTO) standards to ensure consistency in reporting year over year (including references to PP68–14, PP69–14, and PP70–14);

- Providing an option for State DOTs to report Present Serviceability Rating (PSR) for highways with a posted speed limit under 40 miles per hour (MPH) in place of International Roughness Index (IRI), cracking, rutting, and faulting;

- Changing the threshold for pavements with Poor IRI condition to greater than 170 inches per mile for all areas, rather than the NPRM's proposed threshold of 220 inches per mile for urbanized areas with a population greater than 1 million people;

- Changing the threshold for Poor crack rating for asphalt pavement sections from greater than 10 percent to greater than 20 percent and the threshold for Poor crack rating for jointed concrete pavement sections from greater than 10 percent to greater than 15 percent;

- Changing the threshold for Good faulting rating for jointed concrete pavement sections from less than 0.05 inch to less than 0.1 inch;

- Revising the network coverage of data reporting requirements for Interstate pavement condition from both directions of mainline highways to single, inventory direction of mainline highways;

- Changing the approach in dealing with missing, unresolved, or invalid pavement data;

- Removing the proposed language on rating sections with missing, unresolved, or invalid data as Poor condition; and

- Revising the requirements for reporting on sections with missing, unresolved, or invalid data. In the final rule, no more than 5 percent of the network is to be represented with missing, unresolved, or invalid data due to construction, closure, disaster, flood, deterioration or any other reasons;

- Revising the equation for calculating the percentage of missing, unresolved, or invalid data so that it is based on total lane-miles of the system excluding bridges and unpaved and "other" surface types instead of total lane-miles of the system;

- Adjusting the minimum condition standards for pavement condition on the Interstate highways for Alaska because Highway Performance Monitoring System (HPMS) data indicated that a regional adjustment was needed for this State;

- Revising the definition and computation for the classification of structurally deficient; and

- Providing a transition period for implementing the revised definition and computation for the classification of structurally deficient, and using the new calculations for deck area of culverts and border bridges.

The FHWA updated these and other elements in this final rule based on the review and analysis of comments received. For additional detail on all the changes FHWA made in the final rule, please refer to Section VI of this document. The following is a summary of the final rule. Section references below refer to sections of the regulatory text for title 23 of the Code of Federal Regulations (23 CFR).

This final rule adds to subpart A general information applicable to part 490, to include requirements for target establishment, reporting on progress, and how determinations would be made on whether State DOTs have made significant progress toward NHPP targets. Subpart A also includes definitions and clarifies terminology associated with target establishment,

reporting, and making significant progress. Lastly, subpart A incorporates by reference the HPMS Field Manual, the Recording and Coding Guide for the Structure Inventory and Appraisal of the Nation's Bridges, Report No. FHWA–PD–96–001 (December 1995) and errata, and several of the AASHTO standards. Section 490.105 describes the process to be used by State DOTs and MPOs to establish targets for each of the four pavement and two bridge measures. The State DOTs will establish 2- and 4-year targets for a 4-year performance period for the condition of infrastructure assets. State DOTs will establish their first statewide targets 1 year after the effective date of this rule. The MPOs will establish targets by either supporting a State DOT's statewide target, or defining a target unique to the metropolitan area each time State DOTs establish a target. The MPOs have up to 180 days after State DOTs establish their pavement and bridge condition targets to establish their own targets. The FHWA has placed a timeline on the docket that illustrates how this transition could be implemented.

Section 490.107 identifies performance reporting requirements for State DOTs and MPOs. The State DOT will submit its established targets in a baseline report at the beginning of the performance period and report progress at the midpoint and end of the performance period. State DOTs will be allowed to adjust their 4-year target at the midpoint of the performance period. The MPOs are not required to provide separate reporting to FHWA. However, State DOTs and MPOs will need to coordinate and mutually agree to a target establishment reporting process. Coordination will also be required between State DOTs and MPOs if a State DOT adjusts its 4-year target at the midpoint of the performance period.

Section 490.109 establishes the method FHWA will use to determine if State DOTs have achieved or have made significant progress toward the achievement of their NHPP targets. Significant progress will be determined from an analysis of estimated condition/performance and measured condition/performance of each of the NHPP targets. If applicable, State DOTs will have the opportunity to discuss why targets were not achieved or significant progress was not made. If a State DOT fails to achieve significant progress in a biennial performance reporting period, then it is required to document the actions they will undertake to achieve their targets in the next biennial performance report (though encouraged to document sooner).

Subparts C and D establish performance measures and other related requirements to assess pavement and bridge conditions. In subparts C and D, sections 490.305 and 490.405 establish program-specific definitions to ensure that the performance measures are clear and consistent.

Sections 490.307 and 490.407 require that State DOTs and MPOs use a total of six measures to assess the condition of pavements and bridges on the NHS. The pavement measures will be applicable to both Interstate and non-Interstate NHS mainline roads and the bridge measures would be applicable for all bridges carrying the NHS which includes on- and off-ramps connected to the NHS. Both the pavement and bridge measures will reflect the percentage of the system in Good and Poor condition. The measure calculations will utilize data documented in the HPMS and in the National Bridge Inventory (NBI).

Section 490.315 establishes the minimum level for condition of pavements on the Interstate System as required by 23 U.S.C. 150(c)(3)(A)(iii).

Section 490.411 incorporates the minimum level for condition of bridges as required by 23 U.S.C. 119(f)(2).

D. Costs and Benefits

The FHWA estimated the incremental costs associated with the new requirements that represent a change to current practices of State DOTs and MPOs.⁵ The FHWA also estimated the incremental costs associated with the new requirements proposed in this regulatory action. The new requirements represent a change to the current practices of State DOTs and MPOs. The FHWA derived the costs of the new requirements by assessing the expected increase in the level of labor effort for FHWA, State DOTs, and MPOs to standardize and update data collection and reporting systems and establish and report targets.

The FHWA derived the costs of each of these components by assessing the expected increase in level of labor effort and additional capital needed to standardize and update State DOT data collection and reporting systems and to establish and report targets. The FHWA sought opinions from pavement and bridge subject matter experts (SMEs) to estimate impacts of the final rule. Cost estimates were developed based on assumptions based on information received from SMEs.

To estimate costs, FHWA multiplied the level of effort, expressed in labor

hours, with a corresponding loaded wage rate that varied by the type of laborer needed to perform the activity.⁶ Where necessary, capital costs were also included. Following this approach, the 10-year undiscounted incremental costs to comply with this rule are \$156.0 million.

The final rule's 10-year undiscounted cost (\$156.0 million in 2014 dollars) decreased from the proposed rule (\$196.4 million in 2012 dollars). The FHWA made several changes that affected the cost estimate. These changes include updating costs to 2014 dollars from 2012 dollars and labor costs to reflect current Bureau of Labor Statistics (BLS) data. In addition, FHWA revised the final rule Regulatory Impact Analysis (RIA) to reflect: (1) The deferment of the effective date; (2) the postponed implementation of establishing and updating performance targets, reporting on performance targets, and assessing significant progress toward achieving performance targets; (3) a decrease in the number of MPOs expected to establish quantifiable targets and upgrade software; (4) the costs of coordinating the establishment of targets in accordance with 23 CFR 450; (5) a decrease in pavement data collection requirements for State DOTs; and (6) added effort for State DOTs to collect data on the non-Interstate NHS.

The FHWA expects that the rule will result in significant benefits, although they are not easily quantifiable. The rule will yield greater accountability because MAP-21 mandated reporting increases visibility and transparency. The data reported to FHWA will be consistent across the States and will be comprehensive, which will allow for a clear national picture of the status of pavement and bridge conditions. In addition, this data would be available to the public and would be used to communicate a national performance story. The FHWA is developing a public Web site to share performance related information. In addition, the rule will help focus the Federal-aid highway program on achieving balanced performance outcomes.

The FHWA used a break-even analysis as the primary approach to quantify benefits. For both pavements and bridges, FHWA focused its analysis on vehicle operating costs (VOC) savings. The FHWA estimated the number of road miles of deficient pavement that will have to be improved (Table 5, Section VII, Rulemaking Analysis and Notices) and the number

of posted bridges that will have to be avoided (Table 6, Section VII, Rulemaking Analysis and Notices) in order for the benefits of the rule to justify the costs. The results of the break-even analysis quantified the dollar value of the benefits that the rule must generate to outweigh the threshold value, the estimated cost of the rule, which is \$156.0 million in undiscounted dollars. The results show that the rule must result in the net improvement of approximately 71 miles of pavement (*i.e.*, from Poor condition) from its current base case projection, and three 1-year-long bridge postings will need to be avoided over 10 years, to generate enough benefits to outweigh the cost of the rule. The FHWA believes that the benefits of this rule will surpass this threshold. Therefore, the benefits of the rule are anticipated to outweigh the costs.

Relative to the proposed rule, the threshold for the pavement break-even analysis decreased in the final rule. Specifically, the number of NHS miles in Poor condition needing improvement to Fair condition decreased from 435 to 71 in the final rule. The break-even point was affected by an adjustment to the weighted average incremental cost per VMT related to maintenance and repair particularly by updating the VMT vehicle class weights, a decrease in the undiscounted 10-year cost of the pavement rule, an increase in the total VMT that are in poor, and an increase in the number of NHS miles estimated to be in poor condition based on more recent performance data.

The threshold for the bridge break-even analysis increased in the final rule relative to the proposed rule. Specifically, the number of year-long bridge postings that need to be reduced increased from two to three in the final rule. The break-even point increased due to the following updates to input data:

- The average detour for bridges posted with weight limits of at least 40 percent below the legal load decreased from 20 miles to 10.45 miles, and
- The percentage of trucks of total average annual daily traffic on posted bridges decreased from 12.6 percent to 9.7 percent.

The below table displays the Office of Management and Budget (OMB) A-4 Accounting Statement as a summary of the cost and benefits calculated for this rule.

⁵ See Table 4 in Section VII, Rulemaking Analysis and Notices.

⁶ Bureau of Labor Statistics Employee Cost Index, 2014.

OMB A-4—ACCOUNTING STATEMENT

Category	Estimates			Units			Source/citation
	Primary	Low	High	Year dollar	Discount rate (percent)	Period covered	
Benefits:							
Annualized Monetized (\$ millions/year)	None	None	None	NA	7	NA	Not Quantified.
Annualized Quantified	None	None	None	NA	3	NA	Not Quantified.
Qualitative	None	None	None	NA	7	NA	Not Quantified.
Qualitative	With regard to the pavement condition measures, the rule is cost-beneficial if it results in the net improvement of approximately 71 miles of pavement (i.e., from poor condition to good) per year, or 710 miles over 10 years, from its current base case projection. With regard to the bridge condition measures, 0.3 year-long bridge postings will need to be avoided per year, or 3 year-long bridge postings over 10 years, in order for benefits to justify costs. Because of these low thresholds, FHWA determines that the rule benefits outweigh the costs.						Final Rule RIA.
Costs:

III. Background

The DOT's proposal regarding MAP-21's performance requirements is being presented through several rulemakings, some of which were referenced in the above discussions. As a summary, these rulemaking actions are listed below and should be referenced for a complete picture of performance management implementation. The summary below describes the main provisions that DOT plans to propose for each rulemaking.

On January 5, 2015, FHWA published an NPRM (80 FR 326) proposing the following: (1) The definition of national measures for the condition of NHS pavements and bridges; (2) the process to be used by State DOTs and MPOs to establish their pavement and bridge condition related performance targets that reflect the measures proposed in the NPRM; (3) the process State DOTs must follow to report on progress toward meeting or making significant progress toward meeting pavement and bridge condition related performance targets; (4) a methodology to be used to assess State DOTs' compliance with the target achievement provision specified under 23 U.S.C. 148(i); and (5) the minimum levels for the condition of pavement on the Interstate System and bridges carrying the NHS which

includes on- and off-ramps connected to the NHS.

On March 15, 2016, FHWA published a final rule (81 FR 13882) covering the safety-related elements of the Federal-aid Highway Performance Measures Rulemaking that included the following: (1) The definitions that are applicable to the new 23 CFR part 490; (2) the process to be used by State DOTs and MPOs to establish their safety-related performance targets that reflect the safety measures; (3) a methodology to be used to assess State DOTs' compliance with the target achievement provision specified under 23 U.S.C. 148(i); and (4) the process State DOTs must follow to report on progress toward meeting or making significant progress toward meeting safety-related performance targets. The final rule also included a discussion of the collective rulemaking actions FHWA intends to take to implement MAP-21 and FAST Act performance related provisions.

The FHWA published a third Federal-aid Highway Performance Measures Rulemaking (Regulatory Identification Number (RIN) 2125-AF54) on April 22, 2016, FR Vol. 81, No. 78. In this NPRM, FHWA proposed national measures for the remaining areas under 23 U.S.C. 150(c) that were not discussed under the first and second measure rules. The

third rulemaking effort includes the following measure areas: (1) National Management Performance Measures for Performance of the Interstate System and non-Interstate NHS; (2) Freight Movement on the Interstate System and the Congestion Mitigation and Air Quality Improvement Program (CMAQ) Traffic Congestion; (3) CMAQ On-Road Mobile Source Emissions; (4) the State DOT and MPO target establishment requirements for the Federal-aid highway program; and (5) performance progress reporting requirements and timing.

When FHWA began implementation of MAP-21, the three related Federal-aid highway performance measure rules were to be published at the same time to allow for a single, common effective date for all three rules. While FHWA recognizes that one common effective date could be easier for State DOTs and MPOs to implement, the process to develop and implement all of the Federal-aid highway performance measures required in MAP-21 has been lengthy. In light of this, instead of waiting for all three rules to be final before implementing the MAP-21 performance measure requirements, each of three Federal-aid highway performance measures rules will have individual effective dates. This would

allow FHWA, State DOTs, and MPOs to begin implementing some of the performance requirements much sooner than waiting for the rulemaking process to be complete for all three rules. The FHWA also believes that a staggered approach to implementation (*i.e.*, implementing one set of requirements at the onset and adding on requirements over time) will better help State DOTs and MPOs transition to a performance based framework. The FHWA expects that even though the effective date for each rule would occur as that rule is finalized, the second rule would ultimately be aligned with the third rule through a common performance period and reporting requirements for the proposed measures. A timeline for Biennial Performance Reports is shown in Figure 1 in section 490.105(e)(1).

Although FHWA believes that individual implementation dates will help State DOTs and MPOs transition to performance based planning, to lessen any potential burden of staggered effective dates, FHWA will provide guidance to State DOTs and MPOs on how to carry out the new performance requirements.

In addition to providing this guidance, FHWA is committed to providing stewardship to State DOTs and MPOs to assist them as they take steps to manage and improve the performance of the highway system. As a Federal agency, FHWA is in a unique position to use resources at a national level to capture and share strategies that can improve performance. The FHWA will continue to dedicate resources at the national level to provide technical assistance, technical tools, and guidance to State DOTs and MPOs to assist them in making more effective investment decisions. It is FHWA's intent to be engaged at a local and national level to provide resources and assistance from the onset to identify opportunities to improve performance and to increase the chances for full State DOT and MPO compliance of new performance related regulations. The FHWA technical assistance activities include conducting national research studies, improving analytical modeling tools, identifying and promoting best practices, preparing guidance materials, and developing data quality assurance tools.

IV. Summary of the Notice of Proposed Rulemaking

The NPRM published on January 5, 2015 (80 FR 326), was one of several NPRMs that FHWA issued to implement sec. 1203 of MAP-21, which establishes performance management as a way to transform the Federal-aid highway program and refocus it on national

transportation goals, increase accountability and transparency of the program. The NPRM proposed a set of national measures for State DOTs to use to assess the condition of pavement and bridges on the NHS in support of MAP-21's national goal of maintaining the condition of highway infrastructure assets in a state of good repair.

After a period of engagement and outreach with State DOTs, MPOs, and other stakeholders and a review of nationally recognized reports, FHWA's NPRM proposed six national performance measures that rated the percentage of all mainline pavements on the NHS (excluding the Interstate System), bridges carrying the NHS which includes on- and off-ramps connected to the NHS, and mainline pavements on the Interstate System in either Good or Poor condition. The ratings proposed in the NPRM were derived from several quantitative metrics that addressed physical characteristics of pavement and bridge condition and were tracked and reported regularly to FHWA by State DOTs in the HPMS and the NBI. The NPRM also proposed a minimum level of condition for pavements on the Interstate System as required by the statute. The NPRM also incorporated the minimum condition level for NHS bridges, as stated in 23 U.S.C. 119(f)(2). To support the new measures, the NPRM proposed to establish standardized data requirements that prescribed State DOTs' pavement and bridge condition data gathering practices. These requirements specified the data elements State DOTs must collect, methods for collecting those data elements, and the spatial and temporal coverage of the data they collect. The NPRM's proposed data requirements ensured more accurate calculation of the proposed national pavement and bridge performance measures based on State DOTs' data.

The NPRM also proposed to establish the processes for State DOTs and MPOs to establish and report progress toward achieving targets, and the process for FHWA to determine whether State DOTs have made significant progress in achieving targets.

The measures, data requirements, and related processes included in the NPRM were selected by FHWA after careful determination that they represented the best choices for achieving greater consistency among State DOTs in compiling accurate infrastructure condition information, following processes for target setting, and reviewing progress toward targets. In turn, FHWA expected the measures to enhance accountability and support a

strong national focus on the condition of the Nation's highways, while minimizing the number of measures needed and maintaining reasonable flexibility for State DOTs as they manage risk, differing priorities, and fiscal constraints. Lastly, FHWA anticipated that the proposed measures could be implemented in the timeframe required under MAP-21, without introducing a considerable burden on State DOTs.

Pavement Condition Measures

The four pavement condition measures proposed in the NPRM were: (1) Percentage of pavements on the Interstate System in Good condition; (2) Percentage of pavements on the Interstate System in Poor condition; (3) Percentage of pavements on the NHS (excluding the Interstate System) in Good condition; and (4) Percentage of pavements on the NHS (excluding the Interstate System) in Poor condition.

Pavement Data Requirements and Metrics

Under the NPRM, performance ratings of Good, Fair, or Poor condition for pavement were determined by FHWA using a combination of several metrics derived from data elements collected by State DOTs and reported to the HPMS. These metrics collectively provided a way to quantify pavement condition in terms of roughness and cracking for all pavement types, rutting for asphalt pavement surfaces, and faulting (misalignment between concrete slabs) for jointed concrete pavement surfaces. Roughness affects users' travel speeds, safety, comfort, and transportation costs. Cracking, rutting, and faulting are considered surface indicators of structural deterioration in different pavement types. Since 2010, most State DOTs have reported roughness, cracking, rutting, and faulting data annually to FHWA through HPMS.

The NPRM specified that data for the roughness, cracking, rutting, and faulting metrics must be collected consistent with practices outlined in the HPMS Field Manual (A draft of the updated HPMS Field Manual was placed on the docket with the NPRM at FHWA-2013-0053).

Calculation of Pavement Measures

The proposed pavement measures were designed to reflect a pavement's predominant condition, represented by roughness, cracking, rutting, and faulting data elements, as applicable. For a section of pavement to be rated in Good condition, the absolute values for all relevant metrics need to exceed thresholds specified in the NPRM.

Conversely, a section of asphalt or jointed concrete pavement would be rated in Poor condition if any two of three relevant metrics were below specified threshold values. A section of Continuously Reinforced Concrete Pavement would be rated in Poor condition if the two relevant metrics are below the specified threshold values. The FHWA explained that a measurement approach that focused only on increasing Good conditions or reducing Poor conditions may result in practices that would not optimize the benefits of infrastructure investments.

Bridge Condition Measures

The two bridge condition measures proposed in the NPRM were: (1) Percentage of NHS bridge deck area classified as in Good condition and (2) Percentage of NHS bridge deck area classified as in Poor condition.

Bridge Data Requirements and Metrics

Under the NPRM, performance ratings of Good or Poor condition for bridges were determined by FHWA using a combination of several metrics collected by each Federal agency, State DOT, and tribal government as part of their NBI submittals (specifically deck, superstructure, substructure, and culverts). These metrics provide an overall characterization of the general physical condition of the entire bridge component being rated. The NBI database was established in 1972 and State DOTs have been required to submit annual NBI reports to FHWA since 1978. The NBI is a highly consistent set of national data for evaluating and monitoring the condition and performance of bridges that is based on National Bridge Inspection Standards (NBIS) for the proper and uniform inspection and evaluation of highway bridges. The NPRM further proposed to weight the classifications by the respective deck area of the bridge and express condition totals as a percentage of the total bridge deck area on the NHS in a State.

Calculation of Bridge Measures

The NPRM's proposed bridge measures reflected the lowest component condition rating for the bridge, based on the NBI condition ratings for deck, superstructure, substructure, and culverts. For a bridge to be classified as in Good condition, all the relevant metrics need to equal the values specified in the NPRM. Similarly, a bridge would be classified as in Poor condition if any of the relevant metrics equal the values specified in the NPRM.

State Departments of Transportation and Metropolitan Planning Organizations Pavement and Bridge Performance Targets

The NPRM described a process by which the six pavement and bridge condition performance measures would be used by State DOTs and MPOs to establish quantifiable statewide performance targets to be achieved over a 4-year performance period, with the first performance period starting in 2016. Under the NPRM, a State DOT or MPO could consider a number of factors (e.g., funding availability and local transportation priorities) that could impact the targets they ultimately establish for pavement and bridge system conditions. According to the NPRM, State DOTs would establish 2- and 4-year targets for the six pavement and bridge condition measures 1 year after the effective date of the rule. The MPOs would establish targets by either supporting the State DOT's statewide target, or defining a target unique to the metropolitan planning area each time the State DOT establishes a target. In accordance with MAP-21, the NPRM provided MPOs a 180-day period following the date at which the State DOT established their pavement and bridge targets. Furthermore, the NPRM proposed a minimum level of condition for Interstate System pavements of no more than 5 percent of pavement lane miles in Poor condition, and reiterated the MAP-21 requirement of no more than 10 percent of the deck area of bridges on the NHS classified as structurally deficient.

State Departments of Transportation and Metropolitan Planning Organization Pavement and Bridge Performance Reporting

The NPRM proposed that State DOTs submit biennial reports to FHWA on the condition and performance of the NHS. Under the NPRM, State DOTs submitted their targets in a baseline report at the beginning of each performance period and reported progress in achieving targets at the midpoint and end of the performance period. State DOTs were allowed to adjust their 4-year target at the midpoint of the performance period. The MPOs were not required to provide separate reporting to FHWA. However, State DOTs and MPOs needed to agree on a reporting process in the Metropolitan Planning Agreement.

Determination of Significant Progress

The NPRM proposed the method for FHWA to determine if State DOTs achieved significant progress toward their target from an analysis of

estimated condition/performance and measured condition/performance of each of the targets. If applicable, State DOTs could have the opportunity to discuss why targets were not achieved or significant progress was not made. If a State DOT failed to achieve significant progress in two consecutive biennial determinations, then the State DOT was required to document in their next biennial performance report, and encouraged to document sooner, the actions they would undertake to achieve their targets.

V. Discussion of Comments

The FHWA received 127 public comment submissions to the docket. This included letters from 42 State DOTs, 13 MPOs, 19 counties or local government agencies, 16 industry associations, and several other submissions from individuals, advocacy organizations, and private industry members. One submission contained over 1,000 duplicates of a letter expressing support for the rule and appreciation to FHWA for responding to public comment on the first performance management NPRM related to safety. The comment submissions covered a number of topics in the proposed rule, with the most substantive comments on establishment of targets, reporting, the significant progress determination process, pavement condition performance measures, and bridge condition performance measures.

Of the 127 public comment submissions received, the majority expressed overall support for the rule. Commenters expressed general concerns over NHS ownership, the performance period timespan, the start of the reporting cycle, target adjustment, significant progress determination and timing, incorporation by reference, and minimum condition penalties. For pavement condition measures specifically, commenters had mixed opinions regarding the use of the IRI and other metrics and expressed concern over the proposed extent of data collection, the treatment of missing data, and the proposed minimum condition level. For bridge condition measures specifically, commenters expressed mixed opinions about the use of element level data and expressed opposition to the proposed definition of structurally deficient.

The FHWA thanks all commenters for their responses to the NPRM. The FHWA carefully considered the comments received from the stakeholders.

Selected Topics for Which FHWA Requested Comments

In the NPRM, FHWA requested comments on different topics related to the rulemaking. Several of those had an impact on the final rule and are discussed in this section. The others are discussed in the section-by-section analysis.

Purpose and Approach of the Regulatory Action

The FHWA received general support of the performance management concept and its proposed implementation from State DOTs, industry groups, and private citizens.⁸ The FHWA also received several comments that opposed specific portions of the proposed rule from State DOTs, industry, local governments, and advocacy groups.⁹ Some of these same commenters shared their overall support of the rule.

A number of State DOTs and MPOs took issue with the assumptions and levels of cost analysis associated with the requirements of the NPRM reflected in the benefit-cost analysis and suggested that it be reconsidered.¹⁰ These comments are discussed in more detail in Section VI. In terms of benefits, Fugro Roadware, a firm that manufactures and operates equipment that is used to measure the pavement conditions on State and municipal networks, asserted that the “entire pavement and traffic assessment management process has been shown to improve the quality of road networks without an overall increase of funding. . . .”

Finally, FHWA received numerous comments that fell outside of the scope

of the rulemaking. The American Motorcyclist Association, for example, endorsed the design standards that advance the safety of motorcycle use. The advocacy group Perils for Pedestrians commented that more pedestrians are injured by falls than vehicles. The American Society of Civil Engineers (ASCE) requested FHWA incorporate Life Cycle Costs into performance management rules. Finally, private citizens (1) requested an addition to the proposed rule to promote small business during the inspection and accounting for each new project; (2) advocated for improved standards for design and construction of longitudinal joints in pavements; (3) endorsed the goals for Safety and Asset Management Rules as well as incentives to increase public transit; and “(4) suggested the rule require the use of compact joints on highways to extend the pavement’s lifetime.”

Public Comments in Response to FHWA’s Questions in the NPRM

In the NPRM, FHWA requested comments on certain topics related to the pavement and bridge condition performance measures rulemaking. Comments received in response are summarized below.

Does the approach to performance measures support the nine implementation principles?

The FHWA listed nine principles in the NPRM preamble that were considered in the development of the proposed regulation.¹¹ Overall,

¹¹ Nine principles used in the development of proposed regulations for national performance management measures under 23 U.S.C. 150(c), www.regulations.gov, Docket FHWA–2013–0053:

- i. Provide for a National Focus—focus the performance requirements on outcomes that can be reported at a national level.
- ii. Minimize the Number of Measures—identify only the most necessary measures that will be required for target establishment and progress reporting. Limit the number of measures to no more than two per area specified under 23 U.S.C. 150(c).
- iii. Ensure for Consistency—provide a sufficient level of consistency, nationally, in the establishment of measures, the process to set targets and report expectations, and the approach to assess progress so that transportation performance can be presented in a credible manner at a national level.
- iv. Phase in Requirements—allow for sufficient time to comply with new requirements and consider approaches to phase in new approaches to measuring, target establishment, and reporting performance.
- v. Increase Accountability and Transparency—consider an approach that will provide the public and decision makers a better understanding of Federal transportation investment needs and return on investments.
- vi. Consider Risk—recognize that risks in the target establishment process are inherent, and that performance can be impacted by many factors outside the control of the entity required to establish the targets.

commenters (AASHTO and the State DOTs of Alabama, Connecticut, Georgia, Maryland, New Jersey, New York State, Oregon, and Texas, and private entity Steve Mueller Consultancy) supported FHWA’s nine principle approach. However, the New York Metropolitan Transportation Council (NYMTC) felt the NPRM was inconsistent with the nine principles in relationship to linking financial penalties to the single nationwide [*sic*, statewide] targets for pavement and bridges causing inconsistency with the principles of: (1) Understand that Priorities Differ (“Single targets do not acknowledge regional differences in infrastructure age. . . .”), (2) Recognize Fiscal Constraints (“These targets and penalties have the effect of limiting flexibility we have for investing in assets across our systems at the state, regional, and local levels, as we deem appropriate.”), and (3) Provide for Flexibility (“Tying penalties to the specific measures in § 490.317 and § 490.413 and requiring [S]tates to focus spending on two specific components of the transportation system (Interstate pavement and NHS bridges) is the antithesis of flexibility.”) NYSDOT (New York State Department of Transportation) and other NYMTC members are responsible for the entire transportation system in the region, and all approach asset management from a system-level perspective (including both NHS and non-NHS assets). These thresholds and associated penalties could lead to an exclusive focus on Interstate pavement and NHS bridges at the expense of the remainder of the system.”

In addition, the Northeast Pavement Preservation Partnership (NEPPP) felt most of the principles were covered but that FHWA did not address the following principles: (1) Recognize Fiscal Constraints—“The proposed performance measures do not encourage optimal investment. It can be argued that they instead encourage worst-first mentality, since there is a target for percent poor, and since there are bins

vii. Understand that Priorities Differ—recognize that State DOTs and MPOs must establish targets across a wide range of performance areas, and that they will need to make performance trade-offs to establish priorities, which can be influenced by local and regional needs.

viii. Recognize Fiscal Constraints—provide for an approach that encourages the optimal investment of Federal funds to maximize performance but recognize that, when operating with scarce resources, performance cannot always be improved.

ix. Provide for Flexibility—recognize that the MAP–21 requirements are the first steps that will transform the Federal-aid highway program to a performance-based program and that State DOTs, MPOs, and other stakeholders will be learning a great deal as implementation occurs.

⁸ The State DOTs of Alaska, Florida, Georgia, Illinois, Iowa, Louisiana, Maine, Minnesota, Missouri, New Hampshire, New York, Oregon, Vermont, Virginia, and Washington State; and AASHTO, Cemex USA, National Asphalt Pavement Association, National Association of Regional Councils, National Center for Pavement Preservation, New York Metropolitan Transportation Council, New York State Association of Metropolitan Planning Organizations, Northeast Pavement Preservation Partnership, Oversight Committee for the California Local Streets and Roads Needs Assessment, Southern California Association of Governments, Southeast Michigan Council of Governments, Southeast Pavement Preservation Partnership, and Transportation for America, Blake Rubenstein.

⁹ State DOTs of Alaska, Idaho, New York, North Dakota, Oregon, South Dakota, Rhode Island, and Wyoming; the City of Santa Rosa, CA and the Seattle DOT; and Agile Assets, American Road and Transportation Builders Association, Center for American Progress, Michigan Transport Commission and Asset Management, and Transportation for America.

¹⁰ Atlanta Regional Commission, Texas Association of Metropolitan Planning Organizations, Transportation for America, and State DOTs of Colorado, Rhode Island, North Carolina, Mississippi, Oklahoma, Michigan, Georgia, Louisiana, and Oregon.

(i.e., percent good, percent fair, and percent poor)). Optimal investment could much more readily be achieved with an overall Index or RSL approach, where pavement preservation is encouraged along with rehabilitation.”); and (2) Provide for Flexibility—(“It is not apparent in the rules how flexibility is provided for. No provision is made for allowing a [State] DOT to implement and manage toward different measures which may be more cost-effective.”). The National Asphalt Pavement Association (NAPA) made similar arguments in regard to principle (1) “Recognize Fiscal Constraints—(“NAPA is concerned that the proposed rule could lead to poor decisions (i.e., “worst first”) in order to comply with the NPRM minimum pavement condition, rather than decisions that factor in the long-term preservation and performance of pavements.”); and (2) Provide for Flexibility—(“Agencies should have flexibility to make decisions that balance preserving good/fair pavements with improving and rehabilitating poor pavements.”)

While the following commenters generally agreed that FHWA’s approach to performance measures was consistent with the nine principles, they also identified areas that were lacking. Georgia DOT stated that the approach in the proposed rule may not fully support the principle of recognizing fiscal constraints or provide for an approach that encourages the optimal investment of Federal funds to maximize performance.

The NYMTC and the Georgia and Maryland DOTs stated that limited funding could prevent targets and minimums from being achievable and that imposing the proposed penalties could result in worsening of other assets. Moreover, the NYMTC commented that with no long term funding solution for national or State transportation programs, States may not have a defensible way to establish targets or make changes to their investment strategies.

The NEPPP also commented that the proposed rule will not allow a State DOT to implement and manage their program toward different measures or metrics that encourage a balanced program based on asset management pavement preservation conceptions.

Several commenters cited concerns over flexibility in the rule tied to implementation principles. The NYS DOT commented that States should not be forced to use specific performance targets or measures. The New Jersey DOT raised concerns about reporting requirements, commenting that they will need to maintain “two sets of

books,” one for national performance reporting and one to manage their network, using appropriate pavement management and asset management principles.

Suggestions for How FHWA Can Best Assist State DOTs and MPOs To Maximize Opportunities for Successful Implementation of the Proposed Performance Measures

Generally, States expressed a desire for more training materials, technical assistance, and technical guidance so that they can implement the rule accurately and efficiently. Several commenters, including AASHTO and the State DOTs of Connecticut, Louisiana, New Jersey, and Oregon, expressed a desire for additional technical assistance and guidance detailing the process FHWA will use to compute the overall pavement condition measures. Commenters also requested guidance on target setting best practices for State DOTs and MPOs. The Maryland DOT suggested that FHWA provide a contact person or Web link for technical assistance activities. In addition, the Alabama DOT commented that more guidance be given on data quality. They argued that the training materials have lacked information in statistical methodology and note, “it is simple to determine if a dataset is reasonable; it is quite a different matter to determine if the dataset is correct.”

Should the measures reflect additional factors such as facility location, functional class, level of use, environment, or impact it may have on other aspects of transportation performance?

The American Concrete Pavement Association (ACPA) and Portland Cement Association (PCA) requested that FHWA modify the proposed rule to provide a better assessment of the performance of our highways and bridges. A private citizen, Joyce Dillard, commented that the measures should reflect level of use, environment, and overweight trucks. Acknowledging that there is limited funding and increasing needs, Oregon DOT commented that adding additional factors could help show progress. The commenter suggested adding measures such as functional class, progress made on other deficiencies (e.g., painting, vertical clearance, and rail), and risk. Additionally, for bridges specifically, the commenter suggested looking at mitigation measures to reduce vulnerability to seismic activity and scour. In addition, the New York City DOT recommended that traffic counts on bridges could be a useful measure to

collect. The commenter noted that that traffic counts are an important variable that quantifies a bridge’s performance and life expectancy.

Appropriateness of the Proposed Threshold Criteria To Determine Good, Fair, and Poor Ratings

• *Concerns with Pavements:*

Commenters stated that agencies will be driven to overemphasize treatments that lower cracking and improve ride quality on pavements that currently rank as Poor at the cost of solutions that extend the performance life of the pavements that currently rank as Good or Fair (e.g., surface treatments). In addition, commenters noted that although pavement types referenced in the NPRM (Portland Cement Concrete Pavements and Continuously Reinforced Concrete Pavements (CRCP)) make up the vast majority of the NHS, other pavement surfaces exist in small quantities.

Should FHWA establish a minimum condition threshold that would become more stringent over time?

Commenters provided mixed opinions on the establishment of a minimum condition threshold that would become more stringent over time. Several commenters expressed concern that pressure to meet a difficult minimum condition threshold may push States to implement a worst-first approach to pavement preservation, which would run counter to the asset management principles and planning approach advocated by FHWA.¹² The Oregon DOT commented that a problem with pavement performance measures is that they “discourage proven, cost effective, pavement preservation techniques.” Agencies that are under pressure to meet performance targets may implement a worst-first approach.

Other State DOTs and AASHTO recommended FHWA evaluate the effects of the national level performance measures, targets and minimum condition levels to ensure that these policies have a positive impact on management approaches.

¹² State DOTs of Arkansas and Mississippi, the Southern California Association of Governments, the Seattle Department of Transportation.

VI. Section-by-Section Discussion of the General Information and National Performance Management Measures for the National Highway Performance Program: Pavement and Bridge

A. Subpart A—General Information

Discussion of Section 490.101 General Definitions

In the NPRM, FHWA proposed several definitions to be used in this regulation.

Only Washington State DOT commented on the definition for the term “HPMS” and they agreed with the definition. The FHWA retains the definition for HPMS.

In the NPRM, the term “full extent” was defined as “continuous collection and evaluation of pavement condition data over the entire length of the roadway.” The term “mainline highways” was defined as “the through travel lanes of any highway exclude ramps, shoulders, turn lanes, crossovers, rest areas, and other pavement surfaces that are not part of the roadway normally travelled by through traffic.”

Only Washington State DOT commented on the definition for “full extent” and they agreed with the definition. The State DOTs of Connecticut, Maine, New Hampshire, Vermont, and Washington State and AASHTO agreed with the definition of “mainline highways.” However, Colorado DOT stated that the definition conflicts with section 490.309(c)(1)(i) requiring data for the full extent of the mainline highway of the NHS which would indicate that State DOTs need to collect data on all through travel lanes. The Colorado DOT added that the intent is that States collect one lane’s worth of data on NHS. The FHWA described in the NPRM that section 490.309(c) applies to Through Lanes, Surface Type, and Structure Type Data Items, while section 490.309(b) requires that State DOTs report IRI, rutting, faulting, and Cracking Percent only apply to the rightmost travel lane or one consistent lane, if the rightmost travel lane is not accessible. Based on this, FHWA believes that the definitions of “mainline highways” and “full extent” do not conflict with other sections in this rule. The FHWA retains those definitions in the final rule.

The Washington State DOT agreed with the definitions for “metric” and “measure,” and Mid-America Regional Council appreciated the distinction between the two terms. The FHWA retains the definitions for “metric” and “measure.”

The Puget Sound Regional Council (PSRC) urged FHWA to consider

allowing MPOs to establish performance targets that “encompass all areas within their planning boundary rather than only the Federally designated metropolitan planning area.” They added that this definition of area would allow for consistent infrastructure condition targets for the full region in the event the MPO target differs from the State target. To eliminate the ambiguity with the term “metropolitan planning area,” FHWA includes the definition for “metropolitan planning area” in this regulation as the term defined in the Statewide and Nonmetropolitan and Metropolitan Transportation Planning Regulations at 23 CFR 450.104. This term is used consistently as the extent of an MPO target that represents performance outcomes of the transportation network within the area. So the definition has been included to ensure consistency in interpretation by readers.

In the NPRM, the term “non-urbanized area” was defined as “any geographic area that is not an ‘urbanized area’ under either 23 U.S.C. 101(a)(34).” The FHWA received comments from Washington State and Virginia DOTs on the definition for “non-urbanized area.” The Washington State DOT supported the proposed definition. The Virginia State DOT pointed out that the proposed definition is missing a citation because only one citation (23 U.S.C. 101(a)(34)) was provided after the word “either.” The FHWA appreciates the comments from both agencies and examined the definition for better clarification while maintaining consistency with section 490.105(e)(3)(ii), which specifies a single collective non-urbanized area target and is consistent with the language in the final rule for safety performance measures. The FHWA also recognizes the word “either” was inadvertently included in the proposed definition. As a result, FHWA revised the definition for “non-urbanized area” to clearly indicate that a non-urbanized area is a single, collective area comprising all of the areas in the State that are not “urbanized areas” defined under 23 U.S.C. 101(a)(34).

Only Washington State DOT commented on the definition for the term “performance period,” agreeing with the proposed definition. The FHWA retains the definition for “performance period.”

The Washington State DOT agreed with the definition for “target.” The Minnesota DOT recommended the term “plan outcome” as opposed to “target” because they said that Minnesota DOT uses the term “target” to identify an aspirational performance objective to define investment need, as opposed to

an objective that they expect to achieve within the constraints of the resources currently available.” The FHWA appreciates Minnesota DOT’s suggestion on the term. However, FHWA retains the term “target” in the final rule because the term is referenced in the statute (23 U.S.C. 150(d), 134(h), 135(d), and 119(e)).

As discussed in section 490.309 (Using Structure Type to Identify and Exclude Bridges) and section 490.405, FHWA moves the definition of “bridge” from subpart D (*i.e.*, section 490.405) to this section in subpart A to use the term in a consistent manner throughout this rule. The FHWA strikes the term “this section” in the definition of “bridge” and replaces with the term “this Part” to ensure that the definition of “bridge” in this section applies to both subparts in the final rule. Therefore, the definition of “bridge” in the final rule is: “Bridge, as used in this Part, is defined in § 650.305 of this title, the National Bridge Inspection Standards.” Please see discussion sections for sections 490.309 and 490.405 for more detail.

Finally, FHWA retains the definitions for “National Bridge Inventory” as proposed in the NPRM. There were no substantive comments regarding the definition.

Discussion of Section 490.103 Data Requirements

The FHWA proposed in section 490.103 of the NPRM, the data requirements that apply to more than one subpart in part 490. Additional proposed data requirements that are unique to each subpart are included and discussed in their respective subpart.

Some comments from AASHTO and the State DOTs of Alaska and Connecticut referenced section 490.103 in their respective letters, but their comments were on the incorporation by reference of the HPMS Field Manual and NBI Coding Guide. Please refer to the discussion on section 490.111 on incorporation by reference for response and discussion.

There were no direct comments on section 490.103(a). However, FHWA did correct the referenced subparts in section 490.103(a) by changing “B and C” to “C and D” so that the regulatory text correctly refers to the subparts in the final rule.

In section 490.103(b), FHWA proposed that State DOTs submit urbanized area boundaries reported to HPMS in the year the Baseline Performance Period Report is due. Section 490.105(d)(3) specifies that the urbanized boundaries used in the Baseline Performance Period Report are

applicable for the entire performance period, regardless of whether FHWA approves adjustments to the urbanized area boundary during the performance period. This provision was proposed because the urbanized area boundaries and resulting non-urbanized area boundary have the potential to change on varying schedules; and changing a boundary during a performance period may lead to changes in the measures reported for the area, which could impact how an established target relates to actual measured performance. The FHWA also explained in the NPRM that State DOT submitted boundary information would be the authoritative data source for: (1) The target scope for the additional targets for urbanized and non-urbanized areas (section 490.105(e)(3)); (2) progress reporting (section 490.107(b)); and (3) IRI rating (section 490.313(b)(1)) for the pavement condition measures identified in section 490.105(c)(1) through (3).

The FHWA received four comments directly related to the urbanized area boundary. The Missouri State DOT supported that State DOT-submitted boundary information should be the authoritative data source for the target scope for the additional targets for urbanized and non-urbanized areas. The Oregon State DOT commented that keeping urbanized area constant for the performance measures' entire 4-year performance period is "too inflexible and may not reflect how investment decisions are actually made during the performance period due to changing route priorities." They added that the proposed approach "looks backward in the mirror, rather than forward which is needed to incorporate up to date planning and policy." The FHWA agrees with Oregon State DOT in that at the time of target establishment, agencies should be looking forward by incorporating up-to-date planning and policy decisions and anticipate future changes. Although planning and policy decisionmaking should be "forward-looking," for the purpose of assessing the impact of investment on condition/performance, FHWA believes preserving consistent boundaries throughout a performance period is essential to consistently assess target achievement during a performance period. The Texas State DOT and Texas Association of Metropolitan Planning Organizations commented that guidance is needed on where an urbanized area boundary will be set in relation to bridges. They stated that in some cases, the midpoint of the structure has been used as the boundary. There should be a determination regarding this issue in

relation to how these bridges are classified at urban/rural boundaries and, in the case of two adjacent MPO planning area boundaries, to which MPO area the structure is assigned. Considering these comments, FHWA plans to issue guidance on urbanized and non-urbanized target establishment, which will address issues related to bridge boundaries.

Because the threshold values for IRI metric no longer depend on the location (*i.e.*, urbanized area with a population greater than 1 million) of pavement sections which is discussed in section 490.313(b)(1), FHWA revises sections 490.103(b) and 490.107(b)(1)(ii)(D) to remove the term "IRI rating determination."

Section 490.103(c) is reserved.

No direct comment was received for section 490.103(d), and FHWA retains the language as proposed in the NPRM. Please see revised section 490.105(d)(3) for discussion on NHS limits and refer to the section 490.111 discussion section on the incorporation by reference.

Discussion of Section 490.105 Establishment of Performance Targets

In section 490.105 of the NPRM, FHWA proposed the minimum requirements that would be followed by State DOTs and MPOs in the establishment of targets for all measures identified in section 490.105(c). These requirements were proposed to implement the 23 U.S.C. 150(d) and 23 U.S.C. 134(h)(2) target establishment provisions in a manner that provides for the consistency necessary to evaluate and report progress at a State, MPO, and national level, while also providing a degree of flexibility for State DOTs and MPOs.

A couple of general comments on section 490.105 were received by FHWA. The Oregon State DOT expressed their appreciation for the proposed rule allowing State DOTs to establish performance targets "without the unnecessary burden of an FHWA target approval process." However, the Virginia State DOT commented that the proposed rule is "unclear on what may occur if FHWA disagrees with a State's proposed performance target and/or a State's strategy to meet that performance target." They added that the "rule does not indicate what actions FHWA may take in such a situation, the rule as proposed sets up a possible point of future conflict between States and FHWA on how the State manages its resources in order to effectively manage its highway infrastructure to meet traffic demands and assure public safety." However, the Virginia State DOT noted

that they are in favor of the proposal's approach to States establishing targets. In response to the comment from Virginia State DOT, FHWA notes that there is no language in the NPRM or this rule related to FHWA's approval or rejection of established targets by State DOTs and MPOs because the statutory language in MAP-21 provides that State DOTs and MPOs have the ability to establish their own targets and MAP-21 does not provide FHWA the authority to approve or reject State DOT or MPO established targets. In the discussion for section 409.109 in the NPRM, FHWA stated that "State DOTs would, through a transparent and public process, want to establish or adjust targets that strive to improve the overall performance of the Interstate and National Highway systems." The North Carolina State DOT requested clarification of the meaning of "transparent and public" in regard to the target establishment process. They asked if FHWA considered that State DOTs are already required to hold public hearings when they select projects for the Statewide Transportation Improvement Program (STIP), and if this would satisfy the target establishment requirement. The FHWA does not prescribe specific methods for making the target establishment process transparent and public. Please refer to the final Planning Rule¹³ for performance requirements for the statewide transportation plan and STIP, including any requirements to include targets in the planning documents and the methods for developing those documents.

The Center for American Progress stated that MAP-21 established that a clear goal of Federal policy is to "maintain the highway infrastructure asset system in a state of good repair." They added that "Congress did not intend for States to set their performance goals to include assets being in worse condition in the future than they currently are." A letter from Steve Mueller Consultancy stated it would be "wrong to accept declining conditions on our roads of national importance." They added that State DOTs and MPOs should reprioritize their expenditure plans to change because the declining condition is "unacceptable."

However, comments from AASHTO, Association of Metropolitan Planning Organizations (AMPO), Metropolitan Transportation Commission, Mid-America Regional Council, New York

¹³ Final Rule on Statewide and Nonmetropolitan Transportation Planning; Metropolitan Transportation Planning (Regulatory Identification Number (RIN) 2125-AF52) on May 27, 2016, FR Vol. 81, No. 103.

Metropolitan Transportation Council, city of Seattle Department of Transportation, an anonymous citizen, and the State DOTs of Alaska, Arkansas, California, Connecticut, Florida, Idaho, Iowa, Maine, Minnesota, Mississippi, Missouri, Montana, New Hampshire, New York, North Dakota, Oregon, Pennsylvania, South Dakota, Vermont, Washington State, and Wyoming stated that State DOTs and MPOs should have the flexibility to establish targets, including targets that have condition/performance holding steady or, in some situations, declining. They added that targets indicating declined condition/performance are discussed in the preamble of the NPRM but not in the proposed rule itself. These commenters recommended that specific language be included in the rule.

The FHWA believes that State DOTs and MPOs have the authority to establish their targets at their discretion. Moreover, as stated previously in this section, MAP-21 does not provide FHWA the authority to approve or reject State DOT or MPO established targets. The FHWA believes that this rule does not hinder the ability of State DOTs and MPOs to establish targets that have performance holding steady or, declining targets. Thus, FHWA believes that specific language describing potential target level scenarios in the regulatory language is unnecessary. Therefore, FHWA retains the language in section 490.105(a). The FHWA did add “of this section” to the paragraph to meet the publication requirements of the **Federal Register**, and improve the clarity and consistency of the text. This addition did not change the intent of the original text in the NPRM.

In section 490.105(b), FHWA proposed in the NPRM that State DOTs and MPOs shall establish performance targets for the HSIP measures in accordance with section 490.209. The Alaska Department of Transportation and Public Facilities (Alaska DOT&PF) recommended that this paragraph should be removed because section 490.209 is not part of this rulemaking. The FHWA disagrees with the comment because FHWA felt this paragraph is necessary to point out target establishment requirements related to the HSIP measures that are different from this subpart. Therefore, FHWA retains the language in section 490.105(b).

The FHWA did not receive any substantive comments regarding section 490.105(c), therefore, FHWA made no changes.

Discussion of Section 490.105(d) Ownership

Section 490.105(d) specifies that the targets established by State DOTs and MPOs shall, regardless of ownership, represent the transportation network or geographic area, including bridges that cross State borders, that are applicable to the pavement and bridge condition measures. Title 23 U.S.C. 150(c)(3) requires the establishment of measures for State DOTs to use to assess the condition of pavements on the Interstate System, the condition of pavements on the NHS (excluding the Interstate), and the condition of bridges carrying the NHS which includes on- and off-ramps connected to the NHS for the purpose of carrying out the NHPP. Additionally, 23 U.S.C. 150(d) requires State DOTs to establish performance targets that reflect the established measures. Furthermore, 23 U.S.C. 119(e)(7) specifies State requirements when it does not achieve or make significant progress toward achieving the established performance measures targets for the NHS.

To implement the statutory provisions of 23 U.S.C. 150(c)(3), FHWA proposed that the pavement condition measures in subpart C are applicable to the mainline highways on the Interstate System and on the non-Interstate NHS and the bridge condition measures in subpart D are applicable to bridges carrying the NHS which includes on- and off-ramps connected to the NHS (sections 490.307 and 490.403). To ensure that the performance targets required under 23 U.S.C. 150(d) are applicable to the same extent to highways and bridges as the performance measures in sections 490.307 and 490.403, FHWA included the phrase “regardless of ownership,” in section 490.105(d).

To implement the requirements of 23 U.S.C. 119(e)(7), section 490.109(e) provides that FHWA would determine whether or not a State DOT achieved or made significant progress toward achieving the State DOT targets, consistent with the target scope described in section 490.105(d), for the NHS NHPP targets. In the NPRM, FHWA recognized the limit of the direct impact State DOTs and MPOs can have on the performance outcomes within the State and the metropolitan planning area, respectively, and that State DOTs and MPOs need to consider this uncertainty when establishing targets. The FHWA further stated that some Federal and tribal lands contain roads and bridges carrying the NHS, which includes on- and off-ramps connected to the NHS that State DOTs would need to consider (as appropriate) when

establishing targets. Finally, FHWA expressed a need for State DOTs and MPOs to consult with relevant entities (e.g., Federal Land Management agencies, State DOTs, MPOs, local transportation agencies, and tribal governments) as they establish targets to better identify and consider factors outside of their direct control that could impact future condition/performance.

The FHWA received comments from 19 State DOTs (Arkansas, Colorado, Connecticut, Florida, Georgia, Iowa, Maine, Maryland, Michigan, Mississippi, Missouri, New Hampshire, Oklahoma, Oregon, Pennsylvania, Texas, Vermont, Virginia, and Washington State), AASHTO, AMPO, Atlanta Regional Council (ARC), Center for American Progress, Community Planning Association of Southwestern Idaho (COMPASS), National Association of Regional Councils (NARC), National Center for Pavement Preservation, NYMTC, Association of Texas Metropolitan Planning Organizations (TEMPO), and an anonymous commenter¹⁴ generally indicating that State DOTs and MPOs have no authority or control over maintenance and/or investment decisions on some of the assets on NHS. Therefore, State DOTs and MPOs should not be held responsible for the reporting of data, target establishment, and the condition of these assets (*i.e.*, significant progress determination). The letters from the Connecticut, Virginia, and Washington State DOTs and AASHTO argued that State DOTs may not be able to legally collect data on assets they do not own.

The AASHTO, AMPO, ARC, and the Mississippi and Tennessee State DOTs recommended that each agency (e.g., Federal Government, State DOT, tribal government, local agency, transit agency, and tolling authority) that has ownership of an NHS facility should report on and be held accountable for their portion of the system.

As stated above, the statutory provisions under 23 U.S.C. 150(c)(3) require the establishment of measures for “States to use to assess (I) the condition of pavements on the Interstate System; (II) the condition of pavements on the [NHS] (excluding the Interstate); [and] the condition of bridges on the [NHS]” for the purpose of carrying out the NHPP. Also, 23 U.S.C. 150(d) requires States to establish performance targets that “reflect the established measures.” The MAP-21 also provides a description of the limits (or components) of the Interstate System and National Highway System in 23

¹⁴ FHWA-2013-0053-0135.

U.S.C. 103(c) and 23 U.S.C. 103(b), respectively, and defines the terms “States” and “MPOs” in 23 U.S.C. 101(a)(25) and 23 U.S.C. 134 (b), respectively. This statutory language in MAP-21 prescribes the applicability of the NHPP under 23 U.S.C. 119 and the applicability of performance measures and the scope of performance targets under 23 U.S.C. 150.

Considering this statutory language, MAP-21 requires that the performance management requirements (23 U.S.C. 150) and NHPP (23 U.S.C. 119) apply to the entire NHS and Interstate System and not to a subset of the NHS (*e.g.*, State DOT owned or operated Interstate System, State DOT owned or operated National Highway System), as the commenters would prefer. The MAP-21 does not define the terms “State” or “MPO” for purposes of 23 U.S.C. 150 and 119 as something other than already defined elsewhere in MAP-21. Accordingly, FHWA retains the language in section 490.105 (which requires that State DOTs and MPOs establish targets for the entire NHS and Interstate System within the State or metropolitan planning area, regardless of ownership).

As stated in the NPRM, FHWA recognizes that there is a limit to the direct impact State DOTs and MPOs can have on the performance outcomes within the State and the metropolitan planning area, respectively. The FHWA encourages State DOTs and MPOs to consult with relevant entities (*e.g.*, Federal Land Management Agencies, local transportation agencies, and tribal governments) as State DOTs and MPOs report performance data and establish targets. This will allow for a better assessment of the condition of pavements and bridges on the entire NHS and better identify and consider factors outside of their direct control that could impact future condition/performance.

In section 490.105(d), FHWA added the phrase “of this paragraph” to improve the clarity and consistency of the text. This addition did not change the intent of the original text in the NPRM.

In section 490.105(d)(1), FHWA made an editorial correction and replaced the word “areawide” with “area wide.”

The FHWA added cross reference numbers to section 490.105(d)(1)(i) through (iii) to clarify the specific section that corresponds to each measure. The original intent of the section did not change.

Section 490.105(d)(2) is reserved.

Discussion of Section 490.105(d)(3) NHS Limits

In section 490.105(d)(3), FHWA proposed requiring State DOTs to declare and describe NHS limits in their Baseline Performance Period Report at the beginning of each performance period for the purpose of target establishment, reporting, and progress evaluation and significant progress determination. To ensure consistency of network for target establishment, reporting, and progress evaluation and significant progress determination, the proposed language in section 490.105(d)(3) further specified that any changes in NHS limits during a performance period would not be accounted for until the following performance period. As explained in the NPRM, FHWA proposed this methodology because it recognized that if NHS limits changed after a State DOT establishes its targets, actual measured performance of the transportation network within the changed NHS limits would represent a different set of highways as compared to what was originally used to establish the target. As a result, this difference could impact a State DOT’s ability to make significant progress toward achieving targets.

The FHWA received individual letters from ARC, Cemex USA, Oregon DOT, and Texas DOT and a joint letter from the ACPA and PCA in relation to dealing with changes in NHS limits during a performance period. The letter from Texas DOT stated that the proposed approach in dealing with NHS limit changes may cause “overly burdensome” bookkeeping to keep track of NHS network changes. A similar comment was found in the joint letter from ACPA and PCA and the letter from Cemex USA which stated that the proposed method does not take into consideration new pavements or additional lanes constructed, thereby inadvertently penalizing States for expanding the NHS as a means of upgrading performance. They recommended that the measures should reflect the changes in NHS limits. They also added that since the proposed measures are percentage-based, measures reflecting NHS changes would accurately take into consideration improvements made without “artificially altering” performance indicators.

The Oregon DOT commented that the proposed approach appears to be too “inflexible” and may not reflect how investment decisions are actually made during the performance period due to changing route priorities. They added that the proposed approach “looks

backward in the mirror rather than forward which is needed to incorporate up to date planning and policy.”

Finally, ARC agreed with the proposed approach that a baseline network must be identified and “frozen” for purposes of a reporting cycle, but they suggested that at regular intervals (*i.e.*, 2 years), each State DOT should be permitted to adjust their networks and targets as they feel appropriate in collaboration with FHWA. The ARC commented that permitting the network to change on a regular basis does create a slight “apples to oranges” problem with analyzing long-term progress, but added that changes to the NHS network in reality are likely to be “infrequent and minimal” in impact when compared to the overall network.

Some additional comments related to the NHS limits were received by FHWA. The TEMPO and Texas DOT commented that the criteria used to identify the NHS are still being developed. They added that if this issue is not addressed before reporting and evaluation deadlines are implemented, State DOTs and MPOs could expend significant resources collecting, analyzing, and maintaining data that is not part of the final NHS. They also indicated that some portions of the NHS will not be included in the performance management effort resulting in “missing” data segments. The TEMPO and Texas DOT recommended FHWA should not set deadlines for reporting on and evaluating performance measures until the NHS has been established nationwide and accepted by FHWA. The Seattle DOT made similar comments that before imposing NHS-specific regulatory requirements, FHWA should reassess current NHS designation criteria based on functional classification to consider critical routes based on multiple criteria such as person trip volumes rather than on vehicle miles traveled.

The FHWA evaluated the arguments made by commenters regarding the approach for dealing with potential NHS limits changes during a performance period. The FHWA recognizes that NHS limits will directly impact the performance data collection coverage, measure calculation, the extent of targets, significant progress determination, and determination of minimum levels for condition of pavements and bridges. The FHWA agrees with the comments from ACPA, Cemex USA, PCA, and Texas DOT that the proposed approach would exclude realigned and newly constructed NHS roads/lanes in the measure calculation as a means of improved condition/

performance. In addition to the impacts of NHS expansion, FHWA examined NHS contraction. In case of a NHS contraction, the approach proposed in the NPRM would have required State DOTs to report metrics for the part of NHS no longer designated as NHS for the entire performance period. Moreover, for both expansion and contraction cases, FHWA anticipates that communicating and explaining to the general public the condition/performance of NHS based on previous NHS limit (*i.e.*, baseline) would be particularly difficult. In addition to evaluating the comments, FHWA analyzed historical changes in the NHS network using HPMS data for each State. Based on the historical data, in general, FHWA found that NHS network changes are relatively small except when NHS expansion was required under MAP-21. In such case, FHWA plans to issue guidance to deal with mandated changes in NHS limits for implementing performance management.

After consideration of the comments and the issues associated with the proposed approach dealing with the NHS limit changes, FHWA revised section 490.105(d)(3) in the final rule. The State DOTs are no longer required to declare and describe NHS limits in their Baseline Performance Period Report so the changes in NHS limits during a performance period would be accounted for. Since the National Highway System Data Item in HPMS and the Highway System of the Inventory Route Data Item in NBI are required to be reported to FHWA annually together with condition metric data, NHS limits for pavement condition measures will come from the same dataset submitted to HPMS in the same year as the condition metric data is submitted. The NHS designation for bridge condition measures will come from the same NBI data set as the condition metric data of the same year. Accordingly, FHWA removed section 490.107(b)(1)(ii)(E) because State DOTs no longer have to declare and describe NHS limits in their Baseline Performance Period Report. Also, FHWA amended section 490.109(d)(4). The NHS information for the baseline conditions, for the purpose of the significant progress determination of the achievement of the pavement and bridge condition targets, will come from the data reported in HPMS and NBI in the year in which the Baseline Period Performance Report is due to FHWA. The FHWA believes that the revised approach will eliminate the burden of bookkeeping of the multiple data sets by

State DOTs and MPOs and will improve communicating the performance with the public. The FHWA also believes that it will make the NHS extent consistent with other performance publications of State data (*e.g.*, Highway Statistics¹⁵ and Condition and Performance Report to Congress¹⁶). Since the calculated measure reflects the NHS limit change, States DOTs and MPOs should consider anticipated NHS limit changes when establishing their targets.

Discussion of Sections 490.105(e)(1) and 490.105(f)(1) Implementation Timeline for State DOTs and MPOs

The FHWA proposed the requirements for State DOT and MPO performance targets in sections 490.105(e) and 490.105(f), respectively. Section 490.105(e)(1) specified the schedule for State DOT target establishment as “not later than 1 year of the effective date of this rule and for each performance period.” Also in the NPRM, section 490.105(f)(1) specified a schedule for MPO target establishment as “no later than 180 days after the respective State DOT(s) establishes their targets.” The proposed regulatory language specifying target establishment schedules came directly from the statutory language in MAP-21.¹⁷ Accordingly, FHWA proposed a schedule in section 490.107(b) for State DOT target and progress reporting as the first report (*i.e.*, State Biennial Performance Report) that would be due to FHWA by October 1, 2016 and subsequent report due every 2 years on October 1 thereafter. The October 1, 2016, and subsequent biennial due dates are a statutory requirement.¹⁸ To implement these statutory requirements in a consistent manner, FHWA proposed a definite period of time (*i.e.*, performance period) during which condition/performance would be measured, evaluated, and reported. The FHWA proposed a consistent time period of 4 calendar years that would be used to assess pavement and bridge conditions. The FHWA carefully examined this proposed time period so that it aligns with the timing of the biennial performance reporting requirements under 23 U.S.C. 150(e). This proposed time period is calendar year based so that it is consistent with data reporting requirements currently in

place to report pavement and bridge conditions.

During the development of the NPRM, FHWA anticipated the final rule for the proposal to be effective no later than October 1, 2015. The Oregon DOT commented that the effective date would be difficult to meet and suggested FHWA consider a delayed effective date of January 2017. As stated in the preamble of the NPRM, the October 1, 2015 date would have allowed for at least a 1-year period for State DOTs to establish targets so that they can be reported in the first biennial performance report (*i.e.*, Baseline Performance Period Report) that would be due to FHWA by October 1, 2016. The FHWA also stated in the preamble of the NPRM that it recognizes that if the final rule is effective after October 1, 2015, the due date to report State DOT targets for the first performance period may need to be adjusted, or FHWA would need to issue implementation guidance that would provide State DOTs a 1-year period to establish and report targets.

The FHWA received numerous comments that the 1-year duration between the effective date of this rule and the first reporting of targets (*i.e.*, Baseline Performance Period Report for the first performance period) is difficult for State DOTs and MPOs to meet.

The AASHTO and Connecticut DOT commented that the process to collect/analyze data, understand the trends, and establish targets will require additional time and that the submission of the first Baseline Performance Period Report by October 1, 2016, is “truly unrealistic.” The AASHTO and Mississippi and Connecticut DOTs argued that the opportunity for “cold weather States” to collect data for baseline condition/performance of 2015 is limited because all data has to be collected between the effective date (October 1, 2015) and the end of calendar year 2015 for 2016 condition/performance reporting. The North Dakota DOT and Seattle DOT made similar comments as AASHTO did. The Michigan and Minnesota DOTs expressed their support for the AASHTO comments.

The Texas DOT commented that State DOTs will need more time to transition and measure the metrics required that are not currently collected, and to develop some history to establish the targets, especially for the Interstate since the proposed metric is based on the overall condition.

The Mississippi DOT commented that many State DOTs already have multi-year contracts in place for their data collection. They said that the changes related to the expanded NHS and

¹⁵ Highway Statistics (FHWA): <https://www.fhwa.dot.gov/policyinformation/statistics.cfm>.

¹⁶ Conditions and Performance Report to Congress (FHWA): <https://www.fhwa.dot.gov/policy/2013cpr/>.

¹⁷ 23 U.S.C. 150(d)(1) and 23 U.S.C. 134(h)(2)(C).

¹⁸ 23 U.S.C. 150(e).

additional data requirements would make it impossible for many State DOTs to meet the proposed reporting timelines. Furthermore, they said that if additional data required under this rule is obtained, State DOTs will not have the historical data to analyze trends to effectively establish targets. The AMPO, COMPASS, and TEMPO made similar comments that the timeline in NPRM for identifying baseline condition/performance and reporting targets for the first performance period is “aggressive.” They added that the proposed timeline affords little ability or is insufficient for States to identify reasonably attainable targets.

The Southeast Michigan Council of Governments (SEMCOG) commented that the additional and unfamiliar data requirements (*i.e.*, cracking, faulting, rutting, and roughness data) make it difficult to meet the accelerated timelines for collecting the data. They noted that the NPRM assumes that they will be able to work with the Michigan DOT and finish the reporting within 1 year. They commented that the reporting time will actually be much less than 1 year, especially in the first year. The Missouri DOT stated that including cracking, rutting, and faulting metrics under this rule needs to be delayed until national standards are developed and vetted through a quality control process. They added that these metrics will result in additional costs to collect, analyze, and manage the data.

The New York State DOT cited that FHWA intends to use HPMS as a primary mechanism to report pavement performance data. The New York State DOT recommended that State DOTs be provided adequate time and resources to implement the necessary process and system changes.

The Michigan DOT added that their pavement performance management “took years to develop, test, and refine” and recommended an alternative implementation schedule and process until the national measures mature enough that State DOTs become confident using them as the basis for investment decisions. The NYMTC “strongly objected” to the proposed October 1, 2015, effective date for the data collection and reporting requirements associated with the performance measure rules because they do not have sufficient information available about current pavement conditions using the proposed measures and data collection methods. They also added that, given the constraints on available data and analysis tools, they cannot predict the future conditions.

The AASHTO and Connecticut and Tennessee DOTs suggested providing

State DOTs the opportunity to extend the deadline if they demonstrate that they are working toward and making progress in adopting all requirements. The AASHTO and Connecticut and North Dakota DOTs commented that the coordination for establishing targets will require additional time because it encompasses a wide range of performance areas that can be influenced by local and regional needs. The Michigan State Transportation Commission and Michigan Asset Management Council commented that FHWA must allow State DOTs sufficient time to adequately coordinate with local agencies after the rules are finalized but before implementation begins.

The AASHTO and Connecticut and Oregon DOTs recommended a 24-month phase-in period between the effective date and the first target reporting for the Interstate pavement and bridge condition measures in sections 490.307(a)(1) and (2) and 490.407(c). And, they recommended a 48-month phase-in period between the effective date and the first target reporting for the Non-Interstate NHS pavement condition measures in section 490.307(a)(3) and (4). The Alaska DOT&PF recommended at least a 4-year period to report all new data under this rule since the NHS has also changed with MAP-21. The AASHTO and Connecticut and Oregon DOTs also recommended delaying significant progress determination under section 490.109.

The NYMTC also asked FHWA to consider the impacts of this proposed rule on State DOTs and MPOs that must adjust their planning and programming processes to the new requirements under this rule. The NYMTC requested that FHWA lengthen the amount of time before penalties are imposed so that State DOTs and other agencies could make adjustments while they have the maximum amount of flexibility in the use of available funding.

The AASHTO and Connecticut and New Jersey DOTs commented that the time frame for enacting minimum condition level determination for bridges under section 490.413 is too short. They commented that State DOTs will have no time to assess their current situation and then implement reasonable projects to meet the 10 percent threshold. The AASHTO and Connecticut and Oregon DOTs recommended not determining minimum condition levels under sections 490.315 and 490.411 until 48 months after the effective date.

The FHWA appreciates the comments on the proposed timeline. The FHWA understands that collection of new data items, development of tools,

coordination, planning process adjustments, and integrating with other regulatory requirements to implement this rule will take time and effort for State DOTs. The FHWA recognizes that data required in section 490.309 for the pavement condition measures is new to some State DOTs. Therefore, FHWA amended the proposed data collection timeline for the pavement condition measures to reflect the effective date of this final rule. (See discussion section for section 490.309(a) for data collection timeline for the pavement measures.) Accordingly, FHWA retains phase-in requirements related to the targets for Interstate pavement measures and significant progress determination for those targets, as provided in sections 490.105(e)(1) and 490.109(e)(3), respectively, so that the effective date of this final rule is reflected. The FHWA also retains the transition of non-Interstate pavement measure in section 490.313(e) as proposed.

In addition to the challenges associated with new data items, FHWA recognizes that State DOTs are challenged with NHS expansion, lack of historic data and analytical tools for establishing targets, additional coordination requirements, adjustment to their planning process, and integrating with other regulatory requirements. However, as stated previously, State DOT target establishment “not later than 1 year of the effective date of this rule” in section 490.105(e)(1) is a statutory requirement under 23 U.S.C. 150(d). The date for reporting progress toward targets of October 1, 2016 is also a statutory requirement in 23 U.S.C. 150(e). Therefore, FHWA cannot delay the due date of State DOT target establishment or reporting on performance targets.

Since this rule is being issued and effective after October 1, 2016, FHWA issued guidance¹⁹ on the Initial State Performance Report on August 31, 2016, to provide State DOTs the opportunity to comply with the statutory deadline for the first performance report under 23 U.S.C. 150(e). In this guidance, FHWA recognized that State DOTs would not have established targets for the measures in this rule. The FHWA simplified the reporting requirement by only requiring a description of the planned processes for target establishment and coordination with relevant MPOs and other agencies that will occur in the selection of targets. The FHWA has amended the implementation timeline to reflect the

¹⁹ FHWA Guidance: Initial State Performance Report: <http://www.fhwa.dot.gov/tpm/guidance/160831.cfm>.

effective date of this final rule. (See subsequent discussion in this section for more details on timeline adjustments.)

In response to the comments from AASHTO and Connecticut and New Jersey DOTs above, FHWA disagrees that the time frame for enacting minimum condition level determination for bridges on the NHS is too short and that State DOTs will have no time to assess their current situation and then implement reasonable projects to attempt to meet the 10 percent threshold. The MAP-21 was enacted in October 2012. In September of 2012, FHWA provided initial guidance through its MAP-21 Bridge Q&A Web site²⁰ on how FHWA intended to implement the statutory requirements under the 23 U.S.C. 119(f)(2). Additionally, State DOTs are familiar with the classification of structurally deficient as it had been used for decades to implement the Highway Bridge Program. Because of this familiarity, State DOTs are well aware of their current situation in regards to structurally deficient bridges on the NHS. Based on FHWA guidance provided on the MAP-21 Bridge Q&A Web site, which describes the implementation schedule of the minimum condition level determination, and the familiarity State DOTs have with the classification of structurally deficient, State DOTs have had sufficient time to take actions to meet the 10 percent threshold. Because of its long implementation history and State DOTs' familiarity with the classification of structurally deficient bridges, FHWA believes that implementing the requirement of 23 U.S.C. 119(f)(2) does not depend on the effective date of this rule. Moreover, FHWA has been examining NBI data that State DOTs have been reporting since the enactment of MAP-21 and found sufficient evidence that State DOTs are taking actions to meet the statutory requirement. For example, if the 2013 NBI data was used as the baseline for structurally deficient bridges carrying the NHS, then there were potentially 13 State DOTs that would have been affected by the penalty if the trend of percentage structurally deficient deck area of greater than 10 percent continued for another 2 years. However, based on the 2014 NBI data, the number of State DOTs that would be affected by the penalty dropped to eight. Based on 2015 NBI data, the number dropped even further to six State DOTs. This dramatic change in the potential number of States leads FHWA to

conclude that some State DOTs have taken action in addressing their NHS structurally deficient bridges. Therefore, FHWA believes that a delay in implementing the 23 U.S.C. 119(f)(2) provision is not necessary.

The Louisiana DOT recommended the first data collection cycle, to be used in performance analysis, be pushed back to a later date. The Louisiana DOT cited a large number of conflicts between HPMS, the AASHTO specifications, the Fiscal Management Information System (FMIS) requirements for HPMS, and the proposed rules. They commented that these conflicts will not allow an "apples to apples" data comparison or analysis between the current year and future years, nor among States. However, the Louisiana DOT did not identify how delaying the start of the data collection would mitigate the perceived conflicts or how anything having to do with the FMIS impacts the data reporting for HPMS. The FHWA understands that State DOTs will need some time to adjust contracts and programs to meet the data reporting requirements and the final rule has identified the first reporting dates to be 2019 for Interstate routes and 2021/2022 for non-Interstate NHS routes.

A letter²¹ from the State DOTs of Maine, New Hampshire, and Vermont recommended a bi-directional format to support FMIS, which intends to use HPMS data as its source. In the NPRM, FHWA proposed Interstate pavement condition data to be collected on both directions of the Interstate highway in section 490.309(b)(1)(i). However as a result of further studies,²² FHWA amended section 490.309(b)(1)(i) so that the pavement condition data collection on Interstate is only required in one direction of highway, eliminating the need for examining a bi-directional format to support FMIS and the potential discrepancies with HPMS.

The AMPO and COMPASS stated that the process for amending Metropolitan Planning Agreements is a time consuming and requires considerable opportunity for public input. They recommended a timeline that could lead to more realistic targets. The AASHTO, NYMTC, and Oregon and Washington DOTs urged FHWA to delay the MPO target establishment requirement until the start of the second performance period. They argued that there will be lack of complete (*i.e.*, full extent) performance data for cracking, rutting,

and faulting for the Non-Interstate NHS, where full extent data will only be collected for the second half of the first performance period, as described in sections 490.309(b)(2)(ii) and 490.313(e). They added that until complete data is collected and evaluated, the MPOs might have a difficult time understanding the complexities of this data and establishing targets. They also recommended delay because it will allow additional time for State DOTs and MPOs to further develop their collaborative efforts in response to this rule and the Asset Management Plan rule (23 CFR 515). The NARC commented that additional time for MPOs would be helpful because of the significant collaboration and the data collection requirements in this rule.

The SEMCOG expressed the opinion that a piecemeal approach is being used to develop the performance measures in this rule. This approach makes it difficult to identify the total system performance requirements, the complete data needs, and costs to collect the required data and to program and implement projects to address the performance measures.

The FHWA appreciates these comments and understands that implementing this rule takes time and effort for MPOs as they face similar challenges to State DOTs. In response to comments related to the Metropolitan Planning Agreement, FHWA amended the language in section 490.107(c)(1) to remove the requirement to use the agreement as the means to document how MPOs will report their established targets to their respective State DOTs. The FHWA also amended the language in section 490.105(f)(8) to remove the requirement to document the target adjustment process in the Metropolitan Planning Agreement. (See discussion sections for sections 490.105(f)(8) and 490.107(c)(1) for more details on Metropolitan Planning Agreement for MPO target adjustment and reporting, respectively.) The FHWA re-iterates that the State DOT target establishment schedule of "not later than 1 year of the effective date of this rule" in section 490.105(e)(1) and MPO target establishment schedule of "no later than 180 days after the respective State DOT(s) establishes their targets" in section 490.105(f)(1) are statutory requirements under 23 U.S.C. 150(d) and 23 U.S.C. 134(h)(2)(C), respectively. Therefore, to meet the statutory mandates, FHWA cannot delay the due date of the MPO target establishment. (See discussion on MPO implementation schedule in section 490.105(f)(1).)

²¹ Docket Document FHWA-2013-0053-0096—<http://www.regulations.gov/#!documentDetail;D=FHWA-2013-0053-0096>.

²² "Evaluation of Pavement Conditions on the Interstate System: Preliminary Summary", Rada 2015.

²⁰ Question and Answer #2 at: <http://www.fhwa.dot.gov/map21/qandas/qabridges.cfm>.

As discussed above and in the NPRM, FHWA described its plans in the event that the final rule would not be effective until after October 1, 2015. The FHWA stated in the NPRM that, if it becomes clear that the final rule will not be effective until after October 1, 2015, FHWA would consider adjusting the first performance period in the final rule or would issue implementation guidance that would provide State DOTs a 1-year period to establish and report targets. As this rule is issued and effective after October 1, 2015, providing State DOTs less than 1 year to establish targets prior to the October 1, 2016 report, FHWA has amended the timeline in the final rule. These adjustments are necessary to ensure that State DOTs have at least 1 year between the effective date of this rule and biennial performance reporting of their target while adhering to the statutory reporting due dates²³ under 23 U.S.C. 150(e). Therefore, as stated in the NPRM, FHWA amended the due date for State DOT on reporting their targets for the first performance period from October 1, 2016, to October 1, 2018. To accommodate the amendment of the reporting date for the first performance period, FHWA adjusted the start of first performance period (and start dates for subsequent performance periods) in the final rule so that target reporting could be aligned with corresponding performance periods. Although the due date for State DOT on reporting their targets for the first performance period is October 1, 2018, this amendment does not exempt State DOTs from the October 1, 2016, report required under 23 U.S.C. 150(e). As such, FHWA issued guidance²⁴ on the Initial State Performance Report on August 31, 2016, to provide State DOTs the opportunity

to comply with the statutory deadline for the first performance reporting under 23 U.S.C. 150(e). In this guidance, FHWA recognized that State DOTs would not have established targets for the measures in this rule. The FHWA simplified the reporting requirement by only requiring a description of the planned processes for target establishment and coordination with relevant MPOs and other agencies that will occur in the selection of targets. Since this final rule was not effective by October 1, 2015, FHWA adopted the following in this final rule:

- State DOTs shall establish targets for the first performance period not later than 1 year of the effective date of this rule as specified in section 490.105(e)(1) to meet the statutory requirement in 23 U.S.C. 150(d).
- The MPOs shall establish targets for the first performance period no later than 180 days after the respective State DOTs establish their targets as specified in section 490.105(f)(1) to meet the statutory requirement under 23 U.S.C. 134(h)(2)(C).
- The first performance period shall begin on January 1, 2018, and shall end on December 31, 2021, and subsequent 4-year performance periods shall follow thereafter, as provided in as provided in section 490.107(b) and shown in Figure 1 below.
- The State DOTs will begin collecting Interstate pavement condition data (IRI, rutting (asphalt pavements), faulting (jointed concrete pavements), and Cracking Percent) in accordance with section 490.309(b)(1) in calendar year 2018.
- The State DOTs will begin collecting non-Interstate NHS pavement condition data (IRI, rutting (asphalt pavements), faulting (jointed concrete pavements), and Cracking Percent) in accordance with section 490.309(b)(2) in calendar year(s) 2020/2021.
- The State DOTs shall submit their first biennial performance report (*i.e.*,

Baseline Performance Period Report for the first performance period) on October 1, 2018. Subsequent biennial performance reports are due every 2 years after the first biennial performance report, as provided in section 490.107(b).

- The FHWA will make first significant progress determinations after State DOTs report their Mid Performance Period Progress Report for the first performance period on October 1, 2020, and biennially thereafter.
- The FHWA will not make a determination of significant progress toward the achievement of 2-year targets for Interstate System pavement condition measures in calendar year 2020, as discussed in section 490.109(e)(3)(i).
- To meet the statutory requirement under 23 U.S.C. 119(f)(2), FHWA will make the first minimum bridge condition level determination in calendar year 2016 (by October 1, 2016) and in calendar year 2017 (by October 1, 2017) by considering structurally deficient as a classification given to a bridge which has significant load carrying elements in Poor or worse condition, or the adequacy of the waterway opening provided by the bridge is determined to be insufficient to the point of causing overtopping with intolerable traffic interruptions. Beginning with calendar year 2018 and each calendar year thereafter, FHWA will make the minimum bridge condition level determination by considering structurally deficient as a classification given to a bridge which has any component in Poor or worse condition, as defined in section 490.405 and described in section 490.411(b).
- The FHWA will make the first minimum Interstate pavement condition level determination by October 1, 2019, and each year thereafter, as provided in section 490.317.

²³ Report no later than October 1, 2016 and biennially thereafter.

²⁴ FHWA Guidance: Initial State Performance Report: <http://www.fhwa.dot.gov/tpm/guidance/160831.cfm>.

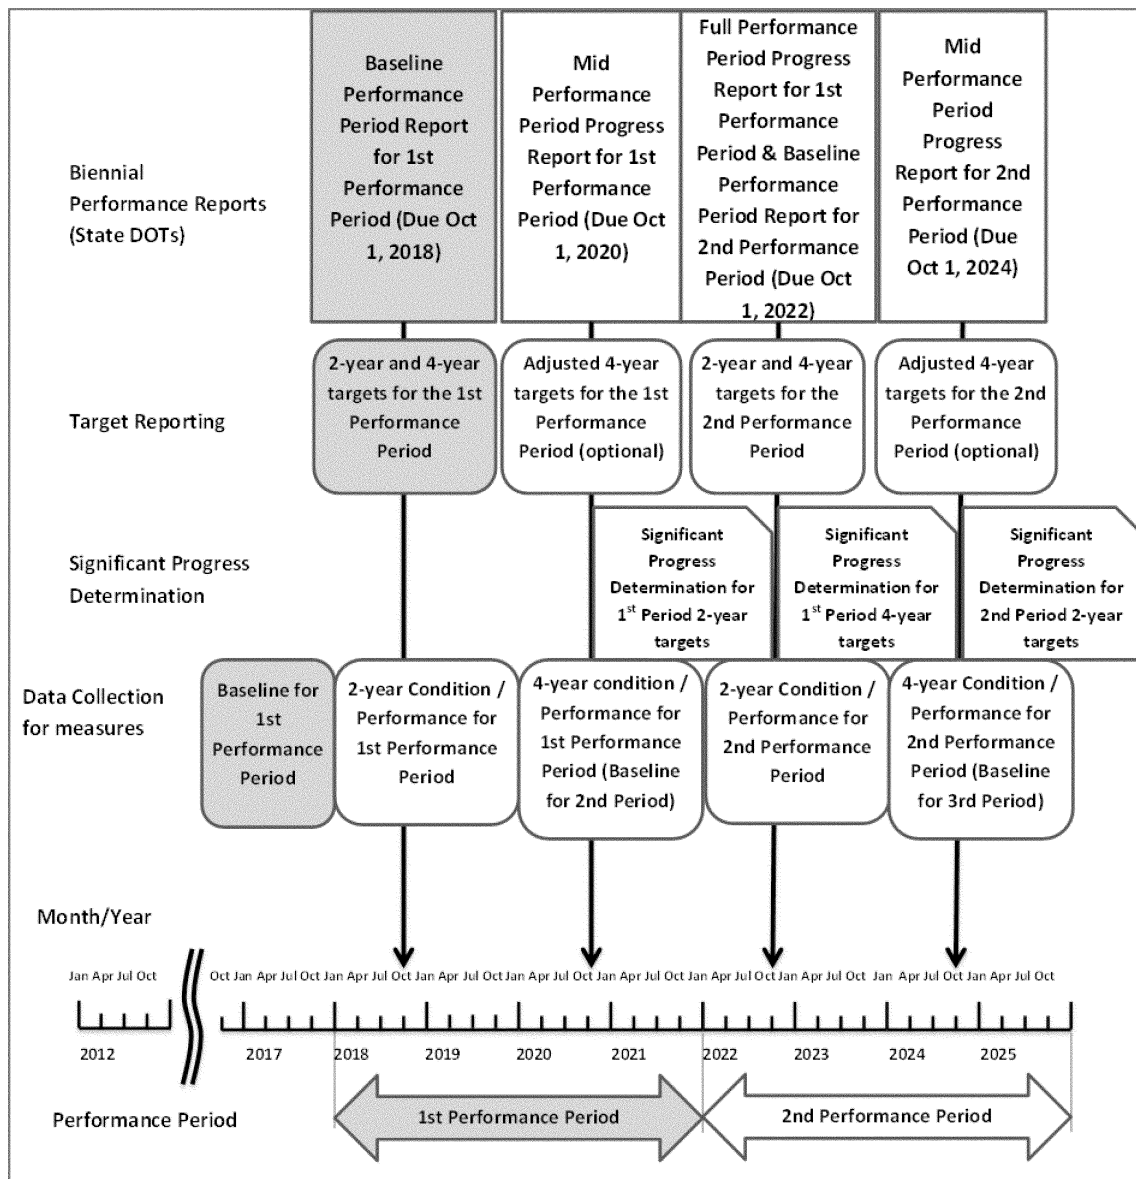

Figure 1 – Biennial Performance Reports – The Baseline Performance Period Report

The FHWA retains the language in section 490.105(e)(1), as proposed in the NPRM, because the due date for State DOT target establishment of “not later than 1 year of the effective date of this rule” in this paragraph is a statutory requirement under 23 U.S.C. 150(d).

Discussion of Sections 490.105(e)(2) and 490.105(f)(2) Target Coordination

Sections 490.105(e)(2) and 490.105(f)(2) specify State DOT and MPO coordination requirements for the establishment of targets, as provided in 23 U.S.C. 135(d)(2)(B)(i)(II) and 23 U.S.C. 134(h)(2)(B)(i)(II). In the NPRM, FHWA sought comment on alternative approaches that could be considered to

effectively implement the coordination requirements under MAP-21.

The Mid-America Regional Council supported the language that encourages State DOT and MPO coordination “to the extent practicable” in target establishment. They also encouraged FHWA to offer guidance and share best practices of coordination among neighboring States and MPOs. The New York State Association of Metropolitan Planning Organizations (NYSAMPO) supported the language in section 490.105(e)(2). They also noted that a “significant portion” of the NHS in New York is owned by local governments and public authorities. They pointed out that the rule is silent on coordination

with other owners and noted that they would support language requiring such coordination. The Orange County Transportation Authority made a similar comment and urged FHWA to include language to support MPO coordination with county transportation commissions and local DOT districts to establish targets and funding priorities, and to allow targets to be established at the sub-regional level.

The Mid-America Regional Council also commented that if State DOTs choose to establish additional targets, under section 490.105(e)(3), for urbanized areas, the rule should encourage coordination with the corresponding MPOs.

The Florida DOT shared their coordination efforts in their letter. The Florida DOT held performance measure workshops in 2014 and 2015 for the representatives of various State DOT Offices, Federal Transit Administration, MPOs, and FHWA. They stated that the workshops resulted “in a rich dialogue with numerous ideas and opinions conveyed through discussion and in writing.” The Florida DOT also indicated in their letter that a Performance Measurement Collaboration Task Force has been formed to coordinate performance measurement activities with FHWA, FTA, Florida’s 27 MPOs, and the Florida Metropolitan Planning Organization Advisory Council. According to Florida DOT, the task force will continue to be used to exchange information during the rulemaking process and implementation. The Florida DOT also indicated that they plan to examine opportunities for data sharing, coordinated target establishment, and combined reporting where practical and efficient. They added that they will look for better ways to communicate the importance of good transportation performance to their State’s economy and their quality of life. The FHWA appreciates the Florida DOT sharing their coordination efforts.

The Illinois DOT commented that the portions of NHS which are not under the jurisdiction of the State DOT will require coordination between Illinois DOT and MPOs on the selection of targets to ensure consistency, to the maximum extent practicable.

The AASHTO and the Connecticut and Oregon DOTs commented that performance measurement and management of NHS pavements and bridges are not the only part of the planning effort State DOTs must undertake in order to deliver a successful program to the public. They emphasized that other tasks and the level of effort and coordination with local agencies, the public, and other stakeholders is “substantial.” They urged FHWA to recognize that the entire process to collect/analyze data, understand the trends, and establish targets needs to be made across a wide range of performance areas that can be influenced by local and regional needs. Finally, they commented that “coordination takes time.”

The AASHTO and the Oregon and Washington DOTs disagreed with the phrase “to ensure consistency, to the maximum extent practicable” in sections 490.105(e)(2) and 490.105(f)(2). They recommended that the regulatory text change to “to facilitate or encourage consistency.” They argued that this

modification would reduce the chances of unreasonable expectations on State DOTs during the implementation.

An anonymous commenter²⁵ stated that coordination between key stakeholders (such as MPOs) and State DOTs needs to be more active. The commenter argued that requiring consultation with MPOs is not enough, and collaboration in goal development is important. Another anonymous commenter²⁶ noted the importance of performance and funding for the entire statewide-non-Interstate NHS and commented that a State DOT should not be allowed to give preference to funding projects on highways within their jurisdiction merely because they are within their jurisdiction.

The North Carolina DOT commented that most of the NHS in North Carolina is owned and operated by North Carolina DOT. They inquired whether or not coordination is “relevant” for North Carolina DOT.

The Northeast Ohio Areawide Coordinating Agency commented that, unless there is a financial rationale or specific policy to coordinate targets, coordination is unlikely, particularly as State laws varies regarding the responsibility of asset management.

The Southern California Association of Governments (SCAG) recommended clear provisions be provided that outline the exact coordination process between State DOTs and MPOs toward the establishment of performance targets. A private citizen, Joyce Dillard, commented that the development of consistent targets across a State can only be achieved when the targets take into account State required plans already in existence, such as the General Plan and its Circulation Element.

Finally, the NARC commented that the success of the national performance management program will rely in part on the extent to which State DOTs and their MPOs are able to work together, establish common ground, and find complementary purpose. They made reference to the discussion of section 490.105(e)(2) in the NPRM which states “FHWA recognizes the need for State DOTs and MPOs to have a shared vision on expectations for future condition/performance in order for there to be a jointly owned target establishment process.” The NARC stated that “in some cases, this shared vision is a difficult—if not impossible—standard.” The NARC encouraged FHWA to foster a “shared vision,” and recommended that FHWA “take a deeper look” into case studies, peer exchanges, and other

input from State DOTs and MPOs in coordination for the establishment of targets. Finally, NARC commented that this is an opportunity to explore existing relationships between State DOTs and MPOs, and create stronger ties between them.

The FHWA appreciates the comments received regarding coordination. The FHWA plans to provide technical assistance to the State DOTs and MPOs through a number of means, including the issuance of guidance, conducting peer reviews and workshops, sharing best practices, and conducting training on topics such as target setting, implementation of performance-based planning and programming, interagency coordination, data collection, and performance progress reporting. The language in sections 490.105(e)(2) and 490.105(f)(2) mirror the statutory language in 23 U.S.C. 135(d)(2)(B)(i)(II) and 23 U.S.C. 134(h)(2)(B)(i)(II) and the regulatory language in 23 CFR 450.206(c)(2) and 23 CFR 450.306(d)(2)(iii) of the final Planning Rule. The FHWA believes the phrase “selection of targets” in 23 U.S.C. 135(d)(2)(B)(i)(II) and 23 U.S.C. 134(h)(2)(B)(i)(II) applies to adjustment of targets. The FHWA expects State DOT and MPO coordination requirements to be carried out for both establishment and adjustment of State DOT and MPO targets in sections 490.105(e)(2) and 490.105(f)(2). The final Planning Rule considers performance target selection as part of statewide and metropolitan transportation planning processes. Therefore, as part of the target selection process, State DOTs are required to consider the concerns of relevant Federal Land Management agencies and Indian tribal governments, and cooperate with affected local elected and appointed officials with responsibilities for transportation (or applicable regional transportation planning organization(s) identified in 23 CFR 450.208(a)), when selecting performance targets. (See 23 CFR 450.206, 23 CFR 450.208, and 23 CFR 450.306 of the final Planning Rule for more details on planning and coordination processes.) The FHWA also encourages State DOTs to coordinate with relevant MPOs and other stakeholders identified in 23 CFR 450.208(a) when establishing additional targets, described in section 490.105(e)(2).

The FHWA amended language in sections 490.105(f)(8) and 490.107(c)(1) to remove the requirement to document the target adjustment process and reporting of targets in the Metropolitan Planning Agreement. The FHWA replaced it with a requirement to

²⁵ Comment #: FHWA–2013–0053–0140.

²⁶ Docket Document FHWA–2013–0053–0135.

document the target adjustment process in a manner that is mutually agreed upon by State DOTs and MPOs. (See discussion sections for sections 490.105(f)(8) and 490.107(c)(1).) The FHWA recognizes that the performance management of NHS pavements and bridges are not the only part of the planning effort State DOTs and MPOs are required to undertake. The FHWA also recognizes that the level of effort and coordination with local agencies, the public, and other stakeholders is substantial and takes time. As discussed in section 490.105(d), the target scope (or the extent of target) for a State DOT consists of the entire NHS within the State, and the target scope for an MPO is the entire NHS within the metropolitan planning area. For this reason, State DOTs and MPOs are required to establish targets for the entire system within their respective areas, regardless of who owns the system. The section also requires close coordination between State DOTs and MPOs in selection of State DOT and MPO targets.

In response to the comments from North Carolina DOT and Northeast Ohio Areawide Coordinating Agency, coordination in the target selection process is required under 23 U.S.C. 135(d)(2)(B)(i)(II) and 23 U.S.C. 134(h)(2)(B)(i)(II), as stated above. Therefore, coordination is not an option, but it is a requirement under statute. Moreover, coordination for target selection is not bound by ownership of assets or asset management responsibilities, but must be consistent with coordination requirements in the statewide and metropolitan transportation planning processes.

In response to SCAG's comments, FHWA believes that the exact coordination process for target selection of an area should be determined by the relevant State DOTs and MPOs in that area. To help establish this process, FHWA plans to provide best practices, Webinar opportunities, and other resources on target selection coordination processes so that the coordination process is effectively implemented.

As stated earlier, the phrase "to ensure consistency, to the maximum extent practicable" in sections 490.105(e)(2) and 490.105(f)(2) is statutory language in 23 U.S.C. 135(d)(2)(B)(i)(II) and 23 U.S.C. 134(h)(2)(B)(i)(II). The FHWA retains the language in sections 490.105(e)(2) and 490.105(f)(2), as proposed in the NPRM.

Discussion of Section 490.105(e)(3) Additional Target

The FHWA proposed to allow State DOTs to establish additional targets for any of the proposed measures in subparts C and D, beyond the required statewide target. The State DOT may establish additional targets for any number and combination of urbanized areas and a target for the non-urbanized area for any or all of the proposed measures. This is intended to give State DOTs flexibility when establishing targets, and to aid State DOTs in accounting for differences in urbanized areas and the non-urbanized area. For example, a State DOT could choose to establish additional targets for a single urbanized area, a number of urbanized areas, or all urbanized areas separately or collectively. For State DOTs that want to establish a non-urbanized target, it would be a single target that applies to the non-urbanized area statewide. In the NPRM, FHWA sought comments on optional additional targets for urbanized and non-urbanized areas. The FHWA also sought comments on any other flexibility it could provide related to the voluntary establishment of additional targets.

The AASHTO and the Connecticut and New York DOTs supported the proposed approach for optional additional targets for urbanized and non-urbanized areas beyond the required statewide target. The AASHTO stated that State DOTs will voluntarily establish additional targets for various geographical boundaries on an ad hoc basis, working with their MPOs and local agencies. The AASHTO added that no other flexibilities need to be provided except that the establishment of additional targets should be at the sole discretion of State DOTs and not encumbered by Federal reporting or other requirements. The Connecticut and New York DOTs echoed AASHTO's comment.

The Georgia DOT commented that the proposed approach provides adequate flexibility in setting targets that will allow differentiation between urban and rural areas. The New Jersey DOT recommended allowing additional targets based on jurisdictional limits of each of the various stewards of the NHS and bridge ownership boundaries. The Oregon DOT recommended allowing States to establish targets of importance to them to provide flexibility in additional targets. The Tennessee DOT stated that they do not believe that it is necessary to provide for separate targets for urbanized and non-urbanized areas at this time.

The Texas DOT commented that optional targets for Texas may be needed for operational needs, but not for collective reporting. They added that many factors could come into play in optional targets, such as climate zones, subgrade, massive industry expansion (e.g., energy sector). The Texas DOT incorporates these factors into district level target setting as it relates to pavement asset condition. They noted that these district level targets accumulate to one State target.

The Missouri State DOT commented that the additional targets should only be considered "if the MPOs desire to have a different target than the State DOT." The Mid-America Regional Council and NARC commented that when a State DOT chooses to establish urbanized and non-urbanized area targets, State DOTs should be encouraged or required to coordinate those targets with relevant MPOs and rural transportation planning organizations. The TEMPO recommended usage of the terms "rural," "urban," and "urbanized" areas, and recommended urbanized area targets for the NHS. The NYMTC, PSRC, and Joyce Dillard recommended that additional flexibility should be provided for State DOTs to establish targets for metropolitan planning areas or urbanized areas. Joyce Dillard also suggested that MPO areas should be viewed in sub-areas for Transportation Management. The NYMTC added that one benefit of using metropolitan planning areas is that the boundaries are likely to change less frequently than urbanized area boundaries, allowing for a longer period of time during which measures would be evaluated on a consistent basis.

Questions were asked by several agencies regarding the additional targets. The Florida DOT asked the reason for the requirements in section 490.105(d)(3) for declaring and describing urbanized area boundaries within the State boundary in the Baseline Performance Period Report (required by section 490.107(b)(1)) for the additional targets. The Colorado DOT questioned the advantages of setting additional targets when these targets are not subject to significant progress determinations under section 490.109(e). Similarly, the NEPPP questioned the incentive of establishing additional targets.

The FHWA appreciates the comments on the voluntary establishment of additional targets and on other flexibilities it could provide. The FHWA strongly encourages State DOTs to monitor condition/performance by different geographic areas (e.g.,

jurisdiction, population, functional class, planning, terrain, and climate) to better understand the location dependency of condition/performance. The FHWA encourages State DOTs to establish targets beyond the required statewide targets where they feel necessary. The FHWA agrees with the comments from AASHTO and the Connecticut and New York State DOTs that State DOT established targets beyond the required statewide targets are at the sole discretion of State DOTs. This agreement was evident in the NPRM and in this final rule because the language does not require State DOTs to establish these targets. However, if a State DOT decides to establish urban or non-urbanized area targets beyond the required statewide targets, FHWA expects that State DOT to meet the coordination and reporting requirements under sections 490.105(e)(2) and 490.107(b). Although urban or non-urbanized area targets are not subject to significant determination under section 490.109, FHWA feels that the coordination and reporting requirements are necessary because once those targets are reported to FHWA (and become available to the public), the transparency and accountability of those targets will be expected by the public. For these reasons, FHWA retains the language in sections 490.105(e)(3)(i), (e)(3)(ii), and (e)(3)(iv) so that State DOTs have the maximum flexibility in monitoring condition/performance by different geographic areas and establishing targets beyond the required statewide targets, while preserving State DOT discretion to establish those targets. However, FHWA revised the language in section 490.105(e)(3)(iii) by striking the phrase “available to FHWA” in the paragraph because the urbanized area data reporting requirement is already covered in section 490.103(b).

Discussion of Section 490.105(e)(4) Performance Period Length and Schedule Alignment

The FHWA proposed a definitive performance period while recognizing that planning cycles and time-horizons for long-term performance expectations differ among State DOTs and MPOs. The FHWA understands that, although differences exist, it is necessary to provide for consistency in performance periods and proposed a 4-year performance period considering: (1) Providing for a link between the interim short-term targets (*i.e.*, 2-year and 4-year time horizons) to individual State DOT's long-term performance expectations as part of a performance-based planning and programming process; (2) ensuring the time horizon is long enough to allow

for condition/performance change to occur through the delivery of programmed projects; (3) aligning the schedule of reporting on targets and the evaluation of progress toward achieving the targets with the biennial performance reporting requirements under 23 U.S.C. 150(e); and (4) reporting targets using a consistent performance period as part of the evaluation of State DOT effectiveness in the performance-based planning process provided to the Congress, as required by 23 U.S.C. 135(h). Therefore, 2-year targets represent the anticipated or intended condition/performance level at the midpoint of each performance period, and 4-year targets represent the anticipated or intended condition/performance level at the end of each performance period. As stated in the NPRM, it is important to emphasize that established targets (2-year targets and 4-year targets) should be considered as interim conditions/performance levels that lead toward the accomplishment of longer term performance expectations in a State DOT's long-range statewide transportation plan²⁷ and NHS asset management plans.²⁸

Two main issues on the proposed 4-year performance period were raised by the commenters: (1) The 4-year performance period duration is too short for noticeable changes in the condition of bridges and pavements and for demonstrating the impact of the investments²⁹ and (2) the timeline of the performance periods does not align with planning cycle of State DOTs and MPOs.³⁰

The ASCE commented that the proposed regimen of performance period and progress reporting “is in accordance with the intent of MAP-21 and will help document the strides that States are making to improve asset conditions.” They also recommended

that FHWA pay particularly close attention to the investment strategies section of progress reviews to help ensure that States are prioritizing investment decisions in a way that will help them reach their intended targets in accordance with national goals. Nicholas Cazares³¹ commented that the proposed approach of performance period is “reasonable.” The Center for American Progress commented that a 4-year performance period is of adequate length to allow States to “make or fail to make progress.”

However, AASHTO and the California, Connecticut, and Texas DOTs commented that the condition of bridges and pavements does not change a great deal in relatively short time periods (*i.e.*, 2-year and 4-year). Additionally, the AASHTO and the Texas DOT provided an example of “a bridge built with a design life of 75 years does not normally show a great amount of change from one inspection cycle to the next (every 2 years).”

The AASHTO, Metropolitan Transportation Commission, Nashville Area MPO, Orange County Transportation Authority, Oversight Committee for the California Local Streets and Road Needs Assessment, Rural Counties Task Force, SCAG, and TEMPO and the State DOTs of California, Colorado, Connecticut, Iowa, New Jersey, and Texas commented that “planning, programming, project delivery, data collection, data reporting of projects” typically takes much longer than 4 years, so the impact of infrastructure investment programs on condition/performance would be difficult to demonstrate with short-term targets (2-year and 4-year targets). The AASHTO and Connecticut and New York DOTs recommended providing State DOTs and MPOs the flexibility to voluntarily establish long-term targets (10 years or more) outside of the regulatory framework and recommended report progress on a 4- or 5-year interval. The Metropolitan Transportation Commission, Nashville Area MPO, Orange County Transportation Authority, the Oversight Committee for the California Local Streets and Roads Needs Assessment, and the Rural Counties Task Force recommended target establishment cycles between 5 and 10 years. The SCAG and TEMPO recommended that performance periods should be at least 10 years. The California and Texas DOTs recommended a 10-year performance period with a 5-year mid performance period progress report. The New York DOT also suggested a 5-year

²⁷ 23 U.S.C. 135(f).

²⁸ 23 U.S.C. 119(e).

²⁹ AASHTO; Transportation for America; the Southeast Pavement Preservation Partnership; the State DOTs of California, Connecticut, Idaho, Iowa, Minnesota, Montana, New Jersey, New York State, North Dakota, South Dakota, Texas, and Wyoming; Rural Counties Task Force; the Organ County Transportation Authority; the Oversight Committee for California local Streets and Road Needs Assessment; TEMPO; the Metropolitan Transportation Commission, the Southern California Association of Governments; Nashville Area MPO.

³⁰ State DOTs of Connecticut, New York, and Texas, the National Association of Regional Councils, the New York State Association of Metropolitan Planning Organizations, the New York Metropolitan Transportation Council, the Association of Metropolitan Planning Organizations, Atlanta Regional Commission, the Association of Texas Metropolitan Planning Organizations, and the Community Planning Association of Southwestern Idaho.

³¹ Docket Letter FHWA-2013-0053-0078.

reporting cycle. The North Carolina DOT suggested 6- to 8-year goals for the bridges. The State DOTs of Idaho, Montana, New York, North Dakota, South Dakota, and Wyoming recommended a longer reporting cycle. Transportation for America recommended the reporting period be 8 or 10 years.

The letters from AMPO, COMPASS, Iowa DOT, Nashville Area MPO, SEMCOG, TEMPO, and Transportation for America suggested that the performance period should coincide with State DOT and MPO Long Range Plan (LRP) cycles. Transportation for America stated that not aligning the performance period with the LRP cycle “creates a disincentive for these important entities to engage in the performance measure targeting and investment process or place an undue burden for these entities to conduct planning and target setting outside the planning process.” The AMPO and COMPASS added that the misalignment of performance periods may cause confusion when discussing baseline conditions and targets within the LRP.

The Iowa DOT indicated that due to their 5-year planning and program development cycle, much of the investment planned for the time period of 2016 through 2020 will already be set by the time these rules go into effect. They added that they have limited ability to make changes, and it may take some time for them to redirect investment, if the national measures indicate different investment prioritization. Similarly, North Carolina DOT indicated that the 2 and 4 year periods will result in their State setting targets based on work that is already planned rather than targets that represent desired long-term system improvement.

The TEMPO did not support the 4-year frequency proposal and argued that MAP-21 does not specify target dates, ranges, or frequencies. They added that State DOTs and MPOs should be allowed to fulfill the continuing, cooperative, and comprehensive process as it relates to the establishment of feasible performance targets and their use in planning activities and documents. They also made a comment that State DOTs and MPOs should establish appropriate targets and meet the statutorily required biennial progress report for each target. Lastly, they rejected any specific target year or target setting frequency proposed by other entities under this and all other related rulemakings.

Finally, the Minnesota DOT indicated that the proposed framework requiring 4-year performance periods with both 2-

year targets and 4-year targets may be overly complex.

The FHWA is aware that pavement and bridges deteriorate slowly and agrees with the comments from AASHTO and the State DOTs of California, Connecticut, and Texas. However, it is important to recognize the difference between condition changes for individual pavement sections or individual bridges over time versus condition changes of system network or system deck areas over time. To confirm this difference, FHWA examined both pavement and bridge condition trends using the proposed condition measures and found noticeable changes over 2-year and 4-year time periods.³² This is also evident in the letter submitted by Oregon DOT³³ for their bridge condition trends using the proposed bridge measures. This analysis provided sufficient evidence for FHWA to believe that the magnitude of percentage of system changes in Good and Poor condition for bridges is noticeable.

As stated in the NPRM, established targets (2-year target and 4-year target) would need to be considered as interim conditions/performance levels that lead toward the accomplishment of longer term performance expectations in State DOT long-range statewide transportation plans³⁴ and NHS asset management plans.³⁵ In order to avoid confusion, FHWA used the term “longer-term performance expectations” in the NPRM to distinguish between longer term targets and the interim anticipated condition/performance (*i.e.*, 2-year and 4-year targets) toward those longer-term performance expectations. The FHWA recognizes the importance of considering a longer time horizon for planning and programming projects that considers and evaluates temporal tradeoffs between feasible improvements for more efficient and effective investment decisions. The FHWA strongly recommends that State DOTs and MPOs consider longer time horizons, which look beyond 4 years (*i.e.*, multiple performance periods), for planning and programming of projects so identification and selection of those projects is guided by the longer term performance expectations. As indicated above, the purpose of the performance period is simply to measure and evaluate condition/performance, which

should not be assumed to be a “planning, programming, project delivery, data collection, data reporting” cycle of individual improvement projects or a program of projects. Thus, the performance period and LRP cycles look at different periods of time and do not have to be aligned to be effective. For these reasons, FHWA believes that the performance period does not need to be aligned with the current LRP cycles of State DOTs and MPOs. Therefore, FHWA retains the intent of the proposed language in sections 490.105(e)(4) and (e)(5) in the final rule. In sections 490.105(e)(4)(iii) and (e)(4)(iv), FHWA added the phrase “for the measures in paragraphs (c)(1) through (c)(3) of this section” to codify the specific measures being discussed. This addition does not change the intent of the paragraph.

Discussion of Section 490.105(e)(5) State DOT Reporting

Because there were no substantive comments on section 490.105(e)(5), FHWA made no changes.

Discussion of Section 490.105(e)(6) Target Adjustment

The FHWA proposed that State DOTs may adjust their established 4-year targets when they submit their Mid Performance Period Progress Report (described in section 490.107(b)(2)). This language recognizes that State DOTs would need to consider many factors in establishing targets that could impact progress, such as uncertainties in funding, changing priorities, and external factors outside the control of State DOTs. This target adjustment allowance is limited to the Mid Performance Period Progress Report, and is not allowed at any other time during the performance period. In the NPRM, FHWA expressed that this frequency of adjustment allows a State DOT to address changes they could not have foreseen in the initial establishment of 4-year targets while still maintaining a sufficient level of control in the administrative procedure necessary to carry out program requirements in an equitable manner. The MPOs impacted by a State DOT's adjustment of targets have the option to adjust their target by either: (1) Agreeing to plan and program projects so that they contribute toward the adjusted State DOT target for that performance measure or (2) committing to a new quantifiable target for that performance measure for its metropolitan planning area when a State DOT adjusts their target, as described in section 490.105(f)(7). The Metropolitan Transportation Commission expressed

³² FHWA (2015) analysis results have been included in the Docket with the filename “NHS Bridge Condition Changes 2015 09 29.”

³³ NPRM Comment FHWA-2013-0053-0161: <https://www.regulations.gov/document?D=FHWA-2013-0053-0161>.

³⁴ 23 U.S.C. 135(f).

³⁵ 23 U.S.C. 119(e).

their support for the proposed approach and stated that the “flexibility of revising targets in mid-stream will improve the ability of State DOTs and MPOs to more accurately predict future performance achievement.” The Illinois DOT expressed their desire for FHWA to retain the language in section 490.105(e)(6). However, the Center for American Progress and Transportation for America opposed the proposed language by stating that the proposed rule provides State DOTs with too much flexibility when establishing performance management targets and recommended that the rule should not allow State DOTs to adjust targets. Transportation for America stated that section 490.105(e)(6) is “directly against the intent of Congress for the nation’s performance management program to increase accountability and transparency of the Federal-aid highway program and improve project decision making through performance-based planning and programming.” They added that section 490.105(e)(6) “provides State DOTs blanket approval to amend their self-established targets after just 2 years without any criteria” and amending self-established targets is “unnecessary and contradictory to congressional intent.”

The AASHTO and the State DOTs of Connecticut, Missouri, Oklahoma, and Oregon recommended that State DOTs should be allowed to adjust targets annually. The South Dakota DOT stated that MAP-21 clearly provides that individual State DOTs establish their own targets. However, they believe that

the proposed rule suggests that FHWA can restrict State DOTs’ authority to establish targets, notably as to when targets can be revised. They added that FHWA “must fully respect a State’s authority to set and revise targets.”

The FHWA disagrees with the comment made by Transportation for America that its approach is “unnecessary and contradictory to congressional intent” and may reduce accountability and transparency of the Federal-aid highway program. As stated previously, the language in section 490.105(e)(6) is a result of FHWA’s recognition that State DOTs have to consider many factors in establishing targets that could impact progress such as uncertainties in funding, changing priorities, and external factors outside the control of State DOTs.

Although the flexibility of adjusting target is granted, FHWA does not believe this approach reduces the accountability associated with targets and transparency in adjusting targets. First, as stated previously, the target adjustment allowance is limited to the Mid Performance Period Progress Report and not allowed at any other time during the performance period.

Second, the 4-year target adjustment through the Mid Performance Period Progress Report will provide a more consistent method for significant progress determinations under section 490.109. The FHWA felt it is necessary to provide State DOTs the same opportunity to make significant progress for 4-year targets as for the 2-year targets. As shown in Figure 2 below,

both 2-year and 4-year targets for the first performance period are reported to FHWA by October 1, 2018. Those 2-year targets will be subjected to a significant progress determination under section 490.109 after the Mid Performance Period Progress Report is submitted on October 1, 2020. Therefore, for the 2-year targets, the duration between target reporting and significant progress determinations is about 2 years. However, for 4-year targets, the duration between target reporting and significant progress determination is about 4 years because the targets are reported on October 1, 2018, and the significant progress determination will be made after the Full Performance Period Progress Report is submitted on October 1, 2022. Allowing the adjustment of the 4-year target in the Mid Performance Period Progress Report provides the opportunity to make the duration between target reporting and significant progress determination about 2 years, which is consistent with 2-year targets.

Third, this rule includes section 490.107(b)(2)(ii)(E) which requires State DOTs to include in their Mid Performance Period Progress Report a discussion on the basis for the adjustment and how the adjusted target supports expectations documented in longer range plans (*e.g.*, the State asset management plan and the long-range statewide transportation plan).

Finally, a State DOT’s discussion on targets and adjustment will be available on a public Web site to ensure transparency and accountability in the process.

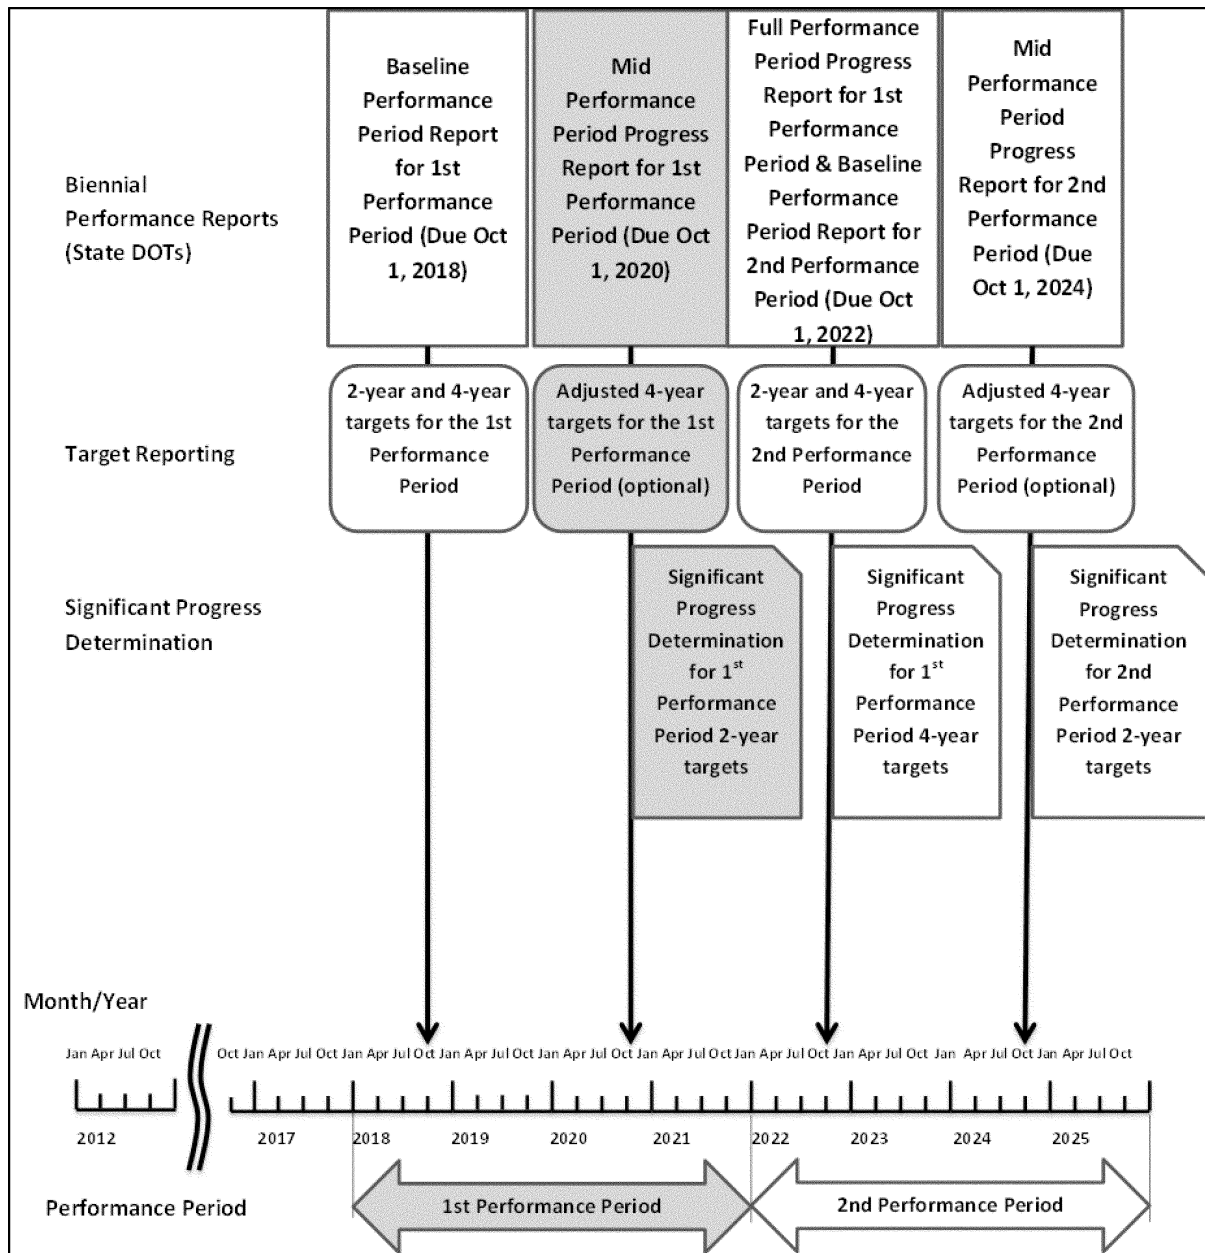

Figure 2 – State DOT Target Adjustment in Mid Performance Period Progress Report

The MAP-21 gives FHWA the discretion to establish requirements for targets such that any targets a State DOT establishes will achieve the overall requirements of the program. The FHWA believes State DOTs have the authority and flexibility to establish targets for the performance measures. However, contrary to South Dakota DOT's comment, FHWA does not believe MAP-21 provides State DOTs the authority to adjust or revise targets at their discretion. Instead, FHWA believes that the statute provides FHWA the authority to establish requirements for targets. The FHWA feels that some

requirements must be established so that accountability and transparency are instilled in the performance management process. The FHWA also believes that these requirements for targets are consistent with six³⁶ of the

³⁶ Six of the Nine principles used in the development of proposed regulations for target establishment criteria: www.regulations.gov, Docket FHWA-2013-0053:

- Ensure for Consistency—provide a sufficient level of consistency, nationally, in the establishment of measures, the process to set targets and report expectations, and the approach to assess progress so that transportation performance can be presented in a credible manner at a national level.

- Increase Accountability and Transparency—consider an approach that will provide the public and decision makers a better understanding of Federal transportation investment needs and return on investments.
- Consider Risk—recognize that risks in the target establishment process are inherent, and that performance can be impacted by many factors outside the control of the entity required to establish the targets.
- Understand that Priorities Differ—recognize that State DOTs and MPOs must establish targets across a wide range of performance areas, and that they will need to make performance trade-offs to establish priorities, which can be influenced by local and regional needs.
- Recognize Fiscal Constraints—provide for an approach that encourages the optimal investment of Federal funds to maximize performance but

nine principles listed in the NPRM preamble that were considered in the development of the proposed regulation.

The biennial reporting cycle, as shown in Figure 2 above, has the appearance of only allowing State DOTs to incorporate uncertainties 2 years in advance. However, as shown in Figure 2 above, the actual duration (*i.e.*, from Mid Performance Period Progress Report due date, October 1, to the end of the performance period) State DOTs have to incorporate uncertainties is shorter than 2 years. For example, as shown in Figure 2, the 4-year target established in 2018 (the first State Biennial Performance Report) may be adjusted in 2020 (the second State Biennial Performance Report due on October 1, 2020). Note that the 4-year target for the first performance period is the anticipated condition/performance level at the end of each performance period (December 31, 2021). As discussed in section 490.105(e)(4), 4-year targets would reflect the programmed improvement projects anticipated to be delivered, and their condition/performance to be measured, by the end of that performance period. Therefore, FHWA believes that target adjustment, in October 2020 for the anticipated condition/performance as of December 2021, provides State DOTs a sufficient level of control in the administrative procedure necessary to carry out these program requirements in a reasonable manner. Note that duration from October 2020 to December 2021 is 15 months, not 2 years.

Annual target adjustment, as suggested by AASHTO and others, would be adjusting the 4-year target (the anticipated condition/performance as of December 2021) during calendar year 2021. The FHWA believes the transparency of target and the target establishment process will be compromised if targets are allowed to be adjusted close to the end of the assessment period. Therefore, FHWA retains the language in section 490.105(e)(6) that allows State DOTs to only adjust their established 4-year targets when they submit their Mid Performance Period Progress Report.

In the NPRM, FHWA proposed that, if an MPO had originally agreed to accept the State DOT's targets and the State DOT adjusts them, the MPO would need to revisit its targets. Several MPOs and

MPO associations, including NARC and TEMPO, argued that the final rule should explicitly state that when a State DOT chooses to adjust targets, an MPO is not required to also adjust its own established targets. The commenters suggested that a State DOT should be required to coordinate with the MPO if the State DOT adjusts its targets, just as State DOTs are required to do when establishing initial targets. The TEMPO recommended that any target adjustments proposed by a State DOT that directly impact an MPO's planning area should be made jointly with the MPO. The FHWA agrees with these comments to implement the target selection coordination requirements under 23 U.S.C. 135(d)(2)(B)(i)(II). Therefore, FHWA added language in section 490.105(e)(6) that if a State DOT decides to adjust their 4-year targets then it must coordinate with relevant MPOs.

Discussion of Section 490.105(e)(7) Phase-in Requirements for Interstate Pavement Measure

In the NPRM, FHWA recognized that some State DOTs may not be able to meet all data requirements in section 490.309(b)(1) prior to the start of the first proposed performance period for the Interstate System pavement condition measure. As a result, FHWA proposed the following for the measures in section 490.307(a)(1) and (a)(2) in the NPRM:

- State DOTs establish their 4-year targets and report these targets in their Baseline Performance Period Report, required under section 490.107(b)(1);
- State DOTs are not required to report 2-year targets and baseline condition/performance in their Baseline Performance Period Report; and
- State DOTs update the baseline condition/performance in their Baseline Performance Period Report, with the 2-year condition/performance in their Mid Performance Period Progress Report, described in section 490.107(b)(2)(ii)(A). Also, State DOTs may adjust their 4-year targets, as appropriate.

The State DOTs of Maine, New Hampshire, and Vermont commented that the phase-in process for the Interstate pavement condition proposed in the NPRM only relieves State DOTs from reporting baseline condition and 2-year targets, but ignores all other new requirements. They commented that establishing both 2 and 4-year targets will require the same baseline data. They questioned whether relieving only the 2-year target was an oversight in the NPRM, and if FHWA should also delay the establishment of 4-year targets. They

requested additional clarification and guidance on how to establish 4-year targets in the absence of baseline condition data. The New Jersey DOT made a similar comment stating that it is impractical to establish and report 4-year targets in the absence of baseline condition information and requested clarification of the requirement to report 4-year targets when a baseline condition/performance reporting is not required. Texas DOT stated that establishing the targets will be challenging since some State DOTs may not have historical information for some of the metrics in this rule and requested guidance on how these measures could be phased in along with new metrics.

During the development of the NPRM, FHWA considered numerous ways for State DOTs to meet the target and progress reporting requirements under the 23 U.S.C. 150(d)(1) and 150(e), which require State DOTs to establish the first set of performance targets one year after the effective date of the final rule and to report those targets not later than October 1, 2016.³⁷ The FHWA felt at the time of the development of the NPRM that some State DOTs may not be able to meet the new data reporting requirements for Interstate pavement condition, as provided in section 490.309(b)(1), until after the start of the first proposed performance period. The FHWA had to consider how State DOTs could meet the statutory requirements. The FHWA also realized that those State DOTs would encounter difficulties in establishing 4-year targets without sufficient data or the baseline condition/performance for Interstate pavement condition measure for the first performance period. Therefore, FHWA allowed State DOTs to estimate their initial 4-year target. This would be done with the understanding that State DOTs would not have baseline condition when the target was first established and State DOTs would be provided an opportunity to adjust their estimated 4-year target through Mid Performance Period Progress Report 2 years later. Their actual 2-year condition in the Mid Performance Period Progress Report would become the baseline condition for the first performance period.

The FHWA has considered the comments and examined State DOTs' ability to implement the data requirements in section 490.309(b)(1) for the Interstate pavement measures with respect to the updated implementation timeline in Figure 2 above. As provided in section 490.309(a), the first data collection cycle

recognize that, when operating with scarce resources, performance cannot always be improved.

- Provide for Flexibility—recognize that the MAP-21 requirements are the first steps that will transform the Federal-aid highway program to a performance-based program and that State DOTs, MPOs, and other stakeholders will be learning a great deal as implementation occurs.

³⁷ "4 years after the date of enactment of the MAP-21" stipulated in 23 U.S.C. 150(e).

(1-year cycle) will be in calendar year 2018. Therefore, assuming this final rule is effective in calendar year 2016, some State DOTs will not have the baseline conditions for Interstate pavement measures at the time of target reporting in Baseline Performance Period Report in calendar year 2018. The FHWA understands that it will be difficult to estimate targets without the baseline condition data for some State DOTs. However, State DOT target establishment “not later than 1 year of the effective date of this rule” in section 490.105(e)(1) is a statutory requirement under 23 U.S.C. 150(d). Therefore, to meet the statutory mandate, FHWA cannot delay the due date of State DOT target establishment. Therefore, as stated above, FHWA has allowed State DOTs to estimate their initial 4-year target. This would be done with the understanding that State DOTs would not have baseline condition when the target is first established and State DOTs would be provided an opportunity to adjust their estimated 4-year target through Mid Performance Period Progress Report 2 years later. Their actual 2-year condition in the Mid Performance Period Progress Report would become the baseline condition for the first performance period. Therefore, FHWA retains the phase-in requirements for Interstate pavement measure in section 490.105(e)(7) as proposed in the NPRM.

Discussion of Section 490.105(f) MPO Targets

Section 490.105(f) describes MPO requirements for the establishment of targets for all measures identified in section 490.105(c). The MPOs are required to implement the 23 U.S.C. 134(h)(2)(B) target establishment provisions in a manner that provides for a level of consistency necessary to evaluate and report progress at both the national and MPO level.

Discussion of Section 490.105(f)(1) MPO Target Schedule

To meet the statutory requirements in 23 U.S.C. 134(h)(2)(C), section 490.105(f)(1) requires each MPO to establish 4-year targets no later than 180 days after the relevant State DOT establishes its targets.

As discussed in the combined discussion for sections 490.105(e)(1) and 490.105(f)(1), FHWA recognizes that the level of effort and required coordination for selecting performance targets is substantial and takes time. However, to meet the statutory requirements in 23 U.S.C. 134(h)(2)(C), FHWA retains the language in section 490.105(f)(1).

In the NPRM, FHWA attempted to develop these target establishment requirements so that they could be met by all MPOs. Recognizing that MPOs vary in size, capability, resource availability, and ability to establish performance targets, FHWA proposed that they only be required to establish 4-year targets and have target establishment options, as provided in section 490.105(f)(4) of the NPRM (section 490.105(f)(3) of the final rule). The FHWA proposed MPO target establishment options: (1) Agreeing to plan and program projects so that they contribute toward the accomplishment of the relevant State DOT targets or (2) committing to quantifiable targets for their metropolitan planning area.

The NARC expressed their appreciation for FHWA’s recognition of the burden an MPO faces in establishing targets and not requiring them to establish 2-year targets. However, Transportation for America stated that this rule lacks consistency as State DOTs are required to establish both a 2-year and 4-year targets while MPOs are only required to establish 4-year targets. The FHWA considered these comments and determined that because MPOs vary in capability, resources, and their ability to establish performance targets it is important that the measures be structured in a way that allows all MPOs to meet the requirements in this rule. The FHWA retains the proposed language in NPRM section 490.105(f)(1)(i), in the final rule.

Section 490.105(f)(1)(ii) is reserved.

The FHWA retains the language of section 490.105(f)(2), as proposed in the NPRM. (See discussion for section 490.105(e)(2).)

The FHWA deleted the language in section 490.105(f)(3) of the NPRM because this paragraph is redundant with what is already in section 490.105(f)(1). Subsequent paragraphs in section 490.105(f) were renumbered in the final rule.

Discussion of Section 490.105(f)(3) and (4) MPO Target Establishment Option and MPOs Serving a Multistate Metropolitan Planning Area

In the NPRM, FHWA proposed MPO target establishment options that would provide for a level of consistency necessary to evaluate and report progress at an MPO level, while providing for a degree of flexibility to support metropolitan planning needs. The FHWA also attempted to develop these target establishment requirements so that they could be met by all MPOs, recognizing that MPOs vary in capability, resource availability, and ability to establish performance targets.

Therefore, FHWA proposed in section 490.105(f)(4) that MPOs would establish targets specific to the metropolitan planning area by either: (1) Agreeing to plan and program projects so that they contribute toward the accomplishment of the relevant State DOT targets, or (2) committing to quantifiable targets for their metropolitan planning area. The proposed language gave MPOs two options to establish targets. The MPOs could establish their own quantifiable targets. Alternatively, recognizing that the resource level and capability of some MPOs to reliably predict performance outcomes varies across the country, FHWA proposed an approach that would allow MPOs that did not want to establish their own quantifiable target to establish targets by supporting State DOT targets for performance. The FHWA also stated in the NPRM that regardless of which option MPOs choose to establish targets, MPOs may need to work with relevant State DOTs to coordinate, plan, and program projects for their planning area.

The NARC expressed their appreciation for the flexibility provided in section 490.105(f)(4) of the NPRM (section 490.105(f)(3) in the final rule), which gives an MPO target establishment options. Moreover, they supported flexibility that emphasizes local transportation priorities in establishing targets and allows MPOs to establish targets that represent a decline in pavement or bridge conditions, if dictated by local priorities. The Connecticut DOT, Mid America Regional Council, and NYSAMPO expressed their support for the proposed MPO target establishment options. However, the Center for American Progress opposed the options, stating that MPOs should be required to establish quantitative performance targets.

The Northeast Ohio Areawide Coordinating Agency stated that if State funds are distributed with a focus on improving capacity, MPOs should have the freedom to establish regional targets that are realistic to the level of funding an MPO receives for maintenance separate from the State DOT goals. The Iowa DOT suggested FHWA should consider a waiver process by which the performance monitoring requirements for MPOs in those States where State DOTs hold sole programming authority over the State’s NHPP funding allocation. This would effectively eliminate the MPOs’ ability to impact the NHPP. The Connecticut DOT commented that many of the smaller MPOs do not currently have the resources to collect and analyze this data so this is likely to put additional

burdens on State DOTs. They advocated that any MPO electing to establish their own targets should be required to collect and analyze whatever data is needed to support their plan, if that data is not already available from State DOT or other entities. Because FHWA believes that MPOs vary in size, capability, resources, and ability to establish performance targets, FHWA disagrees with the Center for American Progress's comment to require that MPOs only be allowed to establish quantifiable targets. The FHWA believes that performance management practices will continuously improve as State DOTs and MPOs implement the requirements under this rule. The FHWA anticipates that more MPOs will be able to establish their own quantitative targets in the future as the performance management practices mature.

In response to the comments from Northeast Ohio Areawide Coordinating Agency and Iowa DOT, FHWA emphasizes that regardless of who controls funds or programming authority, coordination in target selection is required under 23 U.S.C. 135(d)(2)(B)(i)(II) and 23 U.S.C. 134(h)(2)(B)(i)(II). (See the discussion section for sections 490.105(e)(2) and 490.105(f)(2) for more details on target selection coordination requirements.)

In response to Connecticut DOT's comment, FHWA notes that the pavement condition measures in subpart C are applicable to the mainline highways on the Interstate System and on the non-Interstate NHS. The bridge condition measures in subpart D are applicable to bridges carrying the NHS, which includes on- and off-ramps connected to the NHS. This is consistent with the statutory provisions in 23 U.S.C. 150(c)(3). Therefore, the applicable network for State DOTs and MPOs within that State are not mutually exclusive. The data collection and analysis must be done by State DOTs and MPOs in a coordinated manner, as required in 23 CFR 450.208.

The FHWA considered the comments on MPO target establishment options and retains in the final rule the proposed options with minor revision in section 490.105(f)(4) of the NPRM (section 490.105(f)(3)). The revision is to clarify that an MPO can exercise different target establishment options for each measure in subparts C and D, and that they do not have to select the same option for all measures in subparts C and D. The FHWA amended section 490.105(f)(4) so that MPOs shall establish a target by either: (1) Agreeing to plan and program projects so that they contribute toward the

accomplishment of the relevant State DOT target for that performance measure, or (2) committing to a quantifiable target for that performance measure for their metropolitan planning area.

The New Jersey DOT commented that multi-state MPOs should have the discretion to establish different targets for each State. In response to the comment, FHWA added section 490.105(f)(4) to address situations where metropolitan planning areas extend across multiple States. As discussed in section 490.105(f)(3), MPOs have an option for establishing a target by either: (1) Agreeing to plan and program projects so that they contribute toward the accomplishment of the relevant State DOT targets, or (2) committing to quantifiable targets for their metropolitan planning area. The added language in section 490.105(f)(4)(i) provides MPOs the option to choose different target establishment options, as specified in section 490.105(f)(3), for the portion of the metropolitan area within each State. For example, if a metropolitan planning area of an MPO is located within two States (*e.g.*, "State A" and "State B"), that MPO could establish their target for a measure by: (1) Agreeing to plan and program projects so that they contribute toward the accomplishment of the State A target for the portion of metropolitan planning area within State A; and (2) committing to quantifiable target for the portion of their metropolitan planning area within State B. The language in section 490.105(f)(4)(ii) clarifies that if an MPO chooses the option to "agree to plan and program projects to contribute toward State targets" for the entire metropolitan planning area, then they must plan and program projects in support of the individual State DOT targets as applicable to the portion of the metropolitan area within each State.

Although MPOs could exercise their target establishment options provided in section 490.105(f)(3) and (4), FHWA emphasizes that all MPOs are required to coordinate with relevant State DOTs in MPO target establishment regardless of which options MPOs choose in target establishment.

Sections 490.105(f)(5) and 490.105(f)(6) are reserved.

Discussion of Section 490.105(f)(7) MPO Response to State DOT Target Adjustment

The FHWA proposed MPO response options to State DOT target adjustment, described in section 490.105(e)(6), through the State DOT's Mid Performance Period Progress Report. This MPO response option was only for

those MPOs who established their targets by agreeing to plan a program of projects so that they contribute to the adjusted State DOT target for a performance measure, as provided in section 490.105(f)(4)(i) of the NPRM (section 490.105(f)(3)(i) of the final rule). Those MPOs responding to State DOT target adjustment have the following options: (1) Agreeing to plan and program projects so that they contribute toward the accomplishment of the relevant State DOT targets, or (2) committing to quantifiable targets for their metropolitan planning area.

The NARC made a comment that the rule should explicitly state that when a State DOT chooses to adjust its targets, an MPO is not required to also adjust its own established targets. The FHWA believes that the language in this rule does not require MPOs to adjust their own quantifiable target when State DOTs adjust their targets. The FHWA feels that it is not necessary to explicitly state this in the final rule. The FHWA retains the proposed MPO response options with minor revisions in section 490.105(f)(7). The revision is to clarify that MPOs can exercise different target establishment options for each measure in subparts C and D, and that they do not have to select the same option for all measures in subparts C and D. The FHWA amended section 490.105(f)(7) to read that MPOs shall respond to State DOT target adjustment by either: (1) Agreeing to plan and program projects so that they contribute toward the accomplishment of the relevant State DOT target for that performance measure, or (2) committing to a quantifiable target for that performance measure for their metropolitan planning area. Although MPOs could exercise their target selection options provided in section 490.105(f)(7), FHWA emphasizes all MPOs are required to coordinate with relevant State DOTs in target selection, as required in section 490.105(f)(3), regardless of which option MPOs choose in target selection.

Discussion of Section 490.105(f)(8) MPO Target Adjustment

The Texas DOT commented that "if the proposed rules are adopted as drafted, Texas State DOT will need to work with TEMPO and their MPOs and transit providers to amend all existing Metropolitan Planning Agreements to include language regarding performance planning, measures, targets, etc." They added that this is going to become "even more important in light of the new OMB Super Circular and the potential need to make changes to the Metropolitan Planning Agreements based on new regulations in 2 CFR 200." The Texas

DOT commented that “this requirement is a significant task, and State DOTs and MPOs should be given the greatest degree of latitude and flexibility in making these revisions on a schedule of their own choosing without penalty.”

The NYMTC commented that this rule requires State DOTs and MPOs to document procedures for reporting, target setting, target adjustment, and related coordination in metropolitan planning agreements. The NYMTC commented that they object to the use of metropolitan planning agreements for this purpose. In lieu of the metropolitan planning agreements, they recommended maximum flexibility for State DOTs and MPOs in establishing the coordination that is appropriate to each State and region. They argued that MPOs and State DOTs should not have to revisit the metropolitan planning agreements each time they make an adjustment to targets or related data collection and performance reporting procedures.

The comment from Texas DOT on metropolitan planning agreement requirements is beyond the scope of this rule. (See 23 CFR 450.314 for details on metropolitan planning agreement requirements.)

Addressing NYMTC's comments, FHWA amended the language in section 490.105(f)(8) to remove the requirement to document the target adjustment process in the metropolitan planning agreement. The manner in which targets will be adjusted is to be mutually agreed upon by State DOTs and MPOs. This change is consistent with numerous comments received on this rule and the Planning Rule. As noted in the discussion of section 490.107(c)(1) on MPO reporting, amending the metropolitan planning agreement as part of the performance management process is onerous and does not provide the flexibility needed. This change is also intended to emphasize the need for State DOTs and MPOs to coordinate when adjusting targets, just as they are to do when establishing targets. (See discussion section for section 490.107(c)(1) for more information.)

No substantive comments were received for section 490.105(f)(9). The FHWA retains the language in section 490.105(f)(9) as proposed.

Discussion of Section 490.107 Reporting on Performance Targets

Section 490.107 deals with the biennial performance reporting schedule and requirements. The Montana DOT commented that, with multiple rulemakings underway and more planned in the future, FHWA should coordinate the reporting

deadlines for all of the rules that fall under this title. This will reduce the burden on States and allow reasonable process development timeframes.

As outlined in section 490.107, FHWA notes that reporting timeframes will be coordinated to the maximum extent practicable.

The New York DOT submitted a comment expressing their support for the provision that requires that only State DOTs report to FHWA on performance targets and progress in achieving established targets.

Discussion of Section 490.107(a)(1)–(2) General Reporting on Performance Targets

The North Carolina DOT commented that the use of three different reports and the associated requirements is unduly complex. They suggest that since the data is being submitted to HPMS and NBIS, FHWA should extract and use the information to meet the reporting requirements.

The FHWA clarifies that performance metric data is completely different from performance target, condition/performance, progress evaluation, etc. The FHWA felt it is necessary to differentiate the two in this rule because metric data refers to IRI, Cracking Percent, rutting, and faulting values for pavement sections reported to HPMS and NBI Data Items 58-Deck, 59-Superstructure, 60-Substructure, and 62-Culverts). These reported metric data are not performance measures and they do not represent performance targets. Section 490.107 in this rule deals with reporting targets, condition/performance, progress evaluation, etc. and they are also required under 23 U.S.C. 150(e). For this reason, FHWA retains section 490.107(a)(1) and 490.107(a)(2) as proposed in the NPRM.

Discussion of Section 490.107(a)(3) Electronic Reporting Template

The FHWA retains the language in section 490.107(a)(3) that states an electronic template, provided by FHWA, will be used for State DOT reporting. Comments from the AASHTO, Connecticut DOT, Iowa DOT, Missouri DOT, New York DOT, Oklahoma DOT, Oregon DOT, PSRC, Texas DOT, and Washington DOT expressed their support for an electronic template. They wanted State DOTs to be included in the development of the product and given time to review and comment on the requirements to ensure it is not an undue burden to report the data.

The FHWA will invite the public to attend demonstrations of the reporting tool and plans to solicit comments on the reporting tool during this

demonstration. The FHWA will consider comments received on the electronic reporting template.

The New York State DOT commented that FHWA should minimize additional requirements by allowing States and MPOs to work within existing processes, to the extent possible, without imposing onerous reporting requirements or requiring significant adjustment to existing legal documentation. The FHWA notes that development of an electronic reporting template is intended to aid in streamlining the reporting process.

Discussion of Section 490.107(b)(1)(i) Baseline Performance Period Report Schedule

The FHWA received comments on the proposal to require submission of the first Baseline Performance Period Report on October 1, 2016, in section 490.107(b)(1)(i). Comments from Washington DOT and Alaska DOT&PF noted that the proposed 2016 due date would not allow the time required by MAP-21 to establish targets. The Seattle DOT noted this as well, but asked that all deadlines be removed and State DOTs be allowed to conduct an extensive comment and revision process without a specific deadline.

The statute established target establishment and reporting deadlines for State DOTs and MPOs. The FHWA cannot change statutory deadlines. Accordingly, because this rule is being issued and effective after October 1, 2016, FHWA issued guidance on the State DOT report due on October 2016 to advise State DOTs how to comply with the statutory deadline for the first performance reporting under 23 U.S.C. 150(e). Please see discussion section for sections 490.105(e)(1) & (f)(1) for more on the FHWA issued guidance. Considering the comments received on this section, and the requirements in sections 490.105(e)(1) and 490.105(f)(1) (requiring establishment of State DOT targets within 1 year of the effective date of each final rule and MPO targets to be established within 180 days of State targets), FHWA amended the implementation timeline in section 490.107(b)(1)(i). The FHWA amended the due date of the first Baseline Performance Period report from October 1, 2016, to October 1, 2018.

With the revision to section 490.107(b)(1)(i), the first Baseline Performance Period Report is now due October 1, 2018, which is a delay of 2 years. Due to this change, the related performance period discussed in section 490.105(e)(4)(i) will also be delayed 2 years and begin on January 1, 2018. State DOTs and MPOs will still be

required to establish targets by the date specified in sections 490.105(e)(1) and 490.105(f)(1). A timeline for Biennial Performance Reports is shown in Figure 1 in section 490.105(e)(1).

Discussion of Section 490.107(b)(1)(ii)(A) and (C) Baseline Performance Period Report Content

The North Dakota DOT commented that the reporting requirements in section 490.107 were too detailed and that the use of the phrase “to the maximum extent practicable” opens the door to an unconstrained demand on State DOTs with possibilities of abuse. They added that documents such as the long-range statewide transportation plan are already required to document the measures, targets, and financial plans.

The FHWA disagrees with the comment from the North Dakota DOT. The FHWA has identified the minimum reporting requirements in section 490.107 needed to establish a performance management program that meets the intent and requirements of MAP-21, and allows for the discussion of performance management at a national level. The FHWA believes a set of minimum reporting requirements are necessary to provide a sufficient level of consistency in the report and the approach to assess progress, so that transportation performance can be presented in a credible manner at a national level. The FHWA also believes that the requirements in section 490.107 provide the public and decisionmakers a better understanding of Federal transportation investment needs and return on investments, thereby increasing accountability and transparency in the performance management process. The FHWA used the phrase “to the maximum extent practicable” in section 490.107(b)(1)(ii)(A) and (C) where State DOTs are required to include discussions for the basis for each established target and their relationship with other performance expectations (in longer range plans, such as the State asset management plan or the long-range statewide transportation plan). The FHWA believes these descriptions are necessary for State DOT justifications to the public and decisionmakers on how their targets are derived. The FHWA reiterates that the statutory language in MAP-21 provides that State DOTs have the ability to establish their own targets but does not provide FHWA the authority to approve or reject State DOT established targets. The FHWA believes more detailed and defensible explanations will benefit the public, decisionmakers, and State DOTs. The FHWA retains the language in

section 490.107(b)(1)(ii)(A) and (C) in the final rule.

Discussion of Section 490.107(b)(1)(ii)(C) and 490.107(b)(2)(ii)(C) Relationship With Other Performance Expectations in Baseline Performance Report and Investment Strategy Discussion in the Mid-Period Performance Report

Sections 490.107(b)(1)(ii)(C) (Relationship with other performance expectations in Baseline Performance Report) and 490.107(b)(2)(ii)(C) (Investment strategy discussion in the Mid-Period Performance Report) outline the requirements to discuss the link between the performance management targets, other plans, and the effectiveness of the investment strategies documented in the State asset management plan. The AASHTO, Alaska DOT&PF, and Connecticut DOT commented that these requirements should be removed as they are “duplicative and excessive reporting requirements,” and open the “door to an unconstrained demand on State DOTs for information and discussion.” They also commented that the existing documents, such as the long-range Statewide transportation plan and STIP, have requirements to document measures, targets, financial plans, and how the projects support program goals. The North Carolina DOT commented that the mid-period discussion of the State asset management plan could be excessive. The North Carolina DOT asked if this discussion is to be a one-time occurrence or occur in each mid-period report.

As discussed above for section 490.107(b)(1)(ii)(A) and (C), FHWA believes minimum reporting requirements are necessary to provide a sufficient level of consistency, in the expectations and approach, to assess progress so that transportation performance can be presented in a credible manner at a national level. The FHWA also believes that the requirements in section 490.107 provide the public and decisionmakers a better understanding of Federal transportation investment needs and return on investments, thereby increasing accountability and transparency in the performance management process. The FHWA does not agree that the items to be reported in the biennial performance reports are duplicative from the State asset management plan, long-range statewide transportation plan, STIP, or others. Although plans and reports support performance management implementation and the performance targets in section 490.105, the biennial performance reports under this rule are

updates of performance information every 2 years, but the long-range statewide transportation plan and STIP are required as part of planning process. Moreover, FHWA believes that it will be very difficult for the public and decisionmakers to obtain performance information by searching through various plans (e.g., State asset management plan, long-range statewide transportation plan, STIP, and others). The FHWA believes that the minimum reporting requirements under section 490.107 will facilitate public access to performance information in a consistent cycle for all State DOTs, thereby increasing accountability and transparency and helping to facilitate the presentation of transportation performance at a national level. Therefore, FHWA retains the language in sections 490.107(b)(1)(ii)(C) and 490.107(b)(2)(ii)(C), as proposed in the NPRM. The reporting requirements are focused on the impacts of performance management. Including this information within the reports from all State DOTs and on the same timeline will aid in the creation of a national performance story.

Discussion of Section 490.107(b)(1)(ii)(D) Urbanized Area Boundaries and Population Data for Targets

The FHWA proposed in section 490.313(b)(1) that thresholds for IRI rating determination (Good, Fair, or Poor) would be different among the pavement sections located within and outside of the urbanized areas with a population greater than 1 million. In the case of urbanized area boundary changes during a performance period, FHWA proposed that State DOTs declare and describe the urbanized area in their Baseline Performance Period Report at the beginning of each performance period so that the IRI rating determinations could be done consistently throughout the performance period. The FHWA revised section 490.107(b)(1)(ii)(D) to remove the term “IRI rating determination” because the thresholds for IRI rating determination are the same regardless of the location of pavement segments. (See sections 490.103(b) and 490.313(b)(1) for further discussion.)

For section 490.107(b)(1)(ii)(D), the Florida DOT requested clarification on the use of the term “applicable urbanized areas” in regards to the NPRM language that states: “. . . State DOTs shall document the boundary extent for all applicable urbanized areas and the latest Decennial Census population data, based on information in HPMS.”

Should a State DOT choose to establish additional urbanized targets, as outlined in section 490.105(e)(3), urbanized boundary information would need to be submitted. The term “applicable urbanized areas” in section 490.107(b)(1)(ii)(D) applies to the urbanized areas for which State DOTs establish optional targets under section 490.107(e)(3). As stated above, the thresholds for IRI rating determinations in section 490.107(b)(1)(ii)(D) are no longer based on the location of pavement sections. Therefore, the urbanized areas with a population greater than 1 million will no longer apply in this paragraph. In the final rule, the term “applicable urbanized areas” in section 490.107(b)(1)(ii)(D) applies only to the urbanized areas for which State DOTs establish optional targets under section 490.105(e)(3).

Discussion of Section 490.107(b)(1)(ii)(E) Deleted Section

The FHWA deleted section 490.107(b)(1)(ii)(E) so State DOTs will not be required to declare or describe NHS limits for the entire performance period. The NHS limits for pavement condition measures will come from the same year's dataset as the pavement condition metric data in HPMS. The NHS designations for bridge condition measures will come from the same year's dataset as the bridge condition metric data in NBI. (See discussion section for section 490.105(d)(3) for more detail.)

Discussion of Section 490.107(b)(2)(i) Schedule

In section 490.107(b)(2)(i), FHWA has delayed the Mid Performance Period Progress Report due date by 2 years from 2018 to 2020. This was done to be consistent with the delayed start to the performance period and Baseline Performance Report, as discussed in section 490.107(b)(1)(i).

Discussion of Section 490.107(b)(2)(ii)(C) and (E) Investment Strategy Discussion and Target Adjustment Discussion

The NEPPP noted that the investment strategy discussion in section 490.107(b)(2)(ii)(C) specifically identifies the State asset management plan for the NHS, while the other reports do not specify the NHS. The NEPPP requested clarification on the Interstate versus NHS in each of the three reports.

In response to the comments, FHWA inserts the phrase “for NHS” after “State asset management plan” in sections 490.107(b)(1)(ii)(C) and 490.107(b)(2)(ii)(E) to clearly indicate that the State asset management plan

under required under 23 U.S.C. 119(e) is applicable to NHS. This revision is consistent with the term “State asset management plan for NHS” in sections 490.107(b)(2)(ii)(C) and 490.107(b)(3)(ii)(C). The measures in subparts C and D are applicable to the NHS. The measures in subpart C assess the condition of pavements on the NHS (which includes the Interstate System and NHS exclusive of the Interstate System). The measures in subpart D assess the condition of bridges carrying the NHS, which includes on- and off-ramps connected to the NHS.

Discussion of Section 490.107(b)(2)(ii)(H) NHPP Target Achievement Discussion

The FHWA amended the language by replacing the phrase “improve . . . condition” with “achieve targets,” when State DOTs describe the actions they will take required under section 490.109(f). The FHWA received a comment, discussed in section 490.109(f)(1) through (3), that the phrase “improve condition” could be perceived as a “worst-first” management practice. As discussed in sections 490.109(f)(1) through (f)(3), this revision was made to be consistent with the statutory language in 23 U.S.C. 119(e)(7).

Discussion of Section 490.107(b)(3)(i) Schedule

The FHWA delayed the report on the full performance period by 2 years, from 2020 to 2022. This was done to be consistent with the delayed start to the performance period and Baseline Performance Report, as discussed in section 490.107(b)(1)(i).

Discussion of Section 490.107(b)(3)(ii)(B) 4-year Progress in Achieving Performance Targets

The FHWA changed the phrase “. . . each established 4-year target in paragraph (b)(1)(ii)(A) or (E) of this section, . . .” to “. . . each 4-year target established in paragraph (b)(1)(ii)(A) or in paragraph (b)(2)(ii)(E) of this section.” This is an editorial change to correct the section reference in the regulatory text.

The AMPO and New Jersey DOT requested clarification on the difference between the reporting requirements in sections 490.107(b)(3)(ii)(B) and 490.107(b)(3)(ii)(E). The differences between the two are that paragraph (B) applies to all targets, including any additional (urbanized and non-urbanized area) targets in section 490.105(e)(3), but paragraph (E) applies only to the statewide NHPP targets subject to significant progress determination outlined in section

490.109. Additionally, paragraph (B) is a qualitative assessment or explanation of any reasons for differences in the actual and target values. Paragraph (E) is a summary of accomplishments (e.g., how implemented investment strategies impacted the actual condition/ performance) of State DOTs in achievement of 4-year targets for the NHPP measures. The FHWA retains sections 490.107(b)(3)(ii)(B) and 490.107(b)(3)(ii)(E) in the final rule.

Discussion of Section 490.107(b)(3)(ii)(G) NHPP Target Achievement Discussion

As discussed in section 490.107(b)(2)(ii)(H), FHWA amended section 490.107(b)(3)(ii)(G) by replacing the phrase “improve . . . condition” with “achieve targets” when State DOTs describe the actions they will take as required under section 490.109(f). (See discussion section for sections 490.107(b)(2)(ii)(H) and 490.109(f)(1) through (3).)

Discussion of Section 490.107(c)(1) MPOs Shall Report Established Targets to State DOT

The FHWA amended the language in section 490.107(c)(1) to remove the requirement to use the metropolitan planning agreement to document how MPOs shall report their established targets to their respective State DOTs. The final rule requires MPOs to report their established targets to State DOTs in a manner that is documented and mutually agreed upon by both parties.

The Mid-America Regional Council expressed support for the language in the NPRM that required the method for reporting targets be documented in the metropolitan planning agreement. However, AMPO, ARC, COMPASS, NARC, NYSDOT, NYMTC, NYSAMPO, and TEMPO objected to the proposed documentation requirement as it would require the metropolitan planning agreement to be updated. The Transportation for America's commented that “States should form an agreed to process with all MPOs within the State.”

23 CFR 450.314(h) of the final Planning Rule provides State DOTs and MPOs options for mutually identifying the agency roles and responsibilities for performance-based planning and programming in metropolitan areas in writing, either through the metropolitan planning agreements or by some other mutually determined means. To address the received comments above and to ensure consistency between this final rule and the final Planning Rule, FHWA has removed references to the

metropolitan planning agreement from this Rule.

The Connecticut DOT and NYMTC commented that States and MPOs should have maximum flexibility and discretion in target setting. As stated in discussion for section 490.105(a), MAP-21 does not provide FHWA the authority to approve or reject State DOT or MPO established targets. The FHWA reiterates that this rule does not hinder the ability of State DOTs and MPOs to establish targets that have performance holding steady or declining.

The Memphis Urban Area MPO requested clarification on the frequency and method of reporting data to State DOTs. The FHWA did not specify a required MPO reporting process in this rule. Please refer to the 23 CFR 450.324 for the requirements for MPO system performance report in the metropolitan transportation plan.

Discussion of Section 490.107(c)(2) MPO System Performance Report

The FHWA retains the language in section 490.107(c)(2) that requires MPOs to report baseline condition/performance and progress toward the achievement of their targets in the system performance report for the metropolitan transportation plan (MTP), in accordance with part 450 of this chapter and as provided in 23 U.S.C. 134(i)(2)(c). The Mid-America Regional Council expressed their support for this requirement.

The IOWA DOT, NYMTC, and NYSAMPO asked for clarification on the timing of the initial Metropolitan Transportation Plan System Performance Report, given the variability of MTP adoption schedules. The inquiries related to the MTP are outside of the scope of this rule. Those inquiries should refer to the Planning final rule.

The Iowa DOT expressed concerns with submitting the system performance report with the Long Range Transportation Plan (LRTP), which is required every 4–5 years (depending on air quality in the MPO). The Iowa DOT asked how that will line up with the 2-year reporting periods outlined in the NPRM. The Iowa DOT also commented that the NPRM sets specific dates for implementing the performance measure reporting, which may or may not align with LRTP update cycles for individual MPO agencies. The NYSAMPO commented that it is important to coordinate all of the reporting and target setting timelines for each of the performance measure rules so that State DOTs and MPOs are not burdened with numerous reporting schedules that are out of synch with one another.

Transportation for America echoed these concerns, and suggested that FHWA “ensure the performance period being proposed syncs up with the plan update cycles for State DOTs and MPOs.” The AMPO and COMPASS advised FHWA to have MPOs align their performance periods to their LRTP cycle. The TEMPO stated that each MPO should set its own individual target setting and biennial reporting timelines. The AMPO requested clarification on whether MPOs would be required to report on the same timelines as State DOTs.

It is true that the performance period and individual MPO planning cycles may not coincide, but there is no requirement that they do. At the time of MTP adoption (LRTP or MTP), the MPO would include what information it had in its system performance report and expand on the information with the next report update. In addition, MPOs can choose to adopt their MTPS before the 4–5 year requirement, and more closely align their planning cycle and the performance period cycle.

The Iowa DOT requested more detail on what will be required to report in their system performance report. The regulatory requirements of the system performance report are provided in 23 CFR part 450.³⁸ The inquiries related to the system performance report are outside of the scope of this rule. Those inquiries should refer to the Planning final rule.

Section 490.109 Assessing Significant Progress Toward Achieving the Performance Targets for the National Highway Performance Program

Discussion of 490.109(a) General

The FHWA retains the language in section 490.109(a) which makes State DOTs accountable for making progress for all pavements and bridges on the NHS regardless of ownership. The FHWA made minor clerical edits to clarify the cross-references. The AASHTO recommended that non-State DOT assets (e.g., assets owned by the Federal government, tribal governments, local agencies, and others) be excluded from the significant progress determination under section 490.109. The AASHTO and State DOTs of Connecticut, Maine, New Hampshire, Vermont, and Washington argued that State DOTs may not be legally able to collect data on non-State DOT assets and may have no authority to control how funding on those assets is spent or assets are maintained. As discussed in

section 490.105(d), FHWA is aware of a limit to the direct impact that State DOTs can have on performance outcomes for the non-State controlled assets within the State. However, as the recipients and stewards of the NHPP funds for the NHS in respective State DOTs, FHWA expects that State DOTs would consider the uncertainty and associated performance outcome of the non-State owned assets. The FHWA expects State DOTs to coordinate with the appropriate owners of the non-State controlled NHS assets in the establishment of State DOT targets.

Both the Alaska DOT&PF and the Oregon DOT suggested alternatives to the term significant progress and its definition. The Alaska DOT&PF commented that the term be redefined to mean “meet or exceed the ½ target” or the term should be removed from the rule entirely. The Oregon DOT suggested that the term significant progress be revised to “adequate” progress. However, FHWA retains the term “significant progress” in the final rule because the term is referenced in the statute (23 U.S.C. 119(e)(7)).

Discussion of 490.109(b) Frequency

Section 490.109(b) specifies the frequency for FHWA to determine whether a State DOT has or has not made significant progress toward the achievement of NHPP targets to be every 2 years (i.e., at the midpoint and the end of each performance period) which aligns with State DOT Biennial Performance Reports in 490.107. In the NPRM, FHWA stated that it expects that during a performance period, State DOTs would routinely monitor leading indicators (e.g., program delivery status) to assess if they are on track to make significant progress toward achievement of their NHPP targets. If a State DOT anticipates that it may not make significant progress, it is encouraged to work with FHWA and seek technical assistance during the performance period to identify the actions that can be taken to improve progress.

In the NPRM, FHWA sought comment on whether it should require State DOTs to more frequently (e.g., annually) evaluate and report the progress they have made. The Tennessee DOT supported the 2-year cycle of significant progress determinations and added that “annual reporting would be unlikely to show significant differences in results than biennial reporting.” The Missouri DOT commented that State DOTs will have the ability to report data annually. The data should be updated in HPMS and NBI systems, but State DOTs should not be asked to submit a progress report on an annual basis. The AASHTO and

³⁸ Statewide and Nonmetropolitan Transportation Planning: Metropolitan Transportation Planning (FR Vol. 81, No. 103).

Connecticut State DOT opposed more frequent reporting and determinations.

The FHWA clarifies that FHWA did not seek comments on the frequency of FHWA significant progress determination (*i.e.*, every 2 years). Instead, FHWA requested comments on whether or not State DOTs should evaluate their condition/performance and report the progress they have made more frequently than every 2 years. Through more frequent condition/performance evaluation, State DOTs would more frequently monitor their condition/performance and have the opportunity to proactively take necessary actions make significant progress toward achievement of the NHPP targets. The FHWA appreciates the comments, but retains the biennial frequency of progress reporting in § 490.107. The FHWA strongly encourages State DOTs to routinely monitor their condition/performance so they can proactively take actions necessary to make significant progress toward achievement of the NHPP targets.

Discussion of § 490.109(c) Schedule

The FHWA retains the language in section 490.109(c) which says FHWA will determine significant progress toward the achievement of a State DOT's NHPP targets after the State DOT submits the Mid Performance Period Progress Report for progress toward the achievement of 2-year targets, and again after the Full Performance Period Progress Report for progress toward the achievement of 4-year targets.

The Missouri and Tennessee DOTs expressed support for the proposed timeline, noting that the necessary data is submitted annually and therefore FHWA is able to complete their assessment with the frequency they deem necessary.

The Oregon DOT requested clarification on who at FHWA will perform the assessment of significant progress.

The AASHTO and the Oregon and Connecticut DOTs recommend that FHWA inform State DOTs of their achievement of making significant progress by December 31 of the calendar year in which the assessment was made. They also recommended that the rule provide that if a State DOT does not receive that information by the deadline, then it is conclusively deemed to have made significant progress in that time period. North Carolina DOT also commented that notification should be as soon as possible.

The FHWA is committed to a timely notification of significant progress determination results to State DOTs so

they can take prompt actions, as described in section 490.109(f). The FHWA is also committed to a timely publication of determination results on the public Web site to meet the demands of the public and Congress. The FHWA clarifies that prior to its determination, State DOTs are required to report actual condition/performance in their Mid Performance Period Progress Report and Full Performance Period Progress Report, as provided in sections 490.107(b)(2)(ii)(A) and 490.107(b)(3)(ii)(A). The FHWA also clarifies that the reported actual condition/performance in sections 490.107(b)(2)(ii)(A) and 490.107(b)(3)(ii)(A) are not a qualitative assessment of performance, but they are quantitative values (*i.e.*, calculated measures). The qualitative assessment of performance is required under sections 490.107(b)(2)(ii)(B) and 490.107(b)(3)(ii)(B). With quality HPMS and NBI data from State DOTs, FHWA believes that State DOT reported condition/performance will be no different from FHWA calculated condition/performance in significant progress determination in section 490.109.

State DOTs are also required to discuss the progress they have made toward the achievement of all targets established for the NHPP measures, as described in sections 490.107(b)(2)(ii)(F) and 490.107(b)(3)(ii)(E), in the Mid Performance Period and Full Performance Period Progress Reports. The FHWA believes that through these requirements, State DOTs will be well aware of whether they will make significant progress prior to FHWA determination notification. Therefore, FHWA retains the language in section 490.109(c), as proposed in the NPRM. The FHWA plans to issue guidance clarifying when the determination notification to State DOTs will be made after publication of the final rule.

The North Carolina DOT requested clarification on whether States that failed to achieve significant progress would be able to adjust their targets. Failure to achieve significant progress does not trigger the opportunity or requirement to adjust targets. The State DOTs have the opportunity to establish or adjust targets every 2 years, as provided in sections 490.105(e)(4)(i) and (e)(4)(ii) and 490.105(e)(6), respectively. The process used by FHWA to determine significant progress is transparent. As discussed in section 490.105(e)(6), FHWA believes if targets are allowed to be adjusted more frequently, then the transparency of target and target establishment process will be compromised. The FHWA

strongly encourages State DOTs to track their significant progress on their own, and adjust targets in their Mid Performance Period Progress Report as they deem necessary.

Discussion of 490.109(d)(1) Through (d)(3) Source of Data/Information

In sections 490.109(d)(1) through (d)(3), FHWA proposed data extraction dates for the significant progress determination for NHPP measures. The proposed data extraction dates were:

- June 15 of the year in which the significant progress determination is made for the Interstate System pavement condition measures;
- August 15 of the year in which the significant progress determination is made for the non-Interstate NHS pavement condition measures; and
- June 15 of the year in which the significant progress determination is made for the NHS bridge condition measures.

The Oregon DOT requested a wording change from “prior year” to “most recent data collected” in sections 490.109(d)(1) and (d)(2). The commenter noted that the term “prior year” indicates that data has to be collected in the 2nd and 4th years for the non-Interstate NHS sections. They asked what if a State wants to collect this data in years 1 and 3 of the performance period. The commenter stated that the wording should be changed to allow States to use the most recent data collected as this gives the States flexibility in selecting data collection cycles to match other processes, such as STIP development, within the State.

The FHWA clarifies that the data collection frequency requirement for non-Interstate NHS pavement data is every 2 years, as described in section 490.309(b)(2). So, in this rule, there is no requirement for State DOTs to collect their pavement condition data for the entire non-Interstate NHS within a particular year. The FHWA also clarifies that biennial data collection frequency for non-Interstate NHS requires annual data reporting to HPMS making the most recent data collected replacing the data from previous data collection cycle. So, if a State DOT chooses to collect pavement data for the entire non-Interstate NHS in the first year of a performance period and collect data again for the entire non-Interstate NHS in the third year of that performance period, that State DOT will meet the requirements in section 490.309(b)(2). The FHWA believes that this approach will not hinder State DOTs from selecting their data collection cycles to match other processes. Please note that annual pavement data collection

frequency is required for the Interstate System, as described in section 490.309(b)(1). Because of the provided explanation, FHWA believes the term “prior year” is more appropriate in sections 490.109(d)(1) and (d)(2) because the term refers to the “most recent data collected and reported” in HPMS. Therefore, FHWA retains the language in sections 490.109(d)(1) and (d)(2), as proposed in the NPRM.

The FHWA did not receive any substantive comments regarding these data extraction dates but received substantive comments on the proposed data reporting dates for both pavement and bridge condition measures. Please refer to sections 490.311(c)(4) and (c)(5) and 490.411(d) for discussion of those comments. As discussed in sections 490.311(c)(4) and (c)(5) and 490.411(d), FHWA adopts the language in sections 490.109(d)(1) through (d)(3) in the final rule.

Discussion of 490.109(d)(4) Baseline Condition Data

The FHWA revised section 490.109(d)(4) so that the NHS limits for significant progress determination for pavement condition measures will come from the same year’s dataset as the pavement condition metric data in HPMS. The NHS designations for the significant progress determination for the bridge condition measures will come from the same year’s dataset as the bridge condition metric data in NBI. Similarly, the NHS information for the baseline conditions for significant progress determination of the targets for the pavement and bridge condition measures will come from the data contained in HPMS and NBI of the year in which the Baseline Period Performance Report is due to FHWA. (See discussion sections for 490.105(d)(3), and 490.107(b)(1)(ii)(E) for more detail.)

In addition, sections 490.313(b)(1) and (b)(2) are revised so that IRI condition ratings of Good, Fair, and Poor will no longer depend on whether a pavement section is within an urbanized area with a population greater than 1 million. Therefore, urbanized area data for significant progress determinations of pavement condition targets is no longer necessary. (See discussion sections for 490.313(b)(1) for more detail.)

Discussion of 490.109(e)(1) General Discussion of Significant Progress Determination for Individual NHPP Targets

The FHWA revised the language in section 490.109(e)(1) to correct a typographical error and replaced the

word “and” with “through.” The final rule reads “. . . established by the State DOT for the NHPP measures described in 490.109(c)(1) through (c)(3).” This error was noted by AASHTO and the Connecticut and Virginia DOTs.

The AASHTO and Connecticut DOT commented that significant progress should only be determined based on the required targets in section 490.105(d)(1), not any additional targets State DOTs have voluntarily chosen to establish in section 490.105(e)(3). The language in section 490.109(e)(1) of the NPRM and final Rule is consistent with this. Section 490.109(e)(1) specifically says that FHWA will not assess the progress achieved for any additional targets a State DOT may establish under section 490.105(e)(3). No change to the final rule is required.

Discussion of 490.109(e)(2) Significant Progress Toward Individual NHPP Targets

The FHWA retains the language in section 490.109(e)(2), which states that for each NHPP target, progress toward the achievement of the target would be considered significant when either of the following occur: (1) The actual condition/performance level is equal to or better than State DOT Baseline Performance Period Report; or (2) actual condition/performance is equal to or better than the established target. To make the comparisons in a consistent manner, the language in sections 490.313(f) and 490.409(c) includes the precision level (*i.e.*, decimal places) for the measures, which is to be calculated to the one tenth of a percent (0.1 percent). The Colorado DOT expressed their support for the 0.1 percent achievement threshold.

In the first performance measures NPRM, which addresses safety, FHWA proposed in section 490.211 of the NPRM a statistical evaluation approach for determining significant progress. Comments received on the Safety NPRM indicated that it was too complicated and seemed arbitrary. In the Final Rule for safety performance measures, FHWA changed its approach from statistical evaluation to improvement over baseline. Therefore, in this final rule, FHWA is retaining the determination methodology proposed.

The following summarizes the comments on the proposed methodology for determining significant progress. In regard to the proposed significant progress methodology, the comments from AASHTO said that “the approach must be retained in the final rule.” They also added that the approach would “give State DOTs flexibility to establish aggressive targets

if desired but will not result in States being punished if they do not meet those targets.” Missouri DOT also supports the approach as “straightforward and easy to determine.” Oregon DOT voiced their support by indicating that it is “reasonable and accommodates both increasing and decreasing pavement conditions.” Minnesota DOT expressed their support, stating that it would allow States to establish declining targets, but still achieve significant progress.

While many State DOTs did not specifically mention their support, they indicated their general support for the AASHTO’s letter in support of the proposed approach. These State DOTs included Alaska, Arkansas, Colorado, Florida, Georgia, Idaho, Maryland, Michigan, Missouri, Montana, New Jersey, North Dakota, Pennsylvania, South Dakota, and Wyoming. The support of the proposed approach was also expressed by the Metropolitan Transportation Commission and the Mid-America Regional Council.

However, some commenters expressed disagreement with FHWA’s proposed method for determining significant progress. Washington DOT and the PSRC commented that “significant change” should be based on a statistical evaluation of the data submitted by the State DOT and suggested use of the standard deviation of the data to determine the level of significance. The FHWA considered some statistical methods for significant progress determination approach during the time of preparing the NPRM. However, this option was determined to be unfeasible because the magnitude of “statistically significant change” in condition/performance would have to be an arbitrarily selected significance level. Without an established target value, determining the magnitude of “statistically significant change” was not possible. In addition, in the final rule for safety performance measures, FHWA changed its approach from statistical evaluation to improvement over baseline after receiving comments that the statistical methods were “too complex and difficult.”

The AASHTO and the Connecticut and Iowa DOTs stated that the use of 0.1 percent was arbitrary. In the discussion of section 490.109 of the NPRM, FHWA found that any improvement better than the baseline condition/performance, which represents a 0.1 percent improvement, would be viewed as significant progress. Although the AASHTO supported the proposed approach for determining significant progress, they argued that 0.1 percent improvement above the baseline “seems

arbitrary with no basis.” The Connecticut, Iowa, and Washington DOTs made similar comments as well. Oregon DOT cited that 0.1 percent of Oregon’s Interstate System equates to 1.5 miles for Oregon and argued that the 0.1 percent tolerance is too “tight.” They suggested 0.5 or 1 percent tolerance.

Illinois DOT requested clarification on how “significant progress” is defined, asking whether it is any improvement made toward the target, a measure of a partial percentage point, or something else.

As stated above, the proposed approach for determining significant progress is based on comparison between: (1) Target and the actual condition/performance and (2) baseline condition/performance and the actual condition/performance. To make the comparisons in a consistent manner, the language in sections 490.313(f) and 490.409(c) included precision level (*i.e.*, decimal places) of the measures, which is to be calculated to the one tenth of a percent. By specifying precision levels for the measures, FHWA believes the comparisons in significant progress determinations would be done in a consistent manner. The FHWA understands decimal places of measures could be translated to a tolerance level in making significant progress, as Oregon DOT’s example indicated. However, FHWA believes a larger tolerance level with less precision level could work against State DOTs. For example, with a 1 percent tolerance (*i.e.*, measures round to the nearest to 1 whole percent), if a State DOT actually made 0.1 percent improvement above the baseline condition/performance, it would not be considered significant progress because the 0.1 percent would be rounded down and the condition/performance level would be considered as equal to the baseline condition/performance. Therefore, FHWA retains the proposed language.

The Center for American Progress and Transportation for America stated that 2-year target establishment and significant progress determinations should be required for MPOs. They argued that accountability requirements should be the same for State DOTs and MPOs. In 23 U.S.C. 119(e)(7), biennial significant progress determinations under section 490.109 only apply to State DOT NHPP targets. There is nothing in the statute that requires a similar assessment with similar consequences for MPOs. Therefore, FHWA does not have the statutory authority to make significant progress determination on MPO targets.

The TEMPO recommended expanding section 490.109(e)(2) to allow FHWA Division Administrators to determine significant progress. As stated in section 490.109(a), FHWA will assess each State DOT target for the NHPP measure to determine the significant progress made toward its achievement with the method prescribed in section 490.109. The FHWA believes the method outlined in section 490.109 provides a fair and consistent process to determine compliance across State DOTs. Although FHWA Division Offices will notify State DOTs with the results of the significant progress determination, FHWA clarifies that no one individual in FHWA will make the significant progress determination at his or her discretion. Following the publication of the final rule, FHWA will publish guidance on the timing of significant progress determinations and notifications. Therefore, FHWA retains the language in section 490.109(e)(2), as proposed in the NPRM.

Discussion of 490.109(e)(3) Phase-In of New Requirements for Interstate System Pavement Condition Measures

The FHWA proposed a phase-in of new requirements for Interstate pavement condition measures. Only at the midpoint of the first performance period and only for the targets for Interstate System pavement condition measures in section 490.307(a)(1) and (a)(2), FHWA would not make a determination of significant progress toward the achievement of 2-year targets for these measures. The FHWA received comments related to the phase-in of Interstate System pavement condition measures in section 490.105(e)(7), but no direct comments on the phase-in proposed in section 490.109(e)(3).

Since these measures are being phased-in, FHWA will not determine significant progress until after the measures are established and the State DOTs have had time to complete a biennial reporting cycle. As discussed in section 490.105(e)(7), FHWA retains the language in section 490.105(e)(7)(ii) that for the first performance period only, State DOTs are not required to report their 2-year targets and baseline condition/performance for the Interstate pavement condition measures in their Baseline Performance Period Report. Accordingly, FHWA will classify the assessment of progress toward the achievement of targets for the Interstate pavement condition measures as “progress not determined” at the 2-year significant progress determination. The FHWA retains the language in section 490.109(e)(3) as proposed in the NPRM.

(See discussion for section 490.105(e)(7) for more details.)

Discussion of § 490.109(e)(4)

Insufficient Data and/or Information

The FHWA proposed that if a State DOT does not provide sufficient data or information necessary for FHWA to make significant progress determination for each bridge or pavement condition target, FHWA would determine that the State DOT has not made significant progress toward the achievement of the applicable individual targets.

The State DOTs of Connecticut, Oklahoma, and Oregon requested that the phrase “does not provide sufficient data and/or information” be clarified.

In response to these comments, FHWA revised section 490.109(e)(4). The revised text in section 490.109(e)(4)(i) specifies that all measures must meet the reporting requirements in section 490.107. If a State DOT does not submit a required report, targets, or other information as specified in section 490.107, then FHWA will determine that the State DOT has not made significant progress toward the achievement of NHPP target.

Section 490.109(e)(4)(ii) specifies if FHWA determines that a total mainline lane-miles of missing, invalid, or unresolved sections for Interstate System is 5 percent or more, as described in section 490.313(b)(4)(i), then FHWA will determine that the State DOT has not made significant progress toward the achievement of targets for the Interstate System pavement condition measures in section 490.105(c)(1).

Section 490.109(e)(4)(iii) specifies if FHWA determines that a total mainline lane-miles of missing, invalid, or unresolved sections for non-Interstate NHS is 5 percent or more, as described in section 490.313(b)(4)(i), then FHWA will determine that the State DOT has not made significant progress toward the achievement of targets for the non-Interstate NHS pavement condition measures in section 490.105(c)(2). (See discussion for section 490.313(b)(4) for further discussion and information on the revisions to this section.)

Section 490.109(e)(4)(iv) specifies that for the NHS bridge condition measures in section 490.105(c)(3), if a State DOT’s reported data is not cleared in the NBI as of June 15, then FHWA will determine that the State DOT has not made significant progress toward the achievement of targets for the bridge condition measures in section 490.105(c)(3).

As stated above in section 490.109(e)(2), the approach for determining significant progress is

based on comparison between: (1) Target and the actual condition/performance and (2) baseline condition/performance and the actual condition/performance. Section 490.109(e)(4)(v) provides an approach for determining significant progress when reported data for baseline condition/performance is determined “insufficient” in the year in which the Baseline Performance Period Report is due to FHWA. If the data for baseline condition/performance is determined insufficient, the comparison between the baseline condition/performance and the actual condition/performance cannot be made. In this situation, FHWA will make the significant progress determination for that measure by comparing the target to the actual condition/performance. The FHWA will determine that a State DOT has not made significant progress toward the achievement of a target if data for the baseline condition/performance was determined insufficient previously, and the actual condition/performance level is not equal to or better than the established target.

Discussion of § 490.109(e)(5)(i) Extenuating Circumstances

The FHWA amended the language for section 490.109(e)(5)(i) related to the list of extenuating circumstances that may prevent a State DOT from making significant progress. In the final rule, FHWA added language to clarify that extenuating circumstances include the sudden discontinuation of Federally furnished data due to a lack of Federal funding. This text was added to clarify that the lack of funding is not a stand-alone reason, but it is tied to the data access associated with target establishment and evaluation.

The list of extenuating circumstances details issues that could be considered outside of State DOTs ability to make significant progress toward achieving targets. If a State DOT encounters these extenuating circumstances, State DOTs would document the explanation in their performance progress report. If the explanation is accepted by FHWA, then the associated NHPP targets would be excluded from FHWA significant progress determinations. Comments from a private citizen³⁹ supported FHWA’s proposal.

The AASHTO comment letter suggested adding the following additional extenuating circumstances: (1) Lack of Federal funding through a long-term surface transportation program; (2) Cost inflation beyond

assumed levels; and (3) another cause reported by the State not covered under the previous circumstances. The Connecticut DOT made identical comments. The California DOT commented that the situations considered extenuating circumstances are too narrow. They suggested broader circumstances to include fiscal limitations and project delivery constraints. The Illinois DOT recommended that the rule account for the uncertain funding impacts by explicitly recognizing how this might inhibit the achievement of targets for significant progress requirements and determinations in section 490.109. The Colorado and Washington DOTs sought clarification on whether a lack of funding would be considered an extenuating circumstance that would result in a finding of “progress not determined” by FHWA. The Minnesota and North Carolina DOTs commented that budget uncertainties could result in a lack of funding and should be an extenuating circumstance. The Colorado DOT requested clarification on whether a sudden, unforeseen reduction in Federal funding would be considered an extenuating circumstance. The Oregon DOT commented that the discussion of proposed extenuating circumstances covers a range of possible circumstances, but it is also limited to those specifically listed in the rule. The Oregon DOT suggested including some language to allow States to describe circumstances not on the list. They added that there could be situations not yet thought of that should be open for consideration. The Tennessee DOT proposed that the significant progress determinations account for decreases in anticipated Federal funding, inflation above expected rates, or other unforeseeable reasons. The Washington DOT commented that FHWA should consider extenuating circumstances documented by a State DOT in the assessment of progress toward the achievement of NHPP targets in the relevant State Biennial Performance Report.

The majority of the above comments wanted to add financial uncertainty to the list of extenuating circumstances. As noted in the NPRM, FHWA understands that there are many external factors that could impact the condition/performance and the State DOT’s ability to make significant progress, including financial uncertainty. However, FHWA believes that the frequency of target establishment, and the ability to adjust 4-year targets at the mid-point of a performance period creates a relatively short forecast window that should allow

State DOTs to consider the impacts of funding shortfalls and uncertainty (*e.g.*, lack of funding for investment, cost escalation, and others) in initial targets and any subsequent adjustments. As discussed in section 490.105(e)(6), the State Biennial Performance Report has the appearance that State DOTs must consider uncertainties 2 years in advance. In truth, the duration that State DOTs have to consider uncertainties is shorter than 2 years. For example, the 2-year target established in 2018 is not actually submitted until October 2018 when the first State Biennial Performance Report is due. Therefore, while it reflects a 2-year period (2018 and 2019), it is in place for less than 2 years (*i.e.*, October 2018 to December 2019). (See discussion section for section 490.105(e)(6) for additional details of the timing of reports and the impact on targets.) The FHWA does not intend to use the significant progress determination process to be punitive or to lead State DOTs to simply establish easy targets. The FHWA believes one purpose of establishing targets and assessing progress is to encourage State DOTs and MPOs to establish data-supported targets that consider anticipated resources and potential uncertainties. Establishing targets and assessing progress also encourage State DOTs to provide data-supported explanations of condition/performance changes. If a State DOT did not make significant progress because of the absence of a long-term surface transportation program, unanticipated cost escalation, and other reasons, FHWA expects that State DOT would provide data-supported explanations for not achieving significant progress.

The FHWA strongly believes transportation performance management is not just about making significant progress. It is also about effectively communicating to Congress and the public how the absence of a long-term surface transportation program, unanticipated cost escalation, and other circumstances are impacting the condition/performance of the transportation infrastructure. Moreover, FHWA believes the determination process must be meaningful and bring accountability to the program as MAP-21 and FAST Act intended. Therefore, FHWA believes that adding more circumstances to exclude State DOTs from the determination will decrease the level of accountability. For these reasons, FHWA is keeping the list of extenuating circumstances short. The FHWA modified the language in section 490.109(e)(5) only to include the

³⁹ Nicholas Cazares, Docket Letter FHWA–2013–0053–0078.

discontinuation of Federally furnished data due to a lack of Federal funding.

In section 490.109(e)(5)(ii), FHWA proposed to accept a State DOT's explanation if it pertains to the extenuating circumstances listed in section 490.109(e)(5)(i). The FHWA would classify the progress toward achieving the relevant NHPP targets as "progress not determined," and those targets will be excluded from the determination. The FHWA did not receive any substantive comments regarding this paragraph. Therefore, FHWA retains the language in section 490.109(e)(5)(ii) in the final rule.

Discussion of § 490.109(f) Performance Achievement Requirements

The AASHTO, Oregon DOT, and a private citizen⁴⁰ support basing performance achievement on two consecutive FHWA determinations. This provides State DOTs some opportunity to improve their performance before being assessed the penalty. The ASCE took the opposite view and argued that if a State DOT did not make significant progress after two consecutive reviews, intervention by the DOT should be immediate. They argued that the proposed timeline for penalties did not represent the type of speedy accountability that the public expects and that it will benefit our transportation system. Section 119(e)(7) of Title 23 of the U.S.C. required States to describe the actions they will take to achieve targets after they fail to achieve significant progress on two consecutive determinations. Subsequently, FAST Act removed the phrase "two consecutive" in 23 U.S.C. 119(e)(7) and added that the description of actions will be included in the biennial performance report under 23 U.S.C. 150(e). Pursuant to 23 U.S.C. 119(e)(7), FHWA amended section 490.109(f) so that State DOTs are required to describe the actions they will take to achieve targets after they fail to achieve significant progress for each FHWA biennial determination. The FHWA believes this required change in section 490.109(f) will ensure the accountability ASCE urged in their comment.

The Southeast Pavement Preservation Partnership commented that the short time horizon given to recognize improvement in the pavement network may force States into a "worst-first" mentality for the preservation of pavements. The FHWA agrees that indiscriminately attempting to improve condition could lead to a "worst-first" mentality. The FHWA also realizes that

the proposed language in section 490.109(f) is inconsistent with the principle of "Recognize Fiscal Constraints"⁴¹ in the NPRM preamble. In addition, FHWA emphasizes that, as discussed in section 490.105, State DOTs and MPOs have the authority to establish their targets at their discretion. The MAP-21 does not provide FHWA the authority to approve or reject State DOT or MPO established targets.

Therefore, FHWA amended section 490.109(f)(1) through (f)(3) by replacing the phrase "improve . . . condition" with "achieve targets" to be consistent with the nine principles and 23 U.S.C. 119(e)(7). Similarly, in section 490.109(f)(6), FHWA replaces the phrase "improve progress" with "achieve targets" to be consistent with the statutory language in 23 U.S.C. 119(e)(7).

Discussion of Section 490.111 Incorporation by Reference

The FHWA proposed to incorporate by reference several items. First, FHWA proposed to incorporate the HPMS Field Manual to codify the data requirements for measures, as discussed throughout part 490, and to be consistent with the HPMS reporting requirements. Second, FHWA also proposed to incorporate by reference the Recording and Coding Guide for the Structure Inventory and Appraisal of the Nation's Bridges (NBI Coding Guide), which contains all of the NBI items listed in subpart D. Finally, FHWA proposed to incorporate by reference five permanent AASHTO Standards (M328-14, R36-13, R43-13, R48-10, R57-14) and three provisional AASHTO Standards (PP68-14, PP69-10, PP70-10) to codify the methods and devices used to collect data for the metrics (*i.e.*, IRI, Cracking Percent, rutting, and faulting). The FHWA proposed specific versions of each item in the NPRM with an understanding that future changes to the HPMS Field Manual, NBI Coding Guide, and AASHTO Standards will be subject to **Federal Register** notices. Because of the incorporation by reference, FHWA had posted the Proposed HPMS Field Manual 2015 for 2nd Performance Measure NPRM,⁴² the 10 proposed

AASHTO Standards, and the NBI Coding Guide on the docket.

The Mid-America Regional Council expressed general support for the incorporation by reference of the proposed documents, stating "the use of widely accepted standards and calculation methods will facilitate the establishment of targets and monitoring of progress toward their achievement." The FHWA agrees and appreciates the comment.

The Alabama DOT recommended that FHWA consider adding AASHTO R56-10 (Standard Practice for Certification of Inertial Profiling Systems) in the final rule. The FHWA appreciates the need for certification of the Inertial Profiling Systems used in the HPMS data collection and included a requirement for equipment certification as part of the Data Quality Management Program in section 490.319(c). It is expected that State DOTs would specify AASHTO R56 or an equivalent standard as their method for equipment certification in the State Data Quality Management Program.

The AASHTO, Alaska DOT&PF, and Connecticut DOT recommended modifying the wording of the proposed rule "so that any proposed changes to items (b)(1) or (b)(2) would be subject to public notice and comment by State DOTs and other affected parties".⁴³ The FHWA agrees that any updated versions of the HPMS Field Manual and the AASHTO Standards will not be incorporated by reference without public notice and comment.

The AASHTO and the State DOTs of Connecticut, Florida, Mississippi, North Dakota, Iowa, and Oregon commented that AASHTO standards are developed in a voluntary manner and are used by State DOTs in a voluntary manner. Commenters noted that incorporating these standards into a Federal rulemaking is not their intended use and could cause unintended consequences. The FHWA recognizes the voluntary process used to develop AASHTO Standards and appreciates the efforts of State DOTs in creating them. However, the five permanent AASHTO Standards incorporated by reference in section 490.111 of this final rule contain well-known protocols for data collection, equipment requirements, and data compilation. These protocols are useful in determining pavement performance. Since these standards have been balloted and approved by a

www.regulations.gov/#/documentDetail;D=FHWA-2013-0053-0050.

⁴³ State DOTs of Alaska, Connecticut, Idaho, Montana, North Dakota, Oklahoma, Oregon, South Dakota, and Wyoming.

⁴⁰ Nicholas Cazares Docket Letter FHWA-2013-0053-0078.

⁴¹ Nine principles used in the development of proposed regulations for national performance management measures under 23 U.S.C. 150(c), www.regulations.gov, Docket FHWA-2013-0053 "Recognize Fiscal Constraints"—provide for an approach that encourages the optimal investment of Federal funds to maximize performance but recognize that, when operating with scarce resources, performance cannot always be improved.

⁴² Proposed HPMS Field Manual 2015 for 2nd Performance Measure NPRM: Docket Document FHWA-2013-0053-0050: <http://www.regulations.gov/#/documentDetail;D=FHWA-2013-0053-0050>.

majority of State DOTs, it is preferable that State DOTs use the appropriate parts of these standards to guide quality data collection, even though additional calculations may be needed to meet the reporting requirements for the HPMS Field Manual.

The AASHTO and the State DOTs of Connecticut, Iowa, Minnesota, Missouri, and North Dakota recommended that FHWA “develop a mechanism . . . to ensure that the most recent version of AASHTO standards is used or not used as appropriate.” Similarly, Oregon DOT recommended that FHWA provide States with some flexibility in which versions of AASHTO Standards they use. The Oregon DOT recommended that instead of directly referencing specific standards the final rule, FHWA should provide separate guidance for this information.

The FHWA appreciates the desire for flexibility in application of standards and the latest versions. However, Federal law requires a formal comment and review process for any modification of a document incorporated by reference in a rulemaking. The FHWA may undertake this process in the future, but there is no mechanism to automatically ensure that the latest versions of AASHTO Standards be used. The final rule retains the language in section 490.111(b).

The TEMPO, Oregon DOT, and Texas DOT expressed concern over FHWA’s proposal to use provisional AASHTO Standards that will be refined following completion of an ongoing study on cracking and rutting measurements. When provisional standards become full standards, changes may occur in the reported data, causing inconsistencies from previously reported data. The FHWA agrees with the commenters, and removed references to provisional AASHTO standards PP67, PP68, PP69, and PP70 to ensure consistency in reporting. Specific guidance on data collection and reporting for the topics covered by these provisional standards has been added to the HPMS Field Manual, which is posted on the docket. (See discussion section for section 490.309 for more details.)

In addition, the Center for Auto Safety, PSRC, and *Public Resource.org* expressed concern over the availability of the documents incorporated by reference. The PSRC commented that “section 490.111 lists AASHTO Standard Specifications that States must follow when collecting and calculating pavement distress; however, these specifications are not freely available. Please consider providing access to the AASHTO standards for pavement data collection as a component of MAP–21

implementation.” In a joint letter, the Center of Auto Safety and *PublicResource.org* expressed concern that the AASHTO standards incorporated by reference were not freely available to the public.

While FHWA acknowledges that the proposed AASHTO Standards are available for purchase on the AASHTO Web site, they were posted on the docket for review by the public. Furthermore, AASHTO provides copies of all Standards to State DOTs without charge. Therefore, FHWA retains the language as proposed.

The Louisiana DOT commented that the final rule should specify that those documents incorporated by reference are “revised to all English units of measure to be consistent and to eliminate the numerous metric to English conversion rounding issue.” The HPMS Field Manual that is incorporated in the final rule indicates that English units are the preferred method for measurement. However, there is no prohibition on using metric devices for measurement and converting measurements to the English standards. State DOTs electing to convert metric measurement are guided to follow the accepted U.S. standard process⁴⁴ for conversions.

Regarding the proposed HPMS Field Manual, Wisconsin DOT asked when the proposed file that reflects these changes would be available if the HPMS Field Manual would continue to be re-released every year. In response to those questions, the final rule incorporates the revisions to the HPMS Field Manual, which is available on the docket with the final rule. The incorporation by reference requires that future updates to the HPMS Field Manual be made through a formal public comment and review process.

The PSRC asked which standards should be used to collect IRI data. The PSRC also asked for clarification on the following: (1) Whether bituminous road would include those with a chip seal wearing surface; (2) whether the AASHTO method required for distress evaluation is also appropriate for chip sealed surfaces; and (3) whether the percent cracking distress only refers to fatigue and/or alligator cracking.

In response, the HPMS Field Manual has been revised to clarify the standards to be used to collect and report all pavement measurements to the HPMS.

The AASHTO commented that in section 490.309(a), the word “include” should be changed to “are.” The use of “include” suggests that there could be

additional pavement metrics or requirements that are not discussed in this section or elsewhere in the NPRM. The FHWA appreciates the comment and has amended the language in section 490.309(a) to clarify the extent of the metrics and data elements State DOTs are required to report.

B. Subpart C National Performance Management Measures for Assessing Pavement Condition

Discussion of Section 490.301 Purpose

To implement the statutory provisions under 23 U.S.C. 150(c)(3)(A)(ii)(I) and (II), FHWA proposed a statement of purpose which required the establishment of performance measures for State DOTs to use to assess the condition of pavements on the Interstate System and the NHS excluding the Interstate System. No comments specific to this section were received, although Washington DOT concurred with the concept that MAP–21 provided more flexibility in the use of Federal funds.

Discussion of Section 490.303 Applicability

This section described the applicability of this rule to highways on the NHS for purposes of implementing the NHPP. Comments from 19 State DOTs (Arkansas, Colorado, Connecticut, Florida, Georgia, Iowa, Maine, Maryland, Michigan, Mississippi, Missouri, New Hampshire, Oklahoma, Oregon, Pennsylvania, Texas, Vermont, and Washington State), and AASHTO expressed concerns about the requirements to report pavement conditions on routes not owned or operated by States. The commenters also inquired as to whether required reporting included ramps and similar connectors.

In the NPRM, FHWA indicated that the pavement measure would apply to all mainline highways on the NHS. The 19 State DOTs identified above, the AASHTO, AMPO, ARC, Center for American Progress, COMPASS, NARC, National Center for Pavement Preservation, NYMTC, and one anonymous commenter generally agreed that State DOTs and MPOs have no authority or control over maintenance and/or investment decisions on some of the assets on NHS. Therefore, commenters said State DOTs and MPOs should not be held responsible for the reporting of data. The commenters suggested that the responsibility for data collection, reporting, and programming rests with the entities that own the highway system. Similar comments were raised, as discussed in section 490.105(d), regarding highway

⁴⁴ Process is defined in Publication SP 1038–2006 from the National Institute of Standards.

ownership as it pertains to the accountable entity to establish and achieve targets. The statutory language in MAP-21 requires that the performance management requirements under 23 U.S.C. 150 and NHPP under 23 U.S.C. 119 apply to the entire NHS and Interstate System, not to a subset of the NHS (e.g., "State DOT owned or operated Interstate System," "State DOT owned or operated National Highway System," and others) as the commenters would prefer. The MAP-21 does not define the terms "State" and "MPOs" for purposes of 23 U.S.C. 150 and 119 as something other than what is already defined elsewhere in MAP-21. Accordingly, FHWA retains the language in section 490.303 for purposes of the performance management requirements in 23 U.S.C. 150 and 119(e)(7), which require performance measures for the entire NHS and Interstate System within the State. The FHWA evaluated the extent of the enhanced NHS that is not owned or maintained by State DOTs. In that analysis,⁴⁵ FHWA found that a majority of State DOTs own at least 90 percent of the Interstate (40 States) and non-Interstate NHS (28 States) within the State boundary. The FHWA expects State DOTs to coordinate with other entities that own and maintain portions of the NHS in support of these new performance requirements.

The New York DOT and Seattle DOT provided comments to express concern with the focus on the NHS. They commented that this system only comprises a portion of the roadways they need to maintain and improve. The FHWA appreciates these comments and recognizes the challenges that transportation and planning organizations are faced with in managing the transportation system under tight budgetary constraints. However, 23 U.S.C. 150 requires the measure to apply to both the Interstate System and the non-Interstate NHS and precludes FHWA from establishing measures outside those areas described in 23 U.S.C. 150(c). Therefore, FHWA cannot change the applicability of the measures beyond the limits defined in this section of title 23 U.S.C. (See discussion on target scope for the measures in the discussion section for section 490.105(d)(1).)

The National Highway System routes for pavement conditions are specifically defined as mainline highways excluding ramps and connectors. The comments received on the proposed requirement to limit the applicability to the mainline highways of the NHS for the pavement

measure were supportive of this requirement.

Discussion of Section 490.305 Definitions

The NPRM proposed a number of definitions related to pavement performance to clarify specific meaning in Subpart C. Where additional clarification is needed, the HPMS Field Manual is to be used for interpretation. The Ada County Highway District (ACHD) commented that both the definition and means of computing Cracking Percent are unclear. They requested that the final rule either describe how the metric should be computed or reference the HPMS Field Manual, whose definition is clearer. The Iowa DOT expressed concern over the definition of PCC pavements. They noted that the definition does not appear to cover all possible types of cracks and is overly simplistic. As a result, a very small crack could cause an entire pavement slab to be assigned a "failing" grade. They suggested that the definition use "percent slabs cracked" for PCC overlay projects. The FHWA agrees with this concern and has made changes to the thresholds for PCC pavements described below and in revisions to the HPMS Field Manual. The Portland Cement Association commented that composite pavement should be added to the rule as a fourth pavement type. They remarked that composite pavements consist of an asphalt overlay of existing concrete pavement (either jointed or Continuously Reinforced Concrete Pavement). They argued that composite pavement behaves differently than asphalt pavements and will respond differently to preservation, repair, rehabilitation, and replacement requirements. As such, defining composite pavement as a separate pavement type will provide a more consistent assessment of roughness and distress. While there is merit to this suggestion, not all State DOTs have a complete inventory indicating the limits of composite pavement on their networks. The FHWA has concerns about the cost of requiring this level of detail and does not find it justified at this time. Therefore, the comment was not accepted.

An anonymous commenter requested that FHWA add additional details to the pavement cracking definition, noting that the definition in HPMS is too vague. The FHWA does not think the definition used here is too vague; however, the details about measurement and reporting have been revised in the sections that follow to improve clarity.

The Oregon DOT expressed concern with the definition for Cracking Percent, spalling, and visible defects in the proposed rule. In addition, the commenter stated that the proposed unintentional break cracking definition is not included in AASHTO standards or the HMPS Field Manual. The definitions in the final rule are identical to those used in the HPMS Field Manual and are intended to cover the typical conditions that are typically measured on highway pavements. The NPRM defined a term called Pavement Surface Rating that might be used with manual evaluation of pavement surfaces. The Alabama DOT stated that PSR should refer to "Present Serviceability Rating", rather than "Pavement Surface Rating." The FHWA acknowledges the error in the term used and has revised the language the definition to read "Present Serviceability Rating" (PSR) as "an observation based system used to rate pavements." The prohibition on its use was deleted from the definition because the use of PSR is permitted in the final rule for reporting conditions on certain pavement sections as discussed in sections 490.309 and 490.311.

In a joint submission, the State DOTs of Vermont, Maine, and New Hampshire commented that the definition for cracking in the proposed rule was unclear and stated that more work is necessary to identify data collection requirements and interpretation of the cracking performance metric. In addition, the commenters expressed concern with the proposed data collection methodology for rutting. The commenters said the 5-point system can underestimate rutting measurements and the differences between the 5-point system and the automated transverse data profile can lead to inconsistent data presentation at the national level. The FHWA agrees that there is some ambiguity in the description of the methods used for collecting and reporting cracking and rutting and has made changes in the sections that follow. The definitions used in the NPRM are adequate and have been retained in the final rule. The Louisiana DOT expressed concern with several definitions in the proposed rule and urged FHWA to develop standardized definitions. In addition, the commenter remarked that the proposed rule did not include a definition for transverse crack. The issues raised by Louisiana are covered in the specific sections of the final rule and discussed in the sections describing the measurement and reporting of each distress.

In the final rule, FHWA adds a definition for a "Pavement Section" as a nominally 0.1 mile-long reported

⁴⁵ Docket Document.

segment that defines the limits of pavement condition metrics required by FHWA. The added definition is to clearly differentiate between reported condition metric sections and dynamically segmented condition metric sections for calculating measures and determining missing, invalid, and unresolved data. Please see discussion in section 490.309 for more details.

The FHWA proposed a definition for the term “sampling” as “a means for measuring pavement conditions on a short section of pavement as a statistical representation for the entire section.” The FHWA also proposed in the NPRM that sampling is not to be used to measure or rate Interstate and non-Interstate NHS pavement conditions. As discussed in section 490.309, FHWA retains the language stating that no sampling of condition metric and inventory data items is allowed for required pavement condition data and their inventory data items for performance measures or condition rating. To ensure consistency, FHWA revised the definition of sampling by adding “Sampling is not to be used to measure or rate NHS pavement conditions.” This reflects the requirements in sections 490.309 and 490.313(e).

Discussion of Section 490.307 National Performance Management Measures for Assessing Pavement Condition

This section proposed four performance measures required by 23 U.S.C. 150(c)(3)(A)(ii)(I) and (II) for measuring pavement conditions, two for the Interstate System, and two for the NHS excluding the Interstate System. Twenty comments were received from highway agencies, planning organizations, local governments, and industry. In summary, the issues raised included: (1) Not including traffic in the measures; (2) the use of the terms “Good,” “Fair,” and “Poor;” (3) inconsistency in how those terms are determined for pavements and bridges; and (4) finalizing the enhanced NHS.

In the NPRM, FHWA asked for comments on whether other factors such as facility location, functional class, level of use, or environment should be considered in the design of the pavement performance measure. The Louisiana DOT disagreed with the language in the proposed rule. The commenter argued that traffic is an important measure of pavement condition because of the impact that truck traffic has on the long-term structural viability of pavements and bridges. The AMPO, NYMTC, and Washington DOT provided comments

that suggested the pavement measures be weighted by the level of traffic on the roadway. The FHWA agrees that traffic impacts pavement conditions. However, FHWA believes incorporating traffic volume in the pavement condition measures could unintentionally force the State DOTs and MPOs put more emphasis on high-trafficked highway sections. The FHWA believes incorporating traffic in the investment decisionmaking should be dictated by local priorities. So, FHWA does not incorporate traffic in the pavement condition measures in the final rule. A private citizen, William Grenke, commented that there should be separate ratings for pavement performance and pavement maintenance level of service. While there is merit to this suggestion, the statute limits pavement performance in this rule to pavement conditions.

The AASHTO, Maryland SHA, and Minnesota DOT suggested expanding the terms “Good,” “Fair,” and “Poor” to describe the level of repair needed to address each respective condition level. The Connecticut DOT opposed making this change. The Memphis MPO expressed support for the transition to a numerical based scoring system to assess the quality of NHS roads and bridges as well as Interstate pavement. The commenter argued that using numerical scoring eliminates the ambiguity associated with qualitative scores (e.g., Good, Fair, or Poor).

In selecting the terms and calculation methodologies in the final rule, FHWA intended to identify pavement conditions where “Good” suggests no major investment is needed and “Poor” suggests conditions where major investment for pavement reconstruction is needed. “Fair” pavement conditions suggest that minor expenditures for maintenance and repairs are expected. The MAP-21 delegates the selection of actions to States. It would be inappropriate for FHWA to prescribe any actions needed to address a respective condition level. The FHWA agrees with comments from Connecticut DOT that no change should be made to these terms and definitions as they are terms commonly understood by the public.

The AASHTO, NEPPP, and NYMTC commented that the focus on Good and Poor conditions will not promote management practices to preserve existing conditions. The focus on Good and Poor pavements conditions for measuring performance is not intended to prescribe State DOT management practices. The statute makes preservation activities eligible for NHPP funding and State DOTs may find that

preservation programs are cost effective ways to achieve performance targets. However, FHWA has no authority to require them to use preservation programs.

The South Carolina DOT commented that the rating system of Good, Fair, and Poor as a national standard presents a conflict. By setting new metrics for measuring system performance nationally, it challenges State DOTs to tell a new story about the condition of their assets. If State DOTs have traditionally used those terms in their own metrics to communicate the condition of our asset to the public, stakeholders, and legislators, it could give the appearance that State DOTs are “manipulating the information.” The South Carolina DOT also commented that they have no issue with complying with the rule, but recommended that FHWA grant State DOTs the discretion in their reporting to remain consistent in what and how they have been communicating the condition of their assets. The AASHTO, NYSAMPO, and the State DOTs of California, Connecticut, Michigan, and Oklahoma suggested that the Fair condition level be defined and added to the list of four required measures. The Washington DOT commented that they did not see the need for a Fair category, and were in agreement with FHWA’s use of Good and Poor.

The FHWA believes the net increase or decrease of percent Fair network condition does not easily indicate improvement or declining condition. For example, if there was an increase in percent Fair, it could be the result of declined condition of pavement sections that were previously rated as Good condition or improved condition of pavement sections that were previously rated as Poor condition. Therefore, the net increase (or decrease) in percent Fair may not adequately portray condition improvement (or decline) for the highway network. The FHWA believes that focusing on Good and Poor conditions will better indicate improvement or decline of network condition and also will better inform the public about pavement conditions and what they should expect from investments in highway pavements. Finally, the requirement to establish targets for each of the final four measures does not prohibit a State DOT or MPO from focusing on maximizing Fair conditions. For these reasons, FHWA retains the four measures in the final rule.

A few commenters commented that the approaches to determining Good, Fair, and Poor conditions should be consistent for pavements and bridges.

The FHWA proposed approaches that determine pavement condition levels based on the predominance of metric condition levels and bridge condition levels based on the lowest metric condition level. In the NPRM, FHWA discussed how each of these approaches supported current practice and the findings of pilot studies⁴⁶ conducted prior to the rulemaking effort. Although the methods for determining pavement and bridge condition levels are different, the results of the two methods discussed in the studies provide sound assessments of the condition level of pavements and bridges. Consistency or using a single methodology to determine pavement and bridge condition level is desirable from a process standpoint. However, having assessments that best reflect the condition of pavements and bridges is more desirable. It is also important to note that pavements and bridges are two distinct types of assets with distinct performance characteristics. Therefore, having different methodologies for determining their condition levels should not be unexpected. The FHWA retains the two methodologies for assessing the condition level of pavements and bridges in the final rule.

The TEMPO expressed concerns that the criteria used to identify the NHS are still being developed for implementing performance measures applicable to the NHS. They commented that if this issue is not addressed before reporting and evaluation deadlines are implemented, State DOTs and MPOs could expend significant resources collecting, analyzing, and maintaining data that is not part of the final NHS. They urged FHWA to delay implementation of the new pavement requirements until the limits of the NHS are finalized.

As discussed in combined discussion sections for sections 490.105(e)(1) and 490.105(f)(1), FHWA cannot delay the due date of the State DOT target establishment or the State DOT reporting on performance targets because of the statutory deadlines in MAP-21. The FHWA also recognizes that NHS limits could change during a performance period. Therefore, FHWA revised section 490.105(d)(3) in this final rule so that State DOTs are no longer required to declare and describe NHS limits in their Baseline Performance Period Report. As a result, the changes in NHS limits during a performance period would be accounted for. As discussed in section 490.105(d)(3), the National Highway

System Data Item in HPMS and the Highway System of the Inventory Route Data Item in NBI are required to be reported to FHWA annually together with the condition metric data. The NHS limits for pavement condition measures will come from the same data set submitted to HPMS in the same year as the performance condition metric data is submitted, and NHS designation for bridge condition measures will come from the same NBI data set as the performance condition metric data of the same year. (See more details on implementation timeline discussion in sections 490.105(e)(1) and 490.105(f)(1) and discussion on NHS limits in the discussion for section 490.105(d)(3).)

Discussion of Section 490.309 Data Requirements

The FHWA proposed four condition metrics to be collected and reported to the HPMS to calculate the pavement measures. These metrics included IRI, rutting, faulting, and Cracking Percent. Comments on the inclusion of these four metrics were primarily focused on the consideration of IRI as a required metric. The AASHTO and eight State DOTs⁴⁷ commented that, of the four proposed metrics, IRI is the only one ready to be measured consistently in all States and therefore should be the only measure of pavement condition. Alternatively, they suggested that the additional three metrics be phased in over time. In contrast, the ACPA, Cemex USA, Connecticut DOT, Georgia DOT, Illinois DOT, Louisiana DOT, Ohio DOT, and PCA supported the use of the four metrics. Some commenters⁴⁸ suggested that the four metrics not be equally weighted in the calculation of the pavement measures. The FHWA considered these differing opinions and elected to retain the requirement for the collection and reporting of the four metrics. The FHWA has found through documented research⁴⁹ that nearly all State DOTs currently use more than IRI in their pavement management programs. Publications by recognized pavement experts indicate that pavement conditions cannot be determined using only IRI alone.^{50 51 52 53} However, FHWA

recognizes and appreciates that the methods to collect and report the rutting, faulting, and Cracking Percent metrics may be new to some State DOTs. The Alabama DOT suggested that FHWA replace IRI with Mean Roughness Index (MRI) in order to avoid confusion. The FHWA agrees with Alabama that MRI is the correct measurement and the HPMS Field Manual has been revised to clarify this distinction. The term IRI is still used because it is familiar to most users even though the actual collection and reporting is the MRI value.

The FHWA recognizes that the level of pavement data collection for the four metrics is more intensive than the HPMS requirements in previous years and will require time for State DOTs to adjust contracts and equipment to comply. The final rule delays the requirements for pavement data collection until January 1, 2018, for Interstate highways and until January 1, 2020, for non-Interstate NHS routes. Further, FHWA has delayed the implementation of data collection, reporting, and target establishment requirements so that the first performance period begins in 2018. The phased approach pushes the determination of baseline pavement conditions for the first performance period from 2018 to 2020 (the mid-point of this period). This phased approach to target establishment for the pavement measures is presented in the discussion for section 490.105(e)(7). The FHWA believes that these actions will advance the state of practice to more consistently collect and report rutting, faulting, and cracking while allowing for a phased approach to full implementation.

planning organizations, objected to the use of IRI as a metric in the calculation of the pavement measure. The ACHD, for example, commented that collecting data on low speed roads is difficult and generally results in poor quality data. As such Ada County suggested dropping IRI as a measure for local roads. Similarly, the city of Santa Rosa commented that while the California DOT is collecting IRI data on California's NHS, it will likely be the responsibility of local agencies to collect IRI data in the future. This change could disrupt established process for PCI collection and will result in increased cost and duplicative data collection efforts. The Alaska DOT&PF commented that asphalt cracking has no standard method of collection, remarking that two methods, windshield and laser, are not comparable. Finally, CEMEX USA and the Portland Cement Association suggested adding Remaining Service Interval as a condition metric. The majority of the commenters represent cities and counties that utilize the Pavement Condition Index (PCI) as their primary method to assess pavement conditions. The commenters noted that the PCI method does not include IRI nor an assessment of ride quality. Several commenters, primarily local agencies in California, commented that applying IRI to local roads could lead to "worst-first" strategies. Additionally, the ACHD commented that using IRI on local roads may mean that cost-effective pavement preservation techniques (e.g., chip seals) will no longer be useful as they can negatively impact IRI. The commenters expressed a number of concerns related to the cost and burden of collecting IRI using a high speed profiler testing device; and the lack of correlation between PCI and IRI. In addition, many of these commenters suggested that local agencies be allowed to use their own methods to classify pavements as being in Good, Fair, or Poor condition. The ACHD suggested that straight-edge based methods could replace IRI or manual methods on local roads. This alternative method would remain accurate and would be much more practical. Furthermore, as discussed later in this section, a number of commenters raised concerns with the

accuracy of collecting IRI in urban environments. Discussions with manufacturers of IRI data collection equipment and the comments from the Road Profiler Users Group confirmed that this is particularly difficult where posted speed limits are less than 40 mph, usually in urban settings. In the final rule, an alternative method known as PSR is permitted to determine the overall condition of pavement sections only on roadways where posted speed limits are less than 40 mph.

In section 490.309(b) of the NPRM, FHWA proposed the data collection requirements for Interstate and non-Interstate NHS pavements necessary to calculate the four pavement condition metrics. A wide range of comments was received on these proposed data collection requirements. This section includes a discussion on the response to the comments and the changes resulted in the final. This discussion is organized into the following categories of issues raised by commenters:

- Reference to AASHTO protocols
- Collecting data in both directions on Interstate pavements
- Collecting data at an annual frequency for Interstate pavements
- Collecting IRI data on lower speed roadways
- Processing data at 0.10 mile intervals
- Requiring full extent data collection on the full NHS for all four metrics
- Using structure type to identify and exclude bridges
- Travel lane required for data collection
- Devices for rutting collection

Reference to AASHTO Protocols

Because the data requirements to calculate pavement performance vary somewhat from current data collection practices, the NPRM specified defined collection protocols for each of the required data elements. The majority of the methods and standards for data collection are outlined in the HPMS Field Manual and reference some of the aspects of certain AASHTO Standards. These documents are incorporated by reference in section 490.111. Several adopted and provisional AASHTO Standards were specified in the NPRM with the intention of providing guidance and background for measuring data needed to determine performance.

The AASHTO and others⁵⁵ submitted comments about the proposed methods for data collection, suggesting that these

standards were never intended for regulatory purposes. The comments noted distinctions between AASHTO Standards and those in the HPMS Field Manual for cracking measurement. The commenters also noted that AASHTO Provisional Standards PP68–14, PP69–10, and PP70–10 were never intended as permanent standards, are subject to change, and inappropriate for use in rulemaking.

The FHWA recognizes that AASHTO Standards were not specifically designed for collecting data that is used for pavement performance evaluations. However, the 10 AASHTO Standards incorporated by reference in section 490.111 contain well-known protocols for data collection, equipment requirements, and data compilation that are useful in determining pavement performance. It is preferable that State DOTs use the appropriate parts of these standards to guide quality data collection even when additional calculations are needed to meet the requirements for the HPMS Field Manual. For example, AASHTO Standard PP68–14 contains excellent methods to collect cracking images in asphalt pavements. Additional calculations can easily be done to make this value meet the HPMS requirement for area of pavement cracked. Guidance on how to make these calculations is included in the HPMS Field Manual. The FHWA agrees with AASHTO that including the provisional standards PP67–14, PP68–14, PP69–14, and PP70–14 as requirements in the rule is inappropriate. The FHWA directs State DOTs to refer to the HPMS Field Manual for data collection methods for automated data collection of pavement cracking and rutting. However, FHWA recognizes the extensive efforts by State DOTs involved in developing these provisional standards. The HPMS Field Manual may continue to reference them as preferred methods for data collection with specific guidance for making calculations from that data to report pavement conditions to HPMS.

Collecting Data in Both Directions on Interstate Pavements

The FHWA proposed in section 490.309(b) for State DOTs to collect data in both directions of travel for the full Interstate for all four condition metrics to accurately capture the directional differences associated with pavement type, age, traffic loading, and roadway geometry. Three State DOTs and one planning organization⁵⁶ expressed

Seattle DOT, Orange County Transportation Authority, City of Portland, OR, City of Sacramento, CA, City of Gilroy, CA, City of Napa, CA, Town of Tiburon, CA, City of Spokane, WA, California Association of Counties, South Jersey Transportation Planning Organization, Portland Cement Association, American concrete Pavement Association, Northwest Pavement Management Association, Fugro Roadware, NCE, Brian Domsic, John Harvey, An anonymous commenter, Stephen Mueller Consultancy, League of California Cities, and LA DOT.

⁵⁵ Colorado DOT, Connecticut DOT, Florida DOT, Georgia DOT, Idaho DOT, Illinois DOT, Minnesota DOT, Montana DOT, North Dakota DOT, Oregon DOT, Rhode Island DOT, South Dakota DOT, Wyoming DOT, Mid-America Regional Council, and Southeastern Pavement Preservation Partnership.

⁵⁶ Georgia DOT, Missouri DOT, Oregon DOT, Atlanta Regional Commission.

concerns with the burden associated with collecting data in both directions. The Maryland State Highway Administration and Missouri DOT suggested a revision to the final rule to limit the requirement for collection in both directions to only those cases where the highway is divided with either a median or a physical barrier. Conversely, two State DOTs⁵⁷ commented that they collect data on their Interstate in both directions, and in some cases, in all lanes. In addition, it was noted by the Oregon DOT that data for the required inventory metrics (Through Lanes, Surface Type, and number of lanes) are collected and reported in one direction only, which may not represent information in the non-inventory direction correctly. In the NPRM, an HPMS review indicated that 52 percent of State DOTs do not report data in both directions on the Interstate. The comments received on this requirement support that finding.

Contrary to the comments opposing data collection on both directions of Interstate System, the joint letter from the Maine, New Hampshire, and Vermont DOTs supported the pavement condition data requirements on “both barrels of dual-carriageways.” The letter stated that the New Hampshire DOT has been measuring pavement condition and other measurements on each carriageway for all of their Interstate System for “several years and it has taken significant effort to combine the data for FHWA purposes.” They noted that requiring data for “both barrels” of divided Interstate System would relieve them from additional post-processing and create a more comprehensive picture of the statewide pavement condition in their State. They also recommended FHWA to consider the dual-carriage data format to support FMIS, which intends to use HPMS data as its source.

In a recent study for FHWA,⁵⁸ pavement conditions were measured in both directions on a significant number of miles of Interstate highways. The findings indicated that the difference in pavement conditions between the two directions was insignificant. This supports the claims made in the comments indicating that data collection in both directions on Interstate highways is not warranted. However, FHWA also recognizes that agencies, like New Hampshire DOT, collect their data in a dual-carriageway data format for a more comprehensive

assessment of the statewide pavement condition and for better integrating with FMIS. Therefore, section 490.309(b)(1) in the final rule was amended to require pavement data reporting for “at least one direction” for the Interstate System, and section 490.309(b)(1)(iii) in the final rule provides State DOTs the option to collect and report pavement condition data separately for each direction of divided highways (carriageway) on the Interstate System. Please note if a State DOT chooses to exercise the option of reporting Interstate pavement data in dual-carriage data format, then that State DOT must report the data for the entire Interstate System within the State (*i.e.*, no partial network dual-carriage option allowed). As stated previously, FHWA provides this option for State DOTs for a more comprehensive assessment of their statewide pavement condition and for better integrating with FMIS. The FHWA expects State DOTs to not convert data format only to meet the minimum Interstate pavement condition level and/or to make significant progress. Considering a substantial amount of effort required to convert data format (*i.e.*, single/inventory direction to dual carriage or vice versa) in accordance with HPMS Field Manual, FHWA does not believe State DOTs will convert the data format just to meet the minimum Interstate pavement condition level and/or to make significant progress. Therefore, FHWA does not specify an allowable frequency of changes in data format in the final rule so that State DOTs have the flexibility of converting their Interstate data format at any time. The FHWA recommends that State DOTs should carefully examine the effects of data format conversion on condition/performance trends and on the ability to meet the minimum Interstate pavement condition level and significant progress toward achieving targets. Also, it is important to note that if a State DOT decides to report Interstate System data in a dual-carriageway data format, then the Interstate pavement metrics in section 490.311 will be determined separately for each direction (*i.e.*, inventory and non-inventory directions) and the Interstate pavement measures in section 490.313 will be computed using the data from both directions of the Interstate highways. Please refer to the HPMS Field Manual in the docket for data requirements associated with dual-carriageway data format for Interstate System.

Collecting Data on an Annual Frequency for Interstate Pavements

The FHWA proposed to maintain the current HPMS requirement to collect

data annually for the IRI metric and an increased frequency of annual (from biennial collection) collection for the Cracking Percent, rutting, and faulting metrics for the Interstate System. A total of 23 comments⁵⁹ addressed the proposed annual data collection requirements. The majority of these commenters expressed concern with the costs and burden associated with annual data collection and questioned the need to capture annual changes in pavement condition. The Oregon DOT noted that an evaluation of their annual collection efforts after 7 years of testing concluded that “it was not necessary or cost effective to collect data annually,” citing that the overall condition does not change dramatically from year to year. The Michigan State Transportation Commission and Michigan Asset Management Council opposed the annual data collection requirement and recommended that FHWA work in cooperation with States to determine the most appropriate frequency and level of detail for data collection. In general, the commenters did not feel it was necessary to capture annual changes in condition.

The Rhode Island, Pennsylvania, and Minnesota DOTs commented that they collect data on their Interstate System on an annual basis. The Rhode Island DOT commented that their data coverage and frequency were the result of a recommendation by the National Center for Pavement Preservation to account for the rapid deterioration that pavements in Rhode Island can exhibit from year to year due to the weather conditions. Fugro Roadware supported the proposed data coverage and data collection frequency. Fugro Roadware emphasized the importance of identifying many of the potential problems early and clearly so that State DOTs and other agencies can ensure that they are optimizing the work performed on the network to limit deterioration and potential need for more advanced and expensive treatments.

The FHWA believes that the minimum Interstate pavement condition requirements in 23 U.S.C. 119(f) require annual assessments of condition. The FHWA recognizes that, for a specific pavement, conditions may not change

⁵⁸ Evaluation of Pavement Conditions on the Interstate System: Preliminary Summary, Rada 2015.

dramatically each year. However, FHWA believes that changes in conditions of the full-extent Interstate System within a State will be evident from year to year due to construction activities, weather events, and variability in the durability of the highway pavements. State DOTs have been reporting IRI for the Interstate highways to HPMS on an annual basis since 1989. A review of the HPMS data from 2007 to 2011 showed that 29 State DOTs reported at least a 1 percent change in the IRI for their Interstate pavements in Good condition. During the same period, 10 State DOTs reported at least a 10 percent change in annual Good pavement condition levels.

Although the new pavement measure includes multiple condition metrics, FHWA believes this account of historical changes in IRI condition suggest that similar changes should be expected for the new pavement measure. Furthermore, FHWA believes that the 0.1 percent reporting accuracy required of the new pavement measure necessitates at least an annual frequency of testing in order to accurately determine State DOT compliance with the minimum condition requirements in 23 U.S.C. 119(f).

As discussed in the Executive Summary, the FAST Act removed the phrase “two consecutive reports” in 23 U.S.C. 119(f)(1)(A), which relates to triggering the penalty for when the Interstate pavement condition has fallen below the minimum condition level established under this rule. Under the FAST Act the penalty will be based on each FHWA minimum condition level determination instead of two consecutive minimum condition level determinations. The FHWA believes that the changes due to FAST Act further support the importance of the annual data collection for implementing the statutory requirements under 23 U.S.C. 119(f)(1).

For these reasons, FHWA retains the requirement of annual data collection for all four condition metrics for the Interstate pavements in the final rule.

Collecting IRI Data on Lower Speed Highways

The FHWA proposed that IRI data be collected on all NHS roadways. As previously discussed, a number of commenters⁶⁰ noted the challenges with collecting IRI data on roadways in urban settings and lower speed roadways. Although IRI is a well-known

measure for pavement performance, it is less detectable to highway users at low speeds and less useful as a measure of pavement performance. To specifically address this issue, FHWA added an alternative method known as PSR⁶¹ that may be used to determine overall pavement condition for Interstate and non-Interstate NHS sections where the posted speed limit is less than 40 mph (sections 490.309(b)(1)(iv) and 490.309(b)(2)(iii)). The intent of this change is to allow continued use of a method that has been a part of HPMS for many years to provide pavement condition information for locations where IRI data collection is not practical. In addition, section 490.309(b)(2)(iii) provides that State DOTs may use conversions to PSR from other pavement condition assessment methods, such as the U.S. Army Corps of Engineers PCI,⁶² if they demonstrate to FHWA that the conversion produces pavement conditions equivalent to the PSR method.⁶³ (See discussion section for section 490.313(b) for the thresholds to define Good, Fair, and Poor condition levels based on PSR.)

Processing Data at 0.10 Mile Intervals

The FHWA proposed in sections 490.309(b) and 490.311(c) that data be collected and reported at 0.10 mile intervals for the four pavement metrics for the full NHS to provide better uniformity and increased accuracy in condition assessment. The majority of commenters, including 18 State DOTs,⁶⁴ 3 industry associations,⁶⁵ 2 planning organizations,⁶⁶ ACHD and AASHTO opposed or expressed concerns with the proposed requirement. In general, the commenters noted that the uniform 0.1 mile reporting requirement did not align with their current State DOT pavement measuring and reporting practices. The commenters cited the costs to conform to this requirement and urged FHWA to consider an approach that would provide greater flexibility to State DOTs to allow for varying reporting lengths.

The reporting of the inventory data elements in section 490.311(c) of the NPRM generated some questions. Fugro Roadware recommended that sections shorter than 0.1 mile be considered for other significant changes in the pavement inventory, such as change in pavement surface type and change in route identification (*i.e.*, where reference posts reset at county lines and overlapping highways start and end). The Georgia DOT urged FHWA to define the method for calculating cracking, rutting, and faulting, including differentiation of surface types. The Kentucky Transportation Cabinet requested clarification on how sections should be broken down when there are discontinuities in the route or surface type within a section. Considering these comments, FHWA revised sections 490.309(a) and 490.311(c)(2) to clarify that State DOTs are required to report all relevant⁶⁷ condition metrics for each pavement section. This means that each pavement section and all relevant condition metrics must be spatially coincident (*i.e.*, identical Route ID, Begin Point, and End Point values in HPMS). Recognizing that inventory data items do not perfectly align (or are not spatially coincident) with the pavement sections, FHWA revised section 490.311(c) and added section 490.311(d) in the final rule to clarify that State DOTs are required to report the three inventory data items (Through Lanes, Surface Type, and Structure Type) using the protocols in the HPMS Field Manual. In contrast to the section lengths for the measured pavement metrics, the section length for each of the inventory data items is not restricted to the 0.1 mile length. Instead, it reflects logical start and end points. These inventory data items will be tied to measured pavement conditions reported in the metrics using each State DOT's linear referencing system, as described in chapter 4 of the HPMS Field Manual.

Nine State DOTs⁶⁸ the Northeast Ohio Areawide Coordinating Agency and the Southeast Pavement Preservation Partnership provided comments expressing support for 0.1-mile intervals and noted that they collect and report data at 0.10 mile intervals and did not

⁶⁷ For asphalt pavement sections (Surface_Type is 2,6,7, or 8), relevant condition metrics are IRI, rutting, and Cracking_Percent; for jointed concrete pavement sections (Surface_Type is 3,4,9, or 10), relevant condition metrics are IRI, faulting, and Cracking_Percent; and for Continuously Reinforced Concrete Pavements (CRCP) sections (Surface_Type is 5), relevant condition metrics are IRI and Cracking_Percent.

⁶⁸ Hawaii DOT, Kentucky DOT, Maryland DOT, Oklahoma DOT, Oregon DOT, Missouri DOT, New Jersey DOT, Tennessee DOT and Washington State DOT.

⁶⁰ Ada County Highway District (ACHD), John Harvey, CEMEX USA, City of Vacaville, CA, Portland Cement Association, Metropolitan Transportation Commission, Oregon DOT.

see an undue burden with this proposed requirement. However, many of these State DOTs asked for more clarification on how they should address breaks in the system that would prevent collection at 0.10 mile lengths.

The NPRM contained substantial discussion about the importance of the 0.10 mile length data collection and reporting lengths in providing uniformity and increased accuracy in pavement condition assessment. The RIA prepared for the NPRM considered the increased costs of data collection and processing to comply with the requirements. Some State DOTs currently collect and report pavement condition at 0.10 mile intervals to the HPMS. An evaluation of the network level condition outcomes in these State DOTs using 0.20 mile section lengths indicated a minor difference in the percentage of Good condition pavements but a considerable difference in percentage of Poor condition pavements compared to the 0.10 mile length.

In the final rule, the 0.10 mile uniform pavement section data collection and reporting is retained because it is needed for a consistency in national performance reporting. Current data collection and processing technologies can easily accommodate it, and it is already an accepted practice in several State DOTs. Furthermore, this requirement does not impose restrictions on State DOT management programs. State DOTs can and should operate pavement management programs as they see fit.

Related to the section lengths, the commenters asked for more clarification on how State DOTs should address breaks in the system where collection at 0.10 mile lengths is not practical. These breaks occur due to uneven lengths in highway routes, interruptions to measurements by intersections, change in surface type, bridges, and similar locations where uniform 0.1 mile lengths are not possible. In the NPRM, allowance was made to report conditions for smaller pavement sections if needed, but that none should exceed 0.1 mile in length. It was noted in the comments and confirmed by examination of existing HPMS data that field measurements do not always align exactly with official State route maps. These deviations relate to the accuracy of global positioning devices and other field conditions that can result in sections slightly exceeding 0.1 mile lengths but always within a tolerance of approximately 50 feet. In the final rule, the intent is that State DOTs will report in 0.1 mile sections wherever possible, but are provided an allowance for

lengths up to 0.11 mile (580.8 feet) to accommodate the alignment issue. Therefore, FHWA revised sections 490.309(b)(1)(i)(C), 490.309(b)(2)(i)(C), 490.309(b)(2)(ii)(C) and added sections 490.309(b)(1)(iv)(C) and 490.309(b)(2)(iii)(C). These changes were made so that shorter than 0.10 mile pavement sections are permitted at the beginning of a route, end of a route, bridges, locations where surface type changes, or other locations where a section length of 0.10 mile is not achievable and specified that the maximum length of sections shall not exceed 0.11 mile (580.8 feet). Please note that as discussed in sections 490.309(a) and 490.311(c)(2), State DOTs are required to report spatially coincident (*i.e.*, identical Route_ID, Begin_Point and End_Point values in HPMS) sections for all relevant⁶⁹ condition metrics to HPMS.

As stated above, the sections of condition metrics (*i.e.*, IRI, rutting, faulting, Cracking_Percent, and PSR) are 0.10-mile long sections (shorter than 0.10 mile sections are permitted at the situation specified above) and not exceeding 0.11 mile, and all relevant condition metrics must be spatially coincident for each section. On the other hand, as discussed above, the section lengths of inventory data items (Through Lanes, Surface Type, and Structure Type) shall be in accordance with the protocols in the HPMS Field Manual so those data items do not necessarily spatially align with the condition metrics sections. However, in order to calculate measures (described in section 490.313) and to determine missing, invalid, or unresolved data (described in 490.313(b)(4)(i)), the data items (*i.e.*, inventory data items, and other related data items) which do not spatially align with condition metrics are required. So, for the purpose of calculating measures and determining missing, invalid, or unresolved data, condition metric data will be dynamically segmented with all three inventory data items (Through Lanes, Surface Type, and Structure Type), functional class data item (Data Item F – System in HPMS) and NHS data item (Data Item NHS in HPMS). To provide clarification on how sections should be broken down when there are discontinuities in the route in

⁶⁹For asphalt pavement sections (Surface_Type is 2,6,7, or 8), relevant condition metrics are IRI, rutting, and Cracking_Percent; for jointed concrete pavement sections (Surface_Type is 3,4,9, or 10), relevant condition metrics are IRI, faulting, and Cracking_Percent; and for Continuously Reinforced Concrete Pavements (CRCP) sections (Surface_Type is 5), relevant condition metrics are IRI and Cracking_Percent.

responding to the comment from Kentucky Transportation Cabinet, FHWA differentiates between condition metric sections and dynamically segmented condition metric sections by adding a definition for condition metric sections in section 490.305. The FHWA defines a “Pavement Section” as a nominally 0.1 mile-long reported segment that defines the limits of pavement condition metrics required by FHWA. The revised sections 490.309(b)(1)(i)(C), 490.309(b)(2)(i)(C), 490.309(b)(2)(ii)(C) and added sections 490.309(b)(1)(iv)(C) and 490.309(b)(2)(iii)(C) used the term “pavement section.”

Requiring Full Extent Data Collection on the Full NHS for the Four Condition Metrics

The FHWA proposed that the data for all four condition metrics be collected on the full extent of the Interstate and non-Interstate NHS. This proposal introduced and increased the data collection burden for cracking, rutting, and faulting. Comments provided by AASHTO, ARC, the National Asphalt Pavement Association, and the State DOTs of Connecticut, Florida, Georgia, Kentucky, Minnesota, Mississippi, Missouri, and Oregon noted that the requirement for full extent data coverage is “unnecessary and excessive.” They also commented that the full extent data provides only marginally better insight into the system condition with significant financial consequences for State DOTs. Alabama DOT commented that sampling should be permitted on off-system routes, even if the end goal is to eliminate sampling on-system. The Mississippi DOT commented that the cost associated with the proposed requirement is not just in the data collection, but also includes review, analysis, maintenance, and reporting of the data. These requirements create additional burdens to the personnel resources of State DOTs. The Illinois DOT commented that automated crack mapping is still an emerging technology, and it is possible for there to be some inconsistencies in the way that States collect and report this data. They added that manual distress surveys of the entire NHS system are not a viable option.

The AASHTO and State DOTs of Connecticut, Georgia, Idaho, Minnesota, Montana, North Dakota, South Dakota, and Wyoming recommended allowing State DOTs to report metric data on samples in lieu of full extent. The AASHTO and Connecticut and Minnesota DOTs argued that sampling is a more cost effective approach than measuring the full extent. The Oregon

DOT commented that the full extent requirement is somewhat “understandable” for the Interstate System because there is a minimum pavement condition standard applied nationwide with significant financial consequences. Therefore, full extent measurement “makes sense” to ensure the most accurate data. However, the Oregon DOT recommended a sampling approach for the non-Interstate NHS because the system is not subjected to financial consequences. The Oregon DOT also stated that a sampling approach could also help avoid the inherent data errors associated with full extent IRI data where the data collection vehicle must stop at traffic lights. The Rhode Island DOT commented that State DOTs typically manage and maintain each direction of the Interstate System as separate roadways, but only report one direction to the HPMS. The Pennsylvania DOT commented that they collect data in both directions on divided non-Interstate NHS roads and requested clarification from FHWA on if they will only need to report one direction in the future. In addition, the commenter requested clarification on the frequency with which they need to report the data, since it is collected every year.

As discussed in the NPRM, reporting the full extent measurement for the whole NHS is important to determining pavement performance.⁷⁰ The final rule retains the language in section 490.309(b)(1) that requires State DOTs to collect and report IRI, rutting (asphalt pavements), faulting (jointed concrete pavements), and Cracking Percent annually for the full extent of the mainline highway Interstate System and collect data biennially and report data annually for the full extent of the non-Interstate NHS. As discussed in sections 490.109(d)(1) through (d)(3), State DOTs are required to collect non-Interstate NHS data every two years but State DOTs are required to report data for the entire non-Interstate NHS network to HPMS every year, hence, replacing the reported data from previous data collection cycle with the most recent data collected in HPMS. In response to Pennsylvania DOT’s question on the non-Interstate NHS, FHWA retains the language, as proposed in the NPRM, that only one direction (*i.e.*, inventory direction) data collection and reporting for non-Interstate NHS is required for the pavement metrics and inventory

data (sections 490.309(b)(2)(i)(D), 490.309(b)(2)(ii)(D), 490.309(b)(2)(iii)(D) and 490.309(c)(1)(ii)). Please note that the non-Interstate NHS pavement measures in section 490.313 will be computed using only the data referenced to the inventory direction of the non-Interstate NHS highways in HPMS. If a State DOT chooses to collect pavement data for the non-Interstate NHS on an annual basis, that State DOT will still meet the requirements in section 490.309(b)(2). In this case, the actual 2-year condition/performance (midpoint of a performance period) will be derived from the collected pavement data for the entire non-Interstate NHS in the second year of a performance period, and the actual 4-year condition/performance (end of a performance period) will be derived from the collected pavement data for the entire non-Interstate NHS in the fourth year of a performance period.

In response to comments suggesting use of a sampling approach, a recent statistical study⁷¹ found that, even under controlled conditions, the variability of pavement data was substantial. A sampling program would require sample sizes approaching full data collection to provide a reasonable level of confidence in the results. It is not practical to implement this kind of a sampling program.

Using Structure Type To Identify and Exclude Bridges

In section 490.313(f)(1) of the NPRM, FHWA proposed that bridges would be excluded prior to computing all pavement condition measures by removing the sections where the Structure Type field value is coded as “1” in the HPMS. This was done to meet the statutory requirement (23 U.S.C. 119(f)(1)(A)) that pavement analyses must be done “excluding bridges.”

The AASHTO, Fugro Roadware, and the State DOTs of Alabama, Colorado, Connecticut, Georgia, New Jersey, Oregon, and Texas requested clarification on how the bridge limits would be removed from the 0.10 mile interval continuous pavement performance data, particularly where the bridge limits do not spatially coincide with the 0.10 mile pavement sections. Fugro Roadware recommended that areas with bridge structures simply be invalidated and identified as a bridge. The AASHTO and Connecticut and New York DOTs recommended flexibility for State DOTs to use

segments other than 0.10 mile at the bridges. Oregon DOT commented that they prefer not to include IRI data for the structures, but State DOTs have been required for several years to report IRI metric data for bridges under the current HPMS reporting requirements. Oregon DOT added that this redundant effort to provide pavement condition data on structures that is not being used by FHWA is inefficient. This creates concern because of the current environment where staff and money are scarce. The AASHTO and Illinois and Montana DOTs commented that there is a discrepancy between pavement data reporting requirements in the current HPMS and the proposed measure calculation process for handling pavement data on bridges. The Hawaii DOT commented that pavements on viaduct structures should be excluded from the pavement condition performance measures. The FHWA concurs since viaduct structures meet the definition for bridges and are excluded in the legislation.

The New Hampshire DOT commented that the Federal definition of bridges requires structures to be greater than 20 feet long. However, in New Hampshire there are several shorter bridges that often impact roughness just as larger structures do because many of them contain expansion joints or cause transverse cracking through expansion.

The FHWA has evaluated the comments regarding the methodology for excluding bridges for pavement condition measure calculation. The FHWA clarified several of the issues related to bridges on the NHS in the final rule.

First, in response to the comment from New Hampshire DOT, the term “bridge” used throughout subparts C and D is consistent with the definition proposed in section 490.405 of the NPRM. The FHWA agrees with New Hampshire DOT that structures less than 20 feet long could impact the condition of pavement sections. As discussed in the NPRM, FHWA recognizes that State DOTs may have different definitions for bridge. However, FHWA believes that these discrepancies would cause problems in calculating pavement measure consistently at the national level by excluding additional structures. The FHWA believes that the use of an established definition would continue to provide consistent and standardized data to be analyzed for the evaluation of State DOT and national progress. Therefore, FHWA moved the definition for the term “bridge” in subpart D (section 490.405) to subpart A (section 490.101) to use it in a consistent manner

⁷⁰ FHWA (2012). Improving FHWA’s Ability to Assess Highway Infrastructure Health Pilot Study Report, FHWA-HIF-12-049. <http://www.fhwa.dot.gov/asset/pubs/hif12049/hif12049.pdf>.

⁷¹ Evaluation of Pavement Conditions on the Interstate System: Preliminary Summary, Rada 2015.

throughout the rule. As discussed in section 490.405, FHWA did not receive any substantive comments on the definition. The FHWA made an editorial revision to the definition in section 490.101 by striking the phrase “this section” and replacing it with the phrase “this part” to ensure that the definition in subpart A applies to both subparts C and D in the final rule.

The FHWA also clarifies that excluding bridges means that bridge limits will be determined by the coded values “Route_ID,” “Begin_Point,” and “End_Point” for the Structure Type Data Item in HPMS where the value is coded “1.” Those determined bridge limits will not be used for calculating pavement performance measures.

The FHWA agrees with the comments and recommendations from AASHTO and Connecticut and New York DOTs to provide flexibility for State DOTs to use segments other than 0.10 mile at the bridges. Therefore, FHWA revised sections 490.309(b)(1)(i)(C), 490.309(b)(2)(i)(C), 490.309(b)(2)(ii)(C), and 490.309(b)(ii)(C) and added sections 490.309(b)(1)(iv)(C) and 490.309(b)(2)(iii)(C) so that shorter than 0.10 mile pavement sections are permitted at bridges. The FHWA also provided flexibility for State DOTs in reporting pavement sections by either: (1) Reporting uniform section lengths of 0.10 mile regardless of presence of bridges (Figure 3); or (2) reporting shorter than 0.10 mile pavement

sections adjacent to bridges (Figure 4). The method of excluding the bridges for both options will be the same for both pavement section reporting options. The FHWA notes that if the first option is chosen, the reported IRI, rutting, faulting, and Cracking Percent metric values for a 0.10 mile pavement section will be influenced by the surface condition of the bridge deck. State DOTs should carefully examine the impact of bridge surface condition on the pavement condition measures when choosing the options on reporting pavement sections at (or adjacent to) bridges.

The FHWA cautions State DOTs in changing the way they report pavement sections at (or adjacent to) bridges between the time of target establishment and the time of progress evaluation. Such changes may alter the measures reported, which could then impact how an established target relates to actual measured performance. This difference could impact a State DOT’s ability to make significant progress toward achieving targets. Therefore, FHWA recommends that reporting of pavement section pavement sections at (or adjacent to) bridges is consistent between the HPMS data reporting cycles so that evaluating progress toward achieving target is consistent.

Finally, unlike the NHS limits and urbanized area boundary, FHWA did not propose that constant bridge limits would be used for excluding bridges

throughout performance period. The FHWA did not add language in the final rule specifying constant bridge limits to be used for excluding bridges throughout performance period. However, FHWA expects State DOTs to take necessary actions so that changes (both the number and the limits) in reported Structure Type Data Item in HPMS will be minimal between the data reporting cycles and have minimal impact on changes in pavement condition. In the discussion section for section 490.105(d)(3), ARC commented that changes to the NHS network are likely to be “infrequent and minimal” in impact when compared to the overall network extent. The FHWA expects the majority of changes in reported Structure Type Data Item in HPMS between data reporting cycles will be due to changes in NHS limits. For example, if a State DOT reports Structure Type Data Item in HPMS for only a small fraction of their bridges at the time of target establishment but reports for all bridges in subsequent years, the progress evaluation of targets for pavement condition measures will not be done in a consistent manner. The FHWA encourages State DOTs to take necessary actions to better integrate data between NBI and HPMS prior to establishing performance targets to minimize the impact of changes in HPMS between reporting cycles.

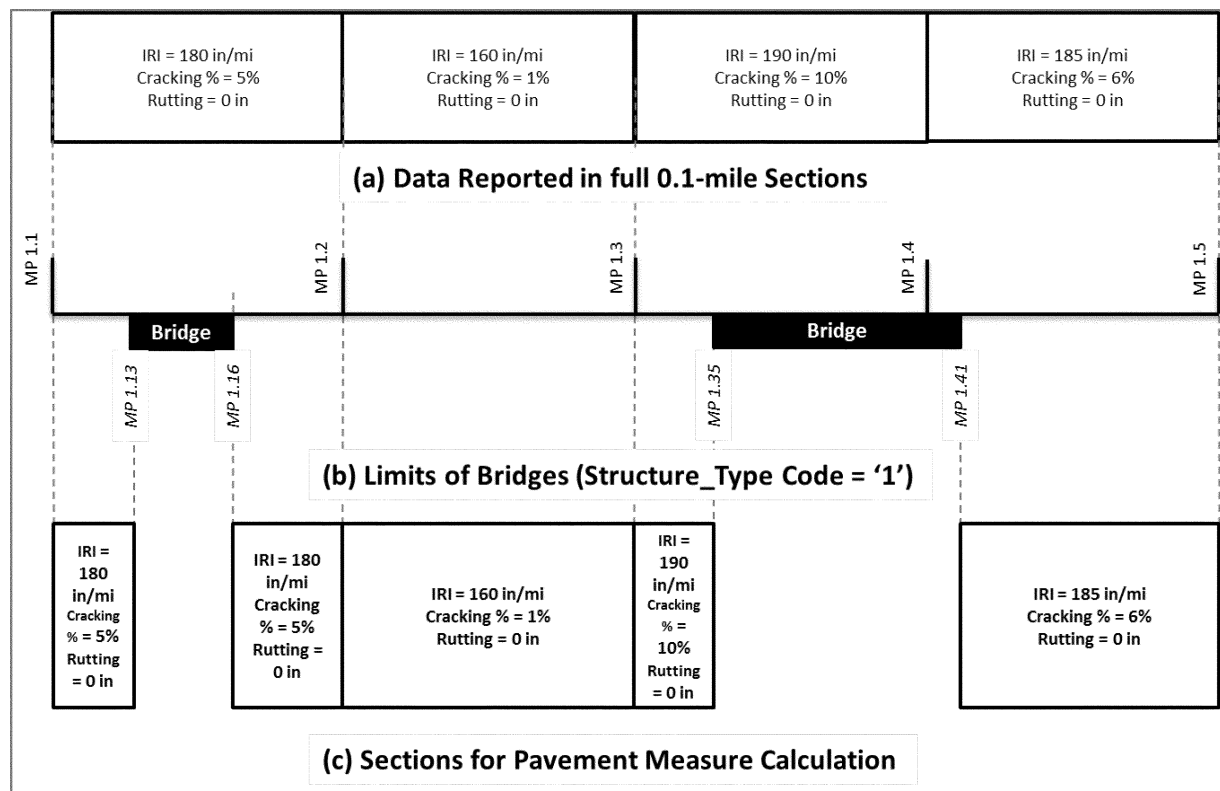

Figure 3 – An example of 0.10 mile pavement section with data measured in full 0.10 mile sections

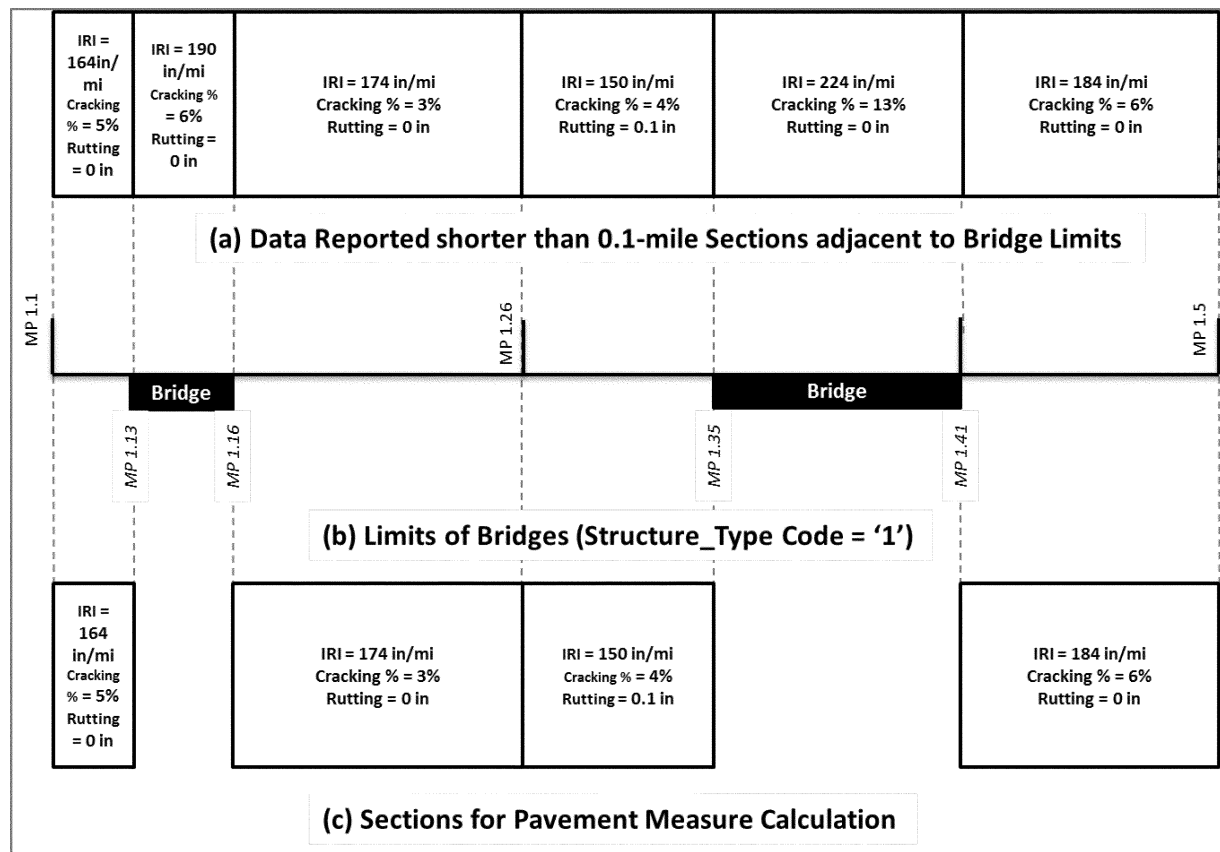

Figure 4 – An example of shorter than 0.10 mile pavement sections adjacent to bridge limits where data is measured separately for each section

Travel Lane Required for Data Collection

In the NPRM, FHWA proposed that data be collected for all four condition metrics in the rightmost travel lane, or one consistent lane if the rightmost travel lane is not accessible. The AMPO stated that a lane-mile requirement could become prohibitively expensive. This commenter suggested a compromise similar to the Interstate requirement where data is collected in each direction for highways divided by a physical median. Similarly, the commenter said data for frontage roads, which serve NHS facilities, should be collected as well and be reported separately. The AASHTO and the Connecticut and Wisconsin DOTs commented that the rightmost lane may not be the most effective for data collection. They agreed that a consistent lane should be used, but preferred that State DOTs make the decision on the lane for data collection. The commenters expressed concerns with using the rightmost lane in mountainous areas. They argued that these lanes are often dedicated to truck travel and not representative of the other lanes on the roadway. They also expressed concern

with the challenges of collecting data in urban settings where the rightmost lane is often more congested than other lanes. The Tennessee DOT commented that they currently test the rightmost lane and supported the proposed requirement.

The FHWA considered these points and acknowledges that pavement conditions measured in dedicated truck lanes and congested lanes may not be representative of the overall condition of pavements in all lanes. The FHWA amended section 490.309(b) to allow other lanes to be used if the rightmost lane carries traffic that is not representative of the remainder of the lanes or is not readily accessible due to closure, excessive congestion, or other events impacting access.

Devices for Rutting Collection

The Florida and Oregon DOTs commented that the proposed process for data collection allows for rutting measurements using either a device that determines rutting from 5 points across the lane, or a device that determines rutting from 1,000 points or more across the lane. They argued that there is a large difference between the two methods. Fugro Roadware commented

that AASHTO R48–10 is not a reliable solution and should be removed as an option for pavement condition reporting. A review of AASHTO Standards R48–10 and PP–70 suggests that differences in precision exist. While the automated transverse profiling devices are the preferred method for measuring rutting, FHWA realizes that the devices are not yet universally adopted by State DOTs and that a significant number of State DOTs use the 5-point devices in their pavement programs. The NPRM provided for use of either device. No changes are made in the final rule.

Discussion of Section 490.311 Calculation of Pavement Metrics

The FHWA proposed the methodology to be used by State DOTs to calculate the IRI, cracking, rutting, and faulting metrics and the requirements to report these metrics and the three inventory data elements to the HPMS. The condition metrics are used, as defined in section 490.313, to classify pavements as being in Good, Fair, or Poor condition. These methods and metrics were derived primarily from

published standards⁷² used in pavement design and adopted by a majority of State DOTs.

A number of commenters suggested additional or alternative metrics to be collected and identified challenges with the use of IRI in some local jurisdictions. The FHWA included discussion on these comments and the changes to the final rule in the previous sections of this rulemaking.

In the NPRM, FHWA proposed a requirement in section 490.311(b)(1) for State DOTs to determine the IRI metric for all NHS sections. As discussed in the previous section, a number of comments raised concerns with the collection of IRI in urban settings and on lower speed roadways. The FHWA used these comments to adjust the requirement of data collection to allow for an alternative method (PSR) to assess pavement condition on roadways where the posted speed limit is less than 40 mph. The PSR is to be determined using the method prescribed in the HPMS Field Manual, which is a visual overall assessment of pavement condition. The new provision also allows for State DOTs to utilize an alternative assessment method to estimate the PSR using a correlation that is approved by FHWA.

In section 490.311(b)(2)(i), FHWA proposed the method to calculate the amount of cracking in each asphalt pavement section. Many commenters noted inconsistencies with the proposed regulations and the HPMS Field Manual, the types of cracks to be included in the metric, and the consideration of cracks that have been sealed. In addition, several commenters noted concerns with the use of provisional AASHTO Standards that have been removed, as discussed previously for section 409.309 (under "Reference to AASHTO Protocols"). Fugro Roadware and the Ada County Highway District recommended the HPMS Field Manual metric of percent area of fatigue cracking for use on asphalt roads. The NCE commented that Cracking Percent may be overly simplistic for use in pavement management. The commenter states that Cracking Percent is a much simpler measure than PCI and adopting it in the rule as opposed to PCI "would be a step backwards." The commenter also remarked that Cracking Percent is not widely used by either local agencies or States. In addition, the commenter expressed concerns with the proposed

thresholds for pavement measures, stating that they are inappropriate for local roads.

Some comments sought clarification on the location of cracks to be included in the metric or how the area of cracked pavement is to be calculated. The language in the HPMS Field Manual has been changed to more clearly state that the location of cracks to be included shall be limited to the wheel paths only. The Louisiana DOT suggested that a wheel path be defined as 3 feet wide to eliminate metric conversion errors. The HPMS Field Manual further clarifies the width and location of each wheel path is in English units. In addition, commenters asked for clarification on the types of cracks to be included in the metric. Suggestions were provided to consider the severity of the crack and to limit the metric to only fatigue related cracking. Stephen Mueller Consultancy suggested that the severity level of cracking (high, medium, or low) be added to the HPMS "Cracking Percent" reporting requirement to be used as one of the pavement condition rating thresholds in the regulation. In addition, the Maine Turnpike Authority commented that severity of cracking will be crucial for making a fair assessment of a road's performance.

The intent of the metric is to only include load associated cracking in the wheel path. The HPMS Field Manual has been revised to clearly state that only fatigue (interconnected cracks) will be included in the metric. The FHWA believes that, for the purpose of the pavement measure being established through this rulemaking, an overall assessment of cracking is adequate to monitor system-wide performance. Consequently, FHWA does not feel that the cracking metric needs to consider the severity of the crack or cracking that is not related to pavement fatigue. The FHWA believes that the majority of fatigue generated cracking is in the wheel paths for asphalt pavements and therefore should be considered in the metric. The HPMS Field Manual has been revised to provide a clarification and guidance in reporting fatigue cracks, regardless of severity, in the metric.

Several commenters asked for clarification on the inclusion of sealed cracks in the cracking metric specifically related to asphalt pavements. The NEPPP noted that sealed cracks are often rated more severe using automated methods. The FP² corporation commented that crack sealing is an effective pavement preservation technique and should not be considered equal to an unsealed crack. The Rhode Island DOT

commented that sealed cracks should be considered in the metric.

In response to these comments, it should be noted that while sealing pavement cracks is an accepted practice for preserving pavements in Good condition, sealing cracks caused by fatigue does not restore structural capacity or alter the need for investment. The cracking performance metric in the final rule is predicated on measurement of fatigue cracking located only in the wheel path, regardless of whether the cracks are sealed. Therefore, no change was made in this final rule.

In section 490.311(b)(2)(ii), FHWA proposed methods to determine the rutting metric for asphalt pavements that permitted the use of either 5-point devices, scanning laser devices, or manual measurements. The Connecticut DOT asked for clarification on the accuracy of rutting measurement and Texas DOT suggested a minimum rut measurement spacing interval be required to determine the rutting average. The Michigan DOT suggested that if the precision level equaled the threshold for Good, then only pavements with zero rutting would be considered Good. The Texas DOT suggested an alternative metric that would represent the extent of rutting, in terms of the percentage of the section exhibiting rutting, to the proposed average value of rutting in a section. The Colorado, Florida, and North Carolina DOTs commented that the two devices identified in the NPRM for measuring rutting do not produce the same results. They recommended that only one device be permitted. The South Carolina DOT commented that it only has a 3-point laser system, and asked that FHWA consider the inability of State DOTs to perform the work in-house as required by the new rulemaking.

In consideration of these comments and inquiries made to the manufacturers of the measuring devices, the final rule clarified section 490.311(b)(2)(ii) and Item 50 of the HPMS Field Manual. The final rule requires the *average* rutting measurement to be computed to the nearest 0.01 inch, and that the measured rut values in each wheel path should be averaged first and then used as the basis for the final rutting metric calculation (average of the average wheel path ruts). The FHWA concurs with the comment by Texas DOT related to the minimum spacing for manual rut measurement at 12 inches and has included clarification in the HPMS Field Manual. However, FHWA does not concur with the suggestion to base the rutting measurement on the extent of rutting in a section instead of the averaged area of

⁷² Mechanistic-Empirical Pavement Design Guide, A Manual of Practice, August 2015, 2nd Edition. American Association of State Highway and Transportation Officials, Washington, DC. Table 7.1

rutting. While there is merit to the suggested method, it conflicts with typical practices used in a majority of State DOTs and would require major reworking of planning and other performance models, such as the Highway Economics Requirements System, currently in use by FHWA. The final rule retains the use of averaged area as the basis for the rutting metric.

In section 490.311(b)(3), FHWA proposed the method to determine the cracking metric for CRCP. Commenters⁷³ requested a more clear description of how cracking, punch-outs, and patching should be measured to determine the percentage of the area for the metric. The Alabama DOT commented that the values for Item 52 are rounded to the nearest 5 percent under the current HPMS Field Manual, meaning that a result of 7.5 percent cracked is rounded to 5 percent and values up to 12.5 percent are rounded to 10 percent cracked. Louisiana DOT made similar comments regarding rounding in the HPMS Field Manual. Item 52 in the HPMS Field Manual was revised to clarify how cracking and other distresses in CRCP are to be measured and reported to the HPMS.

In section 490.311(b)(4)(i), FHWA proposed the method to determine the cracking metric for jointed concrete pavements. There were a number of comments⁷⁴ requesting clarification about the method of calculation, the types of cracks to be included, and the consideration of sealed cracks to the measure. Item 52 of the HPMS Field Manual (attached to the NPRM and posted to the docket) has been revised to clarify how the cracking metric for jointed concrete pavements is to be calculated and reported to the HPMS. There are no changes in the final rule language related to this issue.

In section 490.311(b)(4), FHWA proposed the method to determine the faulting metric for jointed concrete pavements from measured pavement profiles, although there is no prohibition from using manual methods. A number of comments⁷⁵ focused on the method to determine faults from pavement profiles, the determination of average faulting, and the accuracy of reporting. The NPRM proposed the use

of AASHTO Standard R36–13 as the method to identify faults, allowing for both automated and manual detection of faults. Several commenters⁷⁶ expressed concerns with the potential for bias using the automated method. They remarked that the automated method would only average joints that exhibit measurable faulting. They noted that AASHTO Standard R36–13 allows for variability in the method of detecting the location of joints, which causes variation in the reported faulting values.

In response to these concerns, FHWA has revised the section for Data Item 51 in the HPMS Field Manual to clarify how to calculate and report the average faulting to the HPMS.

The Michigan DOT, Alabama DOT, and Louisiana DOTD pointed out a conflict in the threshold proposed to determine Good faulting condition and the accuracy of reporting for the faulting metric. The Louisiana DOT stated that the proposed metrics for faulting appear to be based on pre-2000 historical faulting data, which ignores the significant increase in Truck Traffic and is relatively limited in scope. As Michigan DOT pointed out, if the precision of the reporting of average faulting for a section is 0.05, the process of rounding would eliminate the possibility of a Good classification unless the pavement faulting was zero. For example, if in a section one half of the measurements were 0.02 inch and one half of the measurements were 0.04 inch, the average would be 0.03 inch, which would be rounded up to 0.05 inch. Since the threshold is also 0.05 inch, this section would be classified as Fair per the NPRM, even though all of the measurements were in the Good range. A recheck with the manufacturers of the measuring equipment indicated that the devices would not have a problem providing an average measurement to the 0.01 inch precision. This would eliminate the problem. The basis for the faulting thresholds is the “end of design life” from the AASHTO Mechanistic-Empirical Pavement Design Guide (MEPDG),⁷⁷ not pre-2000 historical faulting data as suggested by Louisiana DOT.

In the final rule, FHWA revised the reporting accuracy of faulting from 0.05 inches to 0.01 inches to address conflicts associated with rounding in the determination of condition levels.

In section 490.311(c)(4) and (5), FHWA proposed due dates of April 15th

and June 15th to report metrics to the HPMS for the Interstate and non-Interstate NHS, respectively. The AASHTO, Alaska DOT&PF, Illinois DOT, Mississippi DOT, New York DOT, Oregon DOT, Rhode Island DOT, and Texas DOT objected to these due dates. They expressed concern with managing two different submission dates and the challenges of meeting the April 15th deadline for Interstates. The commenters felt that the earlier due date was not necessary and that all of the data should be submitted no later than June 15th. The Wisconsin and the Kentucky DOTs commented that they could meet the proposed April 15th deadline. The Washington DOT agreed with reporting metrics for the entire Interstate System by April 15th.

The FHWA included discussion in the NPRM to explain the reasoning for this proposed change. In summary, the accelerated due dates for Interstate pavements and NHS bridges is needed to administer the NHPP condition requirements prescribed in 23 U.S.C. 119(f). These provisions require FHWA to make a determination of compliance in a time frame that would allow for any resulting penalties to be applied by the next fiscal year. The April 15th deadline was proposed to provide sufficient time for the data to be reviewed and for any issues to be addressed before a determination is made. As discussed previously, the determination will be made based on HPMS data extracted on June 15th. State DOTs will have 2 months prior to June 15th to address any unresolved issues with the data submitted to HPMS. The final rule retains the due dates for HPMS submission as proposed.

Discussion of Section 490.313 Calculation of Performance Management Measures

The FHWA proposed the following:

- (1) The methods to calculate the condition levels for each of the four condition metrics;
- (2) the approach to address missing data;
- (3) a transition in the design of the pavement measure for non-Interstate NHS pavements; and
- (4) the method to calculate the section 490.307 pavement performance measures. The proposed approach utilized a method that considered the predominant condition level, represented by the four condition metrics, to determine the overall condition of each pavement section. The overall condition was proposed to be used to determine the percentage of the Interstate and non-Interstate NHS in Good and Poor conditions. In addition, the NPRM provided for a transition for non-Interstate NHS pavements that

⁷³ AMPO, Fugro Roadware, Virginia DOT, Illinois DOT, Louisiana DOTD, New Jersey DOT, Portland Cement Association.

⁷⁷ Mechanistic Empirical Design Guide, A Manual of Practice, Second Edition AASHTO 2015.

utilized only the IRI metric for the first performance period in determining the pavement measure. Finally, the NPRM also proposed an approach to consider all sections with missing data to be in Poor condition.

A number of comments were received on the use of the terms “Good,” “Fair,” and “Poor” and the condition metrics that were proposed to determine condition levels and the final pavement measures. The City of Seattle DOT suggested that FHWA define pavement condition in terms of 3 to 4 predominant assessment systems, arguing that it would provide additional flexibility. The FHWA considered these comments in the review of section 490.307. The discussion in section 490.307 of this preamble responds to comments and describes corresponding changes to the final rule.

In section 490.313(b), FHWA proposed thresholds for each of the four condition metrics that would be used to determine Good, Fair, and Poor condition levels. Several comments, primarily from local government agencies,⁷⁸ suggested that the thresholds be set differently for higher and lower volume roadways. The Louisiana DOT proposed that different performance metrics be identified for pavements that have higher traffic volumes. Maryland DOT generally agreed that the proposed criteria are appropriate, but suggested that alternative thresholds may be appropriate if friction is included as a metric, or if consideration is given to the causes of and repairs to structural cracking versus surface (functional) cracking. The Missouri DOT commented that one approach should be used for all roadways. The FHWA agrees with the comment from Missouri DOT and maintains that a standard definition of condition levels be used for all levels of roadway. The intent of MAP-21 is that State DOTs and MPOs establish targets that reflect different expectations for pavement conditions due to higher and lower traffic volumes and/or other reasons. For example, a State DOT may elect to establish the pavement performance condition target for high traffic volume roads to be significantly

smoother and less prone to disruption from maintenance activities than conditions on lower volume roads.

The FP² Corporation and State DOTs of Georgia, Rhode Island and Illinois expressed concerns regarding the weighting of pavement measures. They suggested that rather than weighting equally (except for rutting and faulting, which are combined), FHWA should consider weighting rutting and faulting differently. Fatigue cracking and rutting typically have a higher impact on the overall pavement condition rating and deterioration rate than does IRI or faulting. In addition, the State DOTs of Connecticut and Illinois argued that excluding bridges from the IRI calculation conflicts with the current HPMS Field Manual reporting practices. The State DOTs asked if the HPMS Field Manual will be updated.

The FHWA appreciates the concerns from FP² Corporation and the Georgia, Rhode Island and Illinois DOTs about the issues related to weighting of the pavement metrics. The FHWA recognizes that weighting is a typical practice for pavement management in many jurisdictions. However, the evaluation of pavement performance is more of a snapshot of existing conditions than a predictor of future conditions. Because of this, it is dependent more or less equally on each of the parameters described in the NPRM and maintained in the final rule. With reference to the bridges, it should be noted that the HPMS Field Manual made changes related to excluding bridges as required by 23 U.S.C. 119(f)(1)(A). Revisions to the HPMS Field Manual incorporated in the final rule retain these changes.

In section 490.313(b)(1), FHWA proposed IRI thresholds of less than 95 for Good condition and more than 170 for Poor condition with an exception for urbanized areas over 1 million in population. The IRI equal to 95 threshold reflects the generally accepted point where a road surface is no longer considered smooth; an IRI equal to 170 is the point where a road surface is considered unacceptably rough. A threshold of 220 for Poor was proposed for urbanized areas over 1 million in population, citing that a greater tolerance for increased roughness, lower travel speeds, utilities and construction difficulties existing in these areas. Several commenters⁷⁹ objected to this

provision. They argued that population should not be part of the definition of pavement roughness and that if adopted, it should be extended to all urban areas. The AASHTO and Connecticut DOT also requested clarification on the definition of urban, suggesting that urban areas should include more than the 1 million population threshold proposed in the NPRM. The Orange County Transportation Authority, PSRC, Road Profilers Users Group, Tennessee DOT, and Washington DOT suggested that the threshold for IRI on pavements be based on speed, not population. New Jersey DOT argued that the Interstate IRI should never be greater than 170, regardless of whether or not it is urban. CEMEX USA suggested that a “Poor IRI threshold of greater than 170 in/mile” be used for both rural and urban Interstate applications. Similarly, the Northeast Areawide Coordinating Agency, the Metropolitan Transportation Commission, and the Portland Cement Association agreed that urbanized and non-urbanized areas should have the same thresholds. Florida DOT and Illinois DOT also noted that there is potential confusion over census boundaries, adjusted/approved boundaries, and metropolitan planning areas.

The FHWA agrees that a separate threshold should not be established for urban areas, primarily because of the point raised by Florida DOT on confusion about boundaries for urbanized areas with a population over 1 million. The exception provided for in the NPRM (section 490.313(b)(2)) has been removed from the final rule. The change requires that all pavements will be considered in Poor IRI condition when the IRI is greater than 170.

In section 490.313(b)(2), FHWA proposed cracking thresholds of less than or equal to 5 percent for Good condition and greater than 10 percent for Poor condition. The New Mexico DOT commented that the definition of Cracking Percent is unclear, particularly for flexible pavements. In addition, the commenter stated the proposed threshold is too low. The Louisiana DOT commented that the thresholds for Cracking Percent be reviewed. The commenter stated that the usefulness of Cracking Percent is extremely limited. In addition, the commenter proposed that total length of cracks in a section be used as opposed to Cracking Percent. The AASHTO and Alabama DOT

commented that the proposed cracking thresholds for asphalt and jointed concrete pavements were more appropriate for Interstates and intended for project level assessments, citing references in the AASHTO MEPDG for

different design thresholds. The FP² Corporation proposed alternative cracking thresholds of less than 10 percent for Good condition and greater than 20 percent for Poor condition.

In response to the comments, the threshold for Poor due to cracking is

relaxed in section 490.313(b)(2) of the final rule (Table 1). This change aligns with the AASHTO MEPDG⁸⁰ for arterial highways and reflects actual practices States DOTs use for design and management of NHS highways.

TABLE 1—CRACKING PERCENT PAVEMENT CONDITION RATING THRESHOLDS

Surface type	Metric	Metric range (percent)	Rating
Asphalt Pavement	Cracking Percent	<5 5–20 >20	Good. Fair. Poor.
Jointed Concrete Pavement	Cracking Percent	<5 5–15 >15	Good. Fair. Poor.
CRCP	Cracking Percent	<5 5–10 >10	Good. Fair. Poor.

No comments were received on the proposed cracking condition thresholds for CRCP (section 490.313(b)(2)(iii)). Therefore, they have been incorporated as proposed.

In section 490.313(b)(3), FHWA proposed asphalt pavement rutting thresholds of less than 0.20 inch for Good condition and greater than 0.40 inch for Poor condition. Several commenters⁸¹ objected to these standards. They argued that the thresholds were not reasonable in areas where tire studs and snow chains are used and that 0.75 inch was a more acceptable threshold. Connecticut DOT suggested that increments of 0.25 inches be used for the thresholds, as opposed to the proposed 0.10 inch increments. Cemex USA and PCA commented that the rutting threshold of 0.10 should be the threshold for Poor condition as this is the level where hydroplaning would begin to occur. The Ohio DOT commented that the proposed rutting threshold of 0.10 would minimize the risk of hydroplaning. For 0.10 mile segments that have relatively uniform rutting, the threshold is appropriate, however, the threshold is inappropriate for 0.10 mile intervals that contain high stress areas.

The FHWA acknowledges the issues related to the use of tire studs and snow chains; however, as noted by Cemex

USA and PCA, the presence of rutting has a potential safety impact to users of the system regardless of the stress in the pavement. Although hydroplaning is possible at rutting level as low as 0.10 inch, the documented practices for State DOTs⁸² identify rutting above 0.20 inch as cause for concern and above 0.40 inch as needing immediate attention. Moreover, these levels are supported by the design thresholds in the MEPDG,⁸³ which has been widely adopted by State DOTs. The final rule retains the proposed thresholds for asphalt pavement rutting.

In section 490.313(b)(3)(ii), FHWA proposed faulting thresholds for jointed concrete pavement of less than 0.05 inch for Good condition and greater than 0.15 inch for Poor condition. There were a number of comments⁸⁴ about this proposal. Some commenters argued that the thresholds were too stringent, particularly to define Good conditions. Some noted that there appears to be a conflict in the proposed threshold of 0.05 inch for Good condition and in the 0.05 inch accuracy of reporting for faulting (discussed earlier in section 490.311(b)). Others suggested that the 0.05 inch threshold for Good faulting would be difficult to maintain using sound construction, preservation, and maintenance activities. The suggested

thresholds for Good ranged from 0.05 inch to 0.25 inch.

In the NPRM, FHWA proposed a minimum requirement for reporting faulting in the HPMS to a precision level of 0.05 inch, reflecting measuring capabilities from legacy equipment no longer in use. Current devices are accurate to 0.002 inches⁸⁵ for individual measures and routinely deliver average values to a precision level of 0.01 inch. The HPMS permits State DOTs to report values more precisely than 0.10 inch and several report values to 0.01 inch or even 0.001 inch precision levels.

The FHWA revised section 490.313(b)(3)(ii) to provide a 0.01 inch precision level for reporting average faulting, reflecting the existing state of the practice. The FHWA also revised section 490.313(b)(3)(ii)(A) to set the threshold for Good at 0.10 inch, as discussed in the research.⁸⁶ The FHWA retains the threshold for Poor at 0.15 inch since the same research indicates that a highway with an average of this faulting level would be considered unsatisfactory to all users and not easily repaired.

In response to the concerns with collecting IRI data on lower speed roadways and the request from local governments to consider alternative condition assessment methods, FHWA

⁸⁰ The Mechanistic-Empirical Pavement Design Guide: A Manual of Practice from AASHTO (2008). AASHTO distributed this document to State DOTs upon publication. ⁸⁶ Improving FHWA's Ability to Assess Highway Infrastructure Health FHWA–HIF–13–042.

has established thresholds to define Good, Fair, and Poor condition levels based on PSR in section 490.313(c)(4). In developing these thresholds, FHWA utilized relationships developed by Michael Darter.⁸⁷ Mr. Darter's research suggests a rough correlation between estimated PSR values and measured IRI. In the final rule, the usage of PSR is restricted only to locations where posted speed limits are less than 40 mph on any NHS highway. The intent of this restriction is to provide an alternative method for areas with "stop-and-go" traffic and where constant speeds needed for proper operation of the measuring devices are not attainable. The PSR is calculated based on a defined process⁸⁸ that uses pavement conditions that include cracking, rutting, and faulting. The overall performance condition rating for these sections is determined directly from the reported PSR values. The comments from the local agencies⁸⁹ indicated that some used methods other than PSR, such as PCI, to rate

pavements. The final rule provides that equivalent methods to determine pavement condition can be used with prior approval from FHWA of the pavement data collection method and the technique to convert values to PSR.

In section 490.313(b)(4), FHWA proposed that roadway sections with missing, unresolved, or invalid data would be considered in Poor condition for each respective condition metric. The FHWA received comments from 41 groups⁹⁰ objecting to the proposal. The majority of the commenters expressed concern that the proposed action would give a false impression of the condition of the network and would mislead the public. Commenters identified common reasons for missing data, including actual or planned construction, road closures, disasters, and similar kinds of events. Most suggested that in any given year it would be unrealistic for a State DOT to reach more than 95 percent of their network, even under the best of conditions. The commenters offered alternative approaches to the proposed method, including: (1) An allowance of

the network to be missed for valid reasons; (2) using previous year reported metrics when data is missing; (3) base the measure only on the sections that were tested and (4) an allowance for construction projects that will improve pavement surface be automatically categorized as Good until a formal rating can be given. The Illinois and Washington DOTs did not specifically object to the proposal, but asked if segments under improvement would default to Poor.

In response, FHWA revised section 490.313(b)(4)(i) to allow no more than 5 percent of the network lane miles, not including bridges, unpaved and "other" surface types (such as cobblestone, planks, brick), to be represented with missing, unresolved, or invalid data due to the reasons noted in Table 2 below. The codes provided in Table 2 are to be documented in the HPMS submission whenever data is missing for any of the required relevant condition metrics or inventory data elements.

TABLE 2—HPMS CODES FOR MISSING DATA

Code	Description
1	Construction—Roadway was under construction.
2	Closure—Roadway was closed to traffic.
3	Disaster—Roadway was located in an area declared as a disaster zone.
4	Deterioration—Roadway is too deteriorated to measure; is already designated as "Poor" and is in the STIP for Capital Improvement Program purposes.
5	Other—Please describe in comments.

The FHWA will determine that a reported section in HPMS has a missing, invalid or unresolved data on June 15, 2019, and annually thereafter for Interstate System (section 490.317(b)) and on August 15, 2018 and biennially thereafter for non-Interstate NHS (sections 490.109(d)(2) and 490.109(d)(4)). Once State DOTs submit data to HPMS by April 15 for the Interstate System (sections 490.311(c)(4) and 490.311(d)(2)) and by June 15 for the non-Interstate NHS (sections 490.311(c)(5) and 490.311(d)(3)), FHWA

will identify the data sections that do not meet the data requirements specified in sections 490.309 and 490.311(c) or do not provide sufficient data to determine its Overall Condition specified in sections 490.313(c) through (f) and FHWA will classify those data sections as "missing or invalid data." The FHWA will then notify State DOTs the list of those data sections classified as missing or invalid data. Upon FHWA notification, State DOTs will have an opportunity to rectify by FHWA data extraction dates (June 15 for the

Interstate System and August 15 for non-Interstate NHS) for determining minimum condition level for the Interstate System and significant progress determination for non-Interstate NHS. If a State DOT does not rectify FHWA identified missing or invalid data by FHWA data extraction dates, then those unrectified data will be classified as "unresolved data." The FHWA will issue guidance on classifying "missing, invalid or unresolved data."

The percentage will be determined by total lane-miles with missing, invalid, or unresolved for the network divided by the total lane-miles of the network (excluding the lane-miles of bridges, unpaved surface type, and “other” surface type). As shown above, the criteria for determining missing, invalid, or unresolved values did not include the data completeness of Structure Type data item. However, FHWA expects State DOTs to report comparable data contained their NBI data. Please see discussion sections for 490.313(f)(1) related to excluding bridges. The FHWA plans to check the reasonableness of total lane-miles of bridges reported in HPMS with the reported NBI data.

The final rule prohibits reporting data collected during the previous data collection cycles because it does not accurately represent current pavement conditions required for reporting performance. Similarly, pavements under construction are not in “Good” condition and should not be reported as such. A review of recent submissions to the HPMS indicates that timely and complete data submissions have been problematic for some State DOTs, although 23 CFR 420.105(b) has required State DOTs to “provide data that supports FHWA’s responsibilities to the Congress and to the public” for many years. Failure to comply with this

rule results in inadequate data to report performance, as required in section 490.107 for the NHS, and insufficient data to enforce the provisions of 23 U.S.C. 150(c)(3)(iii) for minimum conditions on the Interstate System. Because of the importance of the Interstate System to demonstrate progress toward the national goals in 23 U.S.C. 150(b), the final rule requires that State DOTs have at least 95 percent of the Interstate pavement data available, and demonstrate that no more than 5 percent of the pavements are in Poor condition to avoid imposition of the penalties under section 490.317.

In addition, FHWA revised section 490.109(e)(4) so that FHWA will determine that a State DOT has not made significant progress toward the achievement of an NHPP target if a State DOT does not comply with the data completeness requirement under this section. (See discussion on section 490.109(e)(4) for more detail.)

Finally, the equation to calculate the measure was revised. It is now based on the total lane-miles collected and reported, not the total lane-miles in the system.

In sections 490.313(c) and (d) FHWA proposed that the method to determine the overall condition of the pavement be based on the conditions levels for each metric. The AMPO and the State DOTs

of Colorado and Illinois commented that the condition metrics should not be considered equally in the determination of overall condition. The North Dakota DOT commented that faulting and IRI are both indicators of roughness and therefore only one should be considered in the condition of jointed concrete pavements.

The FHWA notes that no data on pavement performance, as defined in the NPRM and in the final rule, exists at the present time. The MEPDG⁹¹ suggests that the selected parameters are equally important in predicting future pavement conditions. The FHWA is committed to reevaluating the process through a future rulemaking once sufficient data has been collected. At this point there is no change in the proposed approach to determining the overall condition.

The FHWA established sections 490.313(c)(4) and 490.313(d)(4) to require the overall condition to be equal to the PSR condition level for roadways with posted speed limits less than 40 mph where State DOTs have reported PSR in lieu of the IRI, cracking, rutting, and faulting metrics. If a State DOT elects to collect PSR for pavement sections meeting these requirements, the overall condition of the section will be determined directly from the PSR values, as described in Table 3.

TABLE 3—OVERALL PAVEMENT CONDITION RATING THRESHOLDS USING PSR METRIC

Surface type	Metric	Metric range	Rating
All Pavements	PSR	≥4.0 >2.0 and <4.0 ≤2.0	Good. Fair. Poor.

The FHWA proposed a transition period in section 490.313(e) for implementing cracking, rutting, and faulting metrics for full extent non-Interstate NHS pavement measures to allow State DOTs time to implement the data requirements. During the proposed transition period, the overall condition rating for all pavement types on the non-Interstate NHS would be based on IRI rating only.

The FHWA received one comment on the proposed transition approach. The Washington DOT disagreed with the proposed transition approach. The Washington DOT remarked that the sole reporting of full extent IRI may “exaggerate the Poor condition.” They provided an example in which IRI-based measure calculation yielded 17 percent

Poor, but the measure calculation using all four metrics yielded 6.4 percent Poor for their for their non-Interstate NHS network. The Washington DOT recommended that the overall condition rating during the transition period should be based on HPMS sample sections for all four metrics. They argued that their approach ensures consistency in condition reporting across the entire first performance period. They also stated that MPOs would have no choice but to adopt the statewide targets (section 490.105(f)(3)) because the HPMS sample data would not be sufficient to represent their metropolitan planning area, and therefore they would not be able to establish their own unique targets.

The FHWA appreciates the comment and the recommendation from Washington DOT. As stated in the NPRM, FHWA recognized that complete data for establishing baseline condition/performance for the first performance period will not be available for many State DOTs. The IRI metric data is already required for all NHS routes and can be used by State DOTs and MPOs to estimate the baseline condition/performance during the non-Interstate NHS pavement measure transition period. The FHWA understands Washington DOT’s concerns about the discrepancies between IRI and four metrics based measures. However, on a national basis, the pavement performance metrics using sampled sections of the NHS is substantially less

upon publication. The document is currently available for purchase on the AASHTO Web site. A

copy has been placed on the docket and is available for viewing by the public.

reliable and less representative of actual pavement conditions. For these reasons, FHWA retains section 490.313(e) in the final rule. (See discussion sections for sections 490.105(e)(7) and 490.109(e)(3) for more details on phase-in target establishment requirements and significant progress determination for the pavement condition measures.)

The New Jersey Department of Transportation requested clarification about how to report pavement conditions adjacent to bridges and other obstacles in the roadway. Alaska DOT noted that a significant portion of the NHS in Alaska is not paved and requested clarification about reporting conditions and rating performance on those routes.

Fugro Roadware recommended that sections with pavement surfaces that are not asphalt, PCCP, or CRCP be identified as alternative pavement types and should be excluded from the network length to determine the percent of Good, Fair, and Poor for Interstate and other NHS roadways.

In response to these requests, Section 490.313(f) includes exemptions for the sections of highway where the Structure is identified as a bridge and exempts sections that where the Surface Type is identified as unpaved or a type where pavement conditions cannot be measured, such as cobblestone or brick. The exemption for bridges conforms to the legislative requirement that measurement of performance not include bridges.

Discussion of Section 490.315 Establishment of Minimum Level for Condition of Pavements on the Interstate System

The MAP-21 requires the Secretary to establish minimum condition levels for pavements on the Interstate System to be maintained by State DOTs. The FHWA proposed the requirement that no more than 5 percent of Interstate pavements be classified as Poor. State DOTs are subject to a statutory penalty that would obligate a portion of NHPP funds and transfer a portion of STP funds to address Interstate pavement conditions if they fail to meet this minimum condition requirement for 2 consecutive years. Passage of the FAST Act in 2015 reduced the time from 2 consecutive years to 1 year.

The AASHTO and a number of State DOTs⁹² submitted comments suggesting the following:

- States would not be able to meet the 5 percent requirement.

- FHWA should establish the threshold at 10 percent (or higher) or not establish a threshold at all.

- State DOTs should set their own requirement as part of the target setting process. The requirement should be distinct by region.

- The minimum pavement condition requirements should consider a range of pavement condition thresholds that accommodate regional variation.

- The rule should establish criteria that reflect a rational assessment of a State's Transportation Asset Management Plan.⁹³

- Funds should not be diverted from one program to another as a penalty for not meeting the minimum condition standard.

- The FHWA should delay implementation of the minimum standard for 48 months from the effective date of the rule.⁹⁴

- The FHWA should incorporate safety measures into the minimum condition for the Interstate System.

In the NPRM, FHWA cited a review of the reported conditions in recent HPMS submissions which suggested that at least 40 of the 52 jurisdictions could meet the 5 percent standard. The existing HPMS data is not as comprehensive as was proposed in the NPRM, but suggests that most State DOTs already prioritize funding to maintain Interstates at a high level. The FHWA believes that setting the threshold higher than 5 percent Poor is not justified by any available data and does not accomplish the national goal of keeping the Interstate System in a state of good repair. Acknowledging that there is virtually no existing data on performance, FHWA made a commitment in the NPRM to review the data submission from State DOTs for the first performance period and conduct a separate rulemaking to change the minimum standard if justified by the assessment of Interstate pavement conditions.

In response to the suggestion that State DOTs set their own minimum standard for Interstate highways, the statute clearly indicates the requirement for a national standard as part of the NHPP and specifically directs FHWA to establish it. The minimum standard is seen as the minimum tolerable condition for the Interstate system to meet the national goals set in the legislation.

Recent submissions to the HPMS suggested that State DOTs prioritized Interstate pavement conditions in every State and did not show significant differences in any region, except in Alaska. Alaska's recent submissions to HPMS showed rates of roughness, cracking, and rutting many times more than other parts of the country. The Alaska DOT&PF commented that Interstate highways in Alaska do not resemble Interstate highways elsewhere in the Nation. They cited the obvious climatic issues present in an Arctic and sub-Arctic environment such as embankment failures due to melting permafrost, cracking, and settlement due to extreme temperatures and the need for studded tire use for 7 months of the year. More importantly, Alaska DOT&PF noted that the Interstate routes were not constructed under the expansion of the National System of Interstate and Defense Highways funding that was used to construct much of the Interstate system in other States. When the Interstate System was designated in Alaska in 1976,⁹⁵ the routes typically were two lanes, did not have access control, and had been constructed under a variety of standards, none of which met Interstate requirements. In addition, Alaska DOT&PF requested that Section 490.315 only apply to "signed" Interstates. Furthermore, they requested that non-Interstate roads that are not paved or that have similar design features as Interstates should not be subject to the performance measures for pavement either.

Although Alaska DOT&PF requested an overall exemption from the minimum standard requirement, MAP-21 does not provide that option. However, the regional conditions and issues brought to light by the Alaska DOT&PF suggest that a greater allowance for Poor pavements is appropriate. A review of the recent HPMS submissions from Alaska DOT&PF suggests that a standard of no more than 10 percent Poor should be achievable and appropriate for the conditions, as provided for in section 490.315(b).

Commenters expressed mixed opinions on the establishment of a minimum condition threshold that would become more stringent over time. Several commenters expressed concern that pressure to meet a difficult minimum condition threshold may push State DOTs to implement a "worst-first" approach to pavement preservation, which would run counter to the asset management principles and

planning approach advocated by FHWA.⁹⁶

However, AASHTO and the State DOTs of California, Louisiana, and Oregon recommended FHWA evaluate the effects of the national level performance measures and targets. They suggested that FHWA consider a graduated approach to setting minimum condition levels to ensure that these policies have a positive impact on management approaches.

The New York State DOT indicated that the establishment of penalties and minimum conditions should take into consideration sound performance and asset management policies. The New York State DOT suggested a delay until State DOTs adopt such measures.

The FHWA agrees that sound performance and asset management policies will aid State DOTs in establishing and achieving desired performance targets. However, it is clear that the intent of 23 U.S.C. 150(b)(2)(iii) and 23 U.S.C. 119(f)(1) is to keep Interstate pavements in a state of good repair in order to achieve the national goals outlined in the statute. The imposition of penalties that transfer Federal funds to Interstate programs is intended as a last resort for State DOTs that have not met this expectation. Delaying this effort would be contrary to the intent of the legislation.

In terms of implementation, the final rule establishes that State DOTs must start collecting Interstate pavement data for the HPMS according to the requirements in the rule not later than January 1, 2018, with the first reporting to HPMS not later than April 15, 2019. The FAST Act eliminated the “two consecutive reporting periods” provisions that were outlined in the NPRM. Therefore, the first evaluation of the Interstate pavement conditions for minimum condition levels will occur based on information in the HPMS database as of June 15, 2019. Delaying this determination is contrary to the intent of the FAST Act.

There are no changes to this section in the final rule except for modifying the 5 percent minimum requirement for Poor pavement condition to 10 percent in the State of Alaska.

Discussion of Section 490.317 Penalties for Not Maintaining Minimum Interstate System Pavement Condition

The FHWA proposed a methodology to annually assess the condition of Interstate pavements to determine

compliance with the minimum condition requirements in 23 U.S.C. 119(f). The MAP-21 specifically applies penalties to State DOTs that do not meet the minimum requirements for pavement condition. These penalties adjust the funding requirements for the Interstate System until the minimum condition standards are met.

The AASHTO and the NCPP outlined concerns from State DOTs over the application and subsequent consequences of not meeting the minimum condition requirements established by Congress and proposed by FHWA in the NPRM with the following arguments:

- Penalties should be eliminated in their entirety because they can lead to a “worst-first” management approach.
- The FHWA should allow longer timeframes for reporting periods before imposing mandatory penalties.
- The transition to the proposed full extent data collection requirements for pavements needs to be fully implemented before assessing penalties for minimum condition.
- Minimum condition and penalties should consider important factors like the current conditions for Interstate pavements or other stressors, such as impacts of State-specific climates.
- The FHWA should defer the imposition of any penalties and minimum condition thresholds to the fullest extent possible. Penalties should be a last resort and only utilized if a State DOT has not adopted sound performance and asset management policies and methods.
- The FHWA should be cautious if establishing a minimum condition goal based primarily on a limited amount of data.
- Attainment of minimum condition thresholds without sufficient and reliable Federal funding will be difficult for some States⁹⁷ and therefore detrimental to off-NHS needs.

Several State DOTs⁹⁸ agreed with AASHTO's comments and suggested that no standard was needed or that the minimum condition standard should be set at a level that would be much easier to meet. The Michigan State Transportation Commission (STC) and Michigan's Transportation Asset Management Council (TAMC) suggested that the “5 percent Poor” (or 95 percent Good/Fair) goal for Interstate pavements should be removed from the rule, arguing that setting such a high standard

for Interstate pavements will undermine State DOTs' ability to improve the condition or ensure the performance of the miles of NHS pavement under their control.

Title 23 U.S.C. 150(a) contains a declaration of policy directing the NHPP to provide efficient investment of Federal transportation funds by focusing on national transportation goals. These goals emphasize the importance of national routes to the economy, safety, and other concerns of the Nation. By including the requirements for a minimum level of condition for Interstate pavements and the penalty provisions in 23 U.S.C. 119(f), the statute focuses on the Interstate system as an essential part of achieving the stated goals. The statute is also clear that redirection of Federal funds is a last resort when Interstate highways do not meet the expectations for state of good repair.

A review of the Highway Statistics table for 2013⁹⁹ indicates that the percentage of State maintained highways that are Interstate lane miles averages 2.5 percent, with no State having more than 7 percent of the State maintained lane miles on the Interstate System. Even in the worst case, maintaining the Interstate lane miles to achieve 95 percent in Fair or better condition would not require the level of investment that would drive a program to a “worst-first” approach. On the contrary, good maintenance and preservation, as currently practiced by many State DOTs, would minimize requirements for major investment on these routes, most likely well below the threshold of 5 percent in Poor condition.

With respect to the timelines for implementation, the final rule takes into account the time State DOTs will need to acquire data collection equipment or arrange for contract data collection in section 490.309(a).

The AASHTO and the concurring State DOTs¹⁰⁰ noted that there may be climatic and other stressors affecting conditions of Interstate pavements. This may be true, but there is no evidence other than State HPMS submissions to estimate whether this variation actually exists. An examination of the 2013 submissions to HPMS suggests that no distinct variations in IRI or other reported pavement characteristics based on regional conditions were reported except in Alaska. Based on this finding

and the estimation that the majority of State DOTs will meet the minimum pavement condition standard, the final rule was not changed except to accommodate Alaska, as described above. However, due to the limited availability of data on performance, FHWA committed to reexamine the pavement performance parameters after the first performance period and open a new rulemaking effort to make changes, if justified.

The MAP-21 language ties together the requirements for asset management plans and performance measurement. As previously stated, State DOTs are expected to have an asset management plan and sound performance policies within a certain period of time designated in the respective rules. In establishing the implementation schedule for data collection and performance evaluation under subpart C, care was taken to give State DOTs enough time to develop and implement the necessary programs to ensure pavement performance.

The FHWA agrees with AASHTO that the imposition of the penalty is a last resort effort necessary to ensure acceptable performance of the Interstate System to achieve the national goals for the NHPP.

Discussion of Section 490.319 Other Requirements

The FHWA proposed the Data Quality Management program requirements in section 490.319(c) to implement 23 U.S.C. 150(c)(3)(A)(iv) for pavement condition data. As FHWA indicated in the NPRM, the structure of the data quality Management Program is left up to State DOTs but this section proposed that the plan must have methods to ensure that equipment is working properly, people are trained, data quality is being checked, and that a method of error resolution is documented.

However, AASHTO and a few State DOTs¹⁰¹ objected to the language. They suggested that a data quality management program was not called for in the legislation; that no specific details are mentioned in the legislation; and that there is concern with the variability among FHWA Division Office approvals. The Oregon DOT requested clarification on which FHWA office would review and approve the Data Quality Management Program, noting that the requirement for a State DOT to seek approval for any change to the

Program seemed excessive. In their joint letter, the State DOTs of Idaho, Montana, North Dakota, South Dakota, and Wyoming suggested that the requirements for Data Quality Management be revised so that States must certify they have a data quality management program and provide a description to FHWA. Conversely, the Alaska DOT&PF supported the provision to have a Data Quality Management Program and suggested that the Program be approved prior to States using the data for the performance measures.

The FHWA disagrees with the comments from AASHTO and those concurring State DOTs. The FHWA believes that MAP-21 gives it the discretion to establish requirements for implementing 23 U.S.C. 150(c)(3)(A)(iv). The FHWA also believes the data quality management program requirements in section 490.319(c) will ensure quality data and provide a sufficient level of consistency in report expectations. The FHWA believes the proposed language is consistent with the nine principles¹⁰² in the NPRM preamble, which were considered in the development of the proposed regulation. Additionally, a recent FHWA study¹⁰³ on data quality indicated that most State DOTs have implemented parts of programs to ensure data quality but have not documented or formalized their use in the data collection process. As stated in the NPRM, the intent of this section was to ensure that the important step of formalization in the program occurs. The FHWA retains the language that leaves the content of the data quality management plan up to State DOTs because FHWA recognizes that every State DOT has unique methods, needs, and opportunities in the data collection. The FHWA approval of each State DOT's data quality management plan is to be based on its ability to deliver the specific outcomes identified in the NPRM and retained in the final rule. Specific guidance will be provided to Division Offices to ensure consistency in the Pavement Data Quality Plan requirements.

C. Subpart D National Performance Management Measures for Assessing Bridge Condition

Discussion of Section 490.401 Purpose

To implement the provisions of 23 U.S.C. 150(c)(3)(A)(ii)(III), FHWA proposed a statement of purpose which required the establishment of performance measures for State DOTs to use to assess the condition of bridges carrying the NHS which includes on- and off-ramps connected to the NHS. This is done to carry out the NHPP. The FHWA revised section 490.401 to provide clarity as to which highway bridges are subject to this regulation.

The FHWA received two comments on section 490.401. The Oregon DOT argued that the proposed rule would create a conflict by giving the Federal Government the authority to interfere with a State DOT's ability to independently manage its highway infrastructure assets.

The Virginia DOT provided a statement of support. The Virginia DOT argued that the proposed rule would promote a preservation approach to managing highway bridges and is an improvement over the "worst-first" approach.

The overall purpose of this rule and the underlying statutory provisions is to ensure that Federal transportation funds are efficiently invested and that the condition of highway infrastructure assets are maintained in a state of good repair, while increasing accountability and transparency of the Federal-aid highway program. (See 23 U.S.C. 150(a) and (b).) Although recipients of Federal-aid highway funds are expected to make transportation investments with a focus on national goals, the authority to establish performance targets and make project selections is still maintained by State DOTs.

The FHWA retains the language in section 490.401, as proposed in the NPRM, with a minor revision that provides clarity as to which highway bridges are subject to this regulation. The stated purpose is consistent with statutory language in MAP-21 and clear in the purpose of the performance measures.

Discussion of Section 490.403 Applicability

To implement the statutory provisions under 23 U.S.C. 150(c)(3)(A)(ii)(III), FHWA proposed that subpart D be applicable to bridges carrying the NHS which includes on- and off-ramps connected to the NHS.

The FHWA received comments from AASHTO, ARC, and 12 State DOTs (Arkansas, Colorado, Connecticut, Iowa,

¹⁰¹ Alaska DOT&PF, Connecticut DOT, Idaho DOT, Montana DOT, New York DOT, North Dakota DOT, Oregon DOT, South Dakota DOT, Washington DOT, Wyoming DOT.

¹⁰² Nine principles used in the development of proposed regulations for national performance management measures under 23 U.S.C. 150(c), www.regulations.gov, Docket FHWA-2013-0053.

¹⁰³ "Practical Guide for Quality Management of Pavement Condition Data Collection" FHWA-HIF-14-006.

Maine, Michigan, Missouri, New Hampshire, North Dakota, Oklahoma, Tennessee, and Vermont) generally stating that State DOTs should not be responsible for the reporting of data, establishment of targets, asset condition, and managing of assets that are beyond their control.

The FHWA retains the language in section 490.403 with a minor revision that provides clarity as to which highway bridges are subject to this regulation. Section 23 U.S.C. 150(c)(3)(A)(ii)(III) of Title 23 of the U.S. Code requires the establishment of measures for “States to use to assess the condition of bridges on the National Highway System” for the purpose of carrying out the NHPP. The Section does not define the terms “National Highway System” or “States.” The MAP-21 did not provide FHWA with the authority to change the definition of State or NHS. Thus, the definitions in 23 U.S.C. 101(a)(15) and 23 U.S.C. 101(a)(25) have been used in this Rule. Therefore, a State DOT is not alleviated of the responsibilities under sec. 150 for the NHPP. As stated in the NPRM, FHWA recognizes that there is a limit to the direct impact State DOTs and the MPOs can have on the performance outcomes within the State and the metropolitan planning area, respectively. The FHWA encourages State DOTs to consult with relevant entities (e.g., Federal Land Management Agencies, MPOs, local transportation agencies, and tribal governments) as they report performance data and establish targets. Consultation will help State DOTs to better assess condition of bridges carrying the NHS, which includes on- and off-ramps connected to the NHS and better identify and consider factors outside of their direct control that could impact future condition/performance. (See discussion on ownership in discussion section for section 490.105(d).)

The FHWA received comments from six State DOTs (Connecticut, Illinois, Iowa, Michigan, Minnesota, and Missouri) generally stating that the applicability of subparts C and D should be consistent. Specifically, they commented that the regulations apply only to mainline highway bridges carrying the NHS and that highway bridges on on- and off-ramps that connect to the NHS should not be subject to these regulations.

Historically, FHWA has provided guidance stating that ramps are to be considered to be the same functional classification as the highest facility

served.¹⁰⁴ Although the NHS is not solely based on functional classification, but is instead defined by 23 U.S.C. 103, the practice of assigning the highest system served for a ramp is consistent with the FHWA guidance referenced above. Therefore, this section is applicable to the NHS (defined by 23 U.S.C. 103), which includes highway bridges that carry the NHS and bridges on on- and off-ramps connecting to NHS.

The FHWA received comments from five State DOTs (Connecticut, Illinois, Mississippi, Virginia, and Washington) seeking clarification on their responsibility for highway bridges on the NHS that cross the border with a neighboring State. One commenter expressed concern that there would be a “double-counting” of the deck area of highway bridges on the NHS when the bridge performance measures are calculated. Another commenter recommended that the responsibility of a highway bridge that crosses a border with a neighboring State should be based on the percentage of ownership. The commenter further stated that a State that does not own or share such a bridge should not be held responsible.

In regards to the responsibility for highway bridges carrying the NHS that cross a border with a neighboring State, State DOTs should refer to the above discussion on responsibility for the reporting of data, establishment of targets, asset condition, and managing of assets that are beyond the control of State DOTs and MPOs. State DOTs should also refer to the discussion on ownership in the discussion of section 490.105(d). Based on these previous discussions, border bridges are to be regarded in the same manner as any other highway bridge carrying the NHS that is within a State’s boundaries.

In calculating the deck area, the total deck area of all the border bridges that cross a State’s border will be included in the calculation of an individual State DOT’s bridge performance measures and the percentage of the deck area of bridges classified as Structurally Deficient. However, there will be no “double-counting” of deck area as FHWA has not proposed a summation or aggregate calculation of all State DOTs’ bridge performance measures or percentage of the deck area of bridges classified as Structurally Deficient into national percentages.

¹⁰⁴ U.S. Department of Transportation, Federal Highway Administration. Highway Performance Monitoring System, Guidance for the Functional Classification of Highways <http://www.fhwa.dot.gov/policy/ohpi/hpms/fchguidance.cfm>.

The New York DOT suggested that an exception to the bridge performance measures be established for very large or historic bridges as they would “never be replaced” and “should be treated as perpetual maintenance exceptions.” Title 23 U.S.C. 150(c)(3)(A)(ii)(III) provided no exception for certain sized or aged highway bridges. Therefore, any highway bridge that carries the NHS or ramp that connects to the NHS, and meets the section 490.405 definition of a bridge, is subject to the requirements of subparts A and C.

Discussion of Section 490.405 Definitions

To implement 23 U.S.C. 119(f)(2) and 23 U.S.C. 150(c)(3)(A)(ii)(III), FHWA proposed definitions for the terms “bridge” and “structurally deficient.”

The FHWA did not receive any substantive comments regarding the definition for bridge. However, as discussed in section 490.309 (Using Structure Type to Identify and Exclude Bridges), FHWA moved the definition of bridge from this section to subpart A (i.e., section 490.101) to ensure the term is used in a consistent manner throughout this rule.

The FHWA received comments from AASHTO (with support from Michigan and Maryland DOT), NYSAMPO and 12 State DOTs (Alabama, California, Connecticut, Idaho, Montana, New York, North Carolina, North Dakota, South Dakota, Texas, Washington, and Wyoming) suggesting changes to the proposed definition of the bridge classification “structurally deficient.” One suggestion was to lower the threshold for the NBI Items (Items 58-Deck, 59-Superstructure, 60-Substructure, and 62-Culverts) that are used to classify a bridge as structurally deficient. The suggestion was to lower the threshold from a condition rating of four—poor condition, which is described in FHWA’s Recording and Coding Guide for the Structure Inventory and Appraisal of the Nation’s Bridges as Poor: advanced section loss, deterioration, spalling, or scour, to three—serious condition which is described as loss of section, deterioration, spalling, or scour have seriously affected primary structural components; local failures are possible; fatigue cracks in steel or shear cracks in concrete may be present.

Additional suggested changes included removing NBI Item 58-Deck from the calculation of the classification, and changing the definition and calculation of “Structurally Deficient” to be the same as the performance measure “Percentage

of NHS bridges classified as in Poor condition.”

The Missouri and New Hampshire DOTs supported the proposed definition. The Colorado DOT noted that the proposed definition is identical to the historical definition. Three other State DOTs (Connecticut, Iowa, and New Jersey) suggested discontinuing the use of the classification and developing a new term that better serves the purpose of the provisions. The Georgia DOT requested clarification on the differences between the classification of structurally deficient and the bridge performance measure of Poor. The Oregon DOT commented that the proposed definition for the classification of structurally deficient was more “amenable to element level” bridge data rather than bridge components (*i.e.*, deck, superstructure, substructure, and culverts). The PSRC recommended that the calculation of the bridge performance measure for Poor equate to the proposed definition and methodology for the classification of structurally deficient.

The FHWA retains the term “structurally deficient” in the final rule as the statutory language in MAP-21 uses it. Section 119(f)(2) of Title 23 U.S.C. requires FHWA to determine the total deck area of bridges in each State on the NHS that have been classified as structurally deficient, and to apply a penalty, when necessary, based on an established percentage of that classification. The statutory language does not grant FHWA the authority to disregard the use of the term “structurally deficient.”

The FHWA revised the definition and methodology for the classification of structurally deficient so that it equates to the performance measure of bridges classified as in Poor condition. The revision also addresses the concern that the proposed definition was more amenable to element level bridge data rather than the NBI component level data that is used for classification. The revised definition considers only the physical condition of the bridge. As proposed in the NPRM, the classification of structurally deficient goes beyond the metrics of the bridge performance measures and physical condition. It also considers the level of service the bridge provides as compared to a bridge that is built to current standards.

Equating the classification of structurally deficient with bridges classified as in Poor condition provides consistency as it aligns the NHPP provisions for the condition of NHS bridges (23 U.S.C. 119(f)(2)), which use the classification of structurally

deficient. Section 150(c)(3) of Title 23 of the U.S. Code requires the establishment of performance measures for State DOTs to use to assess the condition of bridges on the NHS and for the purpose of carrying out the NHPP.

Additionally, the differences in the population of bridges on the NHS that are classified as structurally deficient by the historical definition and method in NPRM versus in Poor condition are minimal as the calculation methods are similar. According to FHWA’s NBI for the 10-year period of 2005 to 2014, the maximum difference between the methodology proposed in the NPRM and the one in the final rule by both the percentage of number of bridges and percentage of deck area of bridges is 0.2 percent. Lowering the threshold for NBI Items 58, 59, 60, and 62 from a condition rating of four to three and removing NBI Item 58 from the calculation of the classification of structurally deficient were not considered. This would represent fundamental changes to a historical classification method and would result in vastly different populations of bridges carrying the NHS, which includes on- and off-ramps connected to the NHS, than what was intended to be addressed by 23 U.S.C. 119(f)(2).

The Minnesota DOT suggested providing “clear and concise definitions” for the terms so that “there is consistency in the interpretation” of the regulations. The FHWA agrees and believes that clarity is provided in the regulations.

The Missouri DOT requested the NBI algorithms used to calculate and determine if a highway bridge is to be classified as structurally deficient. As discussed above, FHWA revised the definition and methodology for the classification of structurally deficient so that it is the same calculation used for classifying bridges as in Poor condition. The historical NBI algorithms that were used to calculate NBI Items 67 (Structural Evaluation) and 71 (Waterway Adequacy) will not be used.

Discussion of Section 490.407 National Performance Management Measures for Assessing Bridge Condition

To implement the statutory provisions under 23 U.S.C. 150(c)(3)(A)(ii)(III), FHWA proposed two performance management measures for assessing the condition of bridges on the NHS: (1) Percentage of NHS bridges classified as in Good condition; and (2) percentage of NHS bridges classified as in Poor condition.

The ASCE and the Georgia DOT supported the proposed section.

The AASHTO expressed general support of the proposed three classifications and two performance management measures for assessing the condition of bridges on the NHS. However, AASHTO, AMPO, and eight State DOTs (Idaho, Montana, Oregon, North Dakota, Rhode Island, South Dakota, Texas, and Wyoming) recommended that additional language be provided to the classifications and performance measures to communicate and focus on the needs of bridges rather than the condition. For example: (1) Good condition bridges should be described as bridges that need routine or cyclic maintenance; (2) Fair condition bridges should be described as bridges that need condition based preventative maintenance; and (3) Poor condition bridges should be described as bridges that need rehabilitation and or replacement.

While providing such additional language may be beneficial when communicating the needs of bridges, the recommended language may be interpreted as limiting the types of projects that can be performed on bridges in certain conditions. The determination of what projects or activities to perform on a bridge is at the discretion of its owner. The Federal-aid highway program provides such flexibility. Eligible bridge projects, regardless of the condition of the bridge, are defined in each of the programs. For example, under the NHPP, the list of eligible projects that includes bridge activities, can be found under 23 U.S.C. 119(d). Although flexibility exists, it should be noted that as part of performance management, recipients of Federal-aid highway funds must make transportation investments to achieve performance targets that make progress toward national goals. The national performance goal for bridges is to maintain their condition in a state of good repair.

The additional language is also inconsistent with the statutory language that requires FHWA to establish performance measures. In 23 U.S.C. 150(c)(3)(A)(ii)(III), the Secretary is required to establish measures for States to use to assess the condition of bridges on the National Highway System. A bridge condition measure describes the existing, in-place bridge’s physical condition as compared to its as-built physical condition. The statute does not provide that an assessment of needs such as maintenance, rehabilitation, or replacement be used to measure the performance of bridges. Instead, “the condition of bridges” is the performance measure. Therefore, FHWA retains the language in the final rule for the three

classifications and two performance management measures for assessing the condition of bridges carrying the NHS, which includes on- and off-ramps connected to the NHS.

The AMPO, California DOT, California State Association of Counties, COMPASS, Metropolitan Transportation Commission, the NYMTC, and an anonymous citizen suggested that additional factors other than those proposed (NBI Items 58, 59, 60, and 62) be included in the calculation of the performance measures. Suggestions included factors that considered level of use, vehicle speed on the bridge, and seismic and scour vulnerability.

As stated above, the statute that required the establishment of performance measures for bridges on the NHS did not provide for any factors other than "condition." Level of use, such as average daily traffic and vehicle speed, are not considered measures of the condition of a bridge. Instead, these factors are measures of functionality. Such measures are used to describe a bridge in relation to the level of service it provides to its highway. Similarly, seismic and scour vulnerability are not considered measures of condition. They would be considered measures of risk for certain types of extreme events. A bridge's physical condition is one of many factors (*e.g.*, bridge design, location, and others) that should be considered when determining vulnerability or risk to extreme events. However, vulnerability and risk to extreme events are not measures of condition. Therefore, FHWA retains the language for the metrics to be used in calculating the bridge performance measures.

The Connecticut DOT commented that the performance measures should not be weighted only by deck area as this may incentivize bridge owners to prioritize plans and projects for larger bridges over smaller ones. The Connecticut DOT also suggested that having an additional set of performance measures that are weighted by number of bridges instead "will ensure that the State also addresses smaller bridges." This dual set of performance measures "will be helpful for both States and FHWA to assess and report a more accurate description of the nation's infrastructure." The AMPO had a similar comment stating, "There is uncertainty about the use of percent of bridge deck area instead of percent of all bridges. This is probably more of a concern for States with longer bridges (*i.e.*, Louisiana as opposed to Montana). For instance if the Lake Pontchartrain Causeway (26.2 miles) ended up rating as Poor this ends up being the

approximate equivalent of 8,300 culverts being rated as Poor. The end result might force Louisiana to improve the Causeway at the expense of other work."

Requiring additional bridge performance measures weighted by the number of bridges would be inconsistent with one of the nine principles in the NPRM preamble which were considered in the development of the proposed regulation (Minimize the Number of Measures). While performance measures weighted by the number of bridges provide an amount of bridges in certain conditions, performance measures weighted by deck area provide a greater perspective on the extent of the condition of bridges as the size of a bridge is taken into account.

Therefore, FHWA retains the language for the two performance measures for assessing the condition of bridges on the NHS, as weighting the performance measures by deck area provides more information through a minimum number of required performance measures. The FHWA recognizes that performance measures based on deck area may influence State DOTs to prioritize plans and projects for larger bridges over smaller ones so as to achieve improved conditions at a greater rate. However, FHWA is confident that this and the related asset management rulemaking to establish minimum standards for State DOTs to develop their bridge management systems and investment strategies will ensure that State DOTs choose the most efficient investments for Federal transportation funds. This final rule, in combination with the State Asset Management Plan rule (RIN 2125-AF57), will ensure that State DOTs focus on national transportation goals, increase accountability and transparency, and improve investment decisions regardless of bridge size.

The Idaho DOT recommended that a statement be provided in the final rule to clarify that States and MPOs are not precluded "from implementing (whether already in effect or new) systems that include assets in addition to NHS assets, such as non-NHS bridges, provided that the State meets Federal requirements as to the assets that are required to be included in the Federal performance management system by the Federal rule. Moreover, as to non-NHS assets, the rule should not require a State to have to utilize the specifics of the Federal rule." The Oregon DOT provided a similar comment stating, "States must consider all bridges regardless of the system when setting up maintenance, preservation, or replacement programs. State plans to

use available transportation funds should be developed based on priorities that consider the system, traffic volume, and condition, but non-NHS needs must also be addressed in order to maintain economic viability and mobility across an entire transportation system. If the national measures are really intended to be used to measure system improvement resulting from investments, both NHS and non-NHS systems should be reported so a comprehensive view of a state's investment strategies will be presented."

The applicability of subpart D is described in section 490.403. Subpart D is only applicable to bridges carrying the NHS, which includes on- and off-ramps connected to the NHS. Therefore, provided that the requirements of this final rule are met, State DOTs and MPOs may go beyond these minimum requirements when implementing a performance management system or program. (See the Final Rule for Asset Management Plan for further information on implementing a performance management program on non-NHS bridges.)

The Ohio DOT inquired about the process by which State DOT bridge performance targets will be submitted to FHWA; the criteria for changing a bridge performance target; and whether performance targets are to be approved by FHWA.

The requirements for reporting on performance targets are described in section 490.107. In general, State DOTs submit their performance targets to FHWA through an electronic template to be provided by FHWA. The process for adjusting a 4-year target is described in section 490.105 and the required reporting for that adjusted target is in section 490.107. If a State DOT decides to adjust its 4-year target, it must include a discussion in their Mid Performance Period Progress Report on the basis for the adjustment and how the adjusted target supports expectations documented in longer range plans (*e.g.*, State asset management plan and the long-range statewide transportation plan). Regarding FHWA approval of performance targets, MAP-21 did not provide FHWA the authority to approve or reject State DOT and MPO targets.

The Metropolitan Transportation Commission commented that it "uses and supports the use of the National Bridge Investment Analysis System to analyze bridge maintenance needs." They also "recommended that FHWA make the tool available and provide appropriate training."

The NYSAMPO expressed concern that the use of performance measures for bridges (*i.e.*, Poor and Good) will

encourage the use of a “worst-first” approach to investment, and limit the flexibility of State DOTs to employ asset management strategies and approaches. The AMPO expressed a similar concern that “the proposed process encourages a “worst-first” approach rather than focusing on strategically important facilities.”

The FHWA acknowledges that indiscriminately attempting to improve condition could lead to a “worst-first” approach to investment, but believes that the framework provided by MAP-21 will support a more strategic investment strategy in most cases. 23 U.S.C. 150(a) directs the NHPP to provide a means of efficient investment of Federal transportation funds by focusing on national transportation goals. These goals emphasize the importance of national routes to the economy, safety, and other concerns in the entire Nation. In a recent FHWA report to Congress (National Bridge and Tunnel Inventories Report—February 2015), it was shown that for the 10-year period of 2005–2014, the percentage deck area of bridges on the NHS classified as structurally deficient improved from 8.5 percent to 6.0 percent.¹⁰⁵ Therefore, even in the worst case, maintaining bridge conditions on the NHS to achieve 90 percent in Fair or better condition would likely not require the level of investment that would drive a program to a “worst-first” approach. On the contrary, good maintenance and preservation, as currently practiced in many State DOTs, would keep the requirements for major investment on these routes at a minimum, most likely well below the allowable 10 percent classified as structurally deficient.

The Texas DOT commented that three classifications for assessing bridge condition were presented in the NPRM: (1) Percentage of NHS bridges classified as in Good condition; (2) percentage of NHS bridges classified as in Fair condition; and (3) percentage of NHS bridges classified as in Poor condition. They recommended “not defining the Fair condition criteria and not making the States generate and maintain a value that is not utilized in the performance measures.”

Although the classification of bridges in Fair condition and its calculation is retained in the final rule, State DOTs and MPOs are not required to establish or report on performance targets for this classification. The reason FHWA retains

the language is that system-wide monitoring of assets will be done for the three classifications, not just the two bridge performance measures. The Fair classification is a simple calculation from the other two; therefore, there is no requirement for reporting on this classification.

The Colorado DOT commented that the proposed measures are “lag” measures focused on the percentage of structurally deficient deck area on the NHS. Therefore, they do not forecast or predict when a bridge will become structurally deficient. The Colorado DOT suggested that predictive structurally deficient performance measures should be proposed instead. Examples of these performance measures are leaking expansion joints over substructure elements, unsealed decks, failed deck seals, debris collections that accelerate deterioration, and failed steel protection systems. The Colorado DOT also commented that the proposed performance measures do not directly address the risks of bridges that are scour critical or do not meet current design standards.

As discussed in sections 490.405 and 490.411, FHWA revised the definition and methodology for the classification of structurally deficient so that it equates to the performance measure of bridges classified as in Poor condition. Also previously discussed, other than condition, the 23 U.S.C. 150 required the establishment of performance measures for bridges on the NHS but did not provide for any other factors such as forecasting or predicting. The suggested predictive performance measures go beyond describing the existing, in-place physical condition of a bridge. Forecasting or predicting bridge conditions is a bridge management tool or process rather than a measurement of performance. (See the Asset Management Plan final rule (RIN 2125–AF57), as the minimum standards for developing management systems will include forecasting deterioration.)

As for the additional factors based on risk, such as scour critical and not meeting current design standards, these are not considered a measure of condition. Therefore, FHWA retains the metrics in section 490.407 to be used in calculating the bridge performance measures.

Discussion of Section 490.409
Calculation of National Performance Management Measures for Assessing Bridge Condition

To implement 23 U.S.C. 150(c)(3)(A)(ii)(III), FHWA proposed calculation methods to carry out the bridge condition related requirements of

this part and make the significant progress determination in section 490.109. The FHWA revised section 490.409(b) to provide clarity as to which highway bridges are subject to this regulation.

The Metropolitan Transportation Commission expressed support for the proposed classification approach for determining the condition of a bridge, where the lowest rating received for any component of a bridge determines the overall condition.

Three State DOTs (New York, North Carolina, and North Dakota) suggested that an alternative method to the proposed minimum of condition rating method be used for national performance measures under the NHPP. They suggested the weighted average method, which consists of calculating an overall condition rating based on a weighted average of NBI Items 58, 59, and 60. Another method that was offered was to simply not include NBI Item 58 in the calculation of the classification. An additional recommendation was to define Fair as “a bridge that is not structurally deficient and also having at least one NBI score of 5.” The recommendation stated that “a Good bridge would be defined as a bridge that is not structurally deficient and also having a minimum NBI score of 6.”

As was noted in the NPRM, FHWA performed a study (Improving FHWA’s Ability to Assess Highway Infrastructure Health) that evaluated five different methods (four different weighted average methods and one minimum condition rating method) to assign bridge condition based on the classifications of Good, Fair, or Poor.¹⁰⁶ The study concluded that for the Interstate System: (1) Percentages of bridges classified as Good, Fair, or Poor were consistent for all methods with little variation; (2) minimum condition rating method resulted in the highest percentage of bridges in Poor condition; (3) percentages of bridges classified as Good, Fair, or Poor based on the four weighted average methods are not sensitive to the weights; and (4) bridge deck conditions alone are not typically the driving factor in the Good, Fair, or Poor calculations. The FHWA further assessed the different methods and observed that the magnitude in differences between condition ratings for individual NBI items was somewhat nullified when a final average or weighted average method was

¹⁰⁵ U.S. Department of Transportation, Federal Highway Administration. Report to Congress, National Bridge and Tunnel Inventories Report, Fall 2015, has been posted to the Docket.

¹⁰⁶ FHWA (2012). Improving FHWA’s Ability to Assess Highway Infrastructure Health Pilot Study Report, FHWA–HIF–12–049. <http://www.fhwa.dot.gov/asset/pubs/hif12049/hif12049.pdf>.

employed. This observation was also noted in the 2012 study.¹⁰⁷ The masking or obscuring of possible Poor bridge conditions is a major concern with the final average or weighted average methods. This concern also applies to the suggested method of a Fair bridge “having at least one NBI score of 5” and “a Good bridge . . . having a minimum NBI score of 6.” Although these methods could be further refined, the development, subjectivity, and complexity of such methods makes them less desirable than the simple minimum condition rating method. This is especially true because analyses indicate that a refined weighted method would result in the same general classification as the minimum condition rating method.

As for the suggested method to not include NBI Item 58 in the calculation of the classification, the deck is a critical component of a bridge as it provides the surface upon which vehicles travel. Omitting such a fundamental component of a bridge would not provide an accurate assessment of its overall condition or performance. Therefore, FHWA retains the language in section 490.409 for the calculations of the three bridge classifications and the two bridge performance measures. However, FHWA made a minor revision that provides clarity as to which highway bridges are subject to this regulation.

The South Jersey Transportation Planning Organization argued that the proposed minimum condition rating method was controlled by lowest rating of a bridge’s three NBI Items (58, 59, and 60) substructure, regardless of whether any of the proposed metrics were rated the same or not. They suggested that the method “may have a disadvantage in that some categories may be much more expensive to repair, and as such, give a distorted view of the over-all bridge repairs needed.”

As discussed above, in assessing various methods for determining the classification of a bridge, FHWA is concerned with the masking or obscuring of possible Poor bridge conditions when an average or weighted average method is used. Although these methods could be further refined, the development, subjectivity, and complexity of such methods makes them less desirable than the simple minimum condition rating method. As previously stated, analyses indicate that a refined weighted method would result in the same general classification as the minimum condition rating method. Regarding the possible distortion of

estimated costs and overall bridge repair needs, other than “condition,” the statute did not provide for any other factors such as costs or needs.

Four State DOTs (Delaware, Idaho, North Carolina, and North Dakota) disagreed with the proposed calculation methods for the bridge classifications of Good and Fair. Suggestions included making the calculation methods flexible to allow State DOTs to define the classifications and the method of calculations for themselves and to include the NBI condition rating of six in the Good classification. The NBI zero to nine scale for condition ratings for the classifications of Good, Fair, and Poor are based on the historical practice of generalization of the scale and the logical distinctions that are made between the descriptions for the various condition ratings. For example, according to FHWA’s Recording and Coding Guide for the Structure Inventory and Appraisal of the Nation’s Bridges, a condition rating of six is described as “satisfactory condition, structural elements show some minor deterioration.” While some commenters have suggested including this condition rating as Good, doing so would be an inaccurate assessment of the condition of the bridge as Good indicates that there are some minor problems, which is different than minor deterioration. Additionally, the comparative analysis study of bridge conditions conducted through NCHRP 20–24(37)E (Measuring Performance Among State DOTs, Sharing Best Practices—Comparative Analysis of Bridge Conditions), recommended defining: (1) Poor as bridges with deck, superstructure, or substructure ratings less than or equal to four; (2) Good as bridges with deck, superstructure or substructure ratings greater than or equal to seven; and (3) all other bridges as Fair condition.¹⁰⁸ Therefore, FHWA retains the language of the NPRM, with a minor revision that provides clarity as to which highway bridges are subject to this regulation, for the calculation of the classifications of Good, Fair, and Poor.

The Knoxville Regional Transportation Planning Organization suggested that “reconfiguring the NBI condition rating approach from its current zero to nine rating to a Good, Fair, or Poor rating would not be favorable.” They argued that it would be “complicated to convert the data to fit to the new scale.” They also suggested

that “if the Good, Fair, or Poor rating scale was still used, perhaps there could be a matrix created for the conversion that would further define the new condition rating scale.” The FHWA retains the language of the NPRM, with a minor revision that provides clarity as to which highway bridges are subject to this regulation, for the calculation of the three bridge classifications. In section 490.409, the calculation of the classifications are provided in detail, including specific information on how to convert the numerical NBI condition rating to a classification of Good, Fair, or Poor condition (*i.e.*, a conversion matrix is provided).

The Missouri DOT argued against the use of the bridge deck area that is reported with element level bridge data, stating that no deck area for culverts is reported with element level data.

The deck area calculation for culverts and culverts where the roadway is on a fill are in sections 490.409(c)(1) and 490.409(c)(2) (see formulas and explanations for the terms “length” and “width.”) In general, the deck area of a culvert is the product of NBI Items 49 (Structure Length) and 52 (Deck Width). For culvert where the roadway is on a fill, the deck area of a culvert is the product of NBI Items 49 and 32 (Approach Roadway Width).

The California and North Dakota DOTs suggested a change to the proposed calculation of deck area for culverts. The change involves replacing NBI Item 32 with the culvert element length in the calculation. The NBI does not include an item for culvert element length.

In order for such an item to be used for the calculation of deck area, an additional collection burden would be placed on State DOTs. Currently, the NBI includes Item 32, which provides an accurate measurement to calculate a deck area that is influenced by the roadway. By using the proposed alternative of culvert element length, deck area calculations may be exaggerated. For example, culverts where the roadway is on a significant amount of fill can be much longer than the width of roadway that is supported. This would result in a calculated deck area that is much larger than an area influenced only by the roadway. Therefore, FHWA retains the language of the NPRM, with a minor revision that provides clarity as which highway bridges are subject to this regulation, for calculating the deck area of bridges, including culverts.

The California DOT also stated, the proposed deck area calculation “assumes that every bridge is rectangular in shape. This assumption

¹⁰⁸ Transportation Research Board of the National Academies, National Cooperative Highway Research Program, NCHRP 20–24(37)E, Measuring Performance Among State DOTs, Sharing Best Practices, [http://onlinepubs.trb.org/onlinepubs/nchrp/docs/NCHRP20-24\(37\)E_FR.pdf](http://onlinepubs.trb.org/onlinepubs/nchrp/docs/NCHRP20-24(37)E_FR.pdf).

¹⁰⁷ Ibid.

ignores ramp area, curved configurations, and other irregular deck shapes. The MAP-21 requires the submission of bridge deck area in the elements that could be used to directly report bridge deck area including all irregular configurations. Use of the element deck areas would improve the accuracy of the measure.” The MAP-21 did not require State DOTs to report a bridge deck area element as part of 23 U.S.C. 144(d)(2).

The Colorado DOT asked whether the areas of approach slabs will be included in the calculation of a bridge’s deck area. The deck area of bridge will be calculated as described in section 490.409. The calculation does not include the areas of approach slabs.

The Iowa DOT suggested that a formula similar to FHWA’s former Sufficiency Rating be used instead to classify bridge condition. Formulas such as the Sufficiency Rating were tools to assist in the identification and prioritization of bridge projects and needs. They are not necessarily indicators of physical condition as they included other factors such as level of service and functional obsolescence. As discussed in section 490.407, the statutory language focused the bridge performance measures on the factor of condition, with the national performance goal of maintaining bridge condition in a state of good repair. It did not provide other factors to be considered for the bridge performance measures or the national performance goal. Therefore, FHWA retains the language in section 490.409 for the metrics to be used in calculating the bridge performance measures.

The Wyoming DOT recommended that the final rule significantly scale back or modify a number of its requirements, such as additional data collection. In regards to the bridge performance measures, there is no additional data collection burden as the data that is currently collected under 23 CFR 650.305 (National Bridge Inspection Standards) will be used to meet the data requirements for this subpart.

The AMPO expressed concern that the combination of bridge data submission requirements (e.g., NBI data and element level bridge data) “will effectively require States to collect duplicative data at considerable cost.” The comment went on to state that the rule should, “Require States to use either the NBI or the new methodology for all bridge related reporting requirements, but not both.” As was stated above, there is no additional data collection burden in regards to the bridge performance measures as the data

that is collected under the NBIS will be used. In regards to element-level data, 23 U.S.C. 144(d)(2) requires the collection of such for bridges on the NHS. This type of data is not duplicative of the NBI data as this data provides more detailed information.

The New York City DOT commented that there is no reference to biennial inspections as the primary source of bridge related information. The commenter further stated that “risk-based scheduling at varying intervals of up to 6 years is proposed at the discretion of the owner. Rather, one could keep the biennial inspection interval fixed, but vary the inspection scope. This would be highly appropriate in large structures with components of very different exposure to aggressive influences.” The NPRM did not propose any such change to the NBIS which define the intervals at which highway bridges are to be inspected. The NPRM did state that the NBI is the definitive source for national bridge information and that the NBI by definition is an FHWA database containing bridge information and inspection data for all highway bridges on public roads, on and off Federal-aid highways, including tribally owned and Federally owned bridges, that are subject to the NBIS.

The California DOT questioned if a scour critical bridge should be considered “Poor” under the provisions of this rule. The California DOT also requested clarification if FHWA’s policy directive related to the Highway Bridge Program of lowering the substructure condition rating (NBI 60) to match the scour code (NBI 113) for scour critical bridges is still in effect as MAP-21 eliminated the Highway Bridge Program. Under this rule, a highway bridge is classified as in Poor condition based on the criteria of section 490.409(b)(3). There is no FHWA policy related to the Highway Bridge Program, which directed the matching of the codes for NBI items 60—Substructure and 113 Scour Critical Bridges. However, the errata to FHWA’s Recording and Coding Guide for the Structure Inventory and Appraisal of the Nation’s Bridges, Report No. FHWA-PD-96-001, December 1995, does state, “The rating factor given to Item 60 should be consistent with the one given to Item 113 whenever a rating factor of 2 or below is determined for Item 113—Scour Critical Bridges.”

The Louisiana DOT requested that an example State be created and the principals of the bridge measures be applied to it, as it would better their understanding of how the practice will be used. The FHWA will issue guidance on step-by-step procedures that detail

the data and the calculations for the national performance measures for 23 U.S.C. 150, which includes the bridge performance measures.

The FHWA made an editorial change in section 490.409(b)(1) through (3) to remove the phrase “of any” to provide clarity in the regulatory text that Good, Fair, or Poor classification of a bridge is determined based on the lowest rating of three NBI items (58, 59, and 60) for that bridge. These paragraphs in the final rule now state: “. . . When the lowest rating of the three NBI items for a bridge (Items 58—Deck, 59—Superstructure, 60—Substructure) is . . .” This editorial change did not alter the intent of the original text in the NPRM.

Discussion of Section 490.411 Establishment of Minimum Level for Condition for Bridges

To implement the statutory provisions under the NHPP for the condition of NHS bridges, FHWA incorporated the minimum condition level established by 23 U.S.C. 119(f)(2). The FHWA revised the NPRM language in section 490.411(a) to provide clarity as to which highway bridges are subject to this regulation.

The AASHTO, with support from six State DOTs (Idaho, Montana, North Dakota, South Dakota, Oklahoma, and Wyoming), suggested changes to the proposed methodology for the classification of structurally deficient. Their suggestion was to lower the threshold of the classification for NBI Items 58, 59, 60, and 62 from a condition rating of four (Poor condition, advanced section loss, deterioration, spalling or scour) to three (serious condition, loss of section, deterioration, spalling, or scour have seriously affected primary structural components. Local failures are possible. Fatigue cracks in steel or shear cracks in concrete may be present). The AASHTO and Alabama DOT also suggested removing NBI Items 67 (Structural Evaluation) and 71 (Waterway Adequacy) from the factors in the determination process.

The New Hampshire DOT “strongly” disagreed with AASHTO’s recommendation of lowering the threshold. The New Hampshire DOT argued that the general public and elected officials currently have a good understanding of the classification of structurally deficient and changing the definition would cause confusion. Additionally, New Hampshire DOT expressed that such a change would result in having “many thousands fewer ‘Structurally Deficient’ bridges, which also implies that there are fewer bridges

that need to be replaced or substantially rehabilitated.” The Missouri DOT recommended not using element level data as it “is cumbersome and results in a large amount of data, which is not meaningful and is complicated to convert to a Good, Fair, or Poor condition rating.” The Georgia DOT requested clarification on whether the NHPP penalty provision is based on the classification of structurally deficient or the bridge performance measure of Poor.

The AASHTO comment also included a suggestion, which four State DOTs supported (Connecticut, Iowa, New Jersey, and New York), that FHWA should note in the final rule that the use of current NBI data for calculating bridge performance measures and classifying bridges on the NHS as structurally deficient is temporary and that there is a transition plan to use element level bridge data.

The New York City DOT similarly commented that the “proposed performance measures are obsolete on arrival” as “FHWA is adopting the AASHTO element level inspection with ratings 1–4.” The comment also stated that the “The AASHTO system, while element—level is not span—specific. Thus, even if updated to element level inspections, NBI will not reflect the complexity of the multi-span bridges.”

As previously discussed, FHWA revised the definition and methodology for the classification of structurally deficient so that it is the same calculation used for classifying bridges as in Poor condition. Although element level bridge data is now being reported to the NBI, the analysis and development as to how this data could be used to calculate the proposed bridge performance measures and classify bridges on the NHS as structurally deficient needs to be conducted and completed. Once completed, element level bridge data, and any other pertinent bridge information or metric that provides an improved indicator for bridge condition, may be considered in revising this regulation in the future. Additionally, it is anticipated that element level data for all of the bridges on the NHS will not be in the NBI until 2019 due to the nature of inspection intervals, which can be up to 48 months. Therefore, the current NBI, with its extensive historical data sets and availability, is the most appropriate metric for assessing the condition of bridges on the NHS and classifying them as Structurally Deficient.

Four State DOTs (Alabama, Maryland, Minnesota, and Missouri) supported the use of the current NBI Items instead of element level bridge data.

The Colorado DOT asked whether the area of approach slabs will be included in the calculation of a bridge’s deck area. The deck area of bridge will be calculated as described in section 490.411. The calculation does not include the area of approach slabs.

The Georgia DOT commented that the March 15 submission date for the most current NBI data on highway bridges to FHWA would result in changes to business practices and require additional resources. The Virginia DOT recommended that the NBI data submittal date remain as April 1 of each year as currently established as it allows for all State bridges inspected in the previous year to be entered in the data base within (and is consistent with) the 90-day period established by 23 CFR 650.315(b) and (c) for Structure Inventory and Appraisal data on State bridges. The FHWA retains the March 15 submission date. Reporting by March 15 is needed in order to administer the NHS bridge minimum condition provision and issue any penalties by the next fiscal year.

Discussion of Section 490.413 Penalties for Not Maintaining Bridge Condition
